Testimony of—

Banker, W. B., assistant chief engineer, E. I. du Pont de Nemours & Co ... 3600, 3603
Bradway, F. W., assistant general manager, smokeless-powder department, E. I. du Pont de Nemours & Co ... 3630
Brannon, Lt. E. M., first lieutenant, Infantry, in the Judge Advocate General's department ... 3612, 3617, 3619, 3621, 3622, 3625, 3628, 3631, 3636, 3660, 3668, 3700, 3713
Casey, K. K. V., director of sales, smokeless-powder department, E. I. du Pont de Nemours & Co ... 3686, 3687, 3695, 3697
Chasmar, J. H., Bridgeport works manager, Remington Arms Co ... 3610
Cochran, H. H., accountant, E. I. du Pont de Nemours & Co ... 3605, 3606
Cutts, Lt. Richard Malcolm, Marine Corps ... 3543
Davis, C. K., president and general manager, Remington Arms Co ... 3635, 3639, 3677, 3679, 3681, 3683, 3688, 3695
Du Pont, Irénée, vice chairman of board of directors, E. I. du Pont de Nemours & Co ... 3543, 3593, 3600, 3602, 3630, 3637, 3639, 3654, 3658, 3661, 3672, 3687, 3692, 3694, 3708, 3715, 3717
Du Pone, Lammot, president, E. I. du Pont de Nemours & Co ... 3654
Du Pont, Pierre S., chairman of board of directors, E. I. du Pont de Nemours & Co ... 3540, 3604, 3606, 3640
Gregg, William S., attorney, E. I. du Pont de Nemours & Co ... 3539, 3543, 3576, 3578, 3588, 3590, 3593, 3601, 3604, 3607
Hadley, Egbert C., technical director, Remington Arms Co ... 3676, 3678, 3680, 3684, 3694, 3696
Handy, E. E., vice president, Remington Arms Co ... 3678, 3683, 3685, 3688
Harris, Lt. Col. C. T., in the planning branch, office of The Assistant Secretary of War ... 3540, 3604, 3609, 3610, 3614, 3618, 3620, 3621, 3623, 3627, 3629, 3633, 3634, 3637, 3639, 3653, 3656, 3662, 3683, 3688, 3699, 3701, 3708, 3715.
Nielsen, A. C., co(mptroller E. I. du Pont de Nemours & Co ... 3578, 3588, 3607, 3608
Pugsley, Edwin, vice president, Winchester Repeating Arms Co ... 3633, 3638, 3643, 3675
Reisinger, W. U., secretary and treasurer Remington Arms Co ... 3698
Relationship between War and Navy Departments and American inventors ... 3543
Nature of obligations assumed and security furnished by Du Pont Co. under Old Hickory contract ... 3577
Further testimony as to nature of audit of Old Hickory contract ... 3600
General description of industrial mobilization plan ... 3610
History of preparation by War Department of forms of contracts for use in next war ... 3619

Adjusted-compensation contract form:

General ... 3628
Profits of integrated companies ... 3629
Accounting methods of contracts ... 3632
Acceptability to contractors of 6-percent fee ... 3636, 3699
Domestic sales of Winchester Repeating Arms Co ... 3643
Industrial connections of certain War Department and other officials involved in procurement and related activities during World War ... 3655
Relations between munitions makers and War Department and War Department officials ... 3676
Examples of scope of activities of War Industries Board ... 3704

---

[1] In cases of exhibits comprised of excerpts from the minutes of certain war-time civilian boards only such parts as were actually entered into in the hearings have been published in the appendix. At a later date the committee ordered to be printed separately as committee prints, the minutes of the following war-time agencies: War Industries Board, Price Fixing Committee of the War Industries Board, Council of National Defense, Advisory Commission of the Council of National Defense, Munitions Standards Board, General Munitions Board.

INVESTIGATION OF MUNITIONS INDUSTRY

MONDAY, DECEMBER 17, 1934

United States Senate,
Special Committee to
Investigate the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a.m., in the Finance Committee room, Senate Office Building, pursuant to the taking of recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Pope, Vandenberg, and Barbour.

Present also: Alger Hiss, legal assistant to the committee.

At this point the committee concluded that part of the testimony which is incorporated in Part XIV, of these hearings, "Old Hickory Contract (continued)".

The Chairman. The committee will be in order.

Mr. Pierre du Pont. Mr. Chairman, before we start, might I offer for the record two documents, one the original request from Colonel Hoffer asking for a bid on a plant the size of Old Hickory; and second, the proposition submitted by the du Pont Co. the following day, which was the basis of this construction work.

The Chairman. That will be accepted.

Mr. Pierre du Pont. May I have them listed as exhibits?

The Chairman. They will be placed in the record.

(The letters referred to were marked "Exhibit No. 1197", and "Exhibit No. 1198", respectively, and are included in the appendix on p. 3719.)

Mr. Gregg. May it please the committee, I should like to offer as an exhibit a statement by du Pont Engineering Co. of the facts concerning the audit of expenditures under the du Pont Engineering Co. contracts. In other words, this is our position as to the audit by the Government during construction and operation, and the reaudit by the Government after the signing of the armistice.

The Chairman. Is this a statement just prepared, or is it a statement of long standing?

Mr. Gregg. I might say this, Mr. Chairman, that this is a statement of long standing, with the exception that I eliminated from the statement certain references to Government employees. It, in effect, with those eliminations, is the same as it was prepared several years ago, probably back as far as 1923.

The Chairman. You wish that to be received?

Mr. Gregg. I would like to introduce that as an exhibit, please.

The Chairman. Very well.

(The statement referred to was marked "Exhibit No. 1199", and is included in the appendix on p. 3721.)

Senator Clark. Mr. Chairman, I ask to have made a committee exhibit an analysis of the war profits of the du Pont Co. This is an analysis of testimony heretofore given, prepared by John T. Flynn, recently published in the New Republic.

The Chairman. Do you wish to have it incorporated into the record, Senator Clark?

Senator Clark. Yes.

The Chairman. That is ordered.

(The article referred to was marked "Exhibit No. 1200", and is included in the appendix on p. 3727.)

Mr. Pierre du Pont. Might we have a copy of that record that has been presented?

Senator Clark. I have it over in my office.

The Chairman. Senator Clark is offering it for the record. He has it at his office and will introduce it later. He will bring it here, and you will have a chance to see it.

I might say that that appeared in the New Republic, the issue of October 3.

Mr. Pierre du Pont. All right. Of this year?

The Chairman. Yes.

Mr. Pierre du Pont. Thank you.

TESTIMONY OF LT. COL. C. T. HARRIS AND LT. E. M. BRANNON—(Resumed)

(The witnesses were previously duly sworn by the chairman.)

Mr. Hiss. Colonel Harris, did you bring with you some material as requested from the files of the War Department?

Lieutenant Colonel Harris. I did.

Mr. Hiss. Will you please submit the material, Colonel Harris, that was requested last week, namely, the audit material prepared by the War Department on Old Hickory?

Lieutenant Colonel Harris. I should like to present this verbally, as it was done so hurriedly it is not in proper form to present in writing.

The papers pertaining to the audit of the Old Hickory powder plant were taken by the Department of Justice some time ago. These papers were receipted for by Mr. Fortune, and photostatic copies of the list of papers taken and receipted for by Mr. Fortune have been furnished to the Nye committee.

Mr. Hiss. May I ask you if you can identify these as the documents so furnished?

Lieutenant Colonel Harris. I am not familiar with them.

Mr. Hiss. This is a letter signed by George H. Dern, Secretary of War. I will just read that letter into the record, if you are not familiar with it.

Lieutenant Colonel Harris. I think it would be better.

Mr. Hiss. This is under date of December 10, 1934. The Secretary of War wrote a letter to the chairman of the committee:

> Reference your letter dated November 30, 1934.
> * * * there are enclosed herewith two photostatic copies of records of this office indicating the experience of George R. Foulke, Jr., prior to his commission in the Ordnance Department.

That has already been introduced in evidence as "Exhibit No. 1188."[1]

> Copy of letter from Major Booton to Arthur Carnduff, dated June 15, is enclosed herewith.

That has also been introduced in evidence as "Exhibit No. 1177".[2]

And the last paragraph:

> In accordance with telephonic request from Mr. Higgins there is also enclosed 20 photostatic sheets from the records at Frankford Arsenal, indicating the papers withdrawn from the files stored there pertaining to the du Pont Engineering Co. and turned over to James H. Fortune, accountant of the Department of Justice, in connection with an investigation being made approximately 10 years ago.

I will offer that letter and the attached sheets for the record.

(The letter and attached sheets referred to were marked "Exhibit No. 1201", and are included in the appendix on p. 3728.)

Mr. HISS. None of the attached sheets constitutes any statement of the examination of underlying records or vouchers, nor can it in any sense be considered an audit.

Mr. PIERRE DU PONT. Have you copies of those letters?

Mr. HISS. That is the only set we have. I will be glad to let you examine this.

Colonel Harris, did you find any other audit material?

Lieutenant Colonel HARRIS. The records do not disclose any other audit material.

Mr. HISS. Colonel Harris, you will remember the statement of Colonel O'Shaughnessy and his telegram which was put in evidence as "Exhibit No. 1172"[3] some time ago, that no original audit had been made, and the evidence that has been disclosed as to whether a reaudit was made. I would like to ask you this question:

According to "Exhibit No. 1167"[4], the recapitulation of the Old Hickory and other Government contracts held by the du Pont Engineering Co., a total of some $37,000,000 was advanced by the United States in connection with both construction and operation of Old Hickory, and a total of some $72,000,000 was reimbursed by the United States. In other words, the United States advanced sums to the du Pont Engineering Co., and the United States further reimbursed expenditures by the du Pont Co., and yet no audit was made of the expenditures by the du Pont Co. in the true sense of an audit. In other words, the burden of proof was put completely on the United States as to whether or not there had been improper payments.

The question, Colonel Harris, is this:

Is it not customary in the War Department to put the burden of proof the other way—namely, the contractor must prove a right to reimbursement before he is reimbursed?

Lieutenant Colonel HARRIS. I think that is true.

Mr. HISS. Colonel Harris, I also requested information as to which Assistant Secretary of War was referred to when Secretary Baker wrote that he had turned the matter over to The Assistant Secretary.[5]

Lieutenant Colonel HARRIS. The records show that Mr. Stettinius was appointed Second Assistant Secretary on April 11, 1918, and resigned on November 13, 1918. I am of the opinion, however, that Mr. Stettinius was on duty in the office before that date.

---

[1] Hearings, Part XIV, p. 3248.
[2] Ibid., p. 3239.
[3] Ibid., p. 3236.
[4] Ibid., p. 3220.
[5] Ibid., p. 3213.

Mr. Crowell was the Assistant Secretary of War up to that time. Under date of May 7, 1918, a division of duties between the various assistant secretaries was published as follows:

> Hon. Benedict Crowell, The Assistant Secretary, will have charge of War Department administration.
>
> Hon. Edward R. Stettinius, Second Assistant Secretary, will have charge of all questions of purchase and supply for all bureaus of the Department.
>
> Hon. Frederick P. Keppel, Third Assistant Secretary, will have charge of all matters affecting the nonmilitary life of the soldier, including the relations of the Army with the Y. M. C. A., Red Cross; questions affecting chaplains and personal discipline.

Other than this, I cannot answer your question.

Mr. HISS. I offer for the record, if it has not already been introduced, a letter of April 27, 1918, a copy of which has been furnished under the seal of the Department of War, signed Samuel McRoberts, Colonel, Ordnance, by Lt. Col. Charles N. Black.

Can you identify Samuel McRoberts?

Lieutenant Colonel HARRIS. He was officer on duty in the Ordnance Department in charge of the Procurement Division.

(The letter referred to was marked "Exhibit No. 1202", and is included in the appendix on p. 3736.)

Mr. HISS. This letter or memorandum was addressed to the Hon. Edward R. Stettinius, Second Assistant Secretary of War, from the Procurement Division, Ordnance Department. [Reading:]

> I am handing you herewith printer's proof of contract with the Du Pont Engineering Co. for the construction and operation of the Nashville powder plant. I find that corrected copies have not yet been returned from the printer's office. As soon as we receive these, which will probably be later today or Monday morning, I will send you a clean copy. I am advised, however, that the copy herewith enclosed is correct, and I trust it will answer your purpose for the time being.

Mr. PIERRE DU PONT. What is the date of that letter, please?

Mr. HISS. April 27, 1918.

Does that not constitute additional confirmation, in your opinion, of your impression that this contract was under the supervision of Assistant Secretary Stettinius?

Lieutenant Colonel HARRIS. It does.

Mr. HISS. That is all on Old Hickory, unless the du Ponts have something more to offer.

The CHAIRMAN. The Chair offers for the record a letter dated December 14, 1934, addressed to it by Ogden L. Mills, which he asks to have made an exhibit.

(The letter referred to was marked "Exhibit No. 1203", and is included in the appendix on p. 3736.)

The CHAIRMAN. The Chair suggests to the witnesses that unless they have something they wish to say upon that, the committee has completed, for the moment at least, the consideration of the Old Hickory matter.

Mr. PIERRE DU PONT. Mr. Chairman, we have some charts in preparation which we would like to present later, if we may, and also a summary of this Old Hickory history; but with your permission we will defer that until later.

The CHAIRMAN. All right.

Mr. Gregg. Mr. Chairman, there was introduced on Friday a copy of a report by Mr. Storck to the Department of Justice. It is in as an exhibit. I assumed that that was the report that Mr. Storck said he saw in my possession on December 5, 1923, at the hearing of the joint board. I testified on Friday that I did not have Mr. Storck's report at that time, that I never saw his report nor had ever seen a copy of it or any extracts from it, and I would like to see the exhibit that was introduced on Friday.

The Chairman. Is that what you are offering now, Mr. Hiss?

Mr. Hiss. Yes.

Mr. Irénée du Pont. Mr. Chairman, might I just call attention to this exhibit you put in, the New Republic article of October 3, 1934? That was printed before a great deal of this testimony, especially on Old Hickory, was put in.

I would like to point out in that, that it compares the total amount paid 200,000 men in the trenches for a full year with the profits which we made from the foreign countries in the war before the United States got into the war. It does not seem to me that they are very germane to each other. I just wanted to remark on that, because although this is hardly testimony, I suppose in the eyes of the Senators at the same time it is rather misleading.

Senator Clark. It is not testimony. It is put in in the way in which we permitted the du Pont Co. repeatedly to put in statements from time to time.

Mr. Irénée du Pont. Then we have permission to put in some newspaper articles which have appeared since this hearing in other papers, a little later in the hearing, similar to this?

Senator Clark. If they are analyses of testimony before the committee, I think they would be pertinent. If it is simply a matter of editorial comment or reporters' opinion, I do not think so. Mr. Flynn is a member of the advisory committee to this committee.

The Chairman. Mr. du Pont, there will be no occasion for you and your associates to be here before 2 o'clock this afternoon, if you wish that information to comply with any plans you might have.

TESTIMONY OF LT. RICHARD MALCOLM CUTTS

RELATIONSHIP BETWEEN WAR AND NAVY DEPARTMENTS AND AMERICAN INVENTORS

(The witness was duly sworn by the chairman.)

Senator Clark. Give to the committee, Lieutenant, your full name.

Lieutenant Cutts. Richard Malcolm Cutts.

Senator Clark. You are a lieutenant in the Marine Corps?

Lieutenant Cutts. Yes.

Senator Clark. At present on the active list?

Lieutenant Cutts. I am, sir.

Senator Clark. Mr. Chairman, the committee desires very briefly this morning, simply as an interlude between the present major hearings of this investigation, to give a preliminary examination to a question which the committee may later decide to go into in some detail. It has to do with the relationship between the military arms of the Government, that is the War Department and the Navy Department, and American inventors, more particularly inventors in the military and naval service of the United States.

Lieutenant, in its work, this committee has learned of considerable correspondence between yourself and several arms firms. The committee understands that you with your late father, Colonel Cutts, who was also an officer in the Marine Corps, was he not——

Lieutenant Cutts. That is right.

Senator Clark. When did he retire?

Lieutenant Cutts. He died November 24.

Senator Clark. Was he on the active list at the time of his death?

Lieutenant Cutts. He died 1 week before he retired, sir.

Senator Clark. The committee understands that you in connection with your father were the inventors of the Cutts compensator, a device for reducing recoil in Thompson submachine guns and other weapons. I will ask you first, Lieutenant, in order to clear the matter up as we go, what weapons were these compensators applicable to?

Lieutenant Cutts. They are applicable to all weapons, but our largest interest is the shotgun, sporting field.

Senator Clark. For the purpose of taking what we call the " kick " out of it?

Lieutenant Cutts. They have other purposes also. In the shotgun it is most revolutionary. We eliminate the old choke. We have changeable choke features, with new types of patterns, and it has a combination of seven guns in one by changing these chokes. The recoil reduction is thrown in extra. The main part is the improvement of the patterns. We are now spending practically all our energies on that development.

Senator Clark. It was also adaptable peculiarly to the Thompson submachine gun?

Lieutenant Cutts. It is adaptable to the Thompson submachine gun.

Senator Clark. And a great deal of your energies in the past were devoted to its exploitation in connection with the submachine gun?

Lieutenant Cutts. Yes.

Senator Clark. It is also applicable to the ordinary army service rifle?

Lieutenant Cutts. Yes.

Senator Clark. Such as the Springfield, Enfield, or Krag?

Lieutenant Cutts. Yes, sir.

Senator Clark. It would seem to me, recognizing the ability of Lieutenant Cutts as an inventor, that his activities in relation to various arms firms while he remained on the active list of the United States Marine Corps, are of particular interest to this committee.

Lieutenant Cutts. I beg your pardon?

Senator Clark. It would seem that the activities which are disclosed in this correspondence, as to your activities and correspondence with various arms companies while a lieutenant on the active list of the United States Marine Corps, are of particular interest to this committee in its investigation. Lieutenant, am I correct in the information that when this device was first perfected some 7 or 8 years ago, it was offered to the Secretary of the Navy?

Lieutenant CUTTS. You are correct, sir.

Senator CLARK. Under what terms was it offered to the Secretary of the Navy?

Lieutenant CUTTS. With no strings attached. The story is as follows:

We felt that we had something new, at the point that our investigations had carried us so far. We also knew to carry it through to a logical conclusion it would cost a great deal of money and would probably be of interest to the Government. Whereupon we offered it to the Government and asked them if they had a fund to help us develop this device. They informed us that they were sorry, but there was no such fund available.

Then we asked if we could have the facilities of the Naval Gun Factory, where they have the equipment which we desired, and were informed that unfortunately it meant punching the time clock and the labor involved would have to be paid for, which amounted to money in the end. Accordingly, after we had gotten to this point, we then filed our patents ourselves and developed it on our own time and at our own expense. Then, before the patent issued, we notified the Navy Department and asked them if they wished it placed in the secret archives, figuring that once a patent comes out it becomes public knowledge. We were informed that they did not so desire. That was due to no fault of anyone in the Department that I can conceive. It was a new thing. It had been tried many times before and failed, and until the proof of the pudding had come out, they had no way of really knowing of its value.

Senator CLARK. Let me ask you, Lieutenant, did your proposi tion to the Secretary of the Navy include any specific proposition as to compensation?

Lieutenant CUTTS. No, sir.

Senator CLARK. Did your proposition for placing the patent in the secret archives and not having it published contain any proposition as to compensation?

Lieutenant CUTTS. No, sir.

Senator BARBOUR. During that development period which you were discussing with the Department, had the Department interested themselves in this invention, in that event the patent would belong to the Government?

Lieutenant CUTTS. As I understand the regulations of the law, so to speak, they are as follows: The position of the Government to its employees is exactly similar to that of an employer on the outside with his employees. In other words, a man who is hired by a civilian employer to develop certain devices or, in certain laboratories; naturally, his developments belong to his employer, for that is what he is being paid for. The same thing obtains in the service. But, however, the employee may keep his commercial rights, providing the Government does not wish to keep it secret.

Senator CLARK. As a matter of fact, the Thompson submachine gun was invented and developed by a man who was Assistant Chief of Ordnance at the time he developed it, was it not?

Lieutenant CUTTS. I cannot state that, sir.

Senator CLARK. Assistant Chief of Ordnance of the United States Army?

Lieutenant CUTTS. I cannot tell you sir. That was before my time.

Senator CLARK. He was a high ranking officer of the Ordnance Department, I know. I cannot state just what. I cannot say whether he was Assistant Chief at the time, or had resigned, or not. When was this negotiation with the Secretary of Navy, Lieutenant?

Lieutenant CUTTS. About November 1925.

Senator CLARK. Who was Secretary of the Navy?

Lieutenant CUTTS. Curtis D. Wilbur, sir.

Senator CLARK. If the invention really were that, Lieutenant, assuming it is successful, it would be of the very greatest importance to the United States Navy and United States Army, wouldn't it?

Lieutenant CUTTS. I feel that it would be, sir.

Senator BARBOUR. It is your observation that green troops, particularly, almost invariably flinch the first time they go on a range, and endeavor to use high-power Army rifles?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. That interferes, of course, with the accuracy of their marksmanship?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. Even in the Camp Perry matches, the old timers usually employ shoulder pads when firing guns?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. And it is more noticeable even as to flinching and marksmanship in regard to the Thompson submachine gun?

Lieutenant CUTTS. Yes, sir. In the Thompson submachine gun it is not so much the recoil as the climb of the weapon.

Senator CLARK. The recoil reduction of the compensator or stabilizer?

LIEUTENANT CUTTS. Compensator.

Senator CLARK. That interferes with the marksmanship and so does the rapidity of firing?

Lieutenant CUTTS. And it is dangerous to bystanders. It is very important that the gun shoot where it is aimed.

Senator CLARK. Now, Lieutenant, after you took out the patent on this device you sold certain rights in the letters patent to the Lyman's Gun Sight people?

Lieutenant CUTTS. Lyman?

Senator CLARK. Lyman; yes.

Lieutenant CUTTS. No, sir. All we do is license to manufacture for a period of time under a royalty agreement.

Senator CLARK. And also to the Auto Ordnance Corporation?

Lieutenant CUTTS. Under the same type of agreement, sir.

Senator CLARK. In other words, simply a license. You do not mean the ownership of the patents?

Lieutenant CUTTS. I do not mean the ownership of the patents; no, sir.

Senator CLARK. The Lyman Co. has manufactured this compensator?

Lieutenant CUTTS. Yes, sir; they have, sir.

Senator CLARK. On the submachine guns sold by the Auto Ordnance or the Federal Laboratories you received a royalty on your compensator?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. Have you received any commissions for the sale of that compensator or for the sale of ordnance other than your royalty on the patent?

Lieutenant CUTTS. I may clarify the situation by stating we have never sold any gun of any type whatsoever, nor have we ever accepted any form of gratuity, other than that to which we are justly entitled, in the form of royalties.

Senator CLARK. You have not attempted to obtain commissions?

Lieutenant CUTTS. No, sir; we have not.

Senator CLARK. I call your attention to a letter dated November 17, 1932, signed by you, addressed to Mr. Walter B. Ryan, Jr., which I will ask to have marked with the appropriate exhibit number.

(The letter referred to was marked "Exhibit No. 1204" and is included in the appendix on p. 3737.)

Senator CLARK. Mr. Ryan's address is 20 Pine Street, New York City. Who is Mr. Ryan?

Lieutenant CUTTS. Mr. Ryan is president of the Auto Ordnance Corporation.

Senator CLARK. This letter is headed, "Marine Barracks."

Lieutenant CUTTS. That happened to be my address at that time.

Senator CLARK. "Navy Yard, Philadelphia, Pa., November 17, 1932."

Lieutenant CUTTS. Yes, sir.

Senator CLARK (reading):

> Dear Mr. RYAN. I got in touch with Captain Edson in regard to the Nicaraguan order for 61 guns.

Who is Captain Edson?

Lieutenant CUTTS. He is a captain of the Marine Corps.

Senator CLARK. Was he at that time stationed in Nicaragua?

Lieutenant CUTTS. In Nicaragua; yes.

Senator CLARK. At that time the marines were occupying Nicaragua?

Lieutenant CUTTS. When the marines were occupying Nicaragua; yes.

Senator CLARK (reading):

> I got in touch with Captain Edson in regard to the Nicaraguan order for 61 guns. He informed me that he considered that the new style compensators would be preferable on this order. I did not wire you for he said that he was getting in touch with you by telephone.
>
> Will you kindly send me 1 dozen of the new catalogs when they come out? Also send a few copies to the colonel—

That was your father, was it?

Lieutenant CUTTS. Yes, sir.

Senator CLARK (continuing reading):

> For he will be able to place them at the War College.

Lieutenant CUTTS. That was in regard to the advance landing base. The marines were equipped with guns and they were making a study at the War College.

Senator CLARK (reading):

> I have been thinking over the foreign sales proposition and I have a proposal to make. I would appreciate it if you could see your way clear to extend the same discounts to me on foreign sales that you extend to Federal Laboratories.

Federal Laboratories was the foreign sales agent for the Auto Ordnance Corporation?

Lieutenant CUTTS. That is correct, sir.

Senator CLARK (reading):

> It is not our intention to compete with them. However, we also have many contacts and orders are apt to come through us at any time.

Lieutenant CUTTS. Yes, sir.

Senator CLARK (continuing reading):

> In all probability these orders will come from different sources than those available to Federal Laboratories. I am not saying that our contacts are better than theirs, but in some cases it is only natural that this should be so.

It would be particularly true in Nicaragua, where the marines were occupying the country, and both you and your father were officers of the Marine Corps, wouldn't it?

Lieutenant CUTTS. That would not apply, sir. I beg your pardon, sir.

Senator CLARK (reading):

> But, in any case, the proposition of commissions is the important point. You are familiar with the fact that these have to be passed around on all foreign sales. Naturally, if Federal Laboratories should figure in on a sale in which they have had no part, there are going to be objections. This is all the more true, for in every sale that we make there are going to be more people figuring in on the deal than would be the case if Federal Laboratories were to make the sale direct.

Why would that be true, Lieutenant?

Lieutenant CUTTS. They generally have an agency.

Senator CLARK. Why would more people be figuring in on a deal made through you and your father than through the ordinary sales agency of the Federal Laboratories?

Lieutenant CUTTS. That is because it is the usual thing. If a man approaches you in making a sale, he generally has associates in his own country. There is a purchasing agent and you turn it over to me and he demands his share.

Senator CLARK. What way did you proceed?

Lieutenant CUTTS. We did not proceed.

Senator CLARK. How did you intend to proceed when you were making this proposition?

Lieutenant CUTTS. I do not recall, sir; because it was never carried through.

Senator CLARK (reading):

> This is due to the fact that we have had to first establish our contacts over here and it will be necessary to take care of these contacts.

Lieutenant CUTTS. That answers that.

Senator CLARK. Who were those contacts?

Lieutenant CUTTS. It depends on separate deals.

Senator CLARK. You already having established contacts, who were some of the contacts?

Lieutenant CUTTS. We had one concern in Germany, our own representative there.

Senator CLARK. I will read you this sentence again.

Lieutenant CUTTS. Yes, sir.

Senator CLARK (reading):

> This is due to the fact that we have had to first establish our contacts over here, and it will be necessary to take care of these contacts.

Lieutenant Cutts. That is correct.

Senator Clark. There is nothing said about a firm in Germany here.

Lieutenant Cutts. We had a German contact through a man in this country, who goes over there.

Senator Clark. Who was that?

Lieutenant Cutts. Mr. Besler.

Senator Clark. Who?

Lieutenant Cutts. Besler. He is not in the gun game.

Senator Clark. What is his business?

Lieutenant Cutts. His business is railroad equipment.

Senator Clark. Now, Lieutenant, the paragraph I have just read clearly shows that at that time you were proposing to enter into the sale of Thompson submachine guns abroad, weren't you?

Lieutenant Cutts. We were thinking of it abroad.

Senator Clark. Provided the commission was satisfactory to you?

Lieutenant Cutts. Our agents over there were going to handle them for police guns. We wanted to know what arrangements they could make.

Senator Clark (reading):

> Fortunately, or unfortunately, our contacts are all big ones and they just won't be bothered unless the financial return is commensurate. They are not interested in small stuff.

Who are the big ones?

Lieutenant Cutts. The big one is Neuhaus, Dr. Neuhaus.

Senator Clark. Who is he?

Lieutenant Cutts. Of Germany. He was the chief engineer of A. Borsig & Co.

Senator Clark. So, Lieutenant, your answer was not strictly accurate awhile ago when you said you never proposed to engage in a sale of Thompson submachine guns if the commission was satisfactory?

Lieutenant Cutts. No; I beg your pardon. As I stated earlier, we never sold any guns. After this letter was written, within a week, I reversed my decision and decided not to enter into it in any way, because it might put me in a false position, and since then we have stuck entirely to compensators, and I think the records of any company in this country will bear me out.

Senator Clark (reading):

> You are out to move guns, and I feel confident that we can help you move them just as well as Federal Laboratories—that is, if we can make it worth our agents' while.

Lieutenant Cutts. That is the point.

Senator Clark. In other words, it was a question of commissions.

Lieutenant Cutts. It was a question of the agent.

Senator Clark. The commission being satisfactory, you were willing to engage in the business of moving these guns, weren't you?

Lieutenant Cutts. Well, this was not consummated, sir. It was considered, but it was not carried through.

Senator Clark. I understand it was not consummated. I am getting at your attitude.

> I do not see where Mr. Young will have an objection for he has granted us discounts on all of his equipment and gas that we may sell.

Lieutenant Cutts. Yes, sir; that was never carried out.

Senator Clark. That apparently refers to a previous arrangement with Mr. Young. What was the discount he granted you?

Lieutenant Cutts. I do not recall, sir. It was just an oral statement, that is all.

Senator Clark (reading):

> If an order comes in for guns there will be an order for gas, etc., to go along with it. In other words, he also stands to profit—so it is reciprocal all along the line including compensators.

Lieutenant Cutts. That is our interest, in the compensators.

Senator Clark (reading):

> Next, in regard to Nicaragua. This is a foreign sale and does not come under Federal Laboratories existing agreement for domestic sales. If you know the history of the T. S. M. G.—

What is that?

Lieutenant Cutts. Thompson submachine guns.

Senator Clark. Oh, yes; Thompson submachine gun. [Continues reading:]

> in Nicaragua, you will know that at the beginning the powers that be were against the gun, speaking of the marines. They did not even wish to give the gun a trial on the trails. Fortunately, we had an active agent who gave many demonstrations and after intensive effort on his part he finally brought the necessary high-ranking officers around to his point of view. Then the playing up of the gun in the reports was not accidental. True, the gun did its stuff—but so did the other weapons. Next, our friend was made ordnance officer of the Nicaraguan Government and the initial orders for T. S. M. G.'s for the Nicaraguan Government came through. All the above occurred in Nicaragua.

Who was the officer who was made ordnance officer of Nicaragua?

Lieutenant Cutts. Mr. Bleasdale.

Senator Clark. Who is he?

Lieutenant Cutts. He is an officer in the Marine Corps. I might clarify that, sir, that demonstration at that time. You see, the marines already had these guns. They were bought back in 1926 for the mail guard. There was a question at that point of meeting the bandits with the gun. So the marines took the gun and compensated it and had a superior weapon and used it. Then when Nicaragua broke, the marines went to Nicaragua and took these guns with them. The gun was a fast gun, firing at the rate of 1,200 a minute, and was not at all suitable for military purposes; first, on account of the waste of ammunition; second, due to the lack of accuracy with that high rate of fire.

So we took the gun, and with Auto Ordnance changed the mechanism inside and developed the gun into its present military model, which is a slowed-down gun, firing at the rate of 500 to 600 shots per minute.

Then the Auto Ordnance took the new parts and replaced them for the Government for the old parts. That was what this demonstration referred to, the putting over of the new type of gun, which gave the marines a very valuable weapon on the trails, which they did not have before.

Senator Clark. I will read this again:

> If you know the history of the T. S. M. G. in Nicaragua, you will know that at the beginning the powers that be were against the gun, speaking of the marines. They did not even wish to give the gun a trial on the trails.

Lieutenant Cutts. That was the fast gun.

Senator CLARK (reading):

> Fortunately, we had an active agent who gave many demonstrations and after intensive effort on his part he finally brought the necessary high-ranking officers around to his point of view.

Who was your active agent?

Lieutenant CUTTS. That was Bleasdale.

Senator CLARK. Was he in the Marine Corps at the time?

Lieutenant CUTTS. Yes, sir; he was a compensator man.

Senator CLARK. I say, was he in the Marine Corps at the time?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. So he was occupying a dual position, being an officer in the Marine Corps which was at that time occupying Nicaragua, and at the same time being your active agent for the purpose of getting high-ranking officers, marine officers, to reverse their opinion in regard to the gun.

Lieutenant CUTTS. No, sir; I object to that, sir.

Senator CLARK. All right, I will read the sentence again:

> They did not even wish to give the gun a trial on the trails. Fortunately, we had an active agent—

Who you now say was on the active list of the Marine Corps—

> who gave many demonstrations, and after intensive effort on his part he finally brought the necessary high-ranking officers around to his point of view. Then the playing up of the gun in the reports was not accidental.

Naturally, if your own agent was writing the reports.

Lieutenant CUTTS. He did not write the reports.

Senator CLARK (reading):

> True, the gun did its stuff—but so did the other weapons. Next, our friend was made ordnance officer—

That was your own agent that was made ordnance agent of Nicaragua?

Lieutenant CUTTS. In Nicaragua; yes.

Senator CLARK. At the same time he was on the active list in the Marine Corps?

Lieutenant CUTTS. Yes, sir.

Senator CLARK (reading):

> Next, our friend was made ordnance officer of the Nicaraguan Government and the initial orders for the T. S. M. G.'s for the Nicaraguan Government came through. All of the above occurred in Nicaragua.
>
> You are now getting what will probably be the final order before the Marines pull out. A new government, the Sacasa Government has come into power—a new deal all around.

Does that mean your agent was going out as ordnance officer for the Nicaraguan Government?

Lieutenant CUTTS. I beg your pardon?

Senator CLARK. I say, does this mean that your agent, this officer you mentioned, was going out as ordnance officer for the Nicaraguan Government?

Lieutenant CUTTS. That is correct.

Senator CLARK. And you thought that was something that Mr. Ryan better be advised about?

> A new government, the Sacasa Government, has come into power—a new deal all around. I have asked for commissions on foreign sales in general

which we are able to make. But here is what I plan doing specifically. I want Nicaragua. If you can grant this, I will have our friend make the necessary contacts, probably the Minister of War. We will have the commission on this sale of 61 guns to pave the way and it ought to make a nice incentive for sales to follow.

What does that mean, Lieutenant?

Lieutenant Cutts. It means——

Senator Clark (reading):

> If you can grant this, I will have our friend make the necessary contacts, probably the Minister of War. We will have the commission on this sale of 61 guns to pave the way.

Lieutenant Cutts. Yes.

Senator Clark. How did the commission on the sale of 61 guns pave the way with the Minister of War in Nicaragua for further sales?

Lieutenant Cutts. It paved the way for an active agent down there.

Senator Clark. Was the Minister of War getting any cut out of this commission on the 61 guns?

Lieutenant Cutts. No, sir.

Senator Clark. Paving the way is another technical term we are encountering here. We have had a good many technical terms in the course of this investigation.

> Then, when the marines pull out, the good work will continue. If this is not done—this order will probably be the last except for replacements. On the other hand, if we have the right party down there working for us and receiving a commission—the situation presents an entirely different picture.

Who is the right party to whom you refer?

Lieutenant Cutts. We had none. The point was, it was a suggestion to them to find the right representative there to handle the guns, only to sell to governments. They do not sell to both sides. That is directly to the government on government sales. But this was never done. We decided against it.

Senator Clark (reading):

> Would you kindly draw up the necessary papers similar to the ones you are making up for Young? You see, I really have to have some credentials before I am in a position to go ahead. In this agreement will you kindly include Nicaragua specifically.
>
> Next, if you see what I am working for, and I believe you will, will you kindly let me know what the commission will be on this Nicaraguan order, so that I may go ahead and make my plans?

That was the order that had already been made for 61 guns, was it not, to which those refer? You wanted him to let you know what the commission on the 61-gun order would be.

Lieutenant Cutts. Yes, sir.

Senator Clark (reading):

> The commission should be the same as for other foreign sales.
>
> The time is short before the marines pull out, and there is much to be done by air mail, so the favor of an early reply is requested.
>
> I am looking into the future on this stuff, and I am out to help you sell guns. As you know, our record to date has not been bad, and I am certain that my plan is going to work.

> I forgot to mention, but will you kindly let me know what the commission is on spare parts? The best thing, if possible, would be to send me the dope on commissions on everything that you handle.
>
> With best wishes, I am cordially yours,
>
> R. M. Cutts, Jr.,
> *Cutts Compensator.*
>
> P. S.—I do not know the price of the last guns that you sold to Nicaragua. If they were $147.50, they were at the United States Government price, and they never should have gone out at this price. It cannot be continued after we withdraw—

that is, after the marines withdraw from Nicaragua?

Lieutenant Cutts. Yes.

Senator Clark (reading):

> and the time to make the break is now. I feel that this can be done and save face with the new model compensators providing you stamp the guns as per the Army specifications. The new gun could then be called a new model and the price of $225 could be charged. If the Marine Corps sold the guns to Nicaragua at the United States Government price, I feel that they had no business doing it. At any rate we must let that pass and build for the future. Please let me know the price you are quoting on these guns and the price quoted on the old guns as soon as possible and I shall see if I cannot arrange things on this end. It may be possible to do so without killing the deal. Of course, I shan't do that.

What did you mean by "arrange things on this end", you being in the Marine Corps?

Lieutenant Cutts. The point is this—I might explain that whole paragraph, to clarify it.

Senator Clark. Be very glad to have you do it.

Lieutenant Cutts. You see, there was no commission on the 61 guns. Those are sold through the Marine Corps at the Government price, and the Auto Ordnance, knowing that was no business of the marines, inquired, wanting to know what they could do about it, because they could not afford to sell at that price, or other parts; there was no profit in it. The cost of changing over from the old model to the new absorbed every bit of profit there was. That is why they came and asked me what to do in the matter, and I told them the best procedure would be to sell the new model at the $225 price. This whole thing was for them to get an agent down there to represent them.

Senator Clark. You say the marines had no business doing this?

Lieutenant Cutts. I mean from the Auto Ordnance point of view.

Senator Clark. You say you would undertake to arrange things on this end. Did you take the matter up with your superiors?

Lieutenant Cutts. No, sir; I did not.

Senator Clark. How did you go about arranging things on this end?

Lieutenant Cutts. As a matter of fact, I did not at this time. The Marines left, and I do not know what their final disposition was of the case.

Senator Clark. So that this letter conclusively indicates, Lieutenant, that you had not only an arrangement for receiving commissions on the sale of Thompson submachine guns and the rest of Mr. Ryan's line, but you were undertaking to make a new and specific arrangement, specifically mentioning Nicaragua, for which you were to have the agency?

Lieutenant Cutts. No; we did not carry that through.

Senator Clark. I understand it was not carried through.

Lieutenant Cutts. Yes.

Senator Clark. But at the time you wrote this letter, that is what you were requesting of Mr. Ryan?

Lieutenant Cutts. We considered it was not ethical, and we did not carry it through. Our main interest was with the compensators, and naturally we were interested in seeing the guns move with the compensators. But there is one other point we were very much interested in, and that was to see the guns only go to the Government and not to wrong hands. It would be very foolish to go down there again, as I would probably have to in the service, with many of my friends, and face compensators in the wrong hands.

Senator Clark. So your only interest was in the capacity of an officer of the Marines and as proprietor of this compensator?

Lieutenant Cutts. I can point out that we held out some stuff on foreign governments. We did not want to sell them.

Senator Clark. Lieutenant Cutts, how much knowledge did your commanding officer or superior in the Marine Corps have at that time of your activities?

Lieutenant Cutts. I cannot state that, sir. They knew of the compensator. They knew of our arrangements. There was nothing unfair about it.

Senator Clark. Did they know that Mr. Bleasdale was acting as the agent for the Cutts compensator at the same time he was an officer on the active list of the Marine Corps and at the same time was the ordnance officer for Nicaragua?

Lieutenant Cutts. Bleasdale is a partner. He is not really an agent.

Senator Clark. You refer to him as an agent.

Lieutenant Cutts. I may have; but he is a partner.

Senator Clark. You identified him as an agent when I asked you who he was.

Lieutenant Cutts. He is a partner, that is what he is.

Senator Clark. "Fortunately, we had an active agent." What is fortunate about it? He was engaged actively to sell compensators to the Marine Corps and was interested in the submachine guns.

Lieutenant Cutts. The Marine Corps had the submachine gun. It was a change to a new model.

Senator Clark. I did not say to sell guns, but to overcome the Marine Corps prejudice against it, to move the guns, to overcome their prejudice against the gun. He was active in pushing it.

Lieutenant Cutts. Yes.

Senator Clark. At the same time he was also active in the Marine Corps.

Lieutenant Cutts. Yes. He carried out his duty as he saw fit.

Senator Clark. And at the same time was ordnance officer for Nicaragua.

Lieutenant Cutts. That is correct. This gun was a gun that we believed in from the first and it subsequently proved itself. If we had not believed in it, it would have been another story. It proved itself in Nicaragua and turned out to be one of the most valuable weapons we had down there.

Senator Clark. There evidently is some connection between his being an ordnance officer and the sale of guns.

Lieutenant Cutts. As a matter of fact, I did not conduct any of that.

Senator Clark. I understand that. After saying that fortunately you had an active agent on the ground who obtained these tests and brought the necessary high ranking officers around to his point of view, you called attention to the fact that other weapons showed up very good, too.

Lieutenant Cutts. We did.

Senator Clark. And you say:

> Next, our friend was made ordnance officer of the Nicaraguan Government and the initial order for the T. S. M. G.'s for the Nicaraguan Government came through.

You evidently saw a direct relationship between cause and effect there, between his being made ordnance officer for Nicaragua and the initial order coming through; and then you ask for the amount of commission you are to be given.

Lieutenant Cutts. Possibly, Senator, you have heard about sales letters before?

Senator Clark. We have heard a great deal about sales letters here.

Lieutenant Cutts. That is a sales letter, selling myself to the Auto Ordnance Corporation. As a matter of fact, the Marines equipped the Nicaraguan Army and these sales would have come through in any event.

Senator Clark. You do not mean to say as an officer of the Government you would tell Mr. Ryan something that was not true, in order to sell these things?

Lieutenant Cutts. No; that would have come through anyway, because the Marine Corps would equip them as they equipped themselves, even as to uniforms and everything else.

Senator Clark. Did your superiors have information that you were writing around, dating your letters at the marine barracks and entering into sales arrangements for munitions?

Lieutenant Cutts. The marine barracks, sir, happened to be where I was living. It happened to be my address, just like any other man's address, and every one to whom I have written knows that I was in the marines.

Senator Clark. Did your superiors know of this practice of yours writing from the marine barracks, dating your letters at the marine barracks, in connection with the sale of munitions for your private profit?

Lieutenant Cutts. I cannot say that they did, but I imagine they would, because that is where I was living.

Senator Clark. Who was your superior officer at that time?

Lieutenant Cutts. I beg your pardon?

Senator Clark. On November 17, 1932, when you wrote the letter I just read.

Lieutenant Cutts. I was there definitely. I was stationed there. I lived there.

Senator Clark. I say, Who was your commanding officer?

Lieutenant Cutts. Captain Steel—just a minute, sir. I will think of it. Come back to that later, please. I will think of it later.

Senator Clark. And who was your post commander or station commander?

Lieutenant CUTTS. The commanding officer?

Senator CLARK. Yes.

Lieutenant CUTTS. I was directly under the commanding officer. It was Colonel Evans.

Senator CLARK. I now call your attention to a letter dated, "Marine Barracks, Navy Yard, Philadelphia, Pa., December 7, 1932", addressed by you to Mr. Walter B. Ryan, Jr., which I will offer for appropriate marking.

(The letter referred to was marked "Exhibit No. 1205", and appears in full in the text.)

Senator CLARK. This is about 3 weeks after the other letter that I just read.

Mr. WALTER B. RYAN, Jr.,
New York City.

DEAR MR. RYAN: I have delayed in answering your letter of November 23 for I hoped to be able to tell you definitely when I would be in New York. I as yet do not know just when I shall be able to get away, but I am trying to arrange it for the near future.

The reason I got in touch with you in regard to the foreign-sales proposition was because I did not want you to tie up with Young hand and foot. I have brought up the fact that as far as selling is concerned, the more representatives the merrier.

That would not indicate that you had a week after the previous letter withdrawn your offer?

Lieutenant CUTTS. I don't know the time, but within a very short period after that I decided not to carry it on.

Senator CLARK (reading):

There is a company known as the "Government Service Co." in which I am interested, and I hope they will be able to handle foreign sales of your products. I can't guarantee just what they will be able to do, but in many ways their prospects are just as good as Young's, and in some ways they are better. I shall run over the situation when I see you.

I also have some ammunition lined up for you at a discount. Of course it will be subject to test.

When do you expect your new pamphlets off the press? I have run out of them and am in urgent need of about 2 dozen. These are to go out to about 10 or more countries, and I hope that you will be able to send me new ones. Our contacts are widening constantly, and something ought to pop soon.

Now, what was the Governmental Service Co.?

Lieutenant CUTTS. The Governmental Service Co. is now nonexistent, except as an operating company for compensators. It handles nothing but compensators.

Senator CLARK. What was it at this time?

Lieutenant CUTTS. It was conceived to be able to handle other things besides compensators, anything that was desired, but it was decided, as I informed you, Senator, not to carry it through, so we relegated the whole thing to the discard and handled nothing but compensators and have done so, and the Government Service Co. has never done any business of any sort in anything else.

Senator CLARK. Who owned the stock of the Governmental Service Co.? Was it incorporated?

Lieutenant CUTTS. No; it was not incorporated, sir.

Senator CLARK. Who were the formers?

Lieutenant CUTTS. Mr. Barron in New York, an attorney in New York. He operated in his office, and we used that for the compensator.

Senator CLARK. Were you a partner in the firm?

Lieutenant CUTTS. No; I am not, sir.

Senator CLARK. Were you at the time?

Lieutenant CUTTS. No, sir; I have no active interests outside of the compensators, sir.

Senator CLARK. What was your interest? You say there is a company known as the "Governmental Sales Co.", to which I made reference.

Lieutenant CUTTS. That is correct.

Senator CLARK. And he says they will be able to handle foreign sales for your products?

Lieutenant CUTTS. Correct.

Senator CLARK. How were you interested?

Lieutenant CUTTS. That was the company that Mr. Barron and myself formed but did not operate for the reasons I have given before.

Senator CLARK. But you were a partner in it at the time it was formed?

Lieutenant CUTTS. No; it is now a compensator company.

Senator CLARK. On December 16, 1932, there was a letter from Auto-Ordnance Corporation to Lt. R. M. Cutts, Jr., which I offer for appropriate number.

(The letter referred to was marked "Exhibit No. 1206" and appears in full in the text.)

Senator CLARK. Mr. Ryan wrote you as follows under date of December 16, 1932:

Lt. R. X. CUTTS, Jr.,
Marine Barracks, Navy Yard, Philadelphia, Pa.

DEAR LIEUTENANT CUTTS: Pursuant to our telephone conversation of last night, I hand you herewith our regular export price list of the Thompson submachine gun, spare parts, and equipment. The dealers prices listed thereon are all net to us, f.o.b. Hartford, Conn., and we make shipment only against cash or the equivalent thereof, such as a letter of credit established in our favor in a New York bank. Furthermore, we reserve the right to submit any order prior to its acceptance by us to the State Department at Washington, and reserve the right to refuse to fill any order for any reason whatsoever.

We quote you these prices on a nonexclusive basis for export to some European country other than the following, in which countries we have already exclusive sales arrangements: British Empire, Poland, Esthonia, Latvia, Lithuania, Bulgaria, Turkey, Norway, Sweden, Denmark.

Should the country to which you desire to have shipment made by one of the above mentioned, it is possible that we could make arrangements to be released from our present exclusive agencies. In addition, if the order which you contemplate receiving is a large one, the prices we have quoted you on the enclosed list may possibly be modified to some extent, depending upon the size of the order and special circumstances connected therewith.

Trusting that business will eventuate, and assuring you of our desire to cooperate with you in every way, we are

Yours faithfully,

AUTO-ORDNANCE CORPORATION.

Initialed by Mr. Ryan.

That, Lieutenant, referring to telephone conversation of the night before, and giving you nonexclusive territory in Europe, was dated on December 16, 1932, just a month after the first letter which I read.

Lieutenant CUTTS. Correct.

Senator CLARK. So that apparently up to that time you had not yet concluded it was unethical for an officer on the active list to do this.

Lieutenant Cutts. Mr. Senator, that decision was made before we did any business. I cannot remember exactly the dates. I said it was about—maybe it was about 2 months—but no business was ever consummated, for the reasons I gave.

Senator Clark. But it was a definite sales arrangement——

Lieutenant Cutts. It was a definite sales arrangement.

Senator Clark. Wait until I finish my question.

But it was a definite sales arrangement made by you in a telephonic conversation, confirmed by letter from Mr. Ryan, of New York, to you at the Marine Barracks at Philadelphia, for the sale of Thompson submachine guns.

Lieutenant Cutts. That is correct.

Senator Clark. Did any commission ever result under that?

Lieutenant Cutts. No guns have ever been sold.

Senator Clark. Did you ever get any commission on the guns for Nicaragua?

Lieutenant Cutts. No; we did not want the commission. It was for an agent, and was never done. These guns were sold at the United States Government price.

Senator Clark. You were going to pay an agent and give him a commission on a sale already made, were you?

Lieutenant Cutts. Absolutely, because we had only the compensator and took the royalty on the compensator. When a gun is sold, that means a compensator royalty. We cannot play both ends against the middle.

Senator Clark. The guns had been sold through Mr. Bleasdale—what is his rank?

Lieutenant Cutts. Captain.

Senator Clark (continuing). Through Captain Bleasdale at the time he was agent in Nicaragua. Why give him a new commission on a sale already made?

Lieutenant Cutts. There was no commission.

Senator Clark. You asked for a commission.

Lieutenant Cutts. I suggested we do pay a commission on that in order to establish some sales later down there.

Senator Clark. To whom did you intend to pay a commission on the 61 guns?

Lieutenant Cutts. That commission was never paid, and we were looking around to find out who in the new Sacasa government would be the most reputable man to handle them in that territory.

Senator Clark. You say you were looking for a man in the new Sacasa government?

Lieutenant Cutts. A man with connection with the government.

Senator Clark. Let me see if I understand you correctly.

Lieutenant Cutts. Yes, sir.

Senator Clark. You were going to get a new agent down there and pay him a commission on a sale which had already been made, with which he had nothing to do, in order to straighten him up for future business? Is that correct?

Lieutenant Cutts. I was suggesting that they do that. We had no agent.

Mr. Senator, one of the difficulties in these situations which develop with respect to the Thompson gun is well known, and when the marines come out of a country, every person who thinks he can get it, wants to get the agency for those guns. The same thing occurred in Haiti, and they wrote me and asked me, " How about this gentleman who was down there at the time? " And I said, " No; I thought if they were to do that, they should deal direct with the Haitian Government."

Senator CLARK. What about the commission to the man on the 61-gun order, which had already been made with the Nicaraguan Government through Captain Bleasdale? You asked for a commission on that order. What was to go with that commission? What was to be done with that commission, if it was given?

Lieutenant CUTTS. I believe I answered that in the letter, sir.

Senator CLARK. What was Captain Bleasdale's first name?

Lieutenant CUTTS. Victor.

Senator CLARK. Is he still on the active list of the Marine Corps?

Lieutenant CUTTS. Yes, sir. He has never received any commission on any sales, either.

Senator CLARK. Apparently none of you received a commission.

Lieutenant CUTTS. No.

Senator CLARK. I am trying to find out what you intended to do with the commission if Auto-Ordnance had come through with it, when you had asked for it.

Lieutenant CUTTS. I told them, on page 2 of the letter dated November 17, 1932, Mr. Senator, the second paragraph. I stated that we would have the commission to pave the way for future sales and that would make further contact.

Senator CLARK. That is what I am trying to find out, how paying a man a commission on a sale which had already been made, with which he had nothing to do, is going to pave the way for a future sale. That is connected up with the Nicaraguan Minister of War. I want to know how the paying of a commission on a sale which had already been made, with which he had nothing to do, is going to pave the way for future sales.

Lieutenant CUTTS. Nobody got the commission, and it only amounted to a retainer to awaken the interest of whoever was to be the representative.

Senator CLARK. How much royalty did you get on these various sales?

Lieutenant CUTTS. I do not recall that. They vary.

Senator CLARK. What was the basis of it, if you recollect?

Lieutenant CUTTS. It generally works on a percentage basis.

Senator CLARK. A percentage on the sales price of the gun?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. Captain Bleasdale shares in the royalty?

Lieutenant CUTTS. He shares in our royalty.

Senator CLARK. And did share in the royalty at the time he was ordnance officer for Nicaragua?

Lieutenant CUTTS. Yes, sir; but he did not sell those guns because the Marine Corps was equipped with them, the same as we equipped the first guns they already had. They had already been purchased.

Senator CLARK. I will read to you a letter dated November 8, 1933, from Auto-Ordnance Corporation to you, which I offer for appropriate number.

(The letter referred to was marked " Exhibit No. 1207 " and appears in full in the text.)

Senator CLARK (reading):

Lt. R. M. CUTTS, JR.,
Marine Corps Headquarters, New Navy Building, Washington, D. C.

DEAR LIEUTENANT CUTTS:—

This is at the time you were still in Washington, is it Lieutenant?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. Was that during the period that you were an aide at the White House?

Lieutenant CUTTS. No, sir.

Senator CLARK. You were going right onto this business at the time you were an aide at the White House, were you, Lieutenant?

Lieutenant CUTTS. On the compensator, yes, sir; but the White House has nothing to do with it.

Senator CLARK. I understand that.

Lieutenant CUTTS. Our duties at the White House were social duties only.

Senator CLARK. But you were engaged in this business at the same time you were a White House aide?

Lieutenant CUTTS. I have been engaged in it since we developed the compensator business.

Senator CLARK. That letter reads [reading "Exhibit No. 1207"]:

Lt. R. M. CUTTS, JR.,
Marine Corps Headquarters, New Navy Building, Washington, D. C.

DEAR LIEUTENANT CUTTS: I would appreciate your letting me know at once exactly what steps you have taken in your negotiations for a sale of our guns to Russia. I would also like to know through whom you are attempting to work this and what further steps you contemplate taking in the near future, in view of recent developments between this country and Russia.

I am anxious to have this information with all possible speed, inasmuch as I do not wish to run afoul of your negotiations in certain matters that I am planning to act myself very shortly. Needless to say, what you tell me will be kept in strictest confidence, if you so desire it.

What steps had you taken to initiate negotiations for the sale of Thompson submachine guns in Russia?

Lieutenant CUTTS. Nothing. He was interested in that point because he knew we were thinking of and contemplating selling compensators, and when we sell a compensator, that means the guns they are on, naturally. You show the Thompson machine gun and other types in the catalog, and what the status is in this country. We had made no steps on sales to Russia. He was inquiring.

Senator CLARK. Evidently Ryan got the idea yo uhad negotiations on sales for Russia, and he might run afoul of you unless you acted in agreement. Had you ever told him anything to that effect?

Lieutenant CUTTS. He knew we were looking over the compensator situation with regard to compensator sales, and which needed a different kind of compensator. Our agreement with Ryan figured on a percentage of sales price. If he sold an uncompensated gun or a compensated gun, the sales price would have to be different to take care of it.

Senator CLARK. How would he run afoul of your negotiations by selling submachine guns, unless you were also engaged in selling submachine guns?

Lieutenant CUTTS. I cannot say. He was inquiring in that regard if we were, which we were not. He was requesting information.

Senator CLARK. Coming back to this exhibit, Lieutenant; that date is November 8, 1933?

Lieutenant CUTTS. That is correct.

Senator CLARK. You were a White House aide at that time. You were there, roughly, from March 1933 to September 1934?

Lieutenant CUTTS. Correct. March 1933; I went in at the time the President did, shortly after.

Senator CLARK. What were the matters concerning which Mr. Ryan writes, which you had pending in Russia, that he had to be certain not to interfere with?

Lieutenant CUTTS. He says, "in certain matters that I am planning to act myself very shortly."

Senator CLARK. He says he does not wish to run afoul of your negotiations.

Lieutenant CUTTS. He has used the word "negotiations." I had no negotiations. I was merely investigating the situation.

Senator CLARK. Do you have an agent in Russia?

Lieutenant CUTTS. No, sir.

Senator CLARK. Did you ever have an agent in Russia?

Lieutenant CUTTS. No, sir.

Senator CLARK. What countries did you have representatives in?

Lieutenant CUTTS. A representative in France.

Senator CLARK. Who was that?

Lieutenant CUTTS. Carnot. And a representative in Germany.

Senator CLARK. Who was that?

Lieutenant CUTTS. Dr. Neuhaus. They were our foreign representatives at that time.

Senator CLARK. Now I call your attention to a letter dated November 9, 1933, addressed to Mr. Ryan, headed "Headquarters U. S. Marine Corps, Washington", which I ask be appropriately numbered.

(The letter referred to was marked "Exhibit No. 1208" and appears in full in the text.)

Senator CLARK. That letter reads:

Mr. WALTER B. RYAN,
31 Nassau Street, New York City.

DEAR MR. RYAN: I am enclosing a letter from Dr. Neuhaus, my German representative, in regard to the Schmeisser M. P. for your information, comment, and return.

What is the Schmeisser M. P.?

Lieutenant CUTTS. It is a police pistol similar to the Thompson, shooting a 9 millimeter.

Senator CLARK (continuing reading):

Now in regard to Russia, I interviewed a Mr. D. A. Uger, chief inspector of the Aviation-Automotive Department.

Was that Mr. Uger, the chief inspector of the Aviation-Automotive Corporation?

Lieutenant CUTTS. No; that is Amtorg.

Senator CLARK. That is the purchasing corporation?

Lieutenant CUTTS. That is the purchasing corporation for Russia; yes, sir.

Senator CLARK (continuing reading "Exhibit No. 1208"):

They had no military men over here. Mr. Uger requested that I furnish him with complete information and he would forward it to Russia. He assured

> me that there would probably be no difficulty in having a commission sent over here. This would seem all fine on the surface but there are two important catches.
>
> The first catch is the question of payment and this includes contracts. Their contracts are so drawn that they can generally find a loophole. The second catch is in regard to patents. Russia really recognizes no patents and this means that they will only buy a few. These few will be used as models so they can duplicate. This duplication may take place in Russia or they may have them made in some other country at a very low price.

What was this information that Mr. Uger requested? Was it with respect to compensators or submachine guns as well as compensators?

Lieutenant CUTTS. Compensators.

Senator CLARK. Your talk with Mr. Uger was solely relative to compensators?

Lieutenant CUTTS. As I remember it, that was all.

Senator CLARK. Do you remember having any discussion in that conversation of Thompson machine guns?

Lieutenant CUTTS. No, sir.

Senator CLARK (continuing reading):

> In connection with the above I wish to remind you that the Chinese arsenal at Mukden used to make Thompson guns, complete in every detail. Their only difficulty lay in the fact that they did not have good steel. However, the fact remains that they did cut your Chinese market. The present case is somewhat different inasmuch as Russia can easily obtain Swedish or German steel.
>
> I am taking this matter of patents up with the administration for I feel that it should be incorporated in any treaty arrangements made with Russia.

How did you take it up with the administration?

Lieutenant CUTTS. It was not taken up.

Senator CLARK. What did you mean by saying [reading]:

> I am taking this matter of patents up with the administration for I feel that it should be incorporated in any treaty arrangements made with Russia?

Lieutenant CUTTS. At that time, if you will remember, sir, it was before the recognition of Russia, and it was generally conceded that anything that was developed or sold in this country to Russia, it would be only a matter of time until they would copy everything without making any arrangement with patentees. I thought this, and, in fact, I had made a search of the matter, and I said I was going to take it up, and I intended to, but I did not.

Senator CLARK. You said you intended to take it up with the administration. With whom did you intend to take it up? How were you going to have written insertions in the treaty?

Lieutenant CUTTS. That can be done in the usual manner. There are different ways it could be taken up, but I did not take it up, sir.

Senator CLARK (continuing reading):

> In view of the above, I feel that it might be a good plan if we worked on the Russian situation together. Consequently, it might be well to let me know of your progress to date and your future plans. The situation at best is an extremely ticklish one and will require utmost caution.

What did you mean by that?

Lieutenant CUTTS. Exactly what I said, sir. He was interested in selling guns and I was interested in selling compensators and an exchange of mutual information would probably prove valuable.

Senator CLARK. Why was it "an extremely ticklish" situation?

Lieutenant CUTTS. On account of the patent situation, sir; and, as I mentioned before, it was a question of steels. We do not like to give out what types of steel we are using. Steels are difficult to duplicate.

Senator CLARK (continuing reading "Exhibit No. 1208"):

> If you do not consider it best under the circumstances to work with me, please do not hesitate to let me know. In any case kindly let me hear from you at your earliest convenience.
>
> With best wishes, I am,
> Cordially yours,
>
> (Signed) R. M. CUTTS, Jr.

Lieutenant, how was it possible for an active officer in the Marine Corps to conduct a commercial business venture of this sort?

Lieutenant CUTTS. The law on that, sir, allows an active officer to conduct a commercial business, providing he does not allow it to interfere with his own duties. Of course, naturally, if it interferes with his own duties, his efficiency reports would be marked down accordingly, and he might eventually be cashiered, if he did not do his duty properly, but we are not allowed to represent firms in negotiations with the United States Government.

Senator CLARK. I understand that.

Lieutenant CUTTS. That is correct.

Senator CLARK. What I think is important to this committee, Lieutenant, and what I am asking you, is whether or not there is any regulation of the Marine Corps of any sort that prevents such activities on the part of marine officers, or prevents using marine stationery in conducting commercial negotiations.

Lieutenant CUTTS. We have the rights to these patents, in accordance with the decision of the Navy Department itself, sir.

Senator CLARK. I am not questioning your right to patents at all, but I am trying to find out whether there is any regulation that prevents an officer on the active list from engaging in such commercial transactions and from using the stationery of the Marine Corps in conducting them.

Lieutenant CUTTS. That is a double-barreled question, sir. I will try to answer the first one first.

Senator CLARK. All right.

Lieutenant CUTTS. The first one, with regard to the regulations: As I understand it—and I think I am correct—we cannot represent a firm doing business with the Government. That is the first. The second one is that men in the service, such as musicians, and so forth, cannot play in outside orchestras, thereby putting other people out of a livelihood. Those are the regulations that I know of.

Senator CLARK. Apparently from your first letter, your partner, Captain Bleasdale, was representing a commercial venture in negotiations with the Government, in that you say he was your active agent on the ground, and induced the high-ranking officers of the Marine Corps to reverse the previous judgment on the Thompson submachine gun.

Lieutenant CUTTS. That can be explained more fully. He is our partner. He is not an agent of Thompson. He is a compensator agent.

Senator CLARK. He got a royalty from Thompson on every gun he sold, did he not?

Lieutenant CUTTS. A royalty on every compensator sold.

Senator CLARK. That is what I say; he got a royalty for the Thompson submachine gun on every gun sold to the Government, did he not?

Lieutenant CUTTS. No, sir; he did not, sir. He received a royalty from the compensator. There is a difference there.

Senator CLARK. The compensator was one additional step. The compensator company received the royalty from the Auto-Ordnance Company?

Lieutenant CUTTS. That is correct, sir.

Senator CLARK. Which they, in turn, turned over to the partners of the compensator company?

Lieutenant CUTTS. That is correct, sir.

Senator CLARK. So that it is simply an additional step, but he gets part of the money that the Government pays for furnishing Thompson submachine guns with these compensators on them, does he not?

Lieutenant CUTTS. Correct, sir.

Senator VANDENBERG. Is not that in violation of the regulations?

Lieutenant CUTTS. No, sir.

Senator CLARK. That is what I am trying to get at. That is the important part of this case, from the standpoint of the Government.

Lieutenant CUTTS. We have the right to these patents, and the way it is worded it says that the United States Government can treat with us in regard to purchases of the compensator. In other words, we are at liberty to do business with our own Government on compensators, because we have fulfilled our end of the contract, and so far as that business is concerned, we are the same as any outside corporation.

Senator CLARK. But apparently Captain Bleasdale, Lieutenant, was using his position as an officer in the Marines, and later as an ordnance officer for the Nicaraguan Government, for which the Cutts compensator had a contract. That is your own statement and not mine.

Lieutenant CUTTS. That was, as I said before, the old model gun against the new. The marines had the old model and had improvements put on it. They took the gun there and made it what it is today.

Senator CLARK. Lieutenant, I do not want to take the trouble to read this letter to you again, because I have read it two or three times, but I do not believe any man who understands the English language will understand anything except you are telling Captain Ryan that the high-ranking officers of the Marine Corps were caused to reverse their decision, and that the action in that regard was on the basis that business would be done with the Niacaraguan Government.

Lieutenant CUTTS. That is correct. It is difficult to explain, sir.

Senator CLARK. I think it is.

Lieutenant CUTTS. They had the old-model gun and the old-model gun was ineffective and there was a situation where it could not be used down there. The practice was to turn over the new model to the Government, and all the officers had known of the old model, and there was a difference between the old and new models, and that is what was done, and that gun proved satisfactory to Nicaragua.

Senator CLARK. And at the same time Bleasdale was acting on that, he was also acting in the capacity of an active officer in the marines?

Lieutenant CUTTS. I would not say that, sir.

Senator CLARK. Where is Captain Bleasdale stationed now, sir?

Lieutenant CUTTS. I think he is at sea, sir. As I explained, Mr. Senator, that letter was a sales letter originally.

Senator CLARK. Now, I would call your attention to a letter dated November 17, 1933, just 1 year after the first one, which I read, also written on the letterhead of "Headquarters, United States Marine Corps, Washington", which I offer for appropriate number.

(The letter referred to was marked "Exhibit No. 1209", and appears in full in the text.)

Senator CLARK. That letter reads:

> In replying address: The Major General Commandant and refer to No.
>
> Mr. WALTER B. RYAN, Jr.,
> *31 Nassau Street, New York City, N. Y.*
>
> DEAR MR. RYAN: I wish to thank you for your letter of November 15 in regard to Russia and I wish to reiterate that I would be only too happy to give you a hand, if necessary. In any case I would appreciate being kept informed of your situation as it would be of value to you. You may rest assured that any information you may feel free to give me will be considered as confidential.
>
> When I originally spoke to you in regard to Paraguay and Argentina, I did not know that you had entered into an exclusive license with Federal Laboratories with respect to foreign sales. When you so informed me, I then asked if you could withdraw these two countries in question from the agreement. This request on my part was due to a peculiar situation which seems to exist down there. However, I have seen John Young since our last conference and I decided that the best way would be to take the entire matter up with him as I have never believed in playing both ends against the middle. In view of this, I believe that Young and I will be able to work the problem out together and you may consider my request in regard to these two countries as canceled pending any further advices from me.

This letter was written at the time when Paraguay was engaged in war, was it not?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. And what was the reason which you had in mind for Mr. Ryan granting you a sales contract in Paraguay and Argentina, if he could withdraw them from Federal's exclusive sales contract?

Lieutenant CUTTS. That was in regard to what I informed the Senator before, that we decided not to enter into the business, and Young represented us on compensators.

Senator CLARK. Yes; but your first letter was dated November 17, 1932.

Lieutenant CUTTS. Yes, sir.

Senator CLARK. You said that a week later you concluded that to be unethical as a marine officer to engage in that business.

Lieutenant CUTTS. I did not state that——

Senator CLARK. And yet 1 year later you said:

> When I originally spoke to you in regard to Paraguay and Argentina, I did not know that you had entered into an exclusive license with Federal Laboratories with respect to foreign sales.

This was when Paraguay was engaged in war?

Lieutenant CUTTS. Correct.

Senator CLARK (reading):

> When you so informed me, I then asked if you could withdraw these two countries in question from the agreement.

That was for the purpose of withdrawing it from Federal's agency and giving it to you, was it not?

Lieutenant CUTTS. Yes; but that was a long time prior to this letter.

Senator CLARK (continuing reading):

> This request on my part was due to a peculiar situation which seems to exist down there.

The peculiar situation was a state of war, was it not?

Lieutenant CUTTS. No, sir.

Senator CLARK. That was one peculiar situation?

Lieutenant CUTTS. That was very peculiar; yes, sir; but there is another one.

Senator CLARK (continuing reading):

> However, I have seen John Young since our last conference and I decided that the best way would be to take the entire matter up with him as I have never believed in playing both ends against the middle.

What did you do with this?

Lieutenant CUTTS. I do not exactly recall, but Young represented him down there on Thompson machine guns and with no interest in the compensator end. We at one time contemplated the possibility of compensating guns in that territory, and then we decided against it. In fact, Mr. Senator, all of this which has been brought up before the committee has never occurred, sir. You have all the books of every corporation, I believe, at your disposal, and you will never find that we have accepted a commission on anything but our royalties.

Senator CLARK. Were you ever tendered a commission? I am trying to say that the records which we have before us do not show you have accepted a commission, but they do not show you have ever had a chance to accept a commission, but they have asked for arrangements as to commission. That is a fair statement?

Lieutenant CUTTS. That is a fair statement, before it was changed. We never took it.

Senator CLARK. You had not changed your mind up to November 17, 1933, 1 year after the first letter I read?

Lieutenant CUTTS. It is rather difficult to think back 3 or 4 years.

Senator CLARK. You have the letter right before you.

Lieutenant CUTTS. I have the letter right before me.

Senator CLARK. It is rather conclusive, it seems to me, on that point.

Lieutenant CUTTS. What I was coming to is this: The original agreement I asked about was 'way back.

Senator CLARK. I understand that, but you say here on November 17, 1933, that you would take it up to see if you could get Argentina and Paraguay removed from their exclusive agency.

Lieutenant CUTTS (reading):

> When I originally spoke to you—

that was some time prior, and I do not remember.

Senator CLARK (reading):

> However, I have seen John Young since our last conference, and I decided that the best way would be to take the entire matter up with him, as I have never believed in playing both ends against the middle.

Lieutenant CUTTS. That is correct.

Senator CLARK (continuing reading):

> In view of this, I believe that Young and I will be able to work the problem out together, and you may consider my request in regard to these two countries as canceled pending any further advices from me.

By the "problem" you were talking about the withdrawal of Argentina and Paraguay from the original sales agreement?

Lieutenant CUTTS. I did not say that.

Senator CLARK. If you read the paragraph together, that is the only construction which can be put on it.

Lieutenant CUTTS (reading):

> When I originally spoke to you in regard to Paraguay and Argentina, I did not know that you had entered into an exclusive license with Federal Laboratories with respect to foreign sales.

Senator CLARK (reading):

> I then asked if you would withdraw these two countries—

Argentina and Paraguay, from that exclusive sales agreement.

Lieutenant CUTTS. Yes.

Senator CLARK (reading):

> When you so informed, I then asked if you could withdraw these two countries in question from the agreement—

and then you go ahead and say you would take up this with Young, and do not want to be in a position of playing both ends against the middle.

Lieutenant CUTTS. That was an oral conversation of over a year ago and, as I remember it, the point in question at that time was the selling of Thompson machine guns with compensators, and then the selling of compensators without guns. If there were appointed an agent down there, the agent would be entitled to all sales in that territory. That is natural.

If Thompson sold guns with compensators on, Young would be entitled to the commission, the selling commission on the compensated gun. In effect, the agent would also be entitled to it, and it would bring up a very peculiar situation, and that was with regard to the thing which I mentioned at the time. Young had the agreement to sell compensated guns. I was trying to prevent any conflict in that situation, should we decide to enter into that field.

As I remember it, that was over a year ago, in oral conversation.

Senator CLARK. I call your attention to a telegram signed by yourself, dated Washington, May 16, 1934, addressed to Walter B. Ryan, Jr.

(The telegram referred to was marked "Exhibit No. 1210", and appears in full in the text.)

Senator CLARK (reading):

> Our European agent sails from New York first of next week; all letters must be photostated, bound, and forwarded to be of use. Stop. Your cooperation appreciated by special delivery. Stop. Thought contract finished business along lines discussed; telephoned Colonel the result; he seemed satisfied. Please help. Best regards.

What does that mean? What was the contract you thought was finished?

Lieutenant Cutts. I would like to have a copy of that, if I may. 1934, May. That was our man leaving for Germany, sir.

Senator Clark. Who was that?

Lieutenant Cutts. Von Zastrow.

Senator Clark. Who was he? What was his first name?

Lieutenant Cutts. Fritz von Zastrow.

Senator Clark. Who was he?

Lieutenant Cutts. He was acting as intermediary between me and my agent over there, Dr. Neuhaus.

Senator Clark. Where does he live? Is he a German?

Lieutenant Cutts. Neuhaus? He is German; lives in Berlin.

Senator Clark. No; I mean von Zastrow.

Lieutenant Cutts. Von Zastrow is a German, also, I believe.

Senator Clark. He lives in Germany?

Lieutenant Cutts. No; he lives in this country. He goes back and forth a good deal.

Senator Clark. He was acting as intermediary?

Lieutenant Cutts. Yes, sir; an intermediary.

Senator Clark. To your own agent?

Lieutenant Cutts. Yes.

Senator Clark. For what purpose?

Lieutenant Cutts. I wished to find out what the situation was in Germany in regard to patents and with regard to developments over there, and instead of sending a whole lot of our new literature and things and papers by mail, I was having him take them with him.

Senator Clark. I do not believe you answered my question a moment ago, when I said you had said that you never accepted a commission. It is a fact you never had a chance to accept a commission, although you suggested commissions on several occasions, did you not? You have never been tendered a commission, in other words?

Lieutenant Cutts. That question is not quite—it is a little difficult to answer, the way you have put it.

Senator Clark. You said you never had accepted a commission. I asked you if you had a chance to accept a commission.

Lieutenant Cutts. We could have sold guns had we decided to do so, there is no question about it; but we decided not to do so.

Senator Clark. You apparently had not decided up to November 17, 1933. Were any of these suggestions of yours for commissions ever acted upon favorably by the Federal——

Lieutenant Cutts. That I cannot say.

Senator Clark. In other words, you were never tendered a commission, and therefore did not have a chance to accept the commission?

Lieutenant Cutts. That is like trying to say whether a person is honest. They are not dishonest because they never had a chance to be.

Senator Clark. You say you never accepted one. You were never offered one, were you, just to put it bluntly?

Lieutenant Cutts. No, because——

Senator Clark. You say you never got a commission; I will agree with that, because that is what this correspondence shows.

Lieutenant CUTTS. Yes; that is right. Of course, we never went into the business of selling guns. Had we done so, we would have made commissions—then we would have accepted them.

Senator CLARK. Did you ever have a contract to get a commission on the sale of guns? That is what I am trying to get at.

Lieutenant CUTTS. No, sir.

Senator CLARK. They never acceded to any of your several requests for making that sort of an arrangement?

Lieutenant CUTTS. Yes, sir. They gave us a contract here which the Senator read, dated December 16, 1932, in which we could have sold guns and accepted a commission had we so desired, but we did not sell any guns.

Senator CLARK. That was in their nonexclusive territory?

Lieutenant CUTTS. Yes; in nonexclusive territory.

Senator CLARK. Did you accept that letter as stating a contract?

Lieutenant CUTTS. That amounts to a contract; yes, sir; signed by the president.

Senator CLARK. A contract is an offer that is accepted; an accepted offer?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. An offer to make a contract is not a contract unless it is accepted. Did you ever accept this contract?

Lieutenant CUTTS. If I remember correctly, it was accepted; but we never sold any guns.

Senator CLARK. But you never sold any guns, and therefore were not in any position either to accept or refuse a commission?

Lieutenant CUTTS. But we could have been, because we could have sold if we so desired.

Senator CLARK. I now call your attention to a letter dated Paris, July 19, 1934, signed "George."

(The letter referred to was marked "Exhibit No. 1211" and is included in the appendix on p. 3739.)

Senator CLARK. Who is George?

Lieutenant CUTTS. That is Mr. Besler, I believe.

Senator CLARK. Who is he?

Lieutenant CUTTS. I explained before, sir; he is a railroad man.

Senator CLARK. He was your agent?

Lieutenant CUTTS. No. He is not really an agent. He was a personal friend. He has been interested in the compensator since its inception. He went between us and France.

Senator CLARK. He is not your European representative?

Lieutenant CUTTS. No, sir; he was not. He turned all his interest that he had at first over to Carnot & Neuhaus.

Senator CLARK. It is addressed "Lieutenant R. M. Cutts, Headquarters U. S. Marine Corps, Washington."

> DEAR DICK: The clipping from the Washington Post duly received and most hearty congratulations. When will the big event take place?
>
> Your telegram as follows:
>
> "Conferring Russian next week will 'Carnot result'"—

Lieutenant CUTTS. That is garbled. That message was garbled.

Senator CLARK (reading):

> "'Bigard has six rifle compensators his contract now up for renewal writing Hotchkiss contact Neuhausson compensated Schmeisser thanks.'"

What was that? You say it is garbled. I certainly cannot make any sense of it. What was that, Lieutenant?

Lieutenant CUTTS. He says there he was conferring with the Russians next week.

Senator CLARK. Was this from him to you or from you to him?

Lieutenant CUTTS. This is from him.

Senator CLARK. He says "Your telegram as follows."

Lieutenant CUTTS. Oh, no; that is an answer to him. That is my telegram that was garbled. He cabled me in regard to the situation there, that Bigard's contract had run out and Carnot kept the contract. He continued as our agent.

Senator CLARK (reading):

> The French army is very interested in the application of compensators to submachine guns which they find are practically valueless because of the jump. They are not interested in rifles because of the bayonet nor are they interested in the larger machine guns because they have very firm basis and the compensator would interfere with the flash preventer which they use at night time and which, they feel, is more valuable than the compensator.
>
> They have at least one or more models of every type of machine guns so the thing for you to do is to send immediately a compensator for a Thompson or other similar machine gun, properly labeled as to sizes, bullets, etc. * * * and with complete instructions.
>
> The letters of recommendation, etc., * * * which you sent me are being translated by Carnot, and he decided not to remove anything from the War Department until he had heard from you, so that we could not in any way interfere with the business in case Bigard is to handle it.

Who is Bigard?

Lieutenant CUTTS. Bigard is the man we originally had, and it was up for decision as to the progress he had made there as against Carnot. And Bigard's contract ran out.

Senator CLARK. Did Bigard ever sell anything for you?

Lieutenant CUTTS. No, sir.

Senator CLARK. What is this reference in this telegram? It says, "Bigard has six rifle compensators."

Lieutenant CUTTS. He had them in his possession.

Senator CLARK. They were samples?

Lieutenant CUTTS. Samples; yes, sir.

Senator CLARK (reading):

> I am very hopeful that business can be done in submachine guns within 6 months, and I will try to find out if Bigard was sent any compensators for machine guns, which he did not mention, and he only showed us one compensator which he got out of a cupboard near his desk; perhaps there were others there.

What does George mean by saying he is very hopeful that business can be done in submachine guns? Was he selling submachine guns for you over there?

Lieutenant CUTTS. No, sir.

Senator CLARK. For whom was he selling them?

Lieutenant CUTTS. I do not know anything about that. He thought they were interested in that model. They no doubt purchased——

Senator CLARK. What did he mean by saying he was hopeful that business could be done in submachine guns?

Lieutenant CUTTS. Speaking of compensators.

Senator CLARK. But he does not say "compensators." He says, "I am very hopeful that business can be done in submachine guns."

Lieutenant CUTTS. Meaning compensators for submachine guns. May I explain something, sir?

Senator CLARK. Yes. I would be glad to have you do so.

Lieutenant CUTTS. Thompson guns at the price in this country cannot hope to compete with guns from abroad. It would be impossible to sell a gun made here over in Europe, because they manufacture them from about one-third to one-fourth the price. When he speaks of submachine guns, he is speaking of the generic term of submachine guns, and he means compensators on those guns, because in the paragraph he asks about compensators for that.

Senator CLARK (reading):

> I have spoken about the business of interesting private manufacturers and a Mr. P. Cunisset-Carnot, cousin of Claude, is interested in approaching some of the manufacturers as he is a well-known hunter and sportsman and feels that, even if not used for regular production, a considerable number of guns could be fitted with compensators each year among the limited number of people who go hunting.
>
> Claude Carnot feels that there is so little business to be had in the sporting field that it is scarcely worth going after as compared with the introduction of the unit into the Army for, as he says, what is there to hunt and where?
>
> As soon as he hears from you and is in a position to collect the various material scattered around, we will turn the compensated rifles over to Cunisset, as the Army will be through with them and Cunisset will take them around to gun manufacturers, repair shops, etc. * * *
>
> As to Germany, the Schmeisser gun is in Germany and both Germany and Belgium export rifles. However, as you know, no money in the way of royalty is allowed to be sent out of Germany and therefore it will not do you much good if they manufacture and you will flood the markets of the world with compensated guns on which you will receive no royalty and which will be sold at prices less than is possible with guns manufactured in the United States of America and elsewhere on which you will have royalty paid. I will see Neuhaus next week and talk over the matters with him as he cannot or will not see this face of the matters, being such a loyal German. Have you any patents in Japan, for they will probably sell machine guns, compensators and all, for $6 or $7, if they follow their present practices of selling watches for 15 cents, bicycles with tires for $2, and the equivalent of a Ford automobile for $150. * * *
>
> I may still be here in time to receive the letter which you will write to Claude Carnot and I will be able to help him getting business under way.

Did you have patents in Japan?

Lieutenant CUTTS. No, sir. We did not wish to disclose anything to Japan.

Senator CLARK. In what countries have you taken out patents?

Lieutenant CUTTS. England, France, Germany, Belgium, Czechoslovakia, Italy, Spain, Switzerland, Sweden, and Canada.

Senator CLARK. You said that George —— what was his last name?

Lieutenant CUTTS. Besler.

Senator CLARK. Mr. Besler was not your agent?

Lieutenant CUTTS. No, sir. He is not our direct agent.

Senator CLARK. Was he going to get a commission on anything he sold over there?

Lieutenant CUTTS. Not that I know of; no, sir. He told me he turned it all over to Carnot and Neuhaus. He originally was interested and went over there and appointed those men as our representatives and he turned the business over to them.

Senator CLARK. Did he have an interest in your company at the time?

Lieutenant CUTTS. No, sir.

Senator CLARK. Was he to participate in their commissions? The commissions of the agents he appointed?

Lieutenant CUTTS. I cannot say, sir. I do not know about that.

Senator CLARK. Did you pay his expenses on the trip to Europe?

Lieutenant CUTTS. No, sir.

Senator CLARK. He just went over there as an act of friendship, devoted his time and services to going around appointing agents for you?

Lieutenant CUTTS. He was conducting other business there. He has a large business over there, and was making the trip anyhow. There was really no expense involved.

Senator CLARK. He inquires about the patents in Japan. You do not know whether he was trying to sell submachine guns and compensators to Japan?

Lieutenant CUTTS. What I gather here, he wanted to know if we were protected there, because if we were not, Japan would keep it and flood the world, as he says, the way they have with other things.

Senator CLARK. I call your attention to a letter dated "11 Francis Street, Newport, R. I., August 11, 1934," which I offer for appropriate number.

(The letter referred to was marked "Exhibit No. 1212", and is included in the appendix on p. 3740.)

Senator CLARK. It is addressed to Mr. Bernard S. Barron, 10 East Fortieth Street, New York City.

Mr. Barron was the gentleman whom you mentioned awhile ago that operated the Governmental Service Co.?

Lieutenant CUTTS. Yes.

Senator CLARK. You say, "I would suggest that you get in touch with the quartermaster at Washington."

That is the quartermaster of the Army?

Lieutenant CUTTS. Our quartermaster.

Senator CLARK. The marine quartermaster. [Reading:]

> and request a list of those firms from whom the Marine Corps purchases khaki, also the name of the company to whom a contract was last awarded. You will then be in a position to get bids. Since you are in the Reserve you should be able to get a line on the price if you request same properly.

What does that mean?

Lieutenant CUTTS. That means this, that he knows exactly what the stuff is. This was done so he could get the information.

Senator CLARK. What was he talking about, Lieutenant, that he wanted to get bids?

Lieutenant CUTTS. As I remember that, you see, the way this compensator works is this, that when people come in and ask for things we cannot sell them things. We are not operating that way. We refer them to the proper manufacturers. This man was after compensators. He wanted a compensator agreement. He came into the company and said his contracts were such and such, and so forth, and he had the specifications that he wanted.

Senator CLARK. He wanted to sell compensators?

Lieutenant CUTTS. He wanted to sell compensators.

Senator CLARK. If he simply wanted to sell the compensators, why did you tell him to get in touch with the marine quartermaster?

Lieutenant CUTTS. No, no; this is Barron.

Senator Clark. A list of firms from whom the Marine Corps purchased khaki. What did khaki have to do with the sale of compensators?

Lieutenant Cutts. Among other things, he had the specifications of various articles, and he wanted to know where to get them. So we just inquired to find out where he could fill the order. As I remember, the American Woolen Co. was probably one of the biggest suppliers. At the same time he was asking for compensators. We sold no stuff to him.

Senator Clark. What significance did it have that Mr. Barron was in the Reserve? You say:

> Since you are in the Reserve, you should be able to get a line on the price if you request same properly.

Lieutenant Cutts. That is correct.

Senator Clark (continuing reading):

> As soon as you get this dope, shoot it along to me and I'll try to get the interested parties lined up.

Who were the interested parties?

Lieutenant Cutts. I do not remember what that was about, sir.

Senator Clark. Then it refers to the same thing as in the second paragraph, the paragraph I just read? Just read those two paragraphs again, Lieutenant. [Reading:]

> I would suggest that you get in touch with the quartermaster at Washington and request a list of those firms from whom the Marine Corps purchases khaki; also the name of the company to whom a contract was last awarded. You will then be in a position to get bids. Since you are in the Reserve, you should be able to get a line on the price if you request same properly.

Lieutenant Cutts. Correct.

Senator Clark (reading):

> As soon as you get this dope, shoot it along to me and I'll try to get the interested parties lined up.

What did that mean?

Lieutenant Cutts. As soon as he got that dope? The point is this——

Senator Clark. Who were the interested parties you were going to get lined up as soon as you got this dope?

Lieutenant Cutts. The point was as follows: This man came in requesting this material and wanted to know where to get it. Our purpose in lining up on this was we were finding out who he was and what his contacts were at the time.

Senator Clark. Who were you going to line up? You say as soon as you got this dope you were going to get the interested parties lined up. There is nothing very complicated about lining anybody up if a man simply wants to buy khaki?

Lieutenant Cutts. It is compensators that he wanted.

Senator Clark. Did you tell him to get a list of the last bidders on khaki?

Lieutenant Cutts. That is a separate paragraph, sir.

Senator Clark. It is a separate paragraph, but you go right along. [Reading:]

> As soon as you get this dope—

Lieutenant Cutts. That is correct.

Senator CLARK. It is the same as in the previous paragraph.

> As soon as you get this dope shoot it along to me and I'll try to get the interested parties lined up.

To what use were you going to put the dope, as to who the last bidders for khaki for the Marine Corps were, and the prices at which the khaki was bought, which you told Mr. Barron to get in his capacity as a Reserve officer? When you got the dope shot along to you, what use were you going to make of it in getting the interested parties lined up?

Lieutenant CUTTS. The "interested parties" was this man, meaning we were to have a line on him. You see, the thing was this, it was a stall to find out who this man was at the time. He later turned out to be not what he represented himself to be. As soon as he got this dope, I told him to shoot it along to me. In the meantime, I could have the parties lined up to find out who he was.

Senator CLARK. You wanted to find out who this man was?

Lieutenant CUTTS. That is all.

Senator CLARK. What did you care about the price at which the last contract was awarded?

Lieutenant CUTTS. I did not care.

Senator CLARK. You told Barron to get it.

Lieutenant CUTTS. That is correct.

Senator CLARK. Told him to find out also the name of the company to whom the contract was last awarded.

Lieutenant CUTTS. That is correct.

Senator CLARK (reading):

> You will be in a position to get bids.

Get bids for what?

Lieutenant CUTTS. Bids on the khaki.

Senator CLARK. Did you want bids on the khaki?

Lieutenant CUTTS. Not ourselves; no, sir.

Senator CLARK. You tell him to use his position in the Marine Corps to get the price.

Lieutenant CUTTS. No, sir; he is not in the Marine Corps.

Senator CLARK. I mean, in the Reserve.

Lieutenant CUTTS. No. I said——

Senator CLARK (reading):

> Since you are in the Reserve you should be able to get a line on the price if you request same properly.

Lieutenant CUTTS. Yes. In other words, he knows the form of letter to write. It is public information.

Senator CLARK (reading):

> As soon as you get this dope shoot it along to me and I'll try to get the interested parties lined up.

Lieutenant CUTTS. That is correct.

Senator CLARK. Do you know who the interested parties were?

Lieutenant CUTTS. Yes, sir.

Senator CLARK. Who?

Lieutenant CUTTS. Thompson, on compensated guns, and so forth, and ourselves, who were interested. This gun was over there, as I explained.

Senator Clark. What did Thompson and the manufacturer of submachine guns care about the price at which the last contract for khaki had been awarded?

Lieutenant Cutts. That does not refer to the contract for khaki, sir. It might appear to do so, but it does not.

Senator Clark. That paragraph certainly refers to the preceding paragraph, because you tell him as soon as he gets that dope to shoot it along to you.

Lieutenant Cutts. That is right.

Senator Clark. I now offer in evidence for appropriate number a statement addressed to this committee by Lieutenant Cutts, from Washington, D. C., 2400 Sixteenth Street NW., dated September 5, 1934, to the Special Committee Investigating the Munitions Industry, United States Senate. Subject, the Governmental Service Co.

> 1. The Governmental Service Co. was originally organized on the possibility of acting as purchasing agents for the Government of Santo Domingo.

What contacts did you have in Santo Domingo?

Lieutenant Cutts. I know the president very well.

Senator Clark. Your father was at one time commandant of the Guardia Republique or something?

Lieutenant Cutts. He was, and I have also served there. I know them myself personally. At that time they were having difficulty in purchasing. They wanted the same materials that we have up here.

Senator Clark. What is the name of that organization down there?

Lieutenant Cutts. Policia Nacional.

Senator Clark. Was your father the commandant of the Policia Nacional at the time the Governmental Service Co. was organized?

Lieutenant Cutts. No, sir; he was not.

Senator Clark. How long afterwards?

Lieutenant Cutts. Approximately 10 years.

Senator Clark. After he had been the commandant of the Policia Nacional?

Lieutenant Cutts. Yes.

Senator Clark (reading):

> 2. I soon realized that it would not be proper for me to be actively associated with a company engaged in this type of business.
>
> 3. It was therefore decided to continue the Governmental Service Co. as a "blind."

Lieutenant Cutts. Correct.

Senator Clark. What did you mean by that?

Lieutenant Cutts. Exactly what was brought out in this last letter, sir. When the people come to us asking information, they come to me. They come to New York shopping. They want to buy this, they want to buy that, they want to buy something else. They hear about the compensator and they want to represent us. They come to the Governmental Service Co. Immediately Barron notifies me who they are, what he has learned about them. Then later they come down here, and they come to see me. In the meantime, we have had time to investigate them. All the Governmental Service Co. does is refer them to other people, just like this khaki thing.

Senator Clark (reading):

> 4. All inquiries on equipment of various kinds that came into the Governmental Service Co. have been referred to the proper manufacturing companies. This was necessary in order that the Governmental Service Co. would appear to be operating as a company.

Lieutenant Cutts. Correct.

Senator Clark (reading):

> However, this company has made no sales, nor has it accepted any commissions.

Lieutenant Cutts. Correct.

Senator Clark. We still have this phrase of "accepting commissions."

> A great many so-called "agents" from other countries make inquiries from the Governmental Service Co. During the necessarily involved correspondence resulting therefrom, the true status of the agent is generally quickly ascertained.
>
> The above method of operation acts as a safeguard to prevent Cutts compensators falling into the hands of irresponsible parties.
>
> There is practically no overhead in conjunction with the operation of the Governmental Service Co., inasmuch as it operates from the office of Mr. Bernard S. Barron, 10 East Fortieth Street, New York City, and its operation has proven of value to Cutts compensator only along the lines indicated.

Attached to this is another page, sworn to by Lieutenant Cutts.

Total royalties received from December 1926 to September 1934:

Auto-Ordnance Corporation, $32,514.24.

From Lyman Gun Sight Corporation, $3,292.51, making a total of $35,806.75.

Another page of the exhibit shows a distribution to Victor F. Bleasdale of $1,577; Mary E. Quayle, $2,444; Richard M. Cutts, Jr.. $4,362.60; and Richard M. Cutts of $5,786.40.

What went with the rest of the $35,000, Major?

Lieutenant Cutts. That goes into development expenses, development experimentation, and so forth, improvements, and engineering.

(The letter referred to was marked "Exhibit No. 1213" and is included in the appendix on p. 3740.)

Senator Clark. That is all.

(Witness excused.)

The Chairman. Mr. Gregg.

TESTIMONY OF MR. IRÉNÉE DU PONT AND W. S. GREGG—Resumed

(The witnesses were previously duly sworn by the chairman.)

The Chairman. Mr. Gregg, it has been indicated that there were some matters in connection with the Old Hickory controversy that you wanted to go a little further with.

Mr. Gregg. Yes; I would, Mr. Chairman.

The Chairman. Very well. Let us take this time to do it.

Mr. Gregg. As I said, it would take about a half an hour.

The Chairman. That is all right.

Mr. Gregg. May it please the committee, I have just read over Mr. Storck's report that was filed in September, I believe, 1923. There are some statements in there about expenditures that I never heard of before. I would like the permission of the committee sometime later on during the investigation to file a statement in connection with the matters that Mr. Storck referred to.[1]

It was testified, Mr. Chairman, on Friday—I believe it was Colonel Harris; I am not sure—that there was no other contract entered into that was as broad in its terms as the Old Hickory contract. I wish to state that a contract was entered into in May of 1918 between the Government and the Hercules Powder Co. for the operation of the Nitro plant, and I would like to put a copy of that contract into evidence, because it will be apparent upon reading its provisions that as to reimbursement to the Hercules Powder Co. it is broader than the provisions in the Old Hickory contract. In other words, the Nitro contract provides that the Government shall reimburse the Hercules Powder Co. for expenditures made by it, upon certification by the treasurer or assistant treasurer of the Hercules Powder Co. The Old Hickory contract provided that the du Pont Engineering Co. should be reimbursed upon producing satisfactory evidence of expenditures, while this other contract merely provided that reimbursements should be made upon the certification of the treasurer or assistant treasurer of the Hercules Powder Co.

Mr. Hiss. Mr. Chairman, I do not recall the exact place in the testimony to which Mr. Gregg refers. I do not remember Colonel Harris' testimony to that effect. But if Colonel Harris did testify to that effect, it would seem to me that this would be relevant; otherwise I do not see how this particular contract would be relevant to the testimony so far. Have you the page citation to Colonel Harris' testimony?

The Chairman. The committee excused Colonel Harris for the morning and asked him to be back again at 2 o'clock.

Mr. Gregg. My recollection is that Colonel Harris, Mr. Chairman, testified that he did not know of any other contract as broad in its provisions with respect to reimbursement as the Old Hickory contract.

Mr. Hiss. I do not recall that particular place, Mr. Gregg.

Mr. Gregg. I would like to introduce——

The Chairman. Wouldn't we do well to wait until Colonel Harris returns at 2 o'clock?

Mr. Gregg. Yes, sir; we can check his testimony on Friday.

The Chairman. Then we can see if he has made such a statement and we can go into it at 2 o'clock.

Mr. Gregg. All right, that is satisfactory.

Mr. Hiss brought up the question the other day as to the responsibility of the Delaware Surety Co., which was the surety on one of the bonds of the du Pont Engineering Co.[2]

That is right, is it not, Mr. Hiss?

Mr. Hiss. That is correct.

NATURE OF OBLIGATIONS ASSUMED AND SECURITY FURNISHED BY DU PONT CO. UNDER OLD HICKORY CONTRACT

Mr. Gregg. Let me have that statement, please.

I should like to introduce in evidence a statement of the assets and liabilities, as of January 31, 1918, of the Delaware Surety Co.

---

[1] Under date of Apr. 26, 1935, Mr. Gregg submitted a brief to the committee in relation to Mr. Storck's report. This brief appears in the appendix to Part XIV, p. 3516.

[2] Exhibit No. 1166", Hearings, Part XIV, p. 3217.

Mr. Hiss. May I see that?

Mr. Gregg. Certainly.

(The statement referred to was marked "Exhibit No. 1214," and is included in the appendix on p. 3741.)

Mr. Hiss. May I ask the source of this statement, Mr. Gregg?

Mr. Nielsen. That statement was prepared by the accounting department.

Mr. Hiss. What company?

Mr. Nielsen. Of the Delaware Surety Co. It was their monthly balance statement.

The Chairman. Speak a little louder, please.

Mr. Hiss. This was published in this form, was it, Mr. Neilsen?

Mr. Nielsen. The Delaware Surety, as I recall it, did not publish reports.

Mr. Hiss. How did you secure this particular statement from them?

Mr. Nielsen. The Delaware Surety was a hundred percent owned subsidiary at that time.

Mr. Hiss. Of the du Pont Co.?

Mr. Nielsen. Of the du Pont Co. We had the balance sheet in our files.

Mr. Gregg. Mr. Chairman, Mr. Hiss informs me that he has already introduced in evidence the settlement contract of October 31, 1925,[1] but that he has not put in evidence the memorandum of the Ordnance Department which was prepared at that time. I should like to introduce it in evidence. It is in connection with the settlement contract. I would like to introduce in evidence the memorandum. It is headed, "Memorandum with respect to the settlement of contracts entered into by the United States with the du Pont Engineering Co."

The Chairman. That will be ordered.

(The memorandum referred to was marked "Exhibit No. 1215" and is included in the appendix on p. 3742.)

Mr. Gregg. With respect to the Old Hickory contract, the contract provided that in connection with the construction the United States was to advance $18,750,000 to the contractor. It also provided for an advance in connection with operations of $18,970,000. I have before me a copy of a bond. In other words, the $18,750,000 on construction was advanced to the du Pont Engineering Co.

I have before me a bond to the United States of America by the du Pont Engineering Co., principal, and E. I. du Pont de Nemours & Co., surety, in the penal sum of $20,000,000, covering that advance.

I should like to read the first paragraph of that bond:

> Know all men by these presents, that we, du Pont Engineering Co., a corporation organized under the laws of the State of Delaware, as principal, and E. I. du Pont de Nemours & Co., a corporation, organized under the laws of the State of Delaware, as surety, are held and firmly bound unto the United States of America in the penal sum of $20,000,000, for the payment of which sum, well and truly to be made, we bind ourselves and our successors, jointly and severally, firmly by these presents.

Then it goes on and provides the conditions of the obligation. I should like to introduce a copy of that bond in evidence.

---

[1] Entered as "Exhibit No. 1195", see Hearings, Part XIV, p. 3252.

The CHAIRMAN. Let it be given an appropriate number as an exhibit.

(The bond referred to was marked "Exhibit No. 1216" and is included in the record on p. 3755.)

Mr. GREGG. The same character of bond, Mr. Chairman, was given by the E. I. du Pont de Nemours & Co. in connection with the first advance of $6,318,000 in connection with the operation. Later on there was another advance of $12,636,000. Up to the present time I have been unable to find the executed bond for the $12,636,000, but I am having a search made for it, and I am satisfied that it was entered into.[1]

I should like to introduce a copy of the bond covering the $6,318,000 advance as an exhibit.

The CHAIRMAN. It will be received as an exhibit.

(The bond referred to was marked "Exhibit No. 1217" and is included in the appendix on p. 3756.)

Mr. HISS. Mr. Gregg, in addition to the two bonds which you have just introduced in evidence, was any collateral security of any kind furnished to back up the bonds?

The CHAIRMAN. Any what kind of security?

Mr. HISS. Collateral security.

Mr. GREGG. No collateral security. It was a bond of the E. I. du Pont de Nemours Co., which apparently the Government considered as good or a better bond than the bond of any surety company.

Now, in addition to the bond, there were passed two resolutions by the board of directors of the E. I. du Pont deNemours Co., under which Mr. P. S. du Pont was authorized to execute this first bond of $20,000,000, and in addition to that, to execute a guaranty of performance by E. I. du Pont deNemours Co. that the Du Pont Engineering Co. would carry out all of the terms and provisions of the contract.

I found in the files a form of the guaranty, but it is an unexecuted copy, and I know there is an executed copy somewhere, and I am making an effort to find it.[2] But this form was in the files with the executed contract, and I will show you in a moment that in connection with the Penniman shell-loading contract, the Tullytown bag-loading plant, and the Seven Pines bag-loading plant, that the guaranties were actually executed. Therefore, it necessarily follows that if the Government required a guaranty in connection with the Penniman shell-loading plant, which was a smaller plant than the Old Hickory powder plant, a similar guarantee was executed in connection with the Old Hickory powder plant.

That guaranty provides:

> Whereas, simultaneously with the execution hereof, and at the request of E. I. du Pont de Nemours & Co., the United States has entered into a certain contract with Du Pont Engineering Co., bearing even date herewith, for the erection and operation of a smokeless powder plant at Nashville, Tenn., under which contract the United States will, in reliance upon these presents, amongst other things, advance to said Du Pont Engineering Co. large sums of money for use thereunder (as by reference thereto will more fully appear); and

---

[1] Further data regarding bonds given Government as surety covering advances under Old Hickory Contract was submitted by du Pont Co. to the committee on Apr. 24, 1935, and appears in the appendix on p. 3919.

[2] Under date of Apr. 19, 1935, Mr. Gregg informed the committee that although an exhaustive search of du Pont Co.'s files failed to disclose a copy of the signed guaranty, he is still entirely confident that it was duly executed.

Whereas, E. I. du Pont de Nemours & Co. is the owner of all, or substantially all, of the capital stock of said Du Pont Engineering Co. and has agreed to place its officers, organization, experience, and processes of manufacture at the disposal of said Du Pont Engineering Co. in the performance of said contract and expects to derive certain pecuniary and other benefits from the operation of said plant:

Now, therefore, in consideration of the foregoing, and of $1 to it in hand paid by the United States, receipt whereof is hereby acknowledged, E. I. du Pont de Nemours Co. hereby guarantees to the United States the full and faithful performance of said contract between the United States and said Du Pont Engineering Co. and of each and every part, term, and condition thereof.

Executed in triplicate at Washington, D. C., March 23, 1918.

I should like to introduce a copy of the form of this guaranty. It was executed in triplicate and therefore there must be a copy on file with the Government.

The Chairman. That may be marked with the appropriate number.

(The guaranty referred to was marked "Exhibit No. 1218", and appears in full in the text.)

Mr. Hiss. Will you also reserve that to be asked of Colonel Harris when he returns?

Mr. Gregg. Yes; I will be glad to do that.

Mr. Hiss. Mr. Gregg, you are testifying of your own knowledge that this was executed, or you are testifying from the logical statement already made by you that it is your inference that it must have been executed?[1]

Mr. Gregg. That is correct.

Mr. Hiss. Which was correct—the former or the latter?

Mr. Gregg. In other words, Mr. Hiss, I have not seen the executed copy; therefore, I cannot testify positively that it was executed; but from resolutions of the board of directors and from the fact that it was executed in subsequent contracts, I have every reason to believe it was executed in connection with Old Hickory.

Mr. Hiss. May I call your attention in regard to the bond, to the language of the contract of March 23, 1918, being "Exhibit No. 1168"?[2] I am reading from article 5, paragraph (a), the last sentence:

> Said advances shall be secured as and when made by bonds or other security satisfactory to the contracting officer.

The contracting officer accepted the bond of the du Pont Co. as satisfactory, under that paragraph?

Mr. Gregg. That is correct.

In this connection I would like to introduce a copy of the resolution of the board of directors, authorizing Mr. P. S. du Pont or Mr. E. G. Buckner to execute the bond of $20,000,000, and another resolution of the same date authorizing Mr. P. S. du Pont to execute the guaranty that I just read.

The Chairman. What were the dates?

Mr. Gregg. The date of the resolution is March 27, 1918.

(The resolution referred to was marked "Exhibit No. 1219" and is included in the appendix on p. 3758.)

---

[1] See footnote 2 on p. 3579.

[2] Hearings, Part XIV, p. 3220.

Mr. HISS. Mr. Gregg, I call your attention to what in my copy appears to be article 14 of the contract of March 23, 1918, being exhibit no. 1168, the second sentence:

> The United States shall hold and save harmless the contractor from all loss by accident, fire, flood, explosion, or otherwise, arising or growing out of the construction or operation of the plant.

What is your legal opinion, Mr. Gregg, as to the effect of that in the event of any form of loss that the du Pont Engineering Co. might have suffered in the construction or operation of the Old Hickory powder plant?

Mr. GREGG. I should say that the way that is worded the Government would hold the contractor harmless, as it says, from all loss by accident, fire, flood, explosion, or otherwise; and " otherwise " might mean any other loss than those losses specifically mentioned.

Mr. HISS. Then what possible liability on its bond would the du Pont Co. have, unless the du Pont Co. simply decided not to carry out the contract and so might be sued for breach of contract?

Mr. GREGG. Not to carry out the contract, or the du Pont Co. would be liable on its bond if the Engineering Co. failed in any way to carry out its contract.

Mr. HISS. Would you give me a specific example of the kind of loss that might be covered by the bond and not be reimbursable under this article?

Mr. GREGG. Let us assume that some official of the du Pont Engineering Co. embezzled funds that had been advanced by the Government; then in that case E. I. du Pont de Nemours Co. would be liable. I might think of others.

Mr. HISS. I call your attention——

Senator CLARK. Mr. Gregg, you were in the habit of having your officers and employees who handled money bonded, weren't you?

Mr. GREGG. Yes, sir.

Mr. HISS. Mr. Gregg, particularly referring to that question of Senator Clark's, I call your attention to article 13 of the contract, which authorized the contractor to procure liability insurance to protect it against any and all loss due to claims on the part of employees or the public, and to charge off premiums as part of the cost of construction and operation. You could protect yourself against all loss by appropriate insurance and charge the cost of the premium to the cost of construction, isn't that correct?

Mr. GREGG. That not only covered any embezzlement by any employee or official of the du Pont Engineering Co., but any claims of employees of the du Pont Engineering Co. growing out of accidents at the plants, or any claims by the public against the du Pont Engineering Co. growing out of any claim by any one of the public that was perhaps injured in any way in connection with that contract.

Mr. HISS. Under the example you gave, wouldn't you have been able, under article 13 to have provided against that by insurance, the cost of which would have to be borne by the Government?

Mr. GREGG. It states that we are authorized to procure liability insurance.

Mr. HISS. Furthermore, under article 14 wouldn't you consider that a loss due to embezzlement would be a loss arising out of or growing out of the construction of the plant and would of itself be reimbursable under article 14?

Mr. GREGG. Well, it would be a loss reimbursable under article 13, assuming that liability insurance had been taken out and was sufficient to cover the amount of the embezzlement.

Mr. HISS. Wouldn't it be a loss under article 14 arising out of or growing out of the construction or operation of the plant, as well as a loss which you could have been prompt to guard against by insurance, had you so chosen, under article 13?

Mr. GREGG. In the first part of article 13 you will note that it says to procure liability insurance.

Mr. HISS. Yes, sir.

Mr. GREGG. That is liability, as I construe it, of the du Pont Engineering Co. to any of its employees or to the public, just the same as you would take out liability insurance, automobile-liability insurance, to protect against any claim your employee may make or the public may make in connection with your work under the contract.

Mr. HISS. Then you are inclined to change your first opinion that under article 13 you could have provided against embezzlement by insurance; is that correct?

Mr. PIERRE DU PONT. Mr. Secretary, might I remark there that this bond was given, I believe, at the instance of the Government and not of the company. If they required a $20,000,000 bond, there was some reason to expect a liability on the part of the du Pont Co.

Mr. HISS. That is just the point we are trying to determine, Mr. du Pont, and I was asking Mr. Gregg to give us an example.

Mr. GREGG. On that bond of $20,000,000 that was given to secure an advance of $18,750,000, that was a bond in connection with that advance. In other words, so that the Government would be protected so far as that advance was concerned.

Mr. HISS. To whom was the advance made?

Mr. GREGG. The advance was made to the du Pont Engineering Co.

Mr. HISS. And the du Pont Engineering Co., under article 14, can charge any loss to the Government; in other words, I do not see that the bond given by the du Pont parent company backing up the du Pont Engineering Co. is anything other than a "ring around the rosy."

Mr. GREGG. No.

Mr. HISS. Because for any liability of the du Pont Engineering Co. arising out of the construction or operation it may get reimbursed by the United States. Therefore, any liability on that bond would wash out.

Mr. GREGG. I don't think that necessarily follows. Let us assume that one of the officials of the du Pont Engineering Co. embezzled some money. Article 14 provides that the contractor shall be held harmless from loss by accident, fire, flood, explosion, or otherwise. That, in my opinion, would not be construed by any court to cover a case where an employee of the contractor embezzled a lot of money and the contractor had not protected himself with the proper insurance.

Mr. HISS. Mr. Gregg, isn't that a somewhat more narrow construction of the contract than you were accustomed to make in presenting claims against the United States under this contract?

Mr. GREGG. In presenting claims against the United States under this contract the du Pont Engineering Co. did, I have no doubt, suffer some losses—I do not mean by embezzlement through its officials, or anything of that character—and any losses that it may have suffered, the Government was obligated to reimburse the du Pont Engineering Co.

Now, I think it is pertinent at this point to call attention to the termination clause under the contract.[1] It appears under article 6, paragraph 5. That paragraph provides:

> Should this contract cease or be terminated after the manufacture of powder has begun, the contractor shall be paid by the United States in addition to all costs and expenses incurred to the date of such cessation or termination, the sums provided in paragraphs (*c*), (*d*), and (*e*) of article IV hereof, for all finished powder produced to the date of such termination, and also for all other powder, whether air or water dried—that is, in process of drying or further state of completion. If there shall remain due the United States from the contractor any sum theretofore advanced by the United States, after all reimbursements and payments outlined in this article have been made, such sums shall be promptly returned by the contractor to the United States.

Now, the paragraph just preceding that provides:

> When the operation of the plant shall cease, or upon termination or cancelation of this contract under article XV, the United States shall reimburse the contractor for all costs and expenses of every character and description incurred or made in, or connected with, the construction, equipment, or operation of the plant, or any part thereof, including the cost of all labor, freight, and all apparatus and materials purchased, whether delivered or undelivered, in connection with the construction and equipment of the plant or the operation or contemplated operation thereof; all obligations of the contractor incurred hereunder, outstanding at the date of such cessation or termination or which may thereafter arise, shall be assumed by the United States and the United States shall save harmless the contractor in respect of any liability whatsoever in connection therewith. At the option of the United States, the contractor shall assign or transfer to the United States, or its nominee, all contracts then outstanding entered into by the contractor hereunder.

Mr. HISS. What do you deduce from those two paragraphs you just read, Mr. Gregg?

Mr. GREGG. That the Government agreed to reimburse the contractor for all costs and expenses of every character and description incurred or made under or connected with the construction, equipment, or operation of the plant.

Mr. HISS. Is that an example of a possible loss or liability under the bond? It seems to me that merely goes further to show the duty of the United States to reimburse the Engineering Co. for any losses.

Mr. GREGG. No; I cannot construe the contract in that way. In other words, that paragraph was intended to cover this. We had made certain expenditures under the contract, the purchase of materials, labor, and various other things, and the Government says in this contract:

> For all your cost and expenses in connection with those matters, when this contract is terminated, we will reimburse you.

Mr. HISS. What has that to do with any possible liability of the du Pont Co. on its bond?

Mr. GREGG. If the du Pont Engineering Co. has not properly accounted for the advance payment of $18,750,000 advanced to it by the Government, then the E. I. du Pont de Nemours Co. would be liable, and it was never the intention——

---

[1] "Exhibit No. 1168", Hearings, Part, XIV, p. 3220.

Mr. Hiss. You mean if they had misapplied funds advanced to them by the United States then the du Pont parent company would have been responsible under its bond to the United States?

Mr. Gregg. That is correct.

Mr. Hiss. That is the only liability you can figure under that bond?

Mr. Gregg. Well, under that bond, I say that bond was given to protect that advance of $18,750,000 made by the Government to the du Pont Engineering Co.

The Chairman. Protect it to the extent that you have outlined?

Mr. Gregg. I beg your pardon?

The Chairman. You mean to protect it to the extent you have outlined?

Mr. Gregg. Yes.

Mr. Hiss. It was a guaranty on the moneys advanced by the United States to a 100-percent-owned subsidiary, formed at the request of the du Pont Co. as an agency to carry out the contract that had been made, and the only form of bond that was given was a personal bond of the du Pont parent company without collateral security; in other words, an open I O U note on sums advanced by the United States.

Mr. Gregg. Don't you think that a company with the assets of the E. I. du Pont de Nemours & Co., that its bond to the Government in connection with that $18,750,000 was as good a bond as the Government could get anywhere?

Mr. Hiss. Did it give any more right to the Government in the sense of security than if it had simply turned it over to the du Pont Co. on an open account and reserved the right to sue if it was not properly accounted for?

Mr. Gregg. You mean if the contract had been made direct?

Mr. Hiss. If the contract had been made direct with du Pont, the parent company, and the United States had advanced the money on an open account, would the United States have had any less security than it had under this bond that you have just put in evidence?

Mr. Gregg. Any less security?

Mr. Hiss. Right. Would an open account be less security than this bond?

Mr. Gregg. It would have had this security: That the Government could have then proceeded against E. I. du Pont de Nemours & Co.

Mr. Hiss. And that is what it could do under this bond?

Mr. Gregg. That is what it could do under this bond.

Mr. Hiss. Right.

Mr. Gregg. That it gave for this advance of $18,750,000.

Mr. Hiss. Right; to a wholly owned subsidiary, formed at the suggestion of the du Pont Co. to limit its liability.

Mr. Gregg. I am not sure that the du Pont Engineering Co. was formed at the suggestion of the du Pont Co.

Mr. Hiss. Mr. Gregg, it has already been put in evidence that Judge Laffey, general counsel for the company, requested the War Department to permit them, the du Pont Co., to set up this subsidiary company to limit the du Pont liability. It has already been shown by an exhibit which I think has been entered in this record.

Mr. GREGG. Did he so state, that it was to limit the du Pont liability?

Mr. HISS. That is correct.

Mr. GREGG. My understanding has always been that the reason the du Pont Engineering Co. was set up to keep the accounts separate and apart from the E. I. du Pont de Nemours & Co., so there would be no confusion in the accounting under these contracts between the du Pont Engineering Co. and the Government. I may be in error as to that.

Mr. HISS. I call your attention to a memorandum dated October 21, 1917.[1] It has been entered as an exhibit, but I haven't the number of it.

Mr. GREGG. Did you say 1917?

Mr. HISS. Yes. It is signed by E. A. Hamilton, captain, Ordnance Department. This is all relating to the proposed contract, under the paragraph numbered 4:

> The argument advanced in paragraph 1 of the memorandum—

This refers to Judge Laffey's memorandum, which in the first paragraph of this is described as follows:

> Judge Laffey, counsel for the company, has submitted a memorandum to which this is an endorsement wherein he reviews the reasons advanced by his company in support of their request that they be permitted to form a new company for the performance of this work.

Mr. HISS. The fourth paragraph reads [reading]:

> The argument advanced in paragraph 1 of the memorandum is based upon a desire to limit liability which "lies in the possibility of its being hereafter held that the Ordnance Department exceeded its lawful powers in making this contract, in which event the agent might be held liable on its implied warranty of authority on all contracts signed by it as agent of the Government. The du Pont Co. desires to assume no risk of financial loss to itself."

That is a quotation from Judge Laffey.

Mr. IRÉNÉE DU PONT. You mentioned reasons there. That is one reason. Would you read the others, too?

Mr. HISS. I do not have a copy of Judge Laffey's memorandum. I would be happy if you would introduce it in evidence.[2]

Mr. GREGG. We would be glad to get it for you.

I was stating to you what my understanding was. I might say that that was on October 25, was it?

Mr. HISS. October 21.

Mr. GREGG. That was before I came with the company.

I would like to state for the information of the committee that when this contract of March 23, 1918, was drawn up I drew up that contract with the representatives of the legal section of the Ordnance Department, and when the contract was in complete form, or had been agreed to by both sides, I insisted that it go to the Secretary of War and be approved by the Secretary of War.

Col. Samuel McRoberts was then Chief of the Procurement Division of the Ordnance Department, and I suggested to Colonel Mc-

---

[1] "Exhibit No. 1129", Hearings, Part XIII, p. 2953.

[2] Under date of Jan. 10, 1935, the du Pont Co. supplied the committee with additional data re Judge Laffey's memorandum, which appears in the appendix on p. 3920.

Roberts that we submit this contract to the Comptroller of the Treasury before it was finally signed. I, having had a number of years' experience with the Government, in Government employ, felt that it was advisable to have the views of the Comptroller of the Treasury with respect to this contract before it was executed. I fully appreciated that the Comptroller could not give a formal approval of the contract. That would only come up when matters came before him in connection with reimbursement under the contract, but I did feel that we should have his views with respect to any suggestions that he might make concerning accounting.

Colonel McRoberts asked me to make an appointment with Judge Warwick—by the way, the Comptroller of the Treasury preceded the Comptroller General. In other words, the act was passed about in 1921 creating the office of Comptroller General, which took the place of the former office of the Comptroller of the Treasury.

I made such an appointment. The morning we were to go up there Colonel McRoberts called me up and said, "It is impossible for me to go this morning. A matter has come up that I must attend to today here in the Ordnance Department, and you go over and submit it to the Comptroller."

I told him I did not like to do that, that I would much prefer that he was present. He said, "That is all right. You go over and take it up with the Comptroller."

I did, and I sat down with Judge Warwick and went over the contract, and he did make certain suggestions in the contract with respect to reimbursements, and which were incorporated in the contract. It was then executed and approved by Benedict Crowell, as acting Secretary of War.

Now, I stated that in some of these other contracts of the du Pont Engineering Co., this form of guarantee that I spoke of—not the bond of the E. I. du Pont de Nemours & Co., but the guarantee given by E. I. du Pont de Nemours & Co. for the du Pont Engineering Co. would fortify, I take it, the contracts. I have some of those contracts here showing those forms of guarantee, attached and signed, and I am making every effort now to find the executed guarantee that I feel satisfied was given in connection with the Old Hickory contract.

Mr. Hiss. Mr. Gregg, was the liability of the parent company, E. I. du Pont de Nemours & Co., enlarged over the liability on the bonds by its giving a guarantee, in your opinion?

Mr. Gregg. I do not quite understand what you are driving at.

Mr. Hiss. Was the liability under the bond coextensive with the liability under the guarantee, or was one broader than the other?

Mr. Gregg. They were different things.

Mr. Hiss. Did you cover different eventualities, and, if so, what is the difference?

Mr. Gregg. They covered different eventualities in this way:

The bond which was given by E. I. du Pont de Nemours & Co. for $20,000,000, covering the advance of $18,750,000, covered that advance.

Mr. Hiss. Right.

Mr. Gregg. And the proper accounting by the du Pont Engineering Co. to the Government of that amount of money, $18,750,000.

Mr. Hiss. We have already discussed that. What did the guarantee cover?

Mr. Gregg. As to the guarantee, it was on a different basis, and the guarantee provided that E. I. du Pont de Nemours & Co. guaranteed to the Government the full and satisfactory performance of the contract between the United States and the du Pont Engineering Co. and each and every part and condition and term thereof.

Mr. Hiss. As a matter of law, did that make the du Pont Co. any more liable to the Government of the United States than if it itself had entered into the original contract instead of entering into it through a subsidiary?

Mr. Gregg. If the contract had been made directly between the Government and the E. I. du Pont de Nemours & Co., in my opinion E. I. du Pont de Nemours & Co.'s obligation under this form of guarantee here was no greater than if the contract had been entered into directly with E. I. du Pont de Nemours & Co.

Mr. Hiss. I agree with you fully.

Mr. Gregg. I might say, Mr. Hiss, that in the performance of contracts between E. I. du Pont de Nemours & Co. and the Government, E. I. du Pont de Nemours & Co. got several advances, and in some of those cases, in a few of those cases, they were bonds of the Delaware Surety Co., and in other cases E. I. du Pont de Nemours & Co.

Mr. Hiss. But never an outside surety, as far as you remember?

Mr. Gregg. I think there was one case, but there was only one, something like $600,000, that I found in the files.

Mr. Hiss. In all cases except this one of $600,000——

Mr. Gregg. That is all I recall now, Mr. Hiss.

Mr. Hiss.—the United States accepted the personal responsibility of the du Pont Co., unsecured, for its advances, and for its carrying out of the contract?

Mr. Gregg. I would not say "unsecured." It was secured by all the assets of E. I. du Pont de Nemours & Co.

Mr. Hiss. Would not that be true of any ordinary promissory note or any contract into which it entered?

Mr. Gregg. I think it has a great deal to do——

Mr. Hiss. Was there any mortgage of its assets specifically executed to the Government?

Mr. Gregg. Mortgage of assets?

Mr. Hiss. Yes, sir.

Mr. Gregg. Not to my knowledge.

Mr. Hiss. Therefore, they were not pledged in any sense that they are not pledged under ordinary notes or contracts?

Mr. Gregg. It gave the Government the right to proceed against E. I. du Pont de Nemours & Co. to recover under the bond. I do not mean to say—and I see what you are driving at: Supposing that a small company, with small assets, were to make a contract with the Government—I do not concede for one moment the Government would have accepted the bond of the contractor in that case.

Mr. Hiss. It is very unusual, is it not?

Mr. Gregg. They would have to take into consideration the financial responsibility of the contractor. And I have every reason to assume that that is what the Government did in this case, with all assets of the E. I. du Pont de Nemours & Co.

The CHAIRMAN. Gentlemen, how far are we from finishing?

Mr. GREGG. It won't take but 3 or 4 minutes longer, Mr. Chairman.

The CHAIRMAN. All right.

Mr. NIELSEN. Mr. Hiss, the Delaware surety bonds were the same as the surety bonds of any other company. That was organized as a surety company, and has separate reserves. You cannot classify that as the du Pont Co.

Mr. HISS. Remember, Mr. Nielson, you have already testified that the Delaware Surety Co. was a 100-percent owned subsidiary of the du Pont Co., and the amount of its bond was $250,000 as to the Old Hickory contract, involving advances of $37,000,000, and total expenditures, as it turned out, of $129,000,000.

Mr. GREGG. I might say, Mr. Hiss, that I think it is well understood that in a case of that character, the Government always stands in the position of a preferred creditor. In other words, that the Government's claim would have preference over any other claims against the du Pont Co.

Mr. HISS. That is true of any relationship that the Government might enter into, of any similar contractual relationship that the Government might enter into with any other company.

Mr. GREGG. That is correct.

Mr. HISS. The du Pont Co. is not unusual in that respect.

Mr. GREGG. That is correct. As I pointed out a while ago, it was the assets back of E. I. du Pont de Nemours & Co. that I assume caused the Government to take the bond of E. I. du Pont de Nemours & Co.

I believe on Friday you put in something from Mr. Towler, in connection with Old Hickory.

Mr. HISS. Who was Mr. Towler?

Mr. GREGG. He was chief of the Bureau of Investigation in Nashville.

Mr. HISS. How do you spell the name?

Mr. GREGG. T-o-w-l-e-r.

Mr. HISS. I do not recall it offhand.

Mr. GREGG. I will have to check that testimony and, if it was brought in, then I have a letter which I would like to put in evidence.[1]

There has been some claim that there was no competition in the purchase of materials for the construction and operation of the Old Hickory powder plant. It was brought out on Friday that Mr. R. H. Williams and Mr. Frierson were appointed special counsel to go into the matter in connection with the du Pont Engineering contracts by the Department of Justice.

Mr. Williams and Mr. Frierson called on us for certain information in that connection. I made one trip to Chattanooga in connection with that matter. They then wanted additional information, and I sent Mr. Shafer, who was then chief accountant for du Pont Engineering Co., and who is now dead, to Chattanooga to take up some matters and furnish certain information that Mr. Williams and Mr. Frierson desired.

---

[1] Under date of Apr. 19, 1935, Mr. Gregg advised the committee that he had reviewed the record and found that no testimony concerning Mr. Towler was introduced, and there is therefore no necessity to put in the Towler letter.

I have before me a copy of a letter dated May 10, 1924, written by Mr. Shafer to Mr. Williams, in which he says [reading]:

> Among the subjects which we discussed in reference to the Old Hickory contract, while I was in Chattanooga, was the methods used by the purchasing department in connection with the procurement of material for the Old Hickory projects. You requested me, at the time, to furnish you with evidence which would illustrate that prior to placing orders for materials the purchasing department obtained competitive price quotations. In this connection I am enclosing herewith a special report citing transactions wherein competitive prices were obtained by purchasing department prior to placing orders for materials procured in connection with the Old Hickory powder plant, and a copy of a report dated January 18, 1919, addressed to Mr. David D. Rankin, assistant purchasing agent, which was prepared by Mr. T. W. Harris, one of the purchasing department employees.

He then goes on to point out in this letter a number of materials on which the Government had fixed the price. In other words, he lists them:

> Cement, lumber, pig iron, steel plate, rails, sheet steel, high silicon iron castings, carbon tetrachloride, benzol, methyl alcohol, acetone, toluol, acetate of lime, coal, fuel oil, cotton linters.

I should like to introduce in evidence, because it has been contended that we did not get any competitive bids in connection with that work, a copy of this letter of Mr. Shafer to Mr. Williams, with exhibits attached thereto.

Mr. Hiss. I have no objection.

The Chairman. It will be received and identified properly.

(The letter and attachments were marked, collectively, " Exhibit No. 1220 ", and are included in the appendix on p. 3758.)

Mr. Hiss. May I interrupt you long enough, Mr. Gregg, to offer a letter of October 19, 1918, " subject: Prices of Raw Materials for Old Hickory Plant—Benzol and Alcohol ", written by Major MacCleary, of the Ordnance Department, to the du Pont Engineering Co. I will ask that that be appropriately numbered.

(The letter referred to was marked " Exhibit No. 1221 " and is included in the appendix on p. 3782.)

Mr. Hiss. The third paragraph says [reading]:

> The letter from Mr. Richards does not satisfactorily explain the prices paid for alcohol and benzol, and or why any contract engagements for this material did not include protection against extra declines.
>
> 4. Perhaps you will also agree that it was a little extraordinary to feel that long-term contracts were necessary when material is required by the Government, and when the United States could always commandeer that material whenever necessary or desirable to do so.
>
> 5. This division has not paid over 3.18 on any bookings for benzol which have been made since May.
>
> 6. As regards alcohol, the highest price which the Government has paid is 9.6 cents per pound, and the average is probably about 9.2 cents per pound. Furthermore, it has been generally understood between a sufficient number of alcohol distillers and the United States that the price could not at any time exceed 65 cents per gallon, unless by special agreement, and there is really no excuse for any Government agency to pay more than that price.
>
> 7. In view as above, it is suggested that at least on the raw materials which could be supplied by this division, that your purchasing department be so kind as to submit prices which you can obtain, or permit this division to advise prices at which it can furnish any of the raw materials which it attends.

Mr. Gregg. Do you have a copy of the reply to that?

Mr. Hiss. I have not seen any reply.

Mr. Gregg. I would like to have the opportunity of checking up on that and seeing what reply was made.[1]

Mr. Hiss. Mr. Gregg, was there any competition in the purchase of the material bought from Harrison Bros.?[2] Do you know.

Mr. Gregg. Any compensation?

Mr. Hiss. Any competition?

Mr. Gregg. Oh, competition?

The Chairman. Gentlemen, our 3 minutes have now become 12. I would like to close up this particular matter before we recess, but there must be a recess at this time.

Mr. Hiss. I do not know how much more Mr. Gregg has.

The Chairman. Then let the committee be in recess until 2 o'clock, and we will clear it up then.

(Thereupon, at 12:48 p. m., a recess was taken until 2 p. m. of the same day.)

AFTERNOON SESSION

The committee resumed pursuant to the recess, at 2 o'clock p. m., Hon. Gerald P. Nye (chairman) presiding.

TESTIMONY OF WILLIAM S. GREGG, IRÉNÉE DU PONT, LT. COL. C. T. HARRIS, AND LT. E. M. BRANNON—Resumed

The Chairman. Colonel Harris, in your absence this morning we reverted to the Old Hickory controversy again, and certain points were raised that we had postponed until this afternoon when you could be back.

If you will go on with your statement, Mr. Gregg, where you left off this noon, we will proceed.

Mr. Gregg. Referring to the bonds, I would like to add this as to the bonds that were given by E. I. du Pont de Nemours & Co. to secure the advances to du Pont Engineering Co. by the Government.

Article 2 of the Old Hickory contract provides:

> The United States shall reimburse the contractor for all costs and expenses of every character and description incurred or made in connection with the construction and equipment of the plant or any part thereof, including the pro rata share properly attributable to the construction work under this contract (*a*), and the expenses of maintaining the contractor's offices at Wilmington, Del., or elsewhere, and (*b*) of the salaries and traveling expenses of all officials and employees of the contractor and of E. I. du Pont de Nemours & Co.

That means, of course, the employees of the E. I. du Pont de Nemours & Co. who were devoting their time to, and working on, the Old Hickory contract. As I stated this morning, I am assuming that the reason the Government took the bond of E. I. du Pont de Nemours & Co. for those advances was because the Government felt that it was getting just as good or better security than if a surety company bond had been put up. Surety companies, as we all know, fail. And I am assuming that in taking the bond of E. I. du Pont de Nemours & Co. the Government felt that it was getting good security.

---

[1] Under date of Apr. 19, 1935, Mr. Gregg notified the committee that Major McCleary's letter had never been replied to. See appendix, p. 3921.

[2] Under date of Apr. 19, 1935, Mr. Gregg informed the committee that above subject is dealt with under head of "Subsidiaries" in the du Pont Engineering Co.'s reply of Dec. 4, 1923, to certain inquiries of the War Transactions Section, Department of Justice. See "Exhibit No. 1173", Hearings, Part XIV, p. 3236.

The CHAIRMAN. While security companies have been known to fail, the du Ponts never have been known to fail; is not that the secret of the whole thing?

Mr. GREGG. That is true.

The CHAIRMAN. Of course.

Mr. GREGG. The du Pont Co. has never failed up to the present time.

Furthermore, if a surety bond had been given, there would have been a premium on that bond. Take this bond of $20,000,000. At the premiums charged for surety bonds, the chances are that the premium on that bond might have amounted to $250,000 or $300,000. Under the language of this contract that premium would have been a charge against the Government, because the Government agreed to reimburse the contractor for all costs and expenses of every character and description incurred or made in connection with the construction or equipment of the plant. That same language is also used later in the contract with respect to operation.

As to the form of guaranty, which was discussed this morning, given by E. I. du Pont de Nemours & Co. in connection with a full and faithful performance of the contract between the du Pont Engineering Co. and the United States, I merely used as an illustration embezzlement by employees, but that would apply to any failure on the part of du Pont Engineering Co. If du Pont Engineering Co. deliberately delayed the work and did not use its best efforts to get the plant constructed and into operation as soon as possible, in other words, did not act in good faith, E. I. du Pont de Nemours & Co. would have been responsible under this guaranty, because the language is that—

> E. I. du Pont de Nemours & Co. hereby guarantees to the United States the full and faithful performance of said contract between the United States and said du Pont Engineering Co. and of each and every part, term, and condition thereof.

Mr. HISS. You have not changed your opinion since this morning that the guaranty put no further obligations on the du Pont Co., the parent company, than would have been placed upon it had it itself entered into the construction and operation contract with the United States, have you?

Mr. GREGG. That is my opinion.

Mr. HISS. Any loss arising out of the construction or the operation not attributable to the failure of the engineering company to cairry on the contract would be reimbursed under article XIV, notwithstanding the guaranty, is that correct?

Mr. GREGG. The full and faithful performance by the du Pont Engineering Co. of its contract with the United States.

Pardon me, Mr. Hiss, did you not start to ask me just before adjournment something about the purchase of paints?

Mr. HISS. I thought I had asked it and that you had answered it.

Mr. GREGG. I think you adjourned before I answered.

Mr. HISS. May I restate the question?

Mr. GREGG. Yes.

Mr. Hiss. The question was in relation to an exhibit[1] which you introduced which purported, as I understood your description of it, to show that there had been competition or competitive prices obtained in the case of the purchase of certain of the materials acquired by the engineering company for the construction and operation of Old Hickory.

Mr. Gregg. I did not mean to infer by that that we got competitive bids in every instance, because sometimes that was not feasible. We had to get the material promptly.

Mr. Hiss. But only in the instances referred to in the exhibits you offered, is that correct?

Mr. Gregg. No, I would not say that. Those were only given as illustrations.

Mr. Hiss. But my specific question was, had there been any competitive prices obtained in the case of the paints which were purchased either by Mason & Hanger or by the engineering company, from Harrison Brothers, a subsidiary of E. I. du Pont de Nemours & Co.?

Mr. Gregg. In that connection, Mr. Hiss, may I read a paragraph that was in my brief that I filed before the Joint Board, and which is in evidence?

Mr. Hiss. All right.

Mr. Gregg. This is in connection with the purchase of materials. One of the questions asked by the Department of Justice was this:

> Was it not the rule to purchase materials from Du Pont subsidiaries? Was this not profitable to E. I. du Pont de Nemours & Co.?

This was filed on December 5, 1923.

> Answer: There was no rule relating to the purchase of materials from du Pont subsidiaries. Cotton linters and hull shavings were purchased directly from or through E. I. du Pont de Nemours & Co. or its subsidiary, du Pont American Industries, Inc. The cost of shavings and linters purchased for use at Old Hickory was approximately $4,580,000. No profit resulted to E. I. du Pont de Nemours & Co. or du Pont American Industries, Inc., through the purchase of linters and shavings.
>
> Certain special machinery and equipment were purchased by du Pont Engineering Co. from E. I. du Pont de Nemours & Co., aggregating in value approximately $7,342,926.03, under an arrangement approved by the contracting officer for the United States which provided that E. I. du Pont de Nemours & Co. was to receive a profit of 10 percent above cost. See exhibit 14 hereto attached. However, E. I. du Pont de Nemours & Co. voluntarily waived its rights to the 10 percent profit, and settled with du Pont Endineering Co. on the basis of cost in which was included the amortization of special facilities purchased for producing such machinery and equipment. The total amount of profit waived by E. I. du Pont de Nemours & Co. in connection with this matter was $734,292.60, while the total charges for amortizing facilities was $475,338.99, or a saving to the United States of $258,953.61.
>
> Automobiles manufactured by the General Motors Corporation and its subsidiaries——

Mr. Hiss. Are you getting to the point after a while, Mr. Gregg?

Mr. Gregg. Yes, sir; in just a short time here.

> Automobiles manufactured by the General Motors Corporation and its subsidiaries were purchased from dealers in the vicinity of the several plants operated by the contractor. Such purchases, however, were the result of expediency and on account of the fact that the class of car in question was suitable to the contractor's requirements, deliveries could be made promptly. The indirect profits accruing to E. I. du Pont de Nemours & Co. during its stock owner-

---

[1] "Exhibit No. 1220."

ship in the General Motors Corporation on account of automobiles purchased by the du Pont Engineering Co. were intangible and insignificant.

Mr. HISS. Mr. Gregg, may I interrupt you just a moment there? The parent Company's holdings in General Motors at that time were approximately what percent of the total outstanding stock of General Motors, do you know?

Mr. GREGG. May I let Mr. du Pont answer that?

Mr. IRÉNÉE DU PONT. What is the date of this, 1918?

Mr. GREGG. 1918.

Mr. IRÉNÉE DU PONT. My recollection is, it was approximately one-fourth of the common stock.

Mr. HISS. Then the profits accruing indirectly were one-fourth of the profits to General Motors; whether that be intangible and insignificant or not is a question of opinion.

Mr. IRÉNÉE DU PONT. I think he means by "intangible" another word. He means that it is difficult to compute, or incomputable. I do not think he means they are insignificant.

Mr. GREGG (reading):

> For use at the Old Hickory powder plant, 54 Ford cars were purchased by du Pont Engineering Co. from the Hippodrome Motor Co. and Blackwood Tire Co., and 41 Chevrolet cars were purchased from the Broadway Motor Co., which handled Chevrolet cars, which serves to illustrate that the contractor did not show any preference for cars manufactured by companies in which E. I. du Pont de Nemours & Co. was interested.
>
> The contractor purchased its principal supply of paint and paint ingredients from the Harrison branch of E. I. du Pont de Nemours & Co., although a considerable quantity was bought from competitive manufacturers and vendors who dealt in competitive brands. Purchases of paint, pigments, lead, etc., were made from E. I. du Pont de Nemours & Co. on account of the fact that by reason of the relationship between E. I. du Pont de Nemours & Co. and the contractor, pressure could be exerted to insure priority in deliveries, and paints could thus be obtained when needed without delays. Preference was not given to E. I. du Pont de Nemours & Co. for the purpose of increasing its profits, inasmuch as the demand for such commodities throughout the war period was in excess of the supply, and a ready market was available for all the commercial products then manufactured by E. I. du Pont de Nemours & Co. and its branches. Paints purchased from the Harrison works were invoiced to the contractor at the market price. No profit accrued to E. I. du Pont de Nemours & Co. on account of paint sales to the contractor, as the du Pont Co.'s paint business resulted in a deficit for the year 1918.

Mr. HISS. Mr. Gregg, why does it follow from the sale of paints at market price and the fact that the total paint business of the year showed a loss that the sales at market price to the engineering company were not at a profit? I do not follow that at all.

Mr. GREGG. The reason I pointed that out in that way was to show that there was no profit in the paint business for the year 1918. I did make the positive statement they were sold at the market price, whatever that was at that time. It may have been—I cannot say whether it was or not—that there might have been a profit, a small profit, or some profit in connection with the paints that were sold to the du Pont Engineering Co.

Mr. HISS. And there is nothing to indicate that at least it was not helpful in carrying the overhead of the paint business?

Mr. GREGG. I do not know, Mr. Hiss. That would all depend on the amount of the purchases.

Mr. HISS. Do you know the total quantities purchased by Mason & Hangar and by the engineering company?

Mr. GREGG. No; I do not.

Mr. Hiss. Mr. Gregg, in the statements you have just read no reference is made to the purchase of nitrates. Would you add in your testimony that no profit was made in the transfer of nitrates, that no profit accrued to E. I. du Pont de Nemours & Co.?

Mr. Gregg. My recollection is that the nitrate of soda was furnished by the Government and not purchased by E. I. du Pont de Nemours & Co.

Mr. Hiss. That is not quite responsive, because we have had some testimony about a nitrate of soda pool. Specifically, are you prepared to testify that no profit accrued to E. I. du Pont de Nemours & Co. on the nitrate of soda used in the Old Hickory powder plant? [1]

Mr. Gregg. I do not recall, Mr. Hiss, that that question ever came up before. I will be glad to go into that and furnish you with any information that I can obtain.

In view of the fact that E. I. du Pont de Nemours & Co. owned all of the stock of du Pont Engineering Co., and the further fact that E. I. du Pont de Nemours & Co. had any number of contracts with the Federal Government after the armistice, and the further fact that the newspapers have broadcast that we made enormous profits in connection with Old Hickory, in other words, the implication being that we were out to make a profit all the time and to take advantage of every situation that arose in connection with our contracts with the Government, I would like to state this: That immediately upon the signing of the armistice, E. I. du Pont de Nemours & Co. and du Pont Engineering Co. started in to close down as rapidly as possible. The Old Hickory contract provided that the Government had the right to suspend or terminate the contracts at any time. The E. I. du Pont de Nemours & Co. contract contained the same provisions. And in addition to that, a number of the contracts between E. I. du Pont de Nemours & Co. and the Government contained provisions that gave the company the right to operate for given periods after the receipt of suspension requests.

Mr. Hiss. Is that last clause in the Old Hickory contract, Mr. Gregg?

Mr. Gregg. To operate for a given period?

Mr. Hiss. Yes, sir.

Mr. Gregg. No. My recollection is, it is not. That was in the E. I. contracts.

I had an estimate made up for me several years ago as to the approximate saving to the Government by promptly starting in after the signing of the armistice to close down. In many cases we had to take it up with the Government. We were guided by the Government's directions in the matter. But taking all the contracts into consideration, and I am now speaking of the E. I. du Pont de Nemours & Co. contracts, because as to du Pont Engineering Co. were were governed largely by the instructions from the War Department——

Mr. Hiss. I am not quite clear as to your statement on this point, Mr. Gregg. You are saying that you closed down the Old Hickory plant after the armistice on instructions of the War Department or on your own initiative?

---

[1] Under date of Apr. 29, 1935, Mr. Gregg advised the committee that he found that the du Pont Co., through its subsidiary, the du Pont Nitrate Co., handled the procurement of nitrate of soda for the Government's use at Old Hickory on a cost basis, and made no profit in doing so. He gives further details in his reply to the "Storck Report." See Hearings, Part XIV, p. 3250, appendix, p. 3516.

Mr. Gregg. We did everything we could to close down as rapidly as possible on all five contracts that du Pont Engineering Co. had, but we were in touch with the War Department and receiving instructions from the War Department as to what we should do from time to time and the further work that we should do after the signing of the armistice.

Mr. Hiss. Colonel Harris, at the time the armistice was signed, was it or was it not the general practice of the Ordnance Department to terminate so far as possible all contracts for operation and construction?

Lieutenant Colonel Harris. It was the general policy to shut down the contracts as soon as possible, but there were several determining ideas that had to be given consideration. One was the status of material going through the plants, and the second was whether labor would be thrown out of work. In some cases contractors were directed to proceed a certain length of time before coming to a stop.

Mr. Hiss. Mr. Gregg, on what date was the Old Hickory powder plant turned over to the United States?

Mr. Gregg. April 17, 1919.

Taking the E. I. du Pont de Nemours & Co.'s contracts with the Government, the estimate that was made up for me—and this is not a recent estimate, it was made up in 1926, at a time when the Department of Justice was reviewing the settlements between E. I. du Pont de Nemours & Co. and the Government—not du Pont Engineering Co. but E. I. du Pont de Nemours & Co. and the Government. It is my best recollection that I filed this memorandum with the Department of Justice at that time. A man by the name of Holzhoff was in charge of that review.

The estimate that I gave him, which has never been disputed, so far as I know, and what I said in that memorandum brief, was this:

> It is to be remembered that the du Pont Co., after the signing of the armistice, on November 11, 1918, did not wait for cancelation notices or suspension orders from the Government, but started in to close down operations under its contracts with the Government. Immediately upon the signing of the armistice the company started in to close down operations under its contracts with the Government, and thus saved the Government millions of dollars. The amount thus saved to the Government, through the prompt closing down of plants after the signing of the armistice, amounted to approximately $10,000,000 by discontinuing operations prior to the receipt of suspension requests from the Government. In addition thereto, the company saved the Government approximately $4,000,000 by not taking advantage of rights which it had under certain of its contracts to operate for certain specified periods after receipt of notice of suspension.

Mr. Hiss. May I interrupt you just a moment?

Mr. Gregg. Yes.

Mr. Hiss. Colonel Harris, after the armistice whenever a company voluntarily ceased operations, did the Ordnance Department consider it necessary thereafter to send formal notice immediately to cease operation?

Lieutenant Colonel Harris. I have no recollection on that point, but I feel sure the Ordnance Department would be likely to notify them whether they had stopped or not.

Mr. Hiss. Would you feel there was as much haste to save the Government money where they had already stopped as where they had not?

Lieutenant Colonel HARRIS. Perhaps not; but the obligation would still be on the Government to give them formal notice.

Mr. GREGG. My best recollection is that one suspension request came through as late as April 1919, and others came through during that period from the signing of the armistice until April 1919.

Mr. HISS. Is that all, Mr. Gregg?

Mr. GREGG. I have just a couple of things more and I am through. In connection with the closing down of plants after the armistice, I have here a file which I shall be glad to submit to the committee or Mr. Hiss for his examination, of correspondence between the home offices at Wilmington and the various plants with respect to closing down after the armistice. I am sorry I did not have time to make copies of all this. It is here for your examination if you care to see it.

Mr. GREGG. There has been considerable criticism at various places that appeared in the hearing before the joint board in connection with freight bills, that there were overpayments on freight bills.

In the brief that I filed before that joint board one of the questions asked me by the Department of Justice was: "Was a reaudit or a refund of excessive freight ever made?"

> Answer. A reaudit of freight bills was made by the War Department, and refunds of freight overcharges detected by the contractor or revealed by the Government audit, or disclosed during audit made by the Railroad Administration, were refunded to the contractor, with the exception of overcharges in freight by the N. C. & St. L. Railroad Co., which claims aggregating $26,411.09 were withheld by the N. C. & St. L. Railroad Co. on the ground that its accounts with the United States were in process of adjustment, and it was not considered advisable to pay this amount to the contractor at the time. In this connection, it is well to state the method which was pursued by the contractor in handling freight bills.
>
> Freight bills were presented at the contractor's plants when materials covered by such freight bills were delivered. These freight bills were then noted with reference to the contractor's order numbers for identification purposes. The railroad companies made sight drafts on the contractor at convenient intervals attaching to such drafts statements of the freight bills covered, which drafts were honored by the contractor, and after the freight bills were received from the plants at the Wilmington office, they were checked with the above described statements, and any discrepancies detected were taken up with the railroads for adjustment.

Mr. HISS. May I interrupt you just a minute?

Mr. GREGG. Yes, sir.

Mr. HISS. A great many things you have referred to have not previously been referred to in the testimony. I don't think there is any statement about this freight matter that I recollect.

Mr. GREGG. It is mentioned in Mr. Toll's report that is now an exhibit in this case.

Mr. HISS. What is the exhibit number, if I may learn? I have been trying to locate it. Was that the Storck report?

Mr. GREGG. I beg your pardon, that is the Storck report.[1] [Reading:]

> The railroad companies made sight drafts on the contractor at convenient intervals attaching to such drafts statements of the freight bills covered, which drafts were honored by the contractor, and after the freight bills were received from the plants at the Wilmington office they were checked with the above-described statements, and any discrepancies detected were taken up with the railroads for adjustment. At the Wilmington office of the contractor all freight bills were checked with the material orders or requisitions and the proper ref-

[1] Entered as "Exhibit No. 1190", Hearings, Part XIV, text, p. 3250, appendix, p. 3347.

erences cross noted for record. Each freight bill was given a serial number and entered on registers. The charges were then recapitulated and distributed to the proper ledger accounts. After the contractor had completed the above process the freight bills were transmitted to the contracting officer of the United States who proceeded to audit same in any manner that he desired.

Mr. HISS. Mr. Gregg, may I interrupt you once more? I am sorry, but it is a question of time. The Storck report was not read in evidence and your brief which you are reading is already an exhibit. Isn't that sufficient to clarify the record on that point?

Mr. GREGG. I want to read in this connection—in connection with the freight charges—instructions that we received from the Ordnance Department. This letter is dated April 1, 1919. [Reading:]

From: Cost Accounting Branch, Accounting Section, Ordnance Department, du Pont Engineering Co.
To: du Pont Engineering Co., Wilmington, Del.

1. This is to inform you that it will not be necessary for your traffic department to audit the freight bills on various contracts here, after we have had them, as we have had a ruling from Washington stating that this should not be done by the du Pont Co., as they intended performing this function in Washington.

2. The main point of this is that the traffic department would not know or be able to catch errors of rates that the Government is entitled to on all shipments.

Another letter, dated February 26, 1921, from the Administration Division, War Department, Office of the Chief of Ordnance, Washington, addressed to the du Pont Engineering Co., Wilmington, Del. [reading]:

GENTLEMEN: Under date of April 1, 1919, Mr. C. H. Hartman, supervising accountant in charge at Wilmington, Del., addressed a communication to you as per copy attached, on the subject of freight bills affecting the contracts held by you for the Old Hickory Powder Plant, the Penniman Bag Loading Plant, the Seven Pines Bag Loading Plant, the Tullytown Bag Loading Plant, and the St. Ives TNT plant.

2. It is understood that certain of the railroads, particularly the N. C. & St. L. Railroad Co. and the Tennessee Central Railroad Co., have certain amounts of money which the railroads represent as money refundable by reason of overcharges made by the carriers on shipments of materials to your company in connection with Government work. It is understood that the carriers concede the propriety of returning these sums and that the money is now available.

3. You will therefore disregard the communication of April 1, 1919, above referred to in the following respect: You are authorized to accept for the United States the sums of money due upon shipments made to the Government plants in question. You will not be required to audit the amounts in order to determine the particular shipments upon which the conceded overcharges were made.

May it please the committee, in connection with the audit, may I say this, and then I am through. Reference has been made in the testimony to Major Farr, Colonel Anderson, Mr. Williams, and Mr. Frierson. I would respectfully request, if they have not already been summoned, that Mr. Williams and Mr. Frierson, Colonel Anderson, and Major Farr be summoned before the committee, and I think it might be well in that connection—in other words, Mr. John C. Jones was head of the Ordnance Claims Board in Philadelphia, and it was from his office that a re-audit of the du Pont Engineering Co. contracts was started in October 1919 and he was there until that Claims Board was abolished—for the committee to summon Mr. John C. Jones.

The CHAIRMAN. If any of those who have been named want to be heard, the committee will hear them.

Mr. Gregg. I beg your pardon?

The Chairman. If any of those you named want to be heard, the committee, of course, would be inclined to hear them.

Mr. Gregg. It may be that some of them would not want to appear voluntarily, or they might appear if the committee requested them to appear. Of course, I do not like to go to these people and ask them to appear. It does not seem to be within my province.

The Chairman. You had an exhibit here this morning or undertook to develop something this morning that we asked you to withhold until Colonel Harris could be here. You were introducing it on the assumption that Colonel Harris had made an assumption——

Mr. Gregg. That was a copy of the Nitro operating contract.

The Chairman. Yes.

Mr. Gregg. I have had the testimony of Colonel Harris examined and I was in error in my recollection that he had stated that someone had stated that that was a broader contract—that the du Pont contract for the construction of Old Hickory was a broader contract than any other contract the Government had entered into. I now understand that what Colonel Harris testified to was that it was the largest contract.

Mr. Hiss. Then you withdraw the offer of that particular document as an exhibit?

Mr. Gregg. I withdraw it for the time being, unless something comes up in the future.

Mr. Hiss. Mr. Gregg, can you inform the committee from which source the sulphur that was used at Old Hickory was purchased? Do you know the name of the supplier of sulphur? [1]

Mr. Gregg. I can get it for you. I will be glad to.

Mr. Hiss. Also from what source the linters were supplied.

Mr. Gregg. The linters were supplied by the du Pont American Industries, Inc. It was acting as agent for the Government in the purchase of cotton.

Mr. Hiss. You have already adopted the statement in your brief to the extent that you testified that no profit was derived by du Pont on the sale of those linters; is that correct?

Mr. Gregg. Linters or shavings, hull shavings.

Mr. Hiss. Is that all, Mr. Gregg?

Mr. Gregg. I don't know whether the committee desires to hear me or not on this point: It does seem to me that it is important, because the question of the cost of Old Hickory, the construction and operation, has been brought out here, and I do have a comparison of the cost of construction of Nitro and Old Hickory, taking Old Hickory on the same basis as Nitro. Nitro was a five-unit plant and Old Hickory was a nine-unit plant. That appears in one of the exhibits attached to the brief that I filed at the hearing before the joint board. The brief, as we agreed the other day, would go in as an exhibit, but the exhibits would become a part of the record; is that correct?

---

[1] Under date of Jan. 9, 1935, Mr. Gregg informed the committee that the sulphur used at the Old Hickory plant was purchased from the Freeport Sulphur Co., and the sulphur was shipped from Freeport, Tex. Under date of Apr. 18, 1935, he supplemented this statement as follows: "The greater part of the sulphur used at Old Hickory was procured from the Freeport Sulphur Co. as stated. A minor but still considerable portion, however, was bought from the Union Sulphur Co., of Sulphur Mines, La., and shipped from that point."

Mr. Hiss. Not to be printed, but to be part of the public record of the committee.

Mr. Gregg. I do have a statement here that covers the comparison between Old Hickory and Nitro, as to the cost.[1] If the committee will bear with me, I would like to state it.

The Chairman. If you have that comparison prepared, why not insert it in the record?

Mr. Gregg. If I may be permitted to do so, then I will make a copy of this and insert that as an exhibit.

The Chairman. That will answer the purpose.

Mr. Gregg. As well as another comparison as to——

Mr. Hiss. May I interrupt just a minute? Will you also submit at the same time an estimate of the cost of the Carney's Point plant which the du Pont Co. had just built? That also had a million pounds a day capacity at this time; is that correct?

Mr. Irénée du Pont. That was the manufacture of powder, but it did not make the gun cotton. That was at Hopewell. But the combination of the two, Carney's Point and Hopewell, might be sufficient.[2]

Mr. Hiss. Can we have that?

Mr. Irénée du Pont. I think that can be prepared, but I don't think it can be prepared in a few minutes.

Mr. Hiss. No; I understand.

Mr. Gregg. If the committee will just give me 2 minutes and stop me when that time is up, I will be obliged.

The estimate of the date of completion as given in the contract of March 23, 1918, for Old Hickory's first unit was August 15, 1918. It was completed July 2, 1918.

The estimate for the second unit was September 15, 1918, and it was completed July 24, 1918.

The third unit, the estimated date of completion of the contract was October 15, 1918. It was completed August 26, 1918.

The fourth unit, estimated date, November 15, 1918. It was completed September 3, 1918.

The fifth unit, estimated date, December 15, 1918, completed September 24, 1918.

The estimated date on the sixth unit was January 16, 1919. It was completed November 11, 1918.

For the next unit the estimated date was February 15, 1919, and it was 98 percent completed on November 11, 1918. That date is the same as the armistice.

Mr. Hiss. What number was that last unit?

Mr. Gregg. I beg your pardon?

Mr. Hiss. What number was that last unit? Out of the total of nine units, how many was that?

Mr. Gregg. The February 15, 1919?

Mr. Hiss. The one that was 98 percent completed on Armistice Day.

Mr. Gregg. That was the seventh unit.

Mr. Hiss. The seventh unit?

---

[1] Statement of comparative costs of Old Hickory and Nitro appears in the appendix on p. 3922.

[2] Statement of comparative costs of Hopewell and Carney's Point appears in the appendix on p. 3924.

Mr. GREGG. The estimated date was February 15, 1919, and 98 percent was completed on November 11, 1918.

Mr. HISS. No more than seven units were ever completed; is that correct?

Mr. GREGG. The estimated date for the eighth unit was March 15, 1918. It was 60 percent completed on November 11, 1918.

Mr. HISS. Was that thereafter completed or was work suspended?

Mr. GREGG. It is my understanding that it was suspended. Is Mr. Banker here?

Mr. BANKER. Yes.

Mr. IRÉNÉE DU PONT. I can answer that question. I know that all that construction work was suspended.

Mr. HISS. It was suspended?

Mr. IRÉNÉE DU PONT. Yes.

Mr. GREGG. Mr. Banker, the seventh unit, according to the report made to me, was 98 percent completed on November 11, 1918. The eighth unit was 60 percent completed November 11, 1918, and the ninth unit was 60 percent completed on November 11, 1918. Did you after the signing of the armistice complete those units?

Mr. BANKER. No, sir. They were stopped just as quickly as you could handle the labor situation.

Mr. HISS. Whose estimate of completion were you reading from? An estimate prepared by the Ordnance Department or prepared by the du Pont Co.?

Mr. GREGG. No; it was an estimate prepared by the du Pont Co. from the history that was written up by Mr. Jackling of the Nitro plant.

Mr. HISS. I meant whose estimate as to the time within the various units were expected to be completed; who made those estimates when they were made, Mr. Gregg?

Mr. GREGG. You mean when the contract was entered into?

Mr. HISS. The estimate as to when completion of the various units would be had.

Mr. GREGG. It was a matter arranged between the du Pont Co. and the Ordnance Department as to the best guess when those units would be completed.

Mr. HISS. Were not those estimates based merely upon the du Pont Co.'s own estimates as to when they would be completed?

Mr. GREGG. I am not competent to answer that.

Mr. IRÉNÉE DU PONT. I am sure those are the du Pont Co.'s estimates. I don't think those were made in March. I think those are the same estimates that were made in January, when the contract was started. But it is interesting to know in October, when we signed the first contract with the Government, which was later canceled by Secretary Baker, the estimated time at which the different units would go into production, giving the first unit in July 1918 and carrying over to April 1919, the facts are that the first unit did produce powder, beginning on the 1st of July 1918, so in spite of delays, by rapid work, that progress was made.

FURTHER TESTIMONY AS TO NATURE OF AUDIT OF OLD HICKORY CONTRACT

Mr. IRÉNÉE DU PONT. Could I get back to the matter of summoning the witnesses on the audit? I understand these gentlemen were in charge of the different audits of the company's work; that was referred to in the testimony last week, I believe it was, that no complete audit was ever made of Old Hickory. I also heard testimony, I think, that the Government had spent a million dollars in auditing this, and I think in view of the fact these four different men who were referred to had charge of the auditing, if it is still incomplete after spending a million dollars on this work, I think it would be rather interesting to know why. Certainly, if our auditing cost million dollars on this job, we could have never gotten our overhead down as low as it was anticipated in the contract.

Mr. Hiss. Colonel Harris, can you enlighten the committee on this matter that Mr. Irénée du Pont has just raised?

Lieutenant Colonel Harris. I haven't any knowledge on this subject, other than what I have given from looking up the records.

Mr. Gregg. As to the nitro plant——

The Chairman. For the information of the committee again, do those records reveal that any audit was made by the War Department?

Lieutenant Colonel Harris. I don't know what the records do reveal, because I have never seen them. They were given to the Department of Justice. Mr. Hiss has them in his possession now.

Mr. Hiss. They have already been put in evidence.

Lieutenant Colonel Harris. But whether those are all of the records of the audit existing, I do not know, and I don't think anybody else knows.

Mr. Gregg. Might I ask Colonel Harris a question?

The Chairman. Yes.

Mr. Gregg. Colonel Harris, I notice you produced some records of this audit this morning and you said that was all you could find. Has anyone informed you there are any of those records stored at Curtis Bay?

Lieutenant Colonel Harris. We are familiar with what is stored at Curtis Bay, but those records are apparently not there.

Mr. Gregg. I don't know. Two or three weeks ago someone told me that those records in connection with the reaudit were stored over at Curtis Bay.

Lieutenant Colonel Harris. Mr. Chairman, I might say in regard to war records, the war records are so voluminous they are stored at every Government establishment right now, portions of those war records. I don't know how available those sources as to material have been, but they have all been opened to your investigators.

Mr. Hiss. No more has been found on this subject than has already been put in.

Mr. Gregg. Now, as to Nitro and the completion dates, the estimated date of the first unit was July 1, 1918, and it was completed September 1, 1918.

On the second unit the estimate was August 1, 1918, and it was completed October 5.

On the third unit the estimated date was September 1, 1918, and it was completed November 9, 1918.

The estimated date on the fourth unit was October 1, 1918, and it was 65 percent completed November 15, 1918.

The estimated date on the fifth unit was November 1, 1918, and it was 45 percent complete on November 15, 1918.

Just one word, and I am through. We have stored at Wilmington, Del., records in connection with the du Pont Engineer Co.'s contracts, which I am informed consists of about 400 boxes, about 3 feet long, about 2 feet deep, and 2 feet wide, and in addition to that there are several hundred folders or binders.

I just merely state that to show that we have retained those records.

Mr. HISS. Colonel Harris, you were asked the other day if you could find out for the committee what contractor received the contract for the building of the Nitro plant to which Mr. Gregg has just referred?

Lieutenant Colonel HARRIS. It was the Thompson-Starrett Co. for the building of the plant and the Hercules Powder Co. for the operation of the plant.

Mr. HISS. I would like to say for the record at this time that it does appear that Mr. T. Coleman du Pont was one of the directors of the Thompson-Starrett Co. in 1918 and 1919, according to the New York City directory of directors.

Mr. IRÉNÉE DU PONT. Mr. Hiss—I don't know what your proper title is—Mr. Coleman du Pont was not a stockholder or officer of the du Pont Co. The fact he had the name "du Pont" might be misleading to the press in that connection.

Mr. HISS. My information is that Mr. T. Coleman du Pont's stock holdings have already been requested for the period of——

Mr. IRÉNÉE DU PONT. I say, in 1918 he was not.

Mr. HISS. Colonel Harris, I should also like to call your attention to another letter referring to a question that we raised before, as to Mr. Stettinius being the assistant secretary who had charge of the Old Hickory contract. This is a letter of February 26, 1925, from Colonel O'Shaughnessey, then Major O'Shaughnessy, to Mr. Andrews, of the war transactions section of the Department of Justice, reading:

> MY DEAR MR. ANDREWS: Complying with your oral request, I inclose herewith a history of the transactions which led up to the making of the contract with the du Pont Engineering Co.
>
> For your information, I may add that at the time I prepared this paper I was more concerned with the determination of reasons for the delay in getting into production than with the technique of the contract itself. My conclusion was that, under the contract, the du Pont Engineering Co. was authorized to incur any expenses in connection with the building of the plant which it deemed necessary, and that the company was to be reimbursed for all such expenditures, even if it should later develop that mistakes had been made. I remember very particularly being impressed with this view by the statement of Mr. Stettinius, made at the meeting with the Secretary of War when the contract was finally approved.

I would like to offer that for the record.

(The letter referred to was marked "Exhibit No. 1222", and appears in full in the text.)

Mr. HISS. Mr. Irénée du Pont, you testified the other day—I think it was in answer to a question from Senator Vandenberg—that in your opinion the Old Hickory contract was primarily a service contract, the giving of the du Pont Co.'s services, engineering ability, and experience to the Government, and should not be regarded as an investment-basis contract; is that correct?

Mr. IRÉNÉE DU PONT. Senator Vandenberg made that statement, and I assented to it in part.

Undoubtedly, the capital involved in the Engineering Co. itself was only nominal and consequently was not the funds which produced the profits. That fund alone put in a savings bank or in any ordinary investment could hardly be expected to yield any such profit as came to the du Pont Engineering Co. as it was in proportion to the funds handled. The bond which we gave to cover the advances or any surety that was given was good, because the credit of the company was behind it, and that ran in one case to $20,000,000, and some other bonds that have not been disclosed. So that the capital really used by the company in its credit form was really more than $5,000.

Mr. Hiss. In spite of the advance made by the Government?

Mr. Irénée du Pont. I say that advance was obtained on the du Pont bond, and that was accounted for. To that extent I stand by the Senator in what he says in regard to it being a service proposition.

Mr. Hiss. I call your attention to the letter just introduced, as well as the clause of article 14 of which Mr. Gregg and I discussed this morning, to the effect that even mistakes of the du Pont Co. were meant to be reimbursable, not to come out of the bond of the guaranty.

Now, Mr. du Pont, one further question: Is it not true that the du Pont Co., the parent company, furnished certain engineering services to the Engineering Co.? In addition to supplying personnel who were put on the pay roll of the Engineering Co., did not the parent company furnish additional administrative and engineering service?

Mr. Irénée du Pont. I presume so.

Mr. Hiss. Were not charges made against the Engineering Co. and reimbursed by the United States Government for those services?

Mr. Irénée du Pont. I think for specific performance they would be charged.

Mr. Hiss. So when we refer to this as a service contract, with one million nine hundred thousand profit plus for the services, it is pertinent also to state that specific compensation was made for services actually performed when they were performed. Have you a statement, Mr. Gregg, of how much the du Pont charges were?[1]

Mr. Gregg. Yes; we have that in the records. How much was that?

Mr. Hiss. If you will supply that, it will just about complete the case on that point.

One other point, Mr. Irénée du Pont. It has already been brought out that only seven units were completed. Do you happen to know what the capacity per day in pounds was on November 11; how much was being produced at that time?

Mr. Irénée du Pont. I think the first five units were in full production, 500,000 pounds.

Mr. Hiss. So that at that time only half of the maximum production, roughly half—it may have been 900,000 or a million; isn't that correct, Mr. Banker?

Mr. Banker. Nine hundred thousand was the rated capacity.

Mr. Hiss. That was the rated capacity?

Mr. Banker. Yes.

---

[1] Statement of du Pont Co. charges appears in appendix on p. 3927.

Mr. Hiss. Somewhat more than half the maximum capacity or rated capacity had been achieved. That had been in force for only a comparatively short time, since the first unit was not ready until July.

Mr. Irénée du Pont. Correct.

Mr. Hiss. Yet in that very short period the company's profits were $1,900,000. Therefore, had it reached full production and continued for any considerable length of time, the profits would have been considerably larger, wouldn't they?

Mr. Irénée du Pont. I think that is reasonable.

Mr. Pierre du Pont. May I correct a statement my brother assented to? Although 50 percent of the powder manufacturing was in operation, the guncotton and acid plants and all of the rest that contributed to the powder were in much fuller operation. I think that plant as a whole, including the material on hand ready to complete construction, was between 75 and 90 percent completed and in operation.

Mr. Hiss. I understand the profit was based on the completed powder, was it not?

Mr. Pierre du Pont. Yes; it was.

Mr. Irénée du Pont. There is one qualification in my reply to you. You stated there was a profit of $1,900,000. I do not recall the figure $1,900,000. I have not checked on that, in other words. I am not assenting to that. I don't know what it was. It was read in the testimony.

Mr. Hiss. That is the figure that has already been furnished the committee by the company.

Mr. Gregg. Mr. Hiss has referred to the reimbursement and the evidence on reimbursement. I might say that the Old Hickory contract, both in connection with construction and operation, provides that upon presentation of satisfactory evidence showing the costs and expenditures incurred or made in connection with said construction work, the United States shall promptly pay to the contractor amounts equal to such costs and expenditures, which payments shall be made in addition to the advance payment mentioned in paragraph (a) of this article.

That advance payment was $18,750,000. There is the same provision with respect to operation.

Mr. Hiss. You will remember that the testimony has shown that a 10-percent check was considered sufficient under that clause, Mr. Gregg.

Mr. Gregg. I would like to present a statement of the billings—and this comes in connection with paints—a statement of the billings by E. I. du Pont de Nemours & Co. to the du Pont Engineering Co. in connection with these contracts. I would like to introduce that as an exhibit, if I may.

The Chairman. Let that be received and identified.

(The statement referred to was marked "Exhibit No. 1223" and is included in the appendix on p. 3783.)

Lieutenant Colonel Harris. May I remark on something?

The Chairman. Yes, Colonel.

Lieutenant Colonel Harris. With reference to Mr. Hiss' remark of 10 percent audit check, I want to call attention to the fact that every bill was audited by an Army auditor before it was paid.

Mr. HISS. But only in 10 percent of the cases did they account for the supporting original documents back of the vouchers which came through, according to the testimony.

Lieutenant Colonel HARRIS. That would not seem normal. I am not speaking of knowledge in this case.

Mr. HISS. The testimony introduced indicated that was the only time that ever happened.

Lieutenant Colonel HARRIS. The paying or contracting officer did not audit the bill before he paid it?

Mr. HISS. That in only 10 percent of the cases were the original documents back of it considered.

Lieutenant Colonel HARRIS. In the meantime he paid it?

Mr. HISS. In the meantime he paid it.

Mr. GREGG. By the way, Mr. Chairman, in that connection Mr. Cochran was on that work at that time, and I think it might be well for him to state to the committee how it was handled. He has not been sworn.

Mr. HISS. If you would like to have Mr. Cochran testify, we would be pleased to have him testify.

Mr. GREGG. Be sworn.

TESTIMONY OF H. H. COCHRAN

(The witness was duly sworn by the chairman.)

Mr. HISS. Will you give your connection with the du Pont Co.?

Mr. COCHRAN. Accountant.

Mr. HISS. Mr. Cochran, have you heard the testimony that has been introduced to the effect that a Lieutenant Foulke on May 9, 1918, issued an order[1] that 10 percent of the vouchers coming through should be checked for original documents behind them; and the further testimony that General Williams, then Chief of Ordnance, said that he assumed responsibility for this order, and the further testimony that that order was in fact carried out thereafter?

Senator CLARK. When was this order issued?

Mr. HISS. May 9, 1918, in the middle of the construction.

Do you know anything to the contrary of that testimony, of your own knowledge, Mr. Cochran?

Mr. COCHRAN. This is the first time I have heard of it.

Mr. HISS. Do you know anything to the contrary of that?

Mr. COCHRAN. I have never heard anything in reference to the testimony which you have referred to until this morning.

Mr. HISS. Do you know anything of your own knowledge to contradict that testimony?

Mr. COCHRAN. I have not; no, sir.

Mr. GREGG. What was done, so far as you know, in connection with it?

Mr. HISS. Do you have any knowledge of what was done?

Mr. COCHRAN. Yes; I was employed by the du Pont Engineering Co. from its inception to the end.

Mr. HISS. Do you know whether the order of May 9, 1918, to which I have referred, was issued?

Mr. COCHRAN. No; I do not.

---

[1] Introduced into the record as "Exhibit No. 1186." Hearings, Part XIV, p. 3246.

Mr. Hiss. Have you any reason to believe it was not issued?

Mr. Cochran. I have no knowledge of it at all.

Mr. Hiss. That is all.

Senator Vandenberg. Do I understand from you, Colonel Harris, that you think that is a bit unusual?

Lieutenant Colonel Harris. Senator, I was speaking without having heard this testimony, and was surprised, because the usual method is for the contracting officer to have vouchers with supporting papers.

Senator Clark. Colonel, in your experience, did you ever hear of any other case in which this 10-percent system was followed?

Lieutenant Colonel Harris. I have never; no, sir.

Mr. Pierre du Pont. Mr. Chairman, I am afraid there is a good deal of confusion, having nothing to do with the du Pont Co. affairs, but Mr. Nielsen checks my opinion that a Government inspector signed or approved every voucher that was paid, and, presumably, the documents were accompanying those vouchers at the time they were signed. I do not know. But this 10 percent, I think, was a spot check of vouchers after the original voucher was made by the men on the ground.

Mr. Hiss. I must call your attention, first, to the date of the order, Mr. du Pont, which was May 9, 1918, before construction had been completed, and secondly, to the statement of Mr. O'Shaughnessy, who is not able to be present to testify personally because he is in Florida, that no original audit was ever made, and there was only this 10-percent check, according to the testimony, in the original audit.

Mr. Pierre du Pont. That is a great surprise to me.

Mr. Cochran. Do you mean, Mr. Hiss, the original audit by the War Department?

Mr. Hiss. It was testified the du Pont Co. had their own audit.

Mr. Cochran. There were during the years 1918 and 1919, 115 Government auditors of the War Department.

Mr. Hiss. That has already been gone into, Mr. Cochran, the other day.

Mr. Cochran. Who did nothing but audit and reaudit these vouchers.

Mr. Hiss. That is correct. We have already received that testimony.

Mr. Cochran. So far as any payments are concerned, the supporting papers are attached to the vouchers showing the purposes of the entire transaction.

Mr. Hiss. You are testifying now to your own knowledge that attached to each voucher of the 400 boxes, to which Mr. Gregg referred, there are original documents?

Mr. Cochran. There are, sir.

Mr. Hiss. That is an astonishing statement to make, Mr. Cochran.

Mr. Cochran. The details are attached to each accounts-payable voucher supporting the prime voucher.

Mr. Hiss. My question was, original documents back of each voucher contained in the 400 boxes.

Mr. Cochran. For instance, if the du Pont Engineering Co. purchased—say you were the seller of materials, and you presented the du Pont Engineering Co. a bill for $500—your bill would be attached to the accounts-payable voucher of the du Pont Engineering Co. They were all drawn on our own forms and all supporting papers were attached to the prime voucher.

Mr. Hiss. All I can say, Mr. Cochran, is that your testimony, for the first time in these hearings, raises a conflict with the testimony presented at the joint board hearings in 1923, where it was testified to the contrary.

Mr. Nielsen. Mr. Hiss, you are talking about "audit." I do not know what is meant by "audit", but every voucher representing payment was approved by some official of the Government, before the disbursing officer paid it.

Mr. Hiss. That is conceded.

Mr. Neilsen. He agreed to the accuracy of that bill.

Mr. Hiss. That is not conceded, because the testimony of the Government officers was only in 10 percent of the cases did they check back to find out if the original documents were supporting it.

Mr. Nielsen. What do you suppose a Government officer's signature meant on the voucher?

Senator Clark. It meant you could get the money.

Mr. Nielsen. It was O. K. for payment or they would not have done it.

Senator Clark. Some officer of the Ordnance Department was satisfied to have vouchers approved on a 10-percent check. Nobody is contending you got the money under false pretenses. What we are examining into now is the care which the Government took before issuing the vouchers.

Mr. Nielsen. The care that was taken was 100 percent.

Senator Clark. That is your opinion, but it is not my opinion, if they made only a 10-percent check.

Mr. Nielsen. You cannot prove a 10-percent check was made.

Senator Clark. We can prove the standing order issued by the War Department.

Mr. Nielsen. That does not prove it was done.

Senator Clark. That is in accordance with the Army orders. If you were ever in the Army, you would know that.

Mr. Nielsen. I was in the Navy; sir.

Senator Clark. Then you know it is customary to follow out standing orders, do you not?

Mr. Gregg. I might say that in an exhibit put in by me this morning, prepared by one of our men in 1923, who is now dead, and who was a very able man, and very familiar with this work, the situation was covered, and I would like to read to the committee just what he said about these audits and checks [reading "Exhibit No. 1199"]:

> Certain proficient employees were appointed to direct and supervise the work of the several departments retained for the purpose of constructing and operating the plants.

Mr. Hiss. Mr. Gregg, do you propose to read all of that?

Mr. Gregg. No, sir; not all of it. [Continuing reading:]

> Whenever the procurement of material or equipment was necessary, requisitions were issued by the departments responsible, and forwarded to the purchasing agent in Wilmington, unless the need was sufficiently urgent to neces-

sitate ordering direct by telegraph or otherwise. In all cases, requisitions were sent to the purchasing agent for record. Orders for materials specified on such requisitions were issued by the purchasing department, and numbered in series, copies being sent, respectively, to the vendors, plants, and accounting department, one being retained by the purchasing department for comparison with the vendors' invoices.

Vendors were required to show the order number on the face of each invoice for identification. Each invoice, after receipt at the home office was compared with the orders, and checked as to terms, quantity, and price by the purchasing department; forwarded to the plant which issued the requisition, where certification was made as to receipt of material, and the approval of the plant representative affixed; then returned to the home office at Wilmington. * * *

When vouchers had been audited, recorded, approved, and paid by representatives of the contractor, they were transmitted to the contracting officer of the United States, who checked and verified the expenditures until satisfied that the requirements of the contracts had been fulfilled.

Mr. Hiss. Mr. Gregg, excuse me for interrupting. Is not what you are reading the accounting system adopted by the du Pont Co. itself?

Mr. Gregg. I am coming now to the point where he takes up what the Government auditors did. [Reading:]

The vouchers were then approved by the departmental director responsible for such expenditures, and the charge distribution noted was thereon, after which the accounting department functioned, checking extensions, recording, and issuing checks in payment therefor.

When vouchers had been audited, recorded, approved, and paid by representatives of the contractor, they were transmitted to the contracting officer of the United States, who checked and verified the expenditures until satisfied that the requirements of the contracts had been fulfilled. He then indicated his approval on each voucher and forwarded all vouchers applicable to construction projects to the disbursing officer, who recorded the approved expenditures on public vouchers, and issued instructions for the contractor's reimbursement.

Senator Clark. Mr. Gregg, if I may interrupt you right there, there is nothing inconsistent in what you just read and what Mr. Hiss read, issued by the authority of the Chief of Ordnance of the United States Army. That document which you just read says that the contracting officer satisfied himself, and what Mr. Hiss read was instructions from the Chief of Ordnance, indicating they were to be satisfied with a 10-percent check.

Mr. Nielsen. This is a 100-percent check referred to here.

Mr. Hiss. It does not say so.

Mr. Nielsen. It does say so.

May I ask Colonel Harris a question? Is it possible for a reimbursing agent of the Government, either Army or Navy, to pay without approval by somebody in the Army or Navy? Can he pay a bill under those circumstances?

Lieutenant Colonel Harris. I am a little distressed by this turn of affairs because my chief, for whom I have the highest regard, General Williams, is brought in. I would never believe that he gave approval to vouchers checked blindly to the extent of 10 percent. I think there is a confusion in the word "audit."

Mr. Nielsen. That is my idea.

Lieutenant Colonel Harris. An original voucher could be checked and satisfied.

Mr. Nielsen. That is my impression.

Mr. HISS. May I read from an order of May 9, 1918, which is signed by First Lieut. George R. Foulke, Jr., paragraph III (C), page 2? [Reading:]

> At least 10 percent of the documents received in this office without supporting papers will be held out and will be forwarded to the contractor with request for supporting papers.

There was later testimony that the order was followed out and no more than 10 percent of the documents received without supporting papers were held out and sent to the contractor with the request that he furnish them. There is a further report which has been offered in evidence[1] which states that a certain percentage of that 10 percent, in the course of 1 week, or some period of a report, had no supporting papers when they went back for them that they could find.

Furthermore, General Williams testified, according to the record already introduced from the joint board, to which Mr. Gregg has already referred, which sat in May 1923 and again in December 1923, when asked, Major General Williams said: "I assume responsibility for that order."

I do not know that General Williams directed Lieutenant Foulke to issue it, but I do know he testified, according to the transcript, "I assume responsibility for that order."

Mr. NIELSEN. I am talking about audit and not approval before advance.

Mr. HISS. This is May 9, 1918.

Lieutenant Colonel HARRIS. May I respond?

Mr. HISS. We found by the statement of Colonel O'Shaughnessy that there was no current audit on this, and that is the only way in which he knew that to be the fact.

Lieutenant Colonel HARRIS. May I respond?

In the statement you have read, Mr. Hiss, you stated that those vouchers had come before the disbursing officer without proper supporting papers. What is the 10 percent? I remember the testimony the other day that there were very few that did come before him without supporting papers. In one case of almost 4,000, there were none, and in another case of some 4,000 there were 1,000.

Senator CLARK. How many?

Lieutenant Colonel HARRIS. One thousand, sir. According to this statement, 10 percent of those without supporting papers were subjected to this treatment. That is not the whole set of vouchers, as I understand it.

The CHAIRMAN. Who is here from the Remington and Winchester corporations this afternoon?

Mr. PUGSLEY. I represent the Winchester Repeating Arms Co.

Mr. DAVIS. I am here.

The CHAIRMAN. Will you come forward?

Mr. PIERRE DU PONT. Mr. Chairman, may I ask if a number could be reserved for an item on Old Hickory, which I have not ready to put in. I will submit it later. May we have a reservation of number.

The CHAIRMAN. It may go in.

(The document referred to was submitted later and marked "Exhibit No. 1224" and is included in the appendix on p. 3784.)

---

[1] "Exhibit No. 1187", Hearings, Part XIV, p. 3247.

The CHAIRMAN. We want it understood that the du Ponts will be wanted for testimony in connection with the afternoon work as well.

Have you gentlemen been sworn?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Is Mr. Lammot du Pont present?

Colonel DONOVAN. He was excused today until tomorrow, I think.

The CHAIRMAN. Then we will want Mr. Irénée du Pont, please.

TESTIMONY OF C. K. DAVIS (recalled) AND TESTIMONY OF EDWIN PUGSLEY, EGBERT C. HADLEY, AND J. H. CHASMAR

(The witnesses were duly sworn by the chairman.)

The CHAIRMAN. Will you gentlemen give your names for the record?

Mr. PUGSLEY. Edwin Pugsley, vice president, Winchester Repeating Arms Co.

Mr. HADLEY. Egbert C. Hadley, technical director, Remington Arms.

Mr. CHASMAR, J. H. Chasmar, Bridgeport works manager, Remington Arms.

GENERAL DESCRIPTION OF INDUSTRIAL MOBILIZATION PLAN

Mr. HISS. Colonel Harris, you are familiar with the printed plan which the War Department has prepared, entitled "Industrial Mobilization Plan", are you not?

Lieutenant Colonel HARRIS. I am.

Mr. HISS. As director of the planning branch of the Office of the Assistant Secretary of War, you have immediate supervision over the industrial mobilization plan. Is that not true?

Lieutenant Colonel HARRIS. Under the direction of the Assistant Secretary of War, I have.

Mr. HISS. This plan embraces all industries which, in your opinion, or that of the Office of the Assistant Secretary of War, may be needed in time of war to supply the United States. Is that correct?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. Under your supervision or under the supervision of the Assistant Secretary of War, rather, have there been prepared contract forms to be used in the event of war for the procurement of supplies for the War Department?

Lieutenant Colonel HARRIS. There have been, but it is pertinent to state that these contract forms are in a fluid state, and it is a constant development, and that the present status of the contract forms might be later changed.

Mr. HISS. Have you copies with you of the latest forms?

Lieutenant Colonel HARRIS. I have.

Mr. HISS. Has the Office of the Assistant Secretary of War surveyed several thousand plants in the United States in connection with the industrial mobilization plan, Colonel Harris?

Lieutenant Colonel HARRIS. Not the Office of the Assistant Secretary of War, but the supply branches, acting under the direction of the Assistant Secretary of War.

Mr. HISS. Do you know how many plants have been, as it were, retained on a current list of plants to be relied on by the War Department in the event of war?

Lieutenant Colonel HARRIS. Approximately 12,000.

Mr. HISS. That is applied to all the different purchasing branches of the Army, is it, Colonel Harris?

Lieutenant Colonel HARRIS. Of the Army; yes, sir.

Mr. HISS. Have there also been drafted under the direction of the Assistant Secretary of War comprehensive drafts of statutes to be presented to Congress in the event of the outbreak of war?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. How large a force is required in the War Department for the work of this plan, both in the office of the Assistant Secretary of War and in the various supply branches?

Lieutenant Colonel HARRIS. There are 14 officers of the Army on duty in the planning branch, full time. There are approximately 50 officers in the supply branches, either full time or part time, on industrial planning.

Mr. HISS. How large is the civilian and clerical force?

Lieutenant Colonel HARRIS. About one-half civilian to one military.

Mr. HISS. In other words, there are more officers engaged in this than civilians?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. And that is true also of the clerical force in general?

Lieutenant Colonel HARRIS. I think my statement is a little wrong. I would say in the whole field they are about even, one and one, and in my office it is less.

Mr. HISS. What is the legislative authority for the plan which the War Department, or which the Assistant Secretary of War has prepared?

Lieutenant Colonel HARRIS. Section 5 (a) and section 120 of the National Defense Act.

Mr. HISS. Have you a copy of the national defense act with you?

Lieutenant Colonel HARRIS. I have.

Mr. HISS. By the way, what is the date on which the national defense act was passed, Colonel Harris?

Lieutenant Colonel HARRIS. It was passed originally in 1916, amended in 1920, and numerous amendments have been made since, but the amendment of 1920 is basically what we are working under.

Mr. HISS. When was section 5 (a) passed?

Lieutenant Colonel HARRIS. In the amendment of 1920.

Mr. HISS. When was section 120 passed?

Lieutenant Colonel HARRIS. In 1916, in the original act.

Mr. HISS. Are you familiar with the legislation passed just before the United States went into the World War on the general subject of the mobilization of the country's industrial forces, Colonel Harris? Did I make my question clear, Colonel?

Lieutenant Colonel HARRIS. No, sir.

Mr. HISS. I say, are you familiar with the legislative enactments prior to and after the national defense act, which relate to industrial mobilization and coordination?

Lieutenant Colonel HARRIS. Generally speaking, but I would prefer, as to the details of the act, to have Lieutenant Brannon answer it.

Mr. Hiss. Lieutenant Brannon, do you have before you a report of the War Industries Board?

Lieutenant Brannon. I have not.

Lieutenant Colonel Harris. I have.

Mr. Hiss. Colonel Harris, could you furnish Lieutenant Brannon with a copy of that?

Lieutenant Colonel Harris. Yes, sir.

Mr. Hiss. Roughly speaking, Lieutenant Brannon, do you know about when the first legislative enactment relating to surveying industry and determining the industrial needs was passed?

Lieutenant Brannon. As I understand it, this was the act which established the Council of National Defense, which was passed in August 1916.

Mr. Hiss. Are you familiar with the Naval Consulting Board?

Lieutenant Brannon. I know that was established about 1915, I think.

Mr. Hiss. Do you know under what authority that was established, Lieutenant Brannon?

Lieutenant Brannon. I do not recall any legislative authority for it.

Mr. Hiss. If you will turn to page 19 of Mr. Baruch's report, the second complete paragraph on that page, it says [reading]:

> Three official movements began in 1916. The Naval Consulting Board appointed a committee which made a comprehensive survey of some 18,000 industrial plants throughout the country.

Do you know, or could you state for the committee's information, the personnel of the Naval Consulting Board, Lieutenant Brannon? [1]

Lieutenant Brannon. We could get that, I think.

Mr. Hiss. Do you know offhand whether they were civilians or naval officers?

Lieutenant Brannon. As I understand, they were outstanding civilians. I think Thomas A. Edison was one, and a number of men of that caliber.

Mr. Hiss. The third complete paragraph on page 19 of the report of the War Industries Board states [reading]:

> Another survey of importance was made by the Kernan Board, appointed by the Secretary of War to investigate the country's munitions resources with a view to determining the advisability and practicability of the Government's manufacturing its arms, munitions, and other war equipment.

Do you know when that board was appointed, Lieutenant Brannon?

Lieutenant Brannon. I know approximately. It was appointed under a paragraph of the National Defense Act, I think section 121, and, of course, that was passed in June 1916, and the report was supposed to be submitted before January 1, so that the Kernan Board was appointed between June and December. I think they submitted their report in 1916.

Mr. Hiss. Then the Council of National Defense Act, to which we referred, was passed originally June 3, 1916?

Lieutenant Brannon. Yes, sir.

Mr. Hiss. And when was the Council of National Defense created, and under what authority?

---

[1] The membership of the Naval Consulting Board was later furnished to the committee and appears in the appendix on p. 3929.

Lieutenant **Brannon**. It was under an act, I think, in August 1916.

Mr. **Hiss**. August 29, 1916, I think.

Lieutenant **Brannon**. I do not remember the day.

Mr. **Hiss**. I will show you a copy of this [referring to document]. Was not the provision in the act of August 29, 1916, a much more ambitious statement of the duty to coordinate industry than the previous statement in what is now section 120 of the National Defense Act, passed in June of the same year?

Lieutenant **Brannon**. You mean as far as planning is concerned?

Mr. **Hiss**. As far as the directive contained in this particular provision is concerned.

Lieutenant Colonel **Harris**. I think that it is a more comprehensive development of the subject, but its directive is not so emphasized. Section 120 of the National Defense Act places a directive on the Secretary of War, covering one limited field of industrial mobilization. The Council of National Defense Act covered a broader field and did not give the power, as I recall it, except in an advisory capacity.

Mr. **Hiss**. For the record, I would like to state the citation to this particular act. This was section 2 of an Army appropriation act for the year 1917, approved August 29, 1916, which appears at 39 Statutes at Large, page 619, at pages 649 to 650.

This provided for a Council of National Defense—

> For the coordination of industries and resources for the national security and welfare * * *.

That provided, furthermore, that the council, which was composed of various Cabinet members—that is correct, is it not, Lieutenant Brannon?

Lieutenant **Brannon**. Yes, sir.

Mr. **Hiss** (continuing reading):

> shall nominate to the President, and the President shall appoint an advisory commission consisting of not more than seven persons, each of whom shall have special knowledge of some industry, public utility, or the development of some natural resource, or be otherwise specially qualified, in the opinion of the council, for the performance of the duties hereinafter provided. The members of the advisory commission shall serve without compensation, but shall be allowed actual expenses of travel and subsistence when attending meetings of the commission or engaged in investigations pertaining to its activities. * * *
>
> That it shall be the duty of the Council of National Defense to supervise and direct investigations and make recommendations to the President and the heads of executive departments as to the location of railroads with reference to the frontier of the United States so as to render possible expeditious concentration of troops and supplies to points of defense; the coordination of military, industrial, and commercial purposes in the location of extensive highways and branch lines of railroad; the utilization of waterways; the mobilization of military and naval resources for defense; the increase of domestic production of articles and materials essential to the support of armies and of the people during the interruption of foreign commerce; the development of seagoing transportation; data as to amounts, location, method and means of production, and availability of military supplies; the giving of information to producers and manufacturers as to the class of supplies needed by the military and other services of the Government, the requirements relating thereto, and the creation of relations which will render possible in time of need the immediate concentration and utilization of the resources of the Nation.
>
> That the Council of National Defense shall * * * provide for the work of the advisory commission to the end that the special knowledge of such commission may be developed by suitable investigation, research, and

inquiry and made available in conference and report for the use of the council; * * *.

For this purpose the sum of $200,000 was appropriated.

Is that act still in force, Lieutenant Brannon?

Lieutenant **Brannon**. I understand it is; never been repealed.

Mr. **Hiss**. Does the Council of National Defense now have meetings?

Lieutenant **Brannon**. I think not.

Mr. **Hiss**. Do you know whether any of the advisory members still consider themselves as on the Council?

Lieutenant **Brannon**. I understand no appropriation has been made since about 1920.

Mr. **Hiss**. Have specific appropriations in recent Army appropriation statutes referred to the duties of The Assistant Secretary of War under sections 5a and 120 of the national defense act?

Lieutenant **Brannon**. They have made some reference to personnel for planning, I believe.

Mr. **Hiss**. Would you please select those specific references for the Committee, Lieutenant Brannon, so that we may have those in the record?

Lieutenant Colonel **Harris**. You understand those references were in the hearings before the Appropriations Committee and were not contained in the appropriation acts.

Mr. **Hiss**. There is no specific appropriation for planning?

Lieutenant Colonel **Harris**. It is in the whole Army appropriation.

Mr. **Hiss**. And none of that is specifically related to the subject of planning?

Lieutenant Colonel **Harris**. In the presentation of the requirements of the Department it is broken down and explained. There is where it shows the portion for industrial planning.

Mr. **Hiss**. Is that stated in the reports of the committee to Congress?

Lieutenant Colonel **Harris**. I should think it would be.

Lieutenant **Brannon**. I would just like to add one thing. I believe there were two or three appropriation acts about 1922—I do not know how long it continued—which placed a limitation on the number of persons employed in planning. I think it stated that no additional personnel should be employed, but by implication it referred to persons who were already employed.[1]

Mr. **Hiss**. I should like to read into the record at this point the provisions of the national defense act which have been referred to, those parts which are pertinent.

Section 5a [reading]:

> Hereafter, in addition to such other duties as may be assigned him by the Secretary of War, The Assistant Secretary of War, under the direction of the

---

[1] Under date of Mar. 29, 1935, Colonel Harris supplied additional data concerning personnel for planning, as follows:

The following proviso in the War Department Appropriation Act for the fiscal year 1931 (act approved May 28, 1930, 46 Stat. 432–439) makes specific reference to industrial planning activities:

"*Provided*, That no appropriation contained in this Act shall be available for any expenses incident to the employment of an average number of officers, enlisted men, or civilian employees greater than the largest number employed during the fiscal year ended June 30, 1929, in connection with work incident to the assurance of adequate provision for the mobilization of matériel and industrial organizations essential to wartime needs."

A similar proviso has been included in subsequent War Department Appropriation Acts (46 Stat. 1284; 47 Stat. 671, 1578; 48 Stat. 622)

Secretary of War, shall be charged with supervision of the procurement of all military supplies and other business of the War Department pertaining thereto and the assurance of adequate provision for the mobilization of matériel and industrial organizations essential to war-time needs.

That clause is the fundamental clause under which your branch operates, is it not?

Lieutenant Colonel HARRIS. We operate under both clauses.

Mr. HISS. Section 120 consists of five paragraphs, the first two of which deal with compulsory orders in time of war.

Lieutenant Colonel HARRIS. And commandeering of plants.

Mr. HISS. The first three paragraphs do. The fourth paragraph provides that—

> The Secretary of War shall also make, or cause to be made, a complete list of all privately-owned plants in the United States equipped to manufacture arms or ammunition, or the component parts thereof.

Colonel Harris, what is the accepted definition in the War Department of the words "arms or ammunition" or parts thereof?

Lieutenant Colonel HARRIS. It is, generally speaking, all weapons, bombs, and the ammunition therefor.

Mr. HISS. Would it include the Quartermaster's supplies?

Lieutenant Colonel HARRIS. It would not.

Mr. HISS. Would it include aviation requirements?

Lieutenant Colonel HARRIS. It would in a broad analysis, and particularly the armament on aviation.

Mr. HISS. I call your attention to the fact that this fourth paragraph, in directing the listing of privately owned plants and the determination of whether or not they may be converted into ammunition factories, deals specifically with arms or ammunition or parts and with ammunition factories, whereas the second paragraph, dealing with compulsory orders in time of war, speaks of arms or ammunition or parts of ammunition or any necessary supplies or equipment, and is considerably broader than paragraph 4. Do you consider that under paragraph 4 The Assistant Secretary of War has been directed by Congress to include in any list or any plans plants other than plants engaged in or capable of producing arms and ammunition or parts thereof, Colonel Harris?

Lieutenant Colonel HARRIS. Yes; I consider that to be true; but I further consider that 5a covers the same responsibility in a broader way.

Mr. HISS. Therefore 5a is really the particular provision under which the planning branch operates, rather than section 120, which refers to arms and ammunition in a limited way?

Lieutenant Colonel HARRIS. That is true. There is another paragraph that I wish you would read, if you do not mind, in that section 120, and that is the last paragraph about an authorization to appoint a board. I want to bring that up.

Mr. HISS. I wanted to take that up. The last paragraph is [reading]:

> The President is hereby authorized, in his discretion, to appoint a Board on Mobilization of Industries Essential for Military Preparedness, nonpartisan in character, and to take all necessary steps to provide for such clerical assistance as he may deem necessary to organize and coordinate the work hereinbefore described.

Has any such board to your knowledge ever been appointed?

Lieutenant Colonel HARRIS. It has not.

Mr. HISS. Has any appropriation for the activities of such a board ever been provided by Congress, so far as you know, Colonel Harris?

Lieutenant Colonel HARRIS. Not since the war.

Mr. HISS. This was passed before the Council of National Defense sections of the Army Appropriation Act of August 29, 1916; is that not correct?

Lieutenant Colonel HARRIS. That is correct.

Mr. HISS. Would you not say that both were a part of the then recognized necessity of planning and preparing for the possibility—then seeming very likely—of participation by this country in the European war?

Lieutenant Colonel HARRIS. I do.

Mr. HISS. Do you think that either act was considered at the time a mandate to The Assistant Secretary of War to plan indefinitely in times of peace, such as in the year 1934?

Lieutenant Colonel HARRIS. I consider The Assistant Secretary as now under mandate to plan elaborately for mobilization in time of war.

Mr. HISS. By virtue of what particular legislative provision, Colonel Harris?

Lieutenant Colonel HARRIS. Basically 5a, supported by section 120.

Mr. HISS. I have already pointed out that section 120 is limited to arms and ammunition.

Lieutenant Colonel HARRIS. I think my answer takes cognizance of that.

Mr. HISS. I also call your attention to the fact that 5a refers in the first paragraph, in the first sentence, to two points, one of which is current procurement for the ordinary needs of the Army in peace time or indeed at any time, and the last part of it, "and the assurance of adequate provision for the mobilization of matériel and industrial organizations essential to war-time needs." So that those lines represent the legislative authority for a rather elaborate peace-time organization on planning set up in the Assistant Secretary of War's office.

Returning to the report of the War Industries Board, after the passage of the Council of National Defense legislation, the Council was formed according to the statement on page 20 on October 11, 1916. On February 28, 1917, the Council created a body known as the "Munitions Standards Board." On July 28, 1917, the War Industries Board was created. Then on March 4, 1918, the War Industries Board was reorganized, and after the passage of the Overman Act an Executive order was issued by the President under date of May 28, 1918, formally empowering the War Industries Board.

Does that correctly summarize the planning agencies established during the war?

Lieutenant Colonel HARRIS. Not quite. The Munitions Standards Board was formed just before war was declared, with an idea of standardizing specifications. War was declared just about 6 weeks later, and they knew then it was too late to try to bother with standardizing munitions to any great extent. So they formed the General Munitions Board. Mr. Frank Scott was chairman of both.

It was really the General Munitions Board that carried on until the War Industries Board was formed.

Mr. HISS. That was under the authority of the Council of National Defense Act rather than under the authority of the National Defense Act.

At what period was begun the planning now set up in the Assistant Secretary of War's office under section 5a and section 120, to the extent that it is applicable?

Lieutenant Colonel HARRIS. It was started in 1921; its development has been rather slow because we could not afford to make mistakes. It was started in 1921.

Mr. HISS. That was the first time that the mandate of Congress under which you are now acting was carried out, or was begun by the War Department; is that correct?

Lieutenant Colonel HARRIS. It is the first time that anything under 5a was done. There may have been something under 120, these other surveys you speak of during the war; but after the war it was the first act.

Mr. HISS. Lieutenant Brannon, have you before you copies of the contract forms that you have already referred to?

Lieutenant BRANNON. Yes.

Mr. HISS. I show you excerpts from a memorandum prepared——

Senator CLARK. May I interrupt you just a minute, if I may?

Colonel, did I understand you to say that you have prepared and have on file in the War Department now a lot of legislation that is to be sent up to Congress to be passed after the declaration of war?

Lieutenant Colonel HARRIS. The statement was, Senator, that we had an industrial mobilization plan, and that industrial mobilization plan carried an annex of needed legislation.

Senator CLARK. That included war legislation?

Lieutenant Colonel HARRIS. Yes.

Senator CLARK. But you propose to wait until after the declaration of war, then send it all up to Congress to be passed in one bunch as an emergency measure, at a time when the cry will be raised that if Congress takes time to scrutinize it or study it in detail, they are delaying the defense of the country in a national emergency.

Why is it not possible to send that legislation up there and have it examined in the meantime, before the declaration of war?

Lieutenant Colonel HARRIS. I might state in answer to that that the War Policies Commission in 1932 had before it the same general character of legislation. I think they did submit a report to the Congress at least embodying this proposed plan of legislation in their report.

Senator CLARK. What the legislation itself was has never been submitted to Congress.

Lieutenant BRANNON. I think Attorney General Mitchell in a memorandum to the War Policies Commission raised a question as to the constitutionality of passing legislation of this kind in peace time. This legislation will contemplate price fixing and general control of industry by Congress. I think he stated in that memorandum that the prime basis for the constitutionality was the determination by Congress after the emergency arose of the necessity of control measures.

Senator Clark. There are a great many other provisions in that legislative program, which I glanced over last night, to which that objection would not be in the least applicable, are there not?

Lieutenant Brannon. With reference, for example, to the War Trade Board?

Senator Clark. Yes; in reference to the draft, conscription, and a number of other things to which that objection of price fixing would not in any manner be applicable; certainly since the N. R. A. with its price-fixing program, it is doubtful that that objection would be applicable to any Government act.

Lieutenant Brannon. Might I add one thing, sir, that up until I think the time of the War Policies Commission hearing of the bills, the drafts of the bills in The Assistant Secretary's office were in the form of legislation to be enacted in peace time. It was assumed this thing would be worked up and submitted to Congress. I believe that the drafts of the bill submitted to the War Policies Commission were in that form, but they apparently took the position that it should not be submitted in peace time.

Senator Clark. The point I had in mind, if they were submitted in peace time there would be no reason why Congress should not examine them in detail and know what they were passing before they enacted this very far-reaching and drastic legislation. On the other hand, we all remember how when war is declared the War Department or the Navy Department or the War Industries Board or any other Government activity will send up a bill, no matter how drastic or far-reaching, and Congress is asked to pass it under whip and spur as an emergency measure, without considering its consequences or anything in it; and if Congress does not pass it in that fashion, then a fanfare of protests is raised all over the country that Congress is delaying the national defense. It seems to me these matters ought to be considered at the proper time.

Senator Vandenberg. You do not have to go back to the war. That is the history of the last 18 months.

Senator Clark. The Senator will recall that I have always stood for the fullest consideration by Congress of anything.

The Chairman. Colonel, is there objection to the consideration of and passage of much of this legislation now in peace time? What is the policy of the Department as respects that?

Lieutenant Colonel Harris. There is not the slightest objection, Senator, to the consideration by Congress of these measures.

The Chairman. There has been no effort on the part of the War Department, then, to prevent that consideration?

Lieutenant Colonel Harris. Not the slightest.

The Chairman. Or prevent its passage?

Lieutenant Colonel Harris. Not the slightest. This industrial mobilization plan was prepared with the idea of having something ready on "M. day."[1]

---

[1] "M. day", the date designated in War Department orders as the first day of mobilization. Popularly referred to as the first day of war.

HISTORY OF PREPARATION BY WAR DEPARTMENT OF FORMS OF CONTRACTS FOR USE IN NEXT WAR

Mr. Hiss. Lieutenant Brannon, have you before you a copy of excerpts from memorandum of February 20, 1934, headed "War-Time Contract Forms and Emergency Codes", that I handed you?

Lieutenant Brannon. Yes, sir.

(The memorandum referred to was marked "Exhibit No. 1225", and is included in the appendix at p. 3790.)

Mr. Hiss. Do you remember the memorandum prepared by Major Joyner, Lieutenant Commander Lynch, Captain Jones, Captain Johnson, and yourself?

Lieutenant Brannon. Yes.

Mr. Hiss. Those are excerpts from that memorandum?

Lieutenant Brannon. I have not checked it. I assume it is. I am familiar with that original paper.

Mr. Hiss. For the purposes of the record, the underscoring that is not under headings should not be followed. That is erroneously typed in.

In 1921, Lieutenant Brannon, the Bureau of the Budget set up an interdepartmental board of contracts to revise, standardize, and simplify contract forms in use by the Government. Is that not correct?

Lieutenant Brannon. I think that is correct.

Mr. Hiss. That board has prepared the familiar printed forms of Government contracts?

Lieutenant Brannon. That is right.

Mr. Hiss. Now currently in use?

Lieutenant Brannon. That is right.

Mr. Hiss. At the same time was there formed a board to standardize war-time-contract forms?

Lieutenant Brannon. There was.

Mr. Hiss. Under the Assistant Secretary of War?

Lieutenant Brannon. Yes. Not directly the Assistant Secretary. It was appointed under War Department order, but it has functions in cooperation with the Office of The Assistant Secretary of War.

Mr. Hiss. I refer you to a quotation under the second heading there, the first page [reading]:

> In 1921 the Assistant Secretary of War convened a board to standardize war-time-contract forms.

Lieutenant Colonel Harris. That was by authority of the Secretary of War.

Mr. Hiss. Has that board met consistently since that time and devoted itself primarily to the study of the appropriate contract forms to be used in the event of war?

Lieutenant Brannon. All the members of the board perform their duty in addition to the other duties. It has met from time to time, and subcommittees have been formed to work out particular questions or make changes.

Mr. Hiss. But that board has been in continuous existence?

Lieutenant Brannon. Yes.

Mr. Hiss. It has not been, like the Council of National Defense, inactive?

Lieutenant BRANNON. Oh, no.

Mr. HISS. It is a going concern?

Lieutenant BRANNON. That is correct.

Lieutenant Colonel HARRIS. I might state that Lieutenant Brannon is a member of that board.

Mr. HISS. Reading from the memorandum already identified and offered as "Exhibit No. 1225"—

> The Board to standardize war-time contracts in preparing contracts for use in war recognized the following conditions which affect war procurement contracts:
>
> 1. Uncertain labor and material costs which preclude accurate determination of fixed prices.

Is it the opinion of the War Department that for many purchases in time of war a fixed-price contract will be impracticable?

Lieutenant BRANNON. There are two different points there, Mr. Hiss. One is a fixed-price contract where at a particular time we can arrive at a satisfactory price, but due to the uncertainties of the future on a contract which contemplates production over a long period, the uncertainties regarding the increases in the cost of labor and material make it undesirable to fix the price definitely.

Mr. HISS. May I just go on with 2 and 3 of this, then we will come back to that.

Lieutenant BRANNON. Yes.

Mr. HISS. The second part:

> The termination of contracts due to cessation of hostilities.

That means whenever the war ends the problem arises of terminating many hundreds of contracts. We have had reference to it in connection with the Old Hickory testimony today.

Lieutenant Colonel HARRIS. May I interject a remark there?

Mr. HISS. Certainly.

Lieutenant Colonel HARRIS. This paper you are reading is a study by a group of officers.

Mr. HISS. It is.

Lieutenant Colonel HARRIS. If you are coming to any decision where the War Department states a policy, please——

Mr. HISS. I am using this merely to ask a question.

Lieutenant Colonel HARRIS. I just want to make that clear.

Mr. HISS. We are relying on your testimony and that of Lieutenant Brannon as the official statement of the War Department, not this memorandum.

The third point:

> Confusion due to increased industrial activity and unfamiliarity of manufacturers with war equipment and material.

That is one of the problems which must be faced in war-time procurement?

Lieutenant BRANNON. Yes.

Mr. HISS. Fourth:

> Haste incident to the emergency.
>
> 5. Opportunities for profiteering.
>
> 6. Increased powers of the President and removal of legislative restriction upon the powers of the Government agencies.

In time of war it is necessary for the War Department to have untrammeled discretion in many fields in order to move quickly without delay and without red tape, and so forth, is it not, Lieutenant Brannon?

Lieutenant **Brannon**. I think they have such authority. Under section 120 Congress has already given them rather wide powers in the event of war.

Mr. **Hiss**. Has the War Department drawn up a list of statutes which it believes will have to be suspended or superseded in time of war to permit this wide flexibility of operation?

Lieutenant **Brannon**. There was such a list prepared about 1926, and it was not brought up to date. At present there is no such official list, merely a tentative study on the thing that is a sort of preliminary list. It was prepared in the office, but has not been passed upon or approved.

Mr. **Hiss**. In your opinion will there have to be certain liberalizing amendments to existing statutes governing Government procurement in order to give the necessary flexibility in time of war?

Lieutenant **Brannon**. Yes. The draft of one of the bills contemplates that some measures will be included for suspension.

Mr. **Hiss**. The draft does not mention any specific measures at the present time? That is left blank; is that correct?

Lieutenant **Brannon**. That is left blank.

Mr. **Hiss**. Paragraph 7 of this memorandum " Exhibit No. 1225 "—

> Recent recommendations of the War Policies Commission " to minimize the profits of war "—

Does the board to standardize war contracts in developing drafts of those contracts have in mind as one desideratum at least the minimization of the profits of war?

Lieutenant **Brannon**. Yes, sir.

Mr. **Hiss**. And they have attempted to achieve that in the forms prepared?

Lieutenant **Brannon**. They have.

Mr. **Hiss**. When you say " minimize the profits ", just what does the War Department have in mind, Colonel Harris?

Lieutenant Colonel **Harris**. I think to answer that generally that the War Department based its recommendations and its actions on paying 6 percent on the capital invested in the undertaking.

Mr. **Hiss**. And no more.

Lieutenant Colonel **Harris**. Generally speaking, no more.

Senator **Clark**. Then you would have to have in that case, Colonel, one of these rate cases just as a utility has every time the Government made a contract, would you not?

Lieutenant Colonel **Harris**. It would be difficult, Senator.

Senator **Clark**. You would have to go into all the questions of original cost and cost of reproduction new and capital devoted to the particular contract, which would be rather cumbersome at a time when the Government is making 100 or 150 contracts a day.

Lieutenant Colonel **Harris**. I am glad to have the opportunity to answer that question, because in all cost-plus-a-percentage contracts, or adjusted compensation where it is based on costs, the accounting responsibility placed upon the Government is enormous and leads to difficulties. That is a bad feature of a contract of that kind.

Senator **Clark**. I have seen one rate case before a public service commission where they were trying to find out the actual value of the property devoted to the public service last 4 or 5 months. It would seem to me to be an insuperable task, when the Government is making 100, 125, or 150 contracts a day to obtain any figures on which you could base a percentage figure.

Lieutenant Colonel Harris. We hope in our development of peace-time planning to arrive at some of these figures in carrying this out—to arrive at an estimated cost and the values of plants involved. It is a scheme to have, if our system works out to its full flower, the peace-time planning develop the basic data as to that feature of the contract.

Mr. Hiss. Lieutenant Brannon, in subparagraph (*c*) under paragraph 7, the following statement is made:

> The cost-plus-percentage methods of purchase shall be eliminated.

By that you mean the cost plus percentage of cost, do you not?

Lieutenant Brannon. Yes.

Mr. Hiss. Because under some of the present forms, it is the best opinion of the Assistant Secretary of War's office that in the ordnance field and in the large construction field you must still have cost plus a percentage of something?

Lieutenant Brannon. That is correct, cost plus a fee of some kind. But the reason the percentage was in there was to get away from a fee which will increase as the cost increases.

Mr. Hiss. In this particular paragraph your committee had in mind cost plus percentage of cost, did it not?

Lieutenant Brannon. That is correct.

Mr. Hiss. The view of the War Department is that the cost-plus-a-percentage-of-cost contract which was used frequently during the war and which was used in some of the early drafts of the Old Hickory contract and was used in two or three of the other contracts adopted by the du Pont Enginering Co. that we have referred to, should as a matter of policy not be adopted by the Government for future war procurement; is that correct?

Lieutenant Brannon. That has been the assumption of the contract board, I believe, Mr. Hiss.

Mr. Hiss. Has Congress specifically disapproved or at least hinted its disapproval of cost-plus contracts? I call your attention to an excerpt from the Housing Appropriation Act of June 12, 1918, which appropriated $60,000,000 for housing for war needs and amended section 7 of the general housing act as follows:

> That no work to be done or contract to be made under or by authority of any provision of this act shall be done or made on or under a percentage or cost-plus-percentage basis.

Lieutenant Brannon. May I just add there, Mr. Hiss, that the contract form shown in the report of the Housing Corporation shows that they used a cost-plus contract but not a cost plus percentage of cost.

Mr. Hiss. Referring again to "Exhibit No. 1225", Lieutenant Branno, paragraph eight—

> Provision for changes in plans and specifications and necessary readjustments of original estimated cost of contract—

in time of war it will be necessary to have flexibility in that field, too, will it not, Lieutenant Brannon?

Lieutenant Brannon. Yes; the equipment is changing all the time in war.

Mr. HISS (reading):

> The board on war-time contracts, after much research and collaboration with the supply arms and services, adopted certain forms for use in war procurement. These were embodied in a letter to The Adjutant General dated January 25, 1929.

They were the first formal statement in writing of formal adoption by the board of forms of contracts; is that correct?

Lieutenant BRANNON. I believe that is the first we found in our research.

Mr. HISS (reading):

> The forms as then adopted by the board were later referred to another committee appointed by it for further study and recommendations as to revision. This later committee held numerous conferences with representatives of the several supply arms and services and consulted freely with liaison officers of the Navy Department. Consideration was also given to suggestions received from district procurement planning officers and from Reserve officers.

Who are the district procurement planning officers, Colonel Harris? Are they the men you have already referred to as assisting in the planning?

Lieutenant Colonel HARRIS. They are the field agencies of each of the supply branches engaged in industrial planning.

Mr. HISS. Your estimate was that there about 50 of those at present?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. "And from Reserve officers." What Reserve officers do you have in mind there? What Reserve officers were referred to?

Lieutenant Colonel HARRIS. Each one of the planning branches have assigned to them for the war-time associations certain Reserve officers, and they have periodic meetings. At their meetings questions of this character are discussed.

Mr. HISS. The functions of those Reserve officers in time of war would normally be within the supply arms to which they are at present attached?

Lieutenant Colonel HARRIS. Normally.

Mr. HISS. Are they men who have some familiarity with industry?

Lieutenant Colonel Harris. Generally speaking they have.

Mr. HISS. How many of them have some connection with industry?

Lieutenant Colonel HARRIS. Most of them have.

Mr. HISS. Colonel, in connection with your Reserve officers in the procurement branches, are the Reserve officers who now have some connection with industry expected by the War Department to be proficient in the details of that industry when they are called to active duty?

Lieutenant Colonel HARRIS. They are expected to be proficient in the production of the industry rather than the procurement or making any contracts with the industry.

Mr. HISS. Will you use them as advisers in connection with procurement, from the industries with which they were formerly associated?

Lieutenant Colonel HARRIS. When we speak of the procurement branch, I would like to state that there are several phases of it. There is the actual making of the contract, there is the production activity, inspection activity, and the pay activity, all of which we group under the word " procurement."

Senator Clark. Just as an example, Colonel, that may be used by some fellows who remember so long ago that the most of you may have forgotten it—the parties concerned are nearly all dead—there was a time when the Carnegie Steel Co. made a practice of selling to the Government defective armor plate at a very excessive price. Now, it occurs to me that if at that time an officer of the Carnegie Steel Co. was the Reserve officer who was inspecting that armor plate, it would be very difficult for the Government to detect that defective armament.

That is what I was getting at in connection with Mr. Hiss' question, in connection with the matter of taking officers of industry and using them as Reserve officers to regulate those industries in time of war.

Lieutenant Colonel Harris. When we entered the war we had 85 Ordnance officers as such and when we came to the close of the war we had from three to five thousand.

Senator Clark. What I am trying to find out is whether the reserve officers of these corporations, officials that have been given reserve commissions, are going to have to do with the manufacturing and inspection of munitions produced by their own companies.

Lieutenant Colonel Harris. Not by their own companies.

The Chairman. Let us make clear on it. Why not by their own companies?

Lieutenant Colonel Harris. Because generally even the most honest man cannot help but be swayed to a limited agree, at least, by association. We would have to free them of any implication of that kind, and in our plans we hope that no employee of one company will have to do with that particular company.

The Chairman. You mean then specifically this: As an example, in the case of the Colt Corporation, that there would not be a reserve officer assigned in that field who was in any way related to the Colt Arms and Ammunition Co.?

Lieutenant Colonel Harris. I would say there might be a reserve officer selected who had that relationship that you speak of, but he would not be put on that duty that had to do with the Colt Co.

Senator Clark. He would be assigned to some other industrial plant?

Lieutenant Colonel Harris. Yes, sir. We are bound to have in time of war some reserve officers who have affiliations with large industrial corporations, but we endeavor to put them now where there are no connections with their own companies.

Mr. Hiss. Then their peculiar knowledge that they have gained from their industrial experience would be of no value to the War Department?

Lieutenant Colonel Harris. I would not say that.

Mr. Hiss. Let us say their peculiar business knowledge.

Lieutenant Colonel Harris. Let us not say peculiar knowledge.

Mr. Hiss. Their knowledge of that particular industry. In other words, if an expert is an expert in the explosives industry, you will not use his expert explosive knowledge in time of war in regard to procurement?

Lieutenant Colonel Harris. What do you mean by procurement?

Mr. Hiss. The making of contracts.

Lieutenant Colonel **Harris**. You use it in the narrow sense. Procurement for me is getting the stuff, and that covers a wide field.

Mr. **Hiss**. In the contract field, won't they be your advisers?

Lieutenant Colonel **Harris**. I think it is quite likely that some of them may be advisers; yes.

Mr. **Hiss**. When you say they would not be in the same field, you mean you will not have them actually sign the contracts or carry on the final negotiation for the contracts. Won't you, however, use them to advise you as to how the contracts should be entered into?

Lieutenant Colonel **Harris**. Undoubtedly there may be special cases that way, where they should advise, but I like to stick to my original statement, that we will endeavor not to have people in time of war engaged in duties related to the companies from which they came.

Mr. **Hiss**. Referring to the same memorandum, entered as "Exhibit No. 1225":

> Based on these studies, revised drafts of forms were prepared and submitted to chiefs of supply arms and services for further consideration and suggestions. Final redrafts were then prepared by the committee and submitted to the board. At a formal meeting of the board on December 22, 1931, the revised forms as submitted by the committee were adopted.

Are these the forms you have submitted to me hitherto, Lieutenant Brannon?

Lieutenant **Brannon**. I think so. That last one was not included.

Mr. **Hiss**. The last one in there?

Lieutenant **Brannon**. No; that was not included.

Mr. **Hiss**. Do you have copies of these?

Lieutenant **Brannon**. Yes, sir.

Mr. **Hiss**. I am offering in evidence those contracts which were referred to here as having been adopted by the board on December 22, 1931.

(The contract forms referred to were marked "Exhibit No. 1226–A to 1226–D" respectively, the adjusted-compensation form being no. 1226–A; the evaluated fee form, no. 1226–B; the construction form, no. 1226–C; and the supplies form, no. 1226–D. They appear in the appendix on pp. 3795, 3804, 3814, 3819.)

Mr. **Hiss**. I understand that the form I have here in itself contains certain revisions of the December 22, 1931, form; is that correct?

Lieutenant **Brannon**. I do not think any revisions of the form have been made since December 1931.

Mr. **Hiss**. I see.

Lieutenant **Brannon**. Except that a new form has been included.

Mr. **Hiss**. These are contracts for supplies, contract for construction, adjusted compensation contract, exhibit A to the adjusted compensation contract.

> The final redrafts were forwarded to The Assistant Secretary of War in February 1932, together with the recommendations for their approval for use, in their respective fields, for all war procurement purposes, except that of large-scale construction projects.
>
> The Construction Division, Office of the Quartermaster General, was of the opinion that none of the proposed forms was adaptable to large-scale construction and wished to prepare a form which would be suitable for such project.
>
> The Assistant Secretary of War, through the Army and Navy Munitions Board, submitted the proposed forms for consideration of the Navy Department as to their suitability for war procurement purposes by that Depart-

ment—with a view to promoting uniform war-time contracts in the War and Navy Departments. After consideration of the forms by the Navy Department, they were returned with the notation that while most of the principles contained in them were embodied in forms adopted by the Navy, it was not believed advisable or possible to standardize both Department forms into a single form.

Does that state substantially the history of these particular forms to that point?

Lieutenant BRANNON. I think so. It was written some time ago, but, as I recall it, we looked it up at the time.

Mr. HISS (continuing reading):

> In view of recent criticism and suggestions on war contract forms received from procurement district planning officers and industrialists, The Assistant Secretary of War has referred the 1931 war contract forms to the Board on War Contracts for further consideration.
>
> Pursuant to these instructions the Board met on January 11, 1934, and appointed a committee to consider all papers now in the hands of the Board and to present to the Board definite recommendations as to a form of contract based on the adjusted compensation principle and a manual of instructions for the drawing of contracts thereon.

Does that state your recollection of what occurred up to January 11, 1934, Lieutenant Brannon?

Lieutenant BRANNON. I think that is correct.

Senator CLARK. What do you mean by adjusted compensation, Colonel? Congress passed an adjusted compensation bill once having to do with soldiers, and after having been passed everybody got to calling it a bonus. I wonder if this is going to be any different.

Lieutenant Colonel HARRIS. Basically, it is a contract covering a noncommercial item with which the particular contractor is not familiar, and is not able to estimate his costs and for which the Government has got to finance the operation.

Mr. HISS (reading):

> The Board to Standardize Wartime Contract Forms has recommended adoption of the following forms of contracts for use during war.

That is subsequent to January 11, 1934, Lieutenant Brannon?

Lieutenant BRANNON. No; this is simply going ahead in the statement of the thing to say these are the particular forms.

Mr. HISS. This goes back to the December 1931 recommendation?

Lieutenant BRANNON. Yes.

Mr. HISS. Formal contracts. Fixed price contracts, two kinds, contracts for supplies and contracts for construction. Adjusted compensation contracts.

Lieutenant Brannon, will you turn to your form of adjusted-compensation contract?

Lieutenant BRANNON. May I add one thing right there, Mr. Hiss?

Mr. HISS. Certainly.

Lieutenant BRANNON. In preparing this thing no reference was made to the fact that we expect many cases will arise where the standard Government peace-time form can be used.

Mr. HISS. I am sorry; I didn't get that. Will you repeat it, please?

Lieutenant BRANNON. I say it is not mentioned here, but, as I understand it, it is expected that a number of cases will arise where the standard Government peace-time forms will be used.

Mr. HISS. May we just go into that a little more specifically, Lieutenant Brannon?

Lieutenant BRANNON. Yes.

Mr. HISS. During war time in which fields or in what supply arms were the cost plus a percentage of cost and similar contracts used to the greatest extent?

Lieutenant BRANNON. Under the Quartermaster Corps for construction and the Ordnance Department for noncommercial items.

Mr. HISS. I call your attention at this time to an exhibit already introduced, "1107", being appendix A to the letter of the Secretary of War, which shows that a total of $1,271,000,000 was spent in construction during the World War.[1] All of that was not cantonment construction, and, therefore, I assume all of it was not under the Quartermaster Corps, but I should assume that all of that was either under the Quartermaster Corps or to a large extent under Ordnance.

Lieutenant BRANNON. Yes.

Mr. HISS. Is that a substantially correct statement to make?

Lieutenant BRANNON. Yes; I think that is correct.

Mr. HISS. I have handed you that document. What is the number of that exhibit again?

Lieutenant BRANNON. 1107.

Mr. HISS. In addition to the exhibit just referred to on cost of construction, I refer again to "Exhibit No. 1104", heretofore introduced on the relative proportions of the expenditures of the Army supply branches during the war.[2] It will be noticed that the Quartermaster Corps and the Ordnance Department were by far the major purchasers.

Senator CLARK. What is that?

Mr. HISS. This is the Quartermaster Corps and this is the Ordnance and this is the Air Service.

Is it not true, Colonel Harris, that in the event of another war the Air Service expenditures will be proportionately considerably larger than as shown on this chart?

Lieutenant Colonel HARRIS. Quite true.

Mr. HISS. What type of contract do you think would be suitable for taking care of the requirements of the Air Service, for the Air Corps?

Lieutenant Colonel HARRIS. I think some will be fixed price and some will be contracts of the character of the ones we are proposing here.

Mr. HISS. As between those two, which will predominate or preponderate in volume, in your opinion, as between fixed price and adjusted compensation?

Lieutenant Colonel HARRIS. I think there would be more fixed price in the Air Corps, for air equipment, than there will be in the Ordnance Department, for example, but there will be a large proportion of the adjusted form of contract.

Mr. HISS. In the Air Service?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. In ordnance, what would be your estimate—I think you have already testified on this, but I would just like to bring it out—your estimate as to the proportion of the contracts during the war in the field of ordnance which were fixed-price and those which were some other form.[1]

---

[1] Hearings, Part XIII, p. 2910, appendix, p. 2981.
[2] Ibid., p. 2906, appendix, p. 2974.

Lieutenant Colonel HARRIS. I am getting that data prepared to present at a later date and I prefer not to answer, because I want to give you the exact figures.

Mr. HISS. We can at this time say a large part——

Lieutenant Colonel HARRIS. A large part undoubtedly would be.

Lieutenant BRANNON (continuing). Would be of the non-fixed-price type?

Lieutenant Colonel HARRIS. Quite true.

ADJUSTED-COMPENSATION CONTRACT FORM [2]—GENERAL

Mr. HISS. Under the adjusted-compensation contract, which I have asked you to turn to, Lieutenant Brannon, the scheme of payment is to pay the cost of production; is it not?

Lieutenant BRANNON. That is correct.

Mr. HISS. And this particular contract is believed to be especially suitable to the needs of the ordnance branch—the Ordnance Department— is that correct, in time of war?

Lieutenant BRANNON. Yes, for the protection of noncommercial items manufacturers, and, of course, they are largely the ones to use them.

Mr. HISS. Ordnance is the largest consumer, if we can use that word, of noncommercial items?

Lieutenant BRANNON. Yes.

Mr. HISS. Under ordnance come the purchase of explosives, small arms, and ammunition, and steel for large ordnance, is that correct?

Lieutenant BRANNON. I think so. It is a question of how much steel they buy, of course.

Mr. HISS. In determining the costs of a contractor who also supplies his own raw material—let us take, for example, one of the steel companies, which has its own coal mines, or one of the copper companies which has its own copper mines—what will the War Department regard as the cost of the raw materials for a component element produced by a contractor?

Lieutenant BRANNON. I think if you look at the form, Mr. Hiss, it is not contemplated that a contractor will furnish any raw material except what he may have on hand.

Mr. HISS. Suppose you have the example given, of a steel company with its own coal mine, will you permit them to use their own coal, or will they have to buy on the market?

Lieutenant BRANNON. I think that the form provides only for the material which they have on hand at the time. I will have to look at that.

Mr. HISS. I don't think there is any specific provision containing that, forbidding a company from using——

Lieutenant Colonel HARRIS. Mr. Hiss, may I answer that question?

Mr. HISS. Certainly.

---

[1] Colonel Harris later submitted a list of total cost-plus and fixed-price contracts. See hearings, Part XVI, p. 3936.

[2] Entered as "Exhibit No. 1226–A", p. 3625.

Lieutenant Colonel HARRIS. We contemplate that the prices will be set for raw materials shortly after war is begun, and that all raw material will be on that basis.

Senator VANDENBERG. Is that the price-freezing plan that Mr. Baruch and his board speak of?

Lieutenant Colonel HARRIS. We do not use those terms, but it is under our price control set-up. We hope to take over the next war more or less where the last war wound up on the control of price. At that time they had a standard price on many raw materials, set by the War Industries Board, generally by agreement. There was no legal authority for those prices.

Mr. HISS. Lieutenant Brannon, are you familiar with the memorandum of February 6, 1934, headed, "Comments, Criticisms, and Proposals on the Adjusted Compensation Contract Form?"

Lieutenant BRANNON. Yes; I have a copy here.

Mr. HISS. I show you some excerpts, which may be a little more convenient, and I offer this for their record.

(The excerpts from memorandum referred to were marked "Exhibit No. 1227" and are included in the appendix on p. 3823.)

Mr. HISS. Turn to the third typewritten page, under the heading, "Philadelphia ordnance district." You will see there a statement reading:

> There is nothing in the contract to prevent the contractor from obtaining the market price for such raw materials or component parts as are produced by him.

I agree with that particular provision. I have not been able to find a provision which prevents a manufacturer who also happens to produce his own raw materials from taking over those raw materials at the market price and charging that at cost.

ADJUSTED-COMPENSATION CONTRACT FORM—PROFITS OF INTEGRATED COMPANIES

Senator CLARK. In other words, if you had a manufacturer of heavy ordnance who also controlled his own coal mine and his own iron mine and the railroad to transport them from one part to another, he would make one profit as a producer of coal, he would make another profit as a producer of iron, he would make another profit on the railroad transportation, on the steel, and a further one as a manufacturer of ordnance, wouldn't he, under this proposition?

Lieutenant Colonel HARRIS. Unless other governmental agencies had been established to set prices, that is true.

Senator CLARK. But under this plan he would make a separate profit on each business in which he was engaged.

Lieutenant Colonel HARRIS. But under our industrial mobilization plan we provide a price-control agency which we hope will nullify the feature you speak of.

Mr. HISS. But not under the contract itself.

Lieutenant Colonel HARRIS. Quite true.

Mr. HISS. I call your attention to a similar proposition. Take the du Pont Co., which produces many of its own component elements. In the production of smokeless powder, for example, the smokeless powder department secures cotton from the Parlin plant, which is under the fabrics and finishings department; it secures sulphuric acid from the dye works at Deep Water Point.

Is that correct, Mr. Irénée du Pont?

Mr. Irénée du Pont. We make sulphuric acid at several different places, but your idea that nitrocellulose for smokeless powder would be made at the Parlin plant and shipped somewhere else and made into smokeless powder is erroneous.

Mr. Hiss. I mean at the present time.

Mr. Irénée du Pont. We make some nitro cotton at Parlin; yes.

Mr. Hiss. And the smokeless powder plant receives cotton—Mr. Bradway, you know about that.

Mr. Bradway. It gets purified cotton.

Mr. Hiss. It gets purified cotton and you make your own nitrocellulose.

Br. Bradway. Yes.

Mr. Hiss. Mr. Bradway, will you correct me on any of these points, please?

Br. Bradway. I will.

Mr. Hiss. So far it is all right, is it?

Mr. Bradway. I believe so.

Mr. Hiss. The information I am supplying I believe I got from Mr. Bradway. I may not have understood him correctly.

The smokeless powder department receives its sulphuric acid from the dye works at Deep Water Point, under the organic chemicals department of the du Pont Co.

It receives its nitric acid from the explosives department at Repauno, which in turn has secured its ammonia from the ammonia department.

Diphenylamine, which is an ingredient in smokeless powder, is prepared at Repauno under the explosives department, and the aniline used in the manufacture of the diphenylamine is furnished to Repauno from the dye works at Deep Water Point under the organic chemicals department.

Senator Clark. I just wonder if it is sometimes borrowed from the Government.

Mr. Hiss. Alcohol used in the explosives department, smokeless powder department, is also received from the dye works at Deep Water Point. Trinitrotoluene is also made at the dye works?

Now, I have here an exhibit showing the costs at which the du Pont Co. carries certain of these items within its individual departments.

For example, in 1933 the average manufacturing cost price, within the ammonia department, of ammonia was 0.0291. This is transferred to the next department at 0.0360 the slight percentage of profit being retained in the ammonia department.

Then from the ammonia, nitric acid is made in the next plant, namely, the explosives department. In 1932 the average manufacturing cost price of nitric acid was 2.86 a hundredweight. The average transfer price from the explosives department to the smokeless powder department was 3.83. In 1933 those figures were, respectively, 2.84 manufacturing price and 3.28 transfer price.

Similarly, in regard to aniline produced in the dye works, in 1932 the average price was 8.78. The average transfer price from the dye works to the explosives department was 9.80. In 1933 those figures were, respectively, 9.53 cost, 9.95 transfer.

Similarly, diphenylamine manufactured by the explosives department and transferred to the smokeless powder department was manufactured in 1932 at 16.42 and transferred at 27. It was manufactured in 1933 at 20.20 and was transferred at 21.45.

I offer that as an exhibit for the record.

(The document referred to was marked " Exhibit No. 1228 ", and is included in the appendix on p. 3830.)

Senator CLARK. Do those figures you have been reading include the allocation of all costs?

Mr. HISS. Do you know, Mr. Bradway?

Mr. BRADWAY. That information you received from the Treasurer's Office. I know nothing about that.

Mr. HISS. Is there anyone here from the du Pont Co. that knows the basis for these figures?

Mr. IRÉNÉE DU PONT. I note one thing you leave out of it, and that is the freight for transferring these things. Take ammonia down at West Virginia, at one price, delivered at Repauno at another. You have got to pay the freight en route. Furthermore, if we can sell it at West Virginia at the price we can get at Repauno, there is no particular point in selling it at Repauno at a lower price.

Mr. HISS. Colonel Harris, what is the view of the War Department on the issue presented by this evidence and by Mr. Irénée du Pont's statement, that there would be no particular sense in the du Pont Co. furnishing component elements at less than market price?

Lieutenant Colonel HARRIS. There is a clause in the form that covers part of that.

Mr. HISS. What is that?

Lieutenant Colonel HARRIS. This is the adjusted form, paragraph 9, referring to material on hand, but it does not refer to material thereafter.

Mr. HISS. Material on hand has to be taken over at market price.

Lieutenant Colonel HARRIS. No; taken over at the cost of——

Mr. HISS. Not in excess of the current market price.

Lieutenant BRANNON. Neither in excess of the current market price or the price set forth in exhibit A.

Mr. HISS. This exhibit A is not costs, is it?

Lieutenant BRANNON. Oh, yes.

Mr. HISS. Oh, exhibit A is costs?

Lieutenant BRANNON. Yes; on the cost of the material, which cannot be exceeded unless by approval of the contracting officer or governmental agency.

Mr. HISS. Suppose the contractor had on hand goods that he bought for X dollars?

Lieutenant BRANNON. Yes.

Mr. HISS. If, then, the current market cost was X plus Y, the figure in exhibit A would be X plus Y. He would be entitled under paragraph 9 to transfer that at X plus Y; isn't that correct?

Lieutenant BRANNON. That is correct, if they had agreed in advance that that was the correct price. But here is the thing: Under this adjusted compensation contract, if the stuff is produced in the plant all he gets is a percentage on the value at the plant. We pay the costs. If he gets it from some other plants, if he has two different plants, I don't think there is anything here that specifically prohibits him from buying from a subsidiary, for example; but he could not exceed that cost which had been predetermined in exhibit A. You see, the market price of the materials at the time, all of the different materials which go in, is included in exhibit A; that is fixed in advance and he cannot exceed that, unless either the contracting officer approves or, first, unless a Government agency had raised the price, or if there is no such Government agency, then the contracting officer had approved.

Mr. HISS. But the profits might be more to a contractor who supplies his own raw material or the component parts than 6 percent on the investment.

Lieutenant BRANNON. No; he could not make two profits. We might pay him a certain amount plus 6 percent on what he produced. Now, if he sold coal which would have to go to some other company, on which we did not pay him anything on his mine, it is true on that coal he might make a separate profit, but not a double profit. We would not pay him anything for the use of that mine. You see, we pay him for the use of his plant.

Mr. HISS. The market price of that material?

Lieutenant BRANNON. Yes; we have got to pay the market price to somebody. But if he gets it, he gets not a double profit on his contract, but because he is operating two different things.

Mr. HISS. The War Department has no desire to eliminate any profit on that other transaction?

Lieutenant BRANNON. Not on a separate transaction; no; so long as we have already determined in advance that the price he charges is correct.

Lieutenant Colonel HARRIS. I might state in drawing up this thing we recognize the current market price as being the basic price.

Mr. HISS. I call your attention to a provision of an act approved March 2, 1923, appearing in 42 Statutes, page 1377, at page 1416.

This provides:

> Except as expressly otherwise authorized herein, no part of the sums appropriated by this act for military purposes shall be expended in the purchase from private manufacturers of ordnance and ordnance supplies at a price in excess of the cost of manufacturing such material by the Government, or, where such material is not or has not been manufactured by the Government, at a price in excess of the estimated cost of manufacture by the Government.

Suppose the Government itself begins to manufacture ammonia, nitric acid, diphenylamine, and some of those other elements, what in your opinion will be the effect of this statute on the adjusted compensation form of contract, Lieutenant Brannon?

Lieutenant BRANNON. I am not familiar with this except it says "as otherwise authorized herein." Do you know what the reply to that is, Mr. Hiss.[1]

Mr. HISS. No, sir. We will have to look that up after we adjourn today.

ADJUSTED-COMPENSATION CONTRACT FORM—ACCOUNTING METHODS OF CONTRACTS

Colonel Harris, in determining costs, what is the policy of the War Department with respect to cost-accounting systems which you find in effect when you start negotiations with a particular contractor? Will the War Department, in other words, make any attempt to force a contractor to adopt a different cost-accounting method than that he is currently using?

---

[1] Ordnance supplies as specified, 42 Statutes, pp. 1403 to 1406, show no other authorization.

Lieutenant Colonel HARRIS. Quoting article IV, page 6, paragraph 1 of the adjusted compensation contract form——

Mr. HISS. What page is that?

Lieutenant Colonel HARRIS. Page 6, article IV, "Records and accounts" [reading]:

> The method of accounting used by the contractor shall be subject to the approval of the contracting officer. No material change will be made in the contractor's method if it conforms to good accounting practice and the costs are readily ascertainable therefrom. The original documents of all transactions not delivered to the Government in the course of payments shall be retained by the contractor and shall be open to inspection and examination by the contracting officer at all times prior to final settlement.

Mr. HISS. Is there someone from the Winchester Co. present?

Mr. PUGSLEY. Yes, sir.

Mr. HISS. Are you familiar with the relations between your company and the United States Cartridge Co.? The United States Cartridge Co. is a subsidiary of the National Lead Co., is it not?

Mr. PUGSLEY. I believe it is.

Mr. HISS. In 1926 did your company enter into such an agreement with the United States Cartridge Co. for the manufacture of their entire line of ammunition?

Mr. PUGSLEY. The Winchester Repeating Arms Co., which went into receivership in 1931, went into such agreement.

Mr. HISS. Your predecessor company?

Mr. PUGSLEY. Yes, sir.

Mr. HISS. Are you familiar with the provisions of that contract, which provided for reimbursement to the Winchester Co. on a basis related to cost?

Mr. PUGSLEY. In a very general way only.

Mr. HISS. Are you familiar with the fact that it was based on various percentage burdens charges according to different departments and different manufacturing processes through which the ammunition was passed?

Mr. PUGSLEY. I remember there was such a clause; yes, sir.

Mr. HISS. Were you not, because of the size of your business with the United States Cartridge Co., forced to adopt that particular burden charge as to cost-accounting in general for the entire company, until its reorganization?

Mr. PUGSLEY. No; I think it was rather the other way. That was the method. We kept our own costs and we based the contract on that general procedure, with the exception that we more or less froze those overheads, if you want to use that term.

Mr. HISS. From 1926 on?

Mr. PUGSLEY. That is right.

Mr. HISS. In other words, the contract was entered into on the basis of your 1926 cost-accounting methods; is that correct?

Mr. PUGSLEY. That is correct.

Mr. HISS. Did not that freeze your cost-accounting methods as of 1926?

Mr. PUGSLEY. So far as the billings of the United States Cartridge Co. were concerned; yes, sir.

Mr. Hiss. Did you not go further than that, so that you maintained this form of accounting for your entire cost accounting?

Mr. Pugsley. I do not think that that changed our accounting system in any way.

Mr. Hiss. Did you have two separate means of determining cost—one for the United States Cartridge Co. contract and one for your other business—or did you use the same form throughout? [1]

Mr. Pugsley. Insofar as our own business was concerned, we operated a burden debit or burden credit, depending upon the operation of the particular departments. That was not applicable to the United States Cartridge Co., as I recollect it.

Mr. Hiss. It was different from the United States Cartridge Co.?

Mr. Pugsley. As I recall it; yes.

Mr. Hiss. Will you inquire into that and make sure, because we have information to the contrary, that you adopted a uniform accounting method?

Mr. Pugsley. Yes, sir.

Mr. Hiss. Until we can establish that differently, one way or the other, Colonel Harris, may I state a hypothetical question?

Assume that because of such a contractual relation or for some other reason a particular accounting system, cost-accounting system, was adopted by the Winchester Co., which, because of the size of their contractual arrangement they felt must be used as their general cost-accounting system, and that after a period of years those charges or burdens became, because of changes in the company's processes, arbitrary, and did not truly represent cost. Would you require, under the provision which you have just read from the adjusted-compensation contract, a complete new cost-accounting system to be instituted by the Winchester Co.?

Mr. Pugsley. The clause covering that?

Senator Clark. May I ask a question? I do not want to interrupt you, but I have a question along a different line. Colonel Harris, I have before me a public document known as "Industrial Mobilization Plan, Revised 1933", issued by the Government Printing Office in 1933, and in the back of that is included the draft of eight bills about legislation which it is contemplated to submit to the Congress immediately on the declaration of war. Those eight bills do not comprise all the legislation which you have prepared down there to send to Congress, do they?

Lieutenant Colonel Harris. It includes all the legislation which we feel is necessary to put this plan into effect; yes, sir.

Senator Clark. I am not speaking from knowledge, but from hearsay only, but is it not a fact that you have a bill drawn down there to be submitted to Congress as soon as the declaration of war comes for licensing the press of the country?

Lieutenant Colonel Harris. For doing what?

Senator Clark. Licensing the press.

Lieutenant Colonel Harris. Licensing the press?

Senator Clark. Yes, sir.

Lieutenant Colonel Harris. I know nothing outside of those bills.

---

[1] The committee under date of Apr. 5, 1935, was informed by the Winchester Co. that under the agreement with the United States Cartridge Co. certain overhead percentages in the Winchester Co.'s cartridge shops were agreed upon as standard and were used as the basis of all Winchester ammunition cost accounting until the company was sold in December 1931 by its receivers.

Senator CLARK. Do you have any knowledge, Lieutenant, of any such bill as that?

Lieutenant BRANNON. No, sir.

Senator CLARK. Has that ever been discussed down there in any of your numerous memoranda?

Lieutenant BRANNON. No, sir.

Lieutenant Colonel HARRIS. Answering your question, here is the part of the form applicable to the following methods:

> No material change will be made in the contractor's method if it conforms to good accounting practice and the costs are readily ascertainable therefrom.

Mr. HISS. May I ask what, in your opinion—you do not have to be too exact, but just off hand—what would be your opinion as to the hypothetical case which has just been stated?

Lieutenant Colonel HARRIS. As I understand it, your question is, based over a period of time——

Mr. DAVIS. The overhead is——

Lieutenant Colonel HARRIS. We would certainly examine into it.

Mr. HISS. Would not the obligation imposed on the War Department by that clause demand lengthy and difficult examination and the determination of very doubtful questions from the standpoint of discretion and judgment?

Lieutenant Colonel HARRIS. It would. As I stated previously, the accounting phases of this contract have very serious objection to it.

Mr. HISS. May I call your attention to an agreement dated January 1, 1934, which I believe has not been hitherto introduced in evidence, between a German corporation, the Dynamit Actien Gesellschaft and the Remington Arms Co., which I offer in evidence at this point?

(The agreement referred to was marked "Exhibit No. 1229" and is included in the appendix on p. 3830.)

Mr. HISS. Who is the representative of the Remington Arms Co.?

Mr. DAVIS. Mr. Green and myself.

Mr. HISS. Have you a copy of this contract of January 1, 1934?

Mr. DAVIS. Yes, sir.

Mr. HISS. Will you turn to page 5, paragraph VII, which reads [reading]:

> The royalty paid to D. A. G.—

That is Dynamit Actien Gesellschaft, Mr. Davis, referred to in the preamble to the agreement? Is that correct?

Mr. DAVIS. That is correct.

Mr. HISS (reading):

> The royalty paid to D. A. G. by Remington with respect to military ammunition manufactured and sold by Remington shall not be less than 1 percent without the express consent of D. A. G.

Colonel Harris, would a royalty to a foreign government, a friendly government, be considered a proper allowance of cost under the adjusted-compensation contract?

Lieutenant Colonel HARRIS. If that was the only way we could get it, I would say "yes."

ADJUSTED-COMPENSATION CONTRACT FORM—ACCEPTABILITY TO CONTRACTORS OF 6 PERCENT FEE

Mr. Hiss. Colonel Harris, the adjusted-compensation contract,[1] in its present form, calls for a fee of 6 percent, does it not, on the estimated value of that part of the plant used in connection with the contract? Is that correct? Have you got that provision?

Lieutenant Colonel Harris. Yes, sir. I will let Mr. Brannon answer it. He is more familiar with it.

Mr. Hiss. Have you the page reference?

Lieutenant Brannon. You spoke of article II and in exhibit A the details of the printed form.

Mr. Hiss. Roughly, the fee is 6 percent of the estimated value of the plant used in connection with the contract. Is not that correct?

Lieutenant Brannon. There is a rate of 6 percent per annum.

Mr. Hiss. That is the fee?

Lieutenant Brannon. That is right.

Mr. Hiss. In addition to the difficulties which Colonel Harris has referred to in computing cost and in computing valuation, do you not have to enter a further field of uncertainty, in that you cannot simply value a manufacturer's entire plant, but you must break it down into the valuation of that part of the plant which he is using currently, if he does not require his entire plant for the particular contract?

Lieutenant Brannon. We may have cases where we will have to do that.

Mr. Hiss. That will be extremely difficult, will it not, of determination?

Lieutenant Brannon. Yes; it will be difficult.

Mr. Hiss. Has this adjusted-compensation contract been discussed rather generally with those industries to whom it is most likely to be applied in the event of war?

Lieutenant Brannon. It has been discussed quite fully with industries in the various ordnance districts.

Mr. Hiss. Have they agreed to the form which has been introduced in evidence and to which we are now addressing ourselves?

Lieutenant Brannon. There have been a number of objections. Usually, that they do not get enough.

Mr. Hiss. Have you found a unanimity of agreement on the 6 percent on the investment point?

Lieutenant Brannon. It is hard to say, but just remembering various criticisms, I think generally industry seems to think 6 percent is not enough.

Mr. Hiss. Has the War Department made up its mind definitely as to whether 6 percent is enough or not?

Lieutenant Brannon. I cannot say the War Department, because the War Department has never approved these forms. The board has made them up on the assumption that 6 percent is correct, and that is the rate recommended to the War Policies Commission.

Mr. Hiss. Did not General MacArthur testify before the War Policies Commission, on behalf of the War Department, that 6 percent had been determined on by the War Department?

---

[1] Entered as "Exhibit No. 1226–A", see p. 3625.

Lieutenant Colonel Harris. I think, answering your question, the War Department does look with favor upon 6 percent of the capital invested.

Mr. Hiss. And thinks that that is sufficient?

Lieutenant Colonel Harris. I think that is true.

The Chairman. I think it would be altogether interesting to know what the representatives of industry think of that, rather, what their reaction is to it. Mr. du Pont, what of the 6 percent?

Mr. Irénée du Pont. Mr. Chairman, I have not given any long, consecutive thought to this problem, but it would seem to me that the fixing of a definite percentage would at least eliminate all the embarrassment about trusteeship for your stockholders. In other words, if you are in a position where you deserve more than 6 percent by reason, we will say, of their position in the industry and their efficiency, if 6 percent were the limit, it might be that that would keep them from signing their name on a contract limiting them to 6 percent. I think it would have that very definite advantage in eliminating the double responsibility to stockholders as trustees, and a desire to aid the Government in every way possible on the other hand.

If the general principle is adopted of a fixed percentage like 6 percent for everything in this country, I think that would take away a great deal of the feeling that some people are treated better than others, and I think that that kind of feeling does a great deal of harm. Each thinks somebody else is getting more, and they want to get more for that reason. I think on the war materials which you do not classify as munitions such as grain, perhaps, it is going to be extremely difficult to know whether the farmer gets 6 percent or not. Perhaps it would be found wise to let the price of grain soar, and placate the farmer. I do not know. I think you are going to have great difficulty in drawing the line on war munitions, and if you try to fix it on grain or cotton, on a 6 percent basis, I think you are going to get into grave difficulty. But I do not think that these difficulties are insuperable, and I think the War Department is doing a grand job, trying to figure out ahead of time as to how and where to start this thing and get a plan ahead of them.

Mr. Hiss. Mr. du Pont, this 6 percent, as I understand it, is not on the basis of freezing prices. Is that correct, Colonel Harris?

Lieutenant Colonel Harris. There are two different things.

Mr. Hiss. Does the War Department consider that it has jurisdiction over the fixing of prices in time of war?

Lieutenant Colonel Harris. The War Department does not, but it has the responsibility for planning for it.

Mr. Hiss. And making recommendations?

Lieutenant Colonel Harris. I would like to make the point clear. We have one great responsibility in the War Department, supervising procurement, and we have another responsibility, planning for operation in war, to be operated by this agency appointed by the President.

Mr. Irénée du Pont. Mr. Chairman, could I finish one other thought on this thing?

I do not think we ought to forget in these times that the main object of a war is to win, and fixing the dollars, whether for yourself or preventing somebody else from getting them, is, after all, minor, compared with winning the war. If war came, it would be a very expensive thing to pay all of these damages. I am not saying that the idea is to favor preparedness, regardless of expense, because I am opposed to that thing.

Lieutenant Colonel HARRIS. Mr. Chairman, may I read a paragraph on that from the Foreword to the Industrial Mobilization Plan?

The CHAIRMAN. Yes, sir.

Lieutenant Colonel HARRIS (reading):

> In formulating this plan, the recommendations of the War Policies Commission of March 5, 1932, have been taken into consideration. The tendency to overemphasize administrative efficiency and underemphasize national effectiveness has been guarded against. The objective of any warring nation is victory, immediate and complete. It is conceivable that a war might be conducted with such great regard for individual justice and administrative efficiency as to make impossible those evils whose existence in past wars is well known. It is also conceivable that the outcome of a war so conducted might be defeat. In all plans for preparedness and policies to be pursued in event of war it must never be overlooked that while efficiency in war is desirable, effectiveness is mandatory.

The CHAIRMAN. Colonel, is any consideration given in these plans at all that would in any wise regulate the salaries that would be paid officials of an industry, or bonuses that were to be awarded?

Lieutenant Colonel HARRIS. Please answer that.

Lieutenant BRANNON. In this adjusted-compensation contract there is provided in 2 (a) a schedule of the salaries and wages which would be paid, and which cannot be exceeded unless either approved by a governmental price-fixing agent or by a particular officer.

Senator CLARK. How about the bonuses prevailing in the last war? Would your limitation include bonuses paid in the last war to the various workers in munitions plants, so far as concerns the discussions which we have had from time to time?

Lieutenant BRANNON. I think so.

Lieutenant Colonel HARRIS. I do not think you understand the Senator. I think he is asking whether the Government would sanction including bonuses in the rates.

Senator CLARK. Whether the limitations you are speaking of for this would include bonuses, or whether bonuses would be in addition to that.

Lieutenant Colonel HARRIS. The rates are for salaries or wages to be paid, and there is nothing about bonuses, and 6 percent is on the capital investment involved.

Senator CLARK. What I am trying to get at, Colonel, is this:

Whether or not a set-up was made for them and for bonuses to be paid for the work.

Lieutenant Colonel HARRIS. I think that is prevented in this contract, because the only bonus paid is where an agreement is made as to some form of piecework, in which some incentive to rapid production may be included.

The CHAIRMAN. Mr. Pugsley, do you have any thought which you wish to express concerning the limitation of 6 percent? Have you given it any thought at all?

Mr. PUGSLEY. Practically none. My recollection of the adjusted-compensation contract, so far as my own connection with it is concerned, was a meeting which I attended 6 or 7 years ago in Hartford, at which the original draft was presented, and that seemed to involve so many difficulties of accounting that we did not get as far as discussing the percentage. I heard nothing more from it until I should say 2 or 3 years ago there was another conference, and at that time we were informed by representatives of the Ordnance Department that the former contract which we had discussed was now obsolete and was being revised, and they were swinging away from that type onto another type, and that we would be advised in the matter.

I do not remember ever having any further conference about that, and I have no idea about the 6 percent. I would want to discuss that with the board of directors before I express an opinion.

The CHAIRMAN. Mr. Davis, would you like to discuss that thought, too?

Mr. DAVIS. I have given no thought to it at all, Senator, but I feel sure that you could count on Remington giving their 100-percent support to any plan that the War Department thought was equitable.

Mr. HISS. Mr. du Pont, did you understand that the 6 percent referred not to general fixing of such throughout industry but to a return to specific contractors with the War Department?

Mr. IRÉNÉE DU PONT. I appreciate that now, but I do not know how far you are going down the line.

Mr. HISS. As I understand it, those contractors who the War Department determines require this particular type of contract will be primarily certain contractors with the Ordnance Department. That is correct, Colonel Harris?

Lieutenant Colonel HARRIS. But applying to noncommercial material.

Mr. HISS. And the Ordnance Department is the primary purchaser of such material?

Lieutenant Colonel HARRIS. Generally speaking; yes, sir.

Mr. IRÉNÉE DU PONT. May I say a word about bonuses?

The du Pont Co. certainly paid out very large bonuses throughout the period of the war, especially before the United States went into the war, when we had larger profits than during the war, to offer incentive to men for carefulness and energeticness in the pursuit of their work.

Senator CLARK. That was very general throughout industry, was it not?

Mr. IRÉNÉE DU PONT. I do not know how general it was, but the du Pont Co. had been giving them for many years. It is my belief that the best investment we made during the war was in our bonus plan. I think we got back more earnings by economies from operation, savings all along the line, preparatory to getting further progress, than we could have gotten by the investment of that fund in any other way, without exception.

If that could be grafted onto the plan to incite people to efficiency and the like, it would be a very fine thing to do. I talked to a fellow who used to be vice president of the United States Rubber Co., and I asked why he did not use the bonus plan. He said the plan worked wonderfully if you were working under a beneficent autocracy.

Senator CLARK. The thing I had in mind was that there were men in the front-line trenches frequently working 24 hours a day, without any incentive, and I was trying to find out the difference between a civilian man back of the line and the man in the front-line trenches.

Mr. Irénée du Pont. Mr. Senator, I do not know much about the Army, because I have never been in it. If it could be grafted onto the Army, it might do good and might not. I have my doubts about it, but that is for you Army officers to pass on, not me.

The Chairman. Mr. du Pont, was the matter of bonuses essential to the creation of initiative as respects the executives of the corporation during that period?

Mr. Irénée du Pont. I think it was; yes, sir.

The Chairman. You mean that there was a larger initiative and a larger service performed by reason of the fact that executives felt there was going to be a bonus for them?

Mr. Irénée du Pont. Yes; if they could earn it. I think that ran all through the organization. I have not the least doubt that it was the real cause of a great deal of improvement in our efficiency. You will appreciate that efficiency is very important. Take the matter of alcohol, I mentioned before. The old plan called for using nine-tenths of a pound of alcohol for a pound of powder, probably eight-tenths. I think both the Army and the Navy had the same experience. By concentrating on that particular problem, among the innumerable other problems, we gradually reduced the amount of alcohol required for powder to three-tenths of a pound. Alcohol was extremely scarce at that time, and its price was fixed in the price of molasses and grain. That is, those were means of fermentation. That saving was not only large in dollars, running into millions of dollars, but we might not have been able to get enough alcohol to make all the powder required if we had not saved.

Mr. Pierre du Pont. Mr. Chairman, may I say a word on this?

The Chairman. Yes; Mr. du Pont.

Mr. Pierre du Pont. I think I have had a great deal to do with the bonus system in the du Pont Co. and elsewhere. I never happened to have received a bonus for anything in my life—and possibly I did not deserve it—but that is a fact. However, I have had a great deal to do with other people receiving bonuses, and I have recommended to everyone having control over men to award a man for good work accomplished, whether it is in the Army, industry, or anywhere. I cannot imagine how the Army would fail to improve in its operation if there was a system of reward for success, financial as well as honors. Some people are appealed to more by honors than money, and frequently the reverse is the case. But the fact remains that it appeals to a man to be awarded in that way for good things accomplished. In the du Pont Co. my brother said a lot of men received a bonus. I doubt if he received a bonus at all.

Mr. Irénée du Pont. I did not after becoming president but in the war I received two bonuses. It is in the record of compensation I received.

Mr. Pierre du Pont. It is the second line of men who generally receive the larger bonuses, rather than the first line. Their bonuses, if received at all, are extremely small, but it is the second-line men who are stepping into the big positions who are the ones who get the best bonuses. It is a plan that certainly worked very well.

May I say a word on the question of a 6-percent profit? I agree with what my brother says, but I cannot imagine anything that would discourage invention more than a known policy of that kind applying to everything. I am not trying to raise objections, and I do not know how to overcome that difficulty. But, for instance, in the air business, which is a new thing, it certainly would discourage all invention, if it were known that a 6-percent money reward was all that was being paid, because a tremendous amount of money is going to be required in developing the inventions. A great many people know that the better part of the inventions will fail.

If the man who succeeds has nothing but 6 percent ahead of him, and maybe over 90 percent open to failure, he is not going to pursue that business very far.

New business must be encouraged by higher profits, otherwise nobody will go into it and nobody will follow the inventions which are necessary.

The CHAIRMAN. Do you mean that is true in time of war?

Mr. PIERRE DU PONT. No; I do not. I think in time of war that patriotic feeling gets possession of everybody and they will do everything, knowing what they do will have a direct result. It was certainly apparent when we joined the war, how everybody joined in in every way. That is a condition entirely different from what is a normal condition, and how to meet that condition as against normal is a very difficult problem.

I agree with the starting of this plan, possibly on the 6-percent basis, especially with the things that have become standard, it is a very good plan, possibly at the start, but I think there should be a great deal of care taken in preparing it and not to go so far that we are going to discourage invention, from time to time, which possibly should be promoted in military affairs.

Mr. HISS. Do you realize that your brother, Mr. Irénée du Pont, was referring to a proposal relating to war-time contracts, not to general procurement contracts?

Mr. PIERRE DU PONT. I was not certain about that, whether he was speaking of both or only war time; but I think the whole proposition would be much easier to put in force in war time than in peace time, for the reason that the incentive to go ahead and do things is so much greater then that the money profit is more lost sight of.

Mr. HISS. Do you believe that a 6-percent return on valuation as the fee is a sufficient fee to be paid by the War Department in time of war?

Mr. PIERRE DU PONT. I should say probably yes. I would not want to say without exception. But I think, in general, probably that would be a good throw-down to start.

Mr. HISS. Do you think the War Department should not attempt to be arbitrary about it and apply it to all contractors, but should make exceptions?

Mr. PIERRE DU PONT. I think it ought to be open to possible exceptions. I cannot name any. I agree with my brother it is very difficult to lay down a rule that will apply to everyone. I do not see how the rule could apply to things such as farm products. I do not see how they could be controlled.

Mr. HISS. Do you think the du Pont Co. would be included in the exception, or do you think the du Pont Co. would agree that 6 percent would be sufficient return for it on its contracts with the Government?

Mr. PIERRE DU PONT. I have no right to speak for the du Pont Co. Personally, I should say it was all right, probably.

Senator CLARK. Coming back to this question I was asking a while ago, Lieutenant Brannon has been kind enough to direct my attention to paragraph 5, section D, on page 100 of the Industrial Mobilization Plan to which I referred a little while ago. It is a Presidential proclamation which has been prepared to be issued in the event of war.

> I hereby appoint and designate ____ as Administrator of Public Relations. His duties and powers shall be to advise and assist the President in all matters relating to public information as to the progress, aims, and purposes of the Government of the United States in the present emergency. Said Administrator of Public Relations shall also have the authority to employ such assistants and subordinates as may from time to time be deemed by him necessary, and to fix the compensation of such assistants and subordinates.

Lieutenant Brannon, is there any specific indication as to what the duties of this Administrator of Public Relations would be, other than this chart found opposite page 46 of this document? In other words, is it the purpose of the War Department in setting up this administration of public relations having control of the public information that that is simply a reference—for instance, the administration of the Administrator of Public Relations is divided into the division of news, both domestic and foreign; division of pictures, films, posters, cartoons, photographs, and scenarios; the administrative division; division of civic cooperation—does that simply apply to cooperation or does it apply to taking control of the avenues of public information which are ordinarily put out by the newspapers and magazines, is what I was trying to get at?

Lieutenant BRANNON. Following page 45 are the outlines of the plan so far as they pertain to public information.

Senator CLARK. I see paragraph (*g*) there, Lieutenant, under section 2 on page 46, among the functions to be performed:

> To enlist and supervise a voluntary censorship of the newspaper and periodical press.

Do your plans contemplate anything other than voluntary censorship?

Lieutenant BRANNON. So far as I know, they do not.

Senator CLARK. Colonel Harris, do you have any further information on that subject than what the Lieutenant has given?

Lieutenant Colonel HARRIS. I am sure it does not, Senator.

The CHAIRMAN. The committee will be in recess until 10 a. m. tomorrow morning.

(Thereupon, at 5: 10 p. m., Monday, December 17, 1934, the hearing was recessed until tomorrow, Tuesday, December 18, 1934, at 10 a. m.)

INVESTIGATION OF MUNITIONS INDUSTRY

TUESDAY, DECEMBER 18, 1934

United States Senate,
Special Committee to Investigate
The Munitions Industry,
Washington, D.C.

The hearing was resumed at 10 a.m., in room 357 Senate Office Building, pursuant to the taking of recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Vandenberg, Barbour, and Pope.

Present also: Alger Hiss, legal assistant to the committee, and R. Wohlforth, assistant chief investigator for the committee.

The Chairman. Will the witnesses who were on the stand last night please come forward.

TESTIMONY OF EDWIN PUGSLEY, C. K. DAVIS, EGBERT C. HADLEY, J. H. CHASMAR, LT. COL. C. T. HARRIS, AND LT. E. M. BRANNON—Resumed

Mr. Pierre du Pont. Mr. Chairman, might I present " Exhibit No. 1224 " for the record, the document I spoke of last evening?

The Chairman. Present what, Mr. du Pont?

Mr. Pierre du Pont. This is a record concerning Old Hickory that I have prepared.

Senator Clark. That was the exhibit for which you reserved the number?

Mr. Pierre du Pont. Yes.

The Chairman. Yes; that may be received at this time.

(The statement referred to was marked " Exhibit No. 1224 " and is included in the appendix on p. 3784.)

DOMESTIC SALES OF WINCHESTER REPEATING ARMS CO.

The Chairman. Mr. Pugsley, for the purpose of making the record clear at this stage, what is your official capacity?

Mr. Pugsley. Vice president of the Winchester Repeating Arms Co.

The Chairman. There are one or two matters, Mr. Pugsley, concerning your domestic sales about which the committee is desiring information this morning. Is the committee correct in understanding that your production is primarily that of sporting arms and ammunition?

Mr. Pugsley. Yes, sir.

The CHAIRMAN. Have you manufactured certain parts of guns that have not been intended for sporting purposes?

Mr. PUGSLEY. Possibly.

The CHAIRMAN. You have manufactured gun barrels alone?

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. Information before the committee reveals that you manufactured some 200 gun barrels at one time, 100 barrels in 1933, and 100 barrels in 1934. Can you tell the committee who they were for?

Mr. PUGSLEY. I think you are referring to an order of short barrels. The first order was made for Griffin & Howe.

The CHAIRMAN. For whom?

Mr. PUGSLEY. Griffin & Howe is my recollection. The second order came in and Mr. Beebe handled that. I don't remember who it was made for. I think it was a short barrel similar to a Thompson submachine gun barrel.

The CHAIRMAN. The correspondence before the committee indicates that these gun barrels were for the Hyde Arms Co. of Brooklyn.

Mr. PUGSLEY. I think that is correct.

The CHAIRMAN. What was the other company to which you referred?

Mr. PUGSLEY. Griffin & Howe.

The CHAIRMAN. Are they in any way related?

Mr. PUGSLEY. That I cannot tell you. As far as I know they are a subsidiary of Abercrombie & Fitch.

The CHAIRMAN. I offer in evidence to be marked with such number as is in order a letter dated September 8, 1934, addressed to the Winchester Repeating Arms Co. by the Hyde Arms Corporation, signed by F. V. Huber, sales manager.

(The letter referred to was marked "Exhibit No. 1230" and is included in the appendix on p. 3833.)

The CHAIRMAN. Is that the same Mr. Huber who is present here?

Mr. PUGSLEY. I could not tell you that. I do not know Mr. Huber.

The CHAIRMAN. I read the letter.

> Gentlemen: Confirming our telephone conversation with your Mr. Elmslie Jonas, please enter our order for 100 barrels as per specifications of the previous 100 that you supplied.
>
> It is understood that delivery is guaranteed in 6 weeks or less and that the price will be $5.50 each, placed in New York City. We are enclosing a check for $550 to cover the value of this order.
>
> We will appreciate having you make early delivery on these barrels.

Do you know what these barrels were for. Mr. Pugsley?

Mr. PUGSLEY. From the contour of the barrels, they looked as though they were for Thompson submachine guns; that same type.

The CHAIRMAN. You had knowledge that the barrels were for use possibly in machine guns?

Mr. PUGSLEY. Possibly.

The CHAIRMAN. Mr. Pugsley, I read from a letter dated June 10, 1933, addressed to Mr. Jonas by the Winchester Repeating Arms Co., for whom Mr. H. F. Beebe was writing. I offer this for appropriate exhibit marking.

(The letter referred to was marked "Exhibit No. 1231" and is included in the appendix on p. 3833.)

The CHAIRMAN. This letter reads:

> Referring to your statement that you had heard confidentially that the Lake Erie Chemical Co. were considering manufacturing a machine gun similar to the Thompson submachine gun, I spoke to Mr. Pugsley about this and he was quite interested. I believe he would like an opportunity to figure on the manufacture of such a gun if contemplated.
>
> He told me that we had received an order from Griffin & Howe for some 500 barrels different from anything that we make which might be intended for machine guns.

I take it then there were sales to Griffin & Howe of barrels of this kind, as well as to the Hyde Arms Corporation?

Mr. PUGSLEY. That is my belief; yes, sir.

The CHAIRMAN. The committee, Mr. Pugsley, is interested in this because of its anxiety to find out how machine guns are assembled by securing parts from different manufacturers. Do you know of any material business along that line, buying of parts from different manufacturers and then assembling them?

Mr. PUGSLEY. No, sir; not on new guns. This is the only instance that I have run into on this type of business.

The CHAIRMAN. How similar is the Hyde gun to the Thompson machine gun?

Mr. PUGSLEY. I never saw it, sir.

Senator BARBOUR. Are the barrels similar?

Mr. PUGSLEY. The barrels look about the same length and they are about the same design.

Mr. WOHLFORTH. Are the magazines similar?

Mr. PUGSLEY. That I could not tell you.

The CHAIRMAN. Is there any law or any regulation, Mr. Pugsley, that you know of, which might prevent persons from buying or having manufactured parts of machine guns?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Quite obviously it would take the cooperation of reputable manufacturers, such as your firm, to supply component parts to anyone who was engaged in that kind of business?

Mr. PUGSLEY. If you were going to make them in large quantities; yes. Any machine shop could make this barrel in relatively small quantities.

The CHAIRMAN. This order with which we are dealing this morning, you had good reason to believe that those were for machine gun purposes?

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. Does the National Fire Arms Act serve to restrict in any way the manufacture by some individual collecting the parts from various manufacturers?

Mr. PUGSLEY. It would regulate it, as I understand it, on account of the barrel length. Barrels would have to be more than eighteen inches long.

The CHAIRMAN. Have you finished, Mr. Pugsley?

Mr. PUGSLEY. Somebody asked the question "why" back here.

The CHAIRMAN. Could that question be answered; why?

Mr. PUGSLEY. Because that is what the law says.

The CHAIRMAN. Are you acquainted with R. F. Sedgley?

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. What is he known as? How is he spoken of?

Mr. Pugsley. He is a manufacturer of revolvers. He has made wrenches and he also supplies military arms.

The Chairman. Particularly machine guns?

Mr. Pugsley. He supplies machine guns; yes, sir.

The Chairman. Is he known in the trade as " Sidewalk " Sedgley?

Mr. Pugsley. I heard some paper published that some time ago. I never heard it but that one time.

The Chairman. Have you heard any reason given as to why he would be termed in such manner?

Mr. Pugsley. Only the headlines in that article.

The Chairman. Where does Sedgley secure his stocks of machine guns?

Mr. Pugsley. I could not tell you that.

The Chairman. You do not know?

Mr. Pugsley. I imagine from Government sales, but I am not familiar with that end of the business.

The Chairman. Have you had any transactions with him, your company?

Mr. Pugsley. We have.

The Chairman. What have you sold him?

Mr. Pugsley. We have sold him sporting barrels. We have also sold him some military barrels.

The Chairman. Barrels for what?

Mr. Pugsley. Rifles; shoulder rifles.

The Chairman. Rifles alone?

Mr. Pugsley. He makes quite a line of sporting rifles. We supply him the barrels for those sporting rifles.

The Chairman. Have you knowingly manufactured any component parts of machine guns for him?

Mr. Pugsley. Not to my recollection.

The Chairman. I have here a letter dated as recently as April 12, 1933, Mr. Pugsley, which has the advice that six machine guns by your firm were sold to Mr. Sedgley. I offer that letter for the record.

(The letter referred to was marked " Exhibit No. 1232 " and is included in the appendix on p. 3833.)

The Chairman. I read from that letter:

> Confirming your conversation with Mr. Pugsley and telephone conversation with the signer this afternoon, we are forwarding to you a case containing six Browning light-weight machine guns, caliber 30 Government 06 on consignment.

That letter was written by Mr. Beebe and addressed to R. F. Sedgley, Inc., at Philadelphia. Can you tell us whether or not this was the only sale of machine guns made to Sedgley?

Mr. Pugsley. I think it was. The old company may have made one similar sale. These particular guns were guns that were kept over from the war and turned up when we opened up some boxes that had gotten mislaid, and we found those six guns; I think there was one other sale but I am not sure of that.

The Chairman. How many guns do you carry in stock; machine guns?

Mr. Pugsley. None.

The Chairman. Were you carrying machine guns in stock back there in April 1933?

Mr. PUGSLEY. These were experimental samples that had been filed away for experimental work when we had the war work and they had been mislaid and never been disposed of.

The CHAIRMAN. Mr. Beebe is not present today?

Mr. PUGSLEY. No, sir; he is not.

The CHAIRMAN. I wish you would make note, Mr. Pugsley, so that upon your return you can gather for and supply to the committee definite information concerning stocks on hand and concerning sales of machine guns or component parts to Mr. Sedgley.[1] Will you do that?

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. And send it to the committee?

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. Make that inclusive, Mr. Pugsley, of all sales to agencies other than governmental agencies.

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. I have before me a letter dated July 16, 1934, from one G. Oberdick, of Federal Laboratories, Inc., to the Auto Ordnance Corporation—who are the dealers in the Thompson Machine Gun?

Mr. PUGSLEY. I believe they are.

The CHAIRMAN. I offer this letter for the record.

(The letter referred to was marked "Exhibit No. 1233" and appears in full in the text.)

The CHAIRMAN. The letter reads as follows:

> A few days ago Mr. Thompson, export manager of the Winchester Repeating Arms Co., telephoned to our New York office for a price of 250 type L drums for the Thompson submachine gun.
>
> It is our opinion that these drums are for shipment into Cuba and, no doubt, inquiry was received by Winchester from Lake Erie Chemical Co.
>
> We have advised them that we must know the shipping destination in order to secure the necessary State Department permit before quoting or promising delivery on the equipment.
>
> It is just possible that they may approach you direct on this lot of equipment, so we are passing this information on to you.

Do you also supply machine-gun drums, Mr. Pugsley?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. This letter would indicate it, wouldn't it?

Mr. PUGSLEY. It would, from the first paragraph.

The CHAIRMAN. You never have handled the drum?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Nor have you had any sales. Have you acted as intermediary for the sale of any such drums?

Mr. PUGSLEY. Not to my knowledge.

The CHAIRMAN. The F. V. Huber mentioned in the exhibits which have been referred to this morning, do you know him to be sales manager for the Hyde Arms Corporation?

Mr. PUGSLEY. No, sir; I do not know Mr. Huber at all.

The CHAIRMAN. Do you know him to be an officer of the Lake Erie Chemical Co.?

Mr. PUGSLEY. No, sir; I do not.

The CHAIRMAN. Do any of those associated with you who are present know him?

---

[1] The information regarding sales of machine guns was submitted to the committee under date of Jan. 7, 1935, and appears in the appendix on p. 3929.

Mr. PUGSLEY. I do not think so.

The CHAIRMAN. Is there any association that you know of between the Hyde Arms Corporation and the Lake Erie Chemical Co.?

Mr. PUGSLEY. I do not know a word about it.

The CHAIRMAN. How many parts of a submachine gun can you manufacture?

Mr. PUGSLEY. We could manufacture them, sir, if we were tooled up for it.

The CHAIRMAN. If what?

Mr. PUGSLEY. If we were tooled up for it.

The CHAIRMAN. You mean equipped for it?

Mr. PUGSLEY. Yes, sir.

The CHAIRMAN. Do you manufacture any at all?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Never have?

Mr. PUGSLEY. Not to my knowledge, except these barrels. That is the only thing that I can recall.

The CHAIRMAN. And you do not think the company has ever produced the drums?

Mr. PUGSLEY. I am certain of that.

The CHAIRMAN. Mr. Pugsley, by shopping around it would be possible for anyone to get the parts from reputable manufacturers to make a complete machine gun?

Mr. PUGSLEY. I think that if anybody came to us that was a legitimate customer, and asked us to bid on a part, that we would bid on them.

Mr. WOHLFORTH. Do you consider the Hyde Arms Co. a legitimate customer?

Mr. PUGSLEY. I do not know anything about the Hyde Arms Co., Mr. Wohlforth.

Mr. WOHLFORTH. That is the corporation to whom you sold these barrels.

Senator CLARK. If you did not know who the Hyde Arms Co. were, Mr. Pugsley, how did you know you were dealing with a legitimate customer?

Mr. PUGSLEY. Mr. Beebe would have to testify as to who they were. I had nothing to do with that transaction other than that I was told that another order for barrels had been received.

Senator CLARK. It has been shown in evidence here that the manufacture of those guns was financed by the Lake Erie Chemical Co., a gas manufacturer of Cleveland, Ohio.

The CHAIRMAN. Mr. Pugsley, the committee has before it a letter written by yourself, dated March 21, 1932. upon which we should like to have a little information. Your letter is addressed to Maj. Julian S. Hatcher, Office of the Chief of Ordnance, Washington, D. C.

(The letter referred to was marked "Exhibit No. 1234" and appears in full in the text.)

The CHAIRMAN. It reads:

> DEAR MAJOR HATCHER: Some time ago I understood that the War Department were testing various types of bullets and velocities and their action in meat and to this end had developed a synthetic material which simulated the action of flesh as regards behavior when struck with rifle bullets.
>
> We are continually experimenting along similar lines and it will be a great aid to us if we could develop such synthetic material to enable us to study action

of soft point and steel-jacketed bullets and, therefore, will appreciate any information you could give us with reference to composition and behavior of such a meat substitute.

Very truly yours,

Winchester Repeating Arms Co.,
By Edwin Pugsley.

What is this practice referred to here?

Mr. Pugsley. When we develop a new sporting cartridge, it is always of importance to find out how it will mushroom. It has been very difficult to find anything that acts like living flesh. You cannot experiment on that, so the best we can do is to buy beef from the butcher, and that is not a satisfactory substitute.

The Chairman. You actually use meat as a target or a receiver for the projectile?

Mr. Pugsley. On testing such sporting cartridges; yes, sir.

Senator Clark. Do you use it on military cartridges, Mr. Pugsley?

Mr. Pugsley. No, sir; we do not use it on military cartridges, but we do for jacketed bullets, because the trappers object to the hides being torn, and we have to furnish jacketed bullets for the hide trade.

Senator Clark. Of course, the military authorities are not concerned about how much hide they tear.

The Chairman. You are writing now to the War Department, and you discover that they have been doing some experimental work, and you want the advantage of their knowledge. What is the relationship there. if it had to do only with sporting goods?

Mr. Pugsley. The relation is, if they had discovered a material which would act in the same way that live tissue would, it would be of advantage to us in designing our sporting cartridges.

The Chairman. What does the War Department practice on?

Mr. Pugsley. That I could not tell you. That is what I was trying to find out.

The Chairman. You understood that they were testing types in meat, did you not?

Mr. Pugsley. I had heard they were making some tests.

The Chairman. For what purpose?

Mr. Pugsley. That I do not know.

The Chairman. Do you know to what extent the War Department engages in experimentation of this kind?

Mr. Pugsley. No, sir.

The Chairman. What reply did you have from the War Department in answer to your inquiry?

Mr. Pugsley. My recollection is that we either got no answer or it was a negative, in any event. I do not remember, but we got no information.

The Chairman. What degree of perfection is attained by a perusal of this practice?

Mr. Pugsley. I do not quite know as I understand your question, Senator.

The Chairman. What is it you would want to know about the action of a bullet in meat?

Mr. Pugsley. A soft-nosed bullet has to be hard enough so that it will not go to pieces, and yet soft enough so that it will mushroom when it strikes the animal. We have tried soft pine boards and various other materials, but it is very hard to get a substitute for living tissue. We have reports from hunters continuously telling us about various experiences they have with the use of these hunting bullets, and it is our endeavor to perfect our hunting bullets.

The CHAIRMAN. Have you found any synthetic substances yet?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Nothing to take the place of living flesh?

Mr. PUGSLEY. The nearest we can come to it is beef which we buy from the butcher.

The CHAIRMAN. How extensively have you experimented with beef?

Mr. PUGSLEY. I would say that for any cartridge which we get out, before it is finally approved for the market, it is tested in beef.

The CHAIRMAN. What results do you seek to accomplish in these tests?

Mr. PUGSLEY. Simply to determine whether the bullet acts all right in beef; whether the upset is proper.

The CHAIRMAN. And this testing is confined exclusively to sporting ammunition, is it?

Mr. PUGSLEY. Absolutely.

The CHAIRMAN. You have no knowledge of these experiments by the War Department at all?

Mr. PUGSLEY. None whatsoever.

The CHAIRMAN. This was in March 1932, that you were writing the War Department for this information. Have you heard since, or have you had any understanding since, that they were testing types of bullets upon flesh?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Have you ever made any further inquiry as to the results of the War Department experimentation?

Mr. PUGSLEY. Not to my recollection; no, sir.

The CHAIRMAN. Did the War Department, in responding to you, say that they were not engaged in that kind of experimenting?

Mr. PUGSLEY. I do not remember that they did.

The CHAIRMAN. But they gave you no advantage of their experience?

Mr. PUGSLEY. No, sir.

The CHAIRMAN. Mr. Pugsley, assuming that you are sufficiently well acquainted with the submachine gun to know, I want to ask you again on what scale one could engage, if he were inclined to do it, in the manufacture of submachine guns, through purchasing component parts from various manufacturers?

Senator BARBOUR. You mean assembling guns, Mr. Chairman?

The CHAIRMAN. That is right. Assembling guns without the necessity of having to buy all parts from one factory.

Mr. PUGSLEY. The parts would all have to be specially made for the particular gun, and it would be possible to contract for these parts, yes, sir, in different gun shops.

The CHAIRMAN. What of the Hyde gun? Are there not parts of the Hyde gun which could be used in the Thompson submachine gun?

Mr. PUGSLEY. I do not know.

Senator CLARK. Mr. Pugsley, do you know anything about the practice of the Government in disposing of rifles and machine guns?

Mr. PUGSLEY. Of what?

Senator CLARK. Of rifles and machine guns, when they are supposed to be rendered useless and sold for junk.

Mr. PUGSLEY. I know that they are sold.

Senator CLARK. As a matter of fact, it is the practice of the Government arsenals in one case to break the barrel, and in another arsenal to break the stock, is it not, and if a man wants a machine gun, all he has to do is to buy some so-called "useless" weapons from one arsenal and some from another arsenal, and put them together?

Mr. PUGSLEY. The guns which I have seen have invariably been burned with an acetylene torch and the barrels, bolts and so forth would be affected.

Senator CLARK. Is it not a fact that some arsenals make it a practice to break the stock and other arsenals make it a practice to break the barrel?

Mr. PUGSLEY. Not that I know of.

Senator CLARK. And by assembling the various parts, it is possible to make a serviceable weapon?

Mr. PUGSLEY. Not that I know of. I have never seen that, in other words.

Mr. WOHLFORTH. Mr. Pugsley, just to make the record clear, it is perfectly easy to buy a barrel from your company, and you do not inquire to whom you sell it, that is, you did not know who the Hyde Arms Co. was. You simply made the 200 barrels and sold them.

Mr. PUGSLEY. Mr. Wohlforth, I personally did not know who the Hyde Arms Co. were and had never heard of the Hyde Arms Co. at the time. When Griffin & Howe inquired for the barrels, we knew Griffin & Howe, and made them for them. I cannot testify for the Hyde Arms Co., because I did not know anything about them. I was simply told by Mr. Beebe that they had another order for more of the gun barrels.

Senator VANDENBERG. If you had an offer from Sedgley for barrels, would you fill it?

Mr. PUGSLEY. Yes, sir; we do fill orders from Sedgley for barrels.

Mr. WOHLFORTH. This letter previously referred to, dated September 8, 1934, is a letter in which Mr. Huber is writing you as an official of the Hyde Arms Corporation, and he says [reading]:

> Please enter our order for 100 barrels as per specifications of the previous 100 that you supplied.

The previous 100 were the Griffin & Howe barrels, were they not?

Mr. PUGSLEY. I imagine so.

Mr. WOHLFORTH. Would not this seem to indicate that the Hyde Arms Co. and Griffin & Howe Corporation are very closely allied?

Mr. PUGSLEY. I do not know anything about that.

Mr. WOHLFORTH. After getting the barrel, it would be easy to get the stock and then the other mechanism could perhaps be just as easily assembled and screwed together, and you would have a fairly good submachine gun with a little bit of work, would you not? The point I want to make is that there is no restriction. You will sell it and somebody else will sell the stock, and they can take a pistol and file down the sear, perhaps, and develop some sort of a very dangerous weapon, which often gets into the wrong hands?

Mr. PUGSLEY. I imagine that could be done.

Senator CLARK. Mr. Pugsley, there has been put in evidence in this hearing last September[1] testimony showing a contention raised by the Federal Laboratories, Inc., at Pittsburgh, which make gas, but has a side line, an agency for the Thompson submachine gun, that this Hyde gun which is being put out by the Lake Erie Chemical Co., now the U. S. Ordnance, Inc., of Cleveland, a competitor of Federal Laboratories—that the Hyde gun was nothing on earth except a Thompson machine gun with a new barrel, that they were getting some Thompson machine guns and putting on a new barrel for sale in Cuba. Do you know anything about that?

Mr. PUGSLEY. No, sir; not a word.

In answer to your other question, Senator, you were a little bit confused in my remark, saying, "tooling up." I might say that to tool up to make a given rifle, or any rifle, is a very long and expensive job. It would take 6 months or a year just to tool up to make the Springfield rifle, making the jigs, fixtures, and tools.

Senator CLARK. As a matter of fact, bearing out what you say, American troops were compelled to use the Enfield rifle throughout the war, Mr. Pugsley, because Remington and Winchester were tooled up for making Enfields, which is a far inferior gun to the American Springfield, but the Government went ahead and bought those and used them because of the assurance on the part of the manufacturer that it would take some time to tool up. Is that correct?

Mr. PUGSLEY. That is the only way it could be done.

Senator CLARK. I am not criticizing, but I am just pointing out that.

Mr. PUGSLEY. We have no military rifle in our line whatsoever, and had no military rifle in our line when the Great War broke out, sir.

The CHAIRMAN. The parts which you were manufacturing might have entered into the making of guns for military purposes?

Mr. PUGSLEY. Only a very inferior military rifle. We supplied the Russian Government with some of our model 95, which is a sporting rifle, made over into a military model. It was an extremely unsatisfactory military rifle, but Russia had to have it because it was all they could get.

Senator CLARK. What is the difference between a sporting rifle and a military rifle, Mr. Pugsley?

Mr. PUGSLEY. A military rifle, I think, is generally acknowledged as a bolt-action rifle. There is no Army I know of who has anything but bolt-action rifles.

Senator CLARK. Do you think that the British troops who opposed the Americans in the Battle of Kings Mountain and at the Battle of New Orleans would regard the old squirrel rifle that the American troops were armed with as military or sporting weapons?

Mr. PUGSLEY. They were sporting weapons but they turned out to be a great and important factor in winning the war.

The CHAIRMAN. Are not sporting rifles and sporting ammunition used to some extent in practice by the Army?

Mr. PUGSLEY. In practice, possibly.

Mr. WOHLFORTH. Mr. Pugsley, you have a bolt-action which is caliber .30 in your line, do you not?

Mr. PUGSLEY. We do. We have a model called 54.

---

[1] Hearings, Part VIII, p. 1933.

Mr. Wohlforth. All you would need to do would be to change the front sight and the rear sight a little bit, and you would have a military rifle, would you not?

Mr. Pugsley. I do not think it would be a military rifle which could be sold to any military country. The gun would have to be designed from the ground up to make it a satisfactory military rifle. If you wish to go into the technical reasons, I would be very glad to.

The Chairman. China would be a market for it, would it not?

Mr. Pugsley. I do not think they would take the rifle the way it is at the present time. It would have to be redesigned. Further than that, we are tooled up to produce about 50 guns a day, and it would take a long time to stock an army on 50 guns a day.

Senator Clark. Colonel Harris, on the very point we raised, that is, that American troops used Enfields, which are notoriously inferior to Springfields, that is a point to which I think you will agree.

Lieutenant Colonel Harris. Springfield rifles are superior to the Enfield.

Senator Clark. The Springfield rifle is the best military rifle in the world?

Lieutenant Colonel Harris. It is so regarded by the world, I think.

Senator Clark. I call your attention to section 123 of the National Defense Act, headed:

> Procurement of gages, dies, jigs, and so forth, necessary for manufacture of arms, and so forth.

That reads [reading]:

> The Secretary of War be, and he is hereby, authorized to prepare or cause to be prepared, to purchase or otherwise procure, such gages, dies, jigs, tools, fixtures, and other special aids and appliances, including specifications and detailed drawings, as may be necessary for the immediate manufacture, by the Government and by private manufacturers, of arms, ammunition, and special equipment necessary to arm and equip the land forces likely to be required by the United States in time of war.

I regard that as the most important section in the National Defense Act. I do not wish to ask you to what extent the War Department has been making preparations under that section, but I would like to ask you whether the War Department is taking steps to obviate such occurrences as arose during the war due to the fact that the Remington Co. and other manufacturers of small arms were tooled up for British Enfields and the American troops were compelled to use an inferior weapon during the war, or whether you are prepared with the necessary tools to start into production in the event of war?

Lieutenant Colonel Harris. We are not prepared. We are prepared to the extent that money is appropriated.

Senator Clark. You are limited to the amount of the appropriation by Congress?

Lieutenant Colonel Harris. The appropriation of some $75,000 a year. I imagine that the jigs, dies, and fixtures required for a military program would cost $100,000,000.

Senator Clark. That would be the cheapest money that the United States Government could spend.

Lieutenant Colonel Harris. It would, indeed, sir, and we would like to have the money, too.

Mr. Hiss. Toward the close of yesterday's hearing, there was testimony on the question of what costs were to be included in the adjusted compensation contract, and there was some suggestion on the part of Mr. Pierre du Pont, I think, that bonuses should be included.

I would like to offer for the record at this time an analysis obtained by the committee from the du Pont Co., showing income taxes, experimental and engineering expense in connection with new production, and part of the foreign-trade development expenses, as well as bonuses, to October 31, 1934.

(The document referred to was marked " Exhibit No. 1235 " and is included in the appendix on p. 3834.)

Mr. Hiss. It shows " B " bonus. What is the " B " bonus. Mr. Irénée du Pont?

Mr. Irénée du Pont. The " B " bonus is really the regular bonus. We have "A" bonus, which is specific compensation for special invention or special activity.

The " B " bonus is based on the judgment of the men, Senator, all the way up, checked as they go up, as to how much he really contributed, to the best of his judgment, to the general progress.

Mr. Hiss. Is that a cash bonus or a stock bonus?

Mr. Irénée du Pont. It used to be entirely a stock bonus. I think that since the law regulating issuing securities, which was recently passed, we have been obliged to pay in cash because we would be involved in some of the red tape pertaining to the issuing of stock. I am not quite sure of that, but it is my impression it is so. But in those days it was substantially all stock.

Senator Vanderberg. That is your impression of the red tape, at any rate?

Mr. Irénée du Pont. Very seriously, I think it is a case of overreaching by the legislators in trying to make a thing good and forgetting what other harm may come about in the effort to do good.

Mr. Hiss. Mr. du Pont, the " B " bonus is paid to what class of employees, roughly?

Mr. Irénée du Pont. My recollection is—of course, I am going back a good many years—that the limit was down to a salary of $400 a month.

Mr. Davis. $300.

Mr. Irénée du Pont. $300.

Mr. Hiss. From there up?

Mr. Irénée du Pont. From there up.

Mr. Hiss. It does not include pay-roll employees, but just salary employees.

Mr. Irénée du Pont. I think that is correct, although I am not absolutely sure of that. I think in later years that was departed from, but I am not at all familiar with the details since 1925, 8 years ago.

Mr. Hiss. Mr. Lammot du Pont, can you answer the question?

Mr. Lammot du Pont. I think that is correct.

Mr. Hiss. That from $300 a month up, the salary employees are included, and no pay-roll employees are included?

Mr. Lammot du Pont. I think that is correct.

Mr. Hiss. What is the "merit bonus", Mr. Lammot du Pont, as distinguished from the "B" bonus? Are you familiar with the "merit bonus" paid by your company?

Mr. Lammot du Pont. I do not know of anything at the present time that is referred to as "merit bonus."

Mr. Hiss. This statement prepared by the comptroller, Mr. Nielsen, shows a "B" bonus (consolidated) (including previous year adjustment) for 1934 up to the 31st of October of $945,000, and a merit bonus, also (consolidated) (including previous year adjustment), of $1,733,000. Do you know what that particular bonus referred to there is?

Mr. Lammot du Pont. I have just been reminded that the term "merit bonus" is ordinarily applied to a bonus paid which was set aside under a certain agreement plan, an executive trust agreement plan, which the company adopted some years ago.

Mr. Hiss. Is that a cash-bonus or a stock-bonus plan?

Mr. Lammot du Pont. That is a stock-purchase plan.

Mr. Hiss. Colonel Harris, I call your attention to that specific topic. The present adjusted compensation form of contract excludes from cost the payment of bonuses. Is that correct?

Lieutenant Colonel Harris. I will get Lieutenant Brannon to answer that.

Mr. Hiss. Lieutenant Brannon?

Lieutenant Brannon. Just a second, and I will check on that.

Article III, paragraph 2, subparagraph I, the contract provides (Exhibit No. 1226–A):

> The Government will not reimburse the contractor for any of the following expenditures:
>
> 1. Bonus payments to officers and employees based upon profits earned by the contractor.

Mr. Hiss. Mr. Lammot du Pont, do either the "B" bonus or the merit bonus, in your opinion, constitute bonus payments to officers and employees based upon profits earned by the contractor, assuming that the du Pont Co. were a contractor with the Government?

Mr. Lammot du Pont. Yes; I would so consider it.

Mr. Hiss. Colonel Harris, does not that constitute one point at which there is not agreement between the War Department and one of the major contractors in the event of war?

Lieutenant Colonel Harris. There are a number of points.

INDUSTRIAL CONNECTIONS OF CERTAIN WAR DEPARTMENT AND OTHER OFFICIALS INVOLVED IN PROCUREMENT AND RELATED ACTIVITIES DURING WORLD WAR [1]

Mr. Hiss. Judging from the exhibit which is put in, this particular one may be a rather sizeable item.

Also, toward the close of yesterday's session, there was some testimony on the question of the men who would be chosen by the procurement branches, the supply branches of the Army, to operate on behalf of the Government.

Colonel Harris, I show you a memorandum of April 1, 1924, signed by Mr. Henning, of the du Pont Co., which I offer for appropriate number.

---

[1] This subject was entered into further in hearings of Dec. 19, 1935. See Part XVI, pp. 3991 and 4002.

(The memorandum referred to was marked " Exhibit No. 1236 " and appears in full in the text.)

Mr. Hiss. That memorandum reads:

> Acting on telephone request, obtained the following information regarding the method of contact between the War Department and the General Motors Corporation. Until recently, this was had directly from the office of the Secretary of War, but now through the Detroit district ordnance office in charge of Mr. O'Dell, and with Captain Barnard as executive assistant, and handling joint allocations for the Air Service, Ordnance, and Quartermaster Service. It has been recently proposed to make Mr. Mott of the G.M.C. a colonel of ordnance, and handling matters relative to tractors, motorization of artillery, etc.

This was dated in 1924. Under the proposed plan would Mr. Mott, if he became a colonel of ordnance, deal with the topics here stated, tractors, motorization of artillery, et cetera?

I am not sure that I understand your testimony of yesterday which has been called to my attention.

Lieutenant Colonel Harris. That is a rather difficult question to answer. This Reserve officer in time of peace would be used in planning in connection with these materials with which he was familiar, and if he were called to active service would probably be used somewhere in connection with the production of material of this nature. But, as I stated yesterday, common sense would dictate that he should not deal with his own company.

Mr. Hiss. I misunderstood your statement. I thought you said he would not deal with his own industry, meaning the field in which he had been.

Lieutenant Colonel Harris. No; I referred to his own company.

Mr. Hiss. But he would probably be used within the industrial field from which he came and with which he would be familiar?

Lieutenant Colonel Harris. There are no written regulations now existing which says a thing like that, but I imagine he would, because that is where he would be most useful.

Mr. Hiss. Was that true during the World War, Colonel Harris, that men from a given industry—by that I do not mean a company—were used within the War Department on matters relating to that particular industry?

Lieutenant Colonel Harris. That is true.

Mr. Hiss. Was it understood that the Government was requesting the services of men from various industries, in order to have people from those industries?

Lieutenant Colonel Harris. In many cases they did; yes, sir.

Mr. Hiss. I offer a letter dated August 21, 1917, addressed to Mr. P. S. du Pont, by Clarence C. Killen, secretary of the Chamber of Commerce of Wilmington, Del.

(The letter referred to was marked " Exhibit No. 1237 " and appears in full in the text.)

Mr. Hiss. That letter reads:

> I beg to call your attention to the enclosed copy of letter from the secretary of the Chamber of Commerce of the United States. To secure the type of men suggested in Mr. Goodwin's letter I know of no one else to appeal save to your company. If you are in position to suggest the names of men who are qualified and free to accept these positions in the War Department, I would thank you exceedingly to advise me so that I can make the suggestions to Mr. Goodwin.

Then there is attached a letter under date of August 8, 1917, from Mr. Goodwin, secretary of the Chamber of Commerce of the United States, to Mr. Killen, secretary of the Chamber of Commerce of Wilmington, Del., which reads as follows:

The Ordnance Bureau of the War Department is in urgent need of securing the services of 60 office managers to serve in that Bureau in a civilian capacity during the length of the war. It is essential that those selected shall thoroughly understand office management. The compensation will range from $2,000 to $2.500, but the responsibility calls for men who are now receiving twice that amount, but who will make the sacrifice for patriotism.

Please wire us at the earliest opportunity the names of 5 men who will serve, stating in detail their business connections, and any other information available in regard to their experience in office management.

This affords an excellent opportunity for business organizations to serve the Government efficiently, which we feel sure you will welcome. We shall appreciate your cooperation in securing immediate action.

Mr. Hiss. I also show you a letter dated October 9, 1917, which I offer in evidence.

(The letter referred to was marked "Exhibit No. 1238" and appears in full in the text.)

Mr. Hiss. This is addressed to Colonel Hoffer, gun division, Ordnance Department, Washington, D.C.; signed by Pierre S. du Pont (reading):

In formal reply to both your verbal and written request of September 23 to this company to supply to the gun division of the Ordnance Department men from this company of the highest grade to assist in the development, purchase, and production of explosives, and the urgent need of your Department for such men, and the necessity of the du Pont Co.'s giving the Department assistance in this connection, I would say that we have, as you know, given careful consideration to this request during the past week or 10 days and have arrived at the following conclusion and for the following reasons:

Appreciating the enormous work which is before this company, we still feel it our duty to comply with the Government's request. The men of the class which you require are high-salaried men with this company and men who have been with it a great number of years, and men who are financially interested in the company through their stock holdings. They are also men who will have to make serious sacrifices by severing their active connection temporarily with the du Pont Co., and men who have homes and families in this city. The company feels that they cannot ask these men to simply resign from the company in order to take up this work. The company, therefore, after serious consideration, has decided that they will immediately grant to Mr. Charles A. Patterson leave of absence, with full pay, until the end of the war. It is our feeling that after Mr. Patterson has been with you for 2 or 3 week's he can better judge of what other men it would be well for you to have, and we believe at this time that we can arrange to let you have three or four men under these terms.

We have been somewhat disturbed over section 3 of the Lever Food Act, which forbids any person acting either as a voluntary or paid agent in the employ of the United States in any capacity where he has in any sense a pecuniary interest in contracts or belongs to any firm or company directly or indirectly interested in contracts. We assume, however, that as the Government has requested of this company assistance in the way of men this difficulty can be overcome so that it will not subject either the company or these men to criticism.

The following was written on the reverse side:

October 12, 1917. This letter read by Colonel Hoffer but not delivered to him, as there seemed to be no way by which employees of du Pont could accept positions without sacrificing all connection with the company, including sale of their stock.

Then on October 22, 1917, a letter apparently signed also by Mr. Pierre du Pont, addressed to the Chief of Ordnance, United States Army.

(The letter referred to was marked " Exhibit No. 1239 ", and appears in full in the text.)

Mr. Hiss (reading) :

> I take great pleasure in introducing and recommending to you Mr. Charles A. Patterson who has been employed by E. I. du Pont de Nemours & Co. for a number of years. His duties with us have been very extended in both manufacturing and administrative affairs.

What was Mr. Patterson's duty, do you know, Mr. Irénée du Pont, with the du Pont Co.?

Mr. Irénée du Pont. At that time I think he was general manager of the dynamite division, high-explosives division of the company; either was the head or the next to the head. I am not perfectly sure which.

Mr. Hiss. Was he a member of the board of directors?

Mr. Irénée du Pont. I could not tell you offhand. I would have to refer back to the records. That was 1917?

Mr. Hiss. 1917.

Mr. Irénée du Pont. I could not carry it in my head.

Mr. Hiss (reading) :

> Mr. Patterson is particularly well suited to the work which you have at hand from the fact that he has a thorough knowledge of practical explosive manufacturing, coupled with the necessary experience in administrative affairs and, above all, a disposition particularly adaptable to surrounding circumstances and methods of associates. You will find him invaluable and he leaves our company only because a sense of high duty to the Government prompts us to release him for service with you. Mr. Patterson leaves us without obligation of any kind to further serve E. I. du Pont de Nemours & Co. or to return to its services and it is our desire that he should perform his new work with no sense of obligation to his former associates.

Did Mr. Patterson return to the company after his war-time service, do you know, Mr. Irénée du Pont?

Mr. Irénée du Pont. I do not think he left the company at all. I think he could not stand the physical examination, if I recall it rightly.

Mr. Hiss. Then on November 9, 1917, the president of the du Pont Co., presumably Mr. Pierre du Pont, wrote to General Crozier, Chief of Ordnance.

(The letter referred to was marked " Exhibit No. 1240 ", and appears in full in the text.)

Mr. Hiss (reading) :

> I take great pleasure in recommending for a position in the Ordnance Department of the United States Army Mr. W. C. Spruance, Jr.

What was Mr. Spruance's connection with the du Pont Co. at this time, Mr. du Pont?

Mr. Irénée du Pont. He had been the head of the engineering division of the explosives department. I think at this time he was second in command of the explosives department. Mr. Patterson, I think, was first in command.

Mr. Hiss. Was he a member of the board of directors, do you know?

Mr. Irénée du Pont. I do not think he was at that time. He has been since.

Mr. HISS (reading "Exhibit No. 1240"):

> Mr. Spruance has been prominent in the administrative affairs of our company for many years, particularly with reference to the manufacture of high explosives. His knowledge in this line is extensive, accurate, and up-to-date. It is with great regret that I have consented to the leaving of Mr. Spruance from the employ of our company, and he is doing so only on account of sense of duty. He leaves with no obligation or service to E. I. du Pont de Nemours & Co. in any way or to return to its service at any time.

Mr. Spruance did return to the company after the war, Mr. du Pont?

Mr. IRÉNÉE DU PONT. He did.

Mr. HISS. This was in answer to a letter attached to the letter already offered in evidence.

Mr. IRÉNÉE DU PONT. Mr. Secretary, I am not quite sure whether Mr. Patterson and Mr. Spruance were on the board of directors. I would rather withdraw any reply I made to that question and ask to look it up for the record.[1]

Mr. HISS. All right.

The letter of November 9, which has just been read, was an answer to a letter from Colonel Hoffer, of the Ordnance Department, dated November 6, addressed to Mr. P. S. du Pont.

> Colonel Buckner has spoken to me of Mr. J. A. Haskell as one who might possibly fill the position for which Mr. Patterson was selected.

That indicates Mr. Patterson did not finally serve with the Army.

> I took the matter up wih General Crozier, who has personally known Mr. Haskell for some years, and we have considerable misgivings as to whether he would meet the requirements. We fear that his age would be against him, and also that he has lost touch with problems of a character which we would want him to handle.
>
> It is with considerable regret and hesitation that I came to this conclusion, particularly as Colonel Buckner stated that Mr. Haskell's name had been suggested by you.

Mr. Haskell had what position with your company at that time, Mr. Irénée du Pont?

Mr. IRÉNÉE DU PONT. He had been vice president and member of the board of directors, but whether he had ceased to be a vice president at that time, I could not recall.

Mr. HISS (reading):

> I can't but hope that your company will see its way clear to give me an active member of its staff to assist me in this great undertaking which has been thrust upon me and which I am so little able to bear without able assistance.

Then, one final letter in this field, letter of June 29, 1918, which I offer in evidence.

(The letter referred to was marked "Exhibit No. 1241", and is included in the appendix on p. 3836.)

Mr. HISS. This is an excerpt from a letter of Mr. Pierre du Pont on June 29, 1918, to Mr. Barksdale at White Sulphur Springs.

> There seems a little more activity in Washington with regard to the nitrogen question but nothing definite nor hopeful. We have agreed to lend Edgar and Liljenroth—

Who were Edgar and Liljenroth?

---

[1] See p. 3661 for corrected reply.

Mr. Irénée du Pont. Edgar was in the development end, a specialist in the fixation of atmospheric nitrogen. Liljenroth was a man we had gotten from outside. He was an expert in nitrogen fixation.

Mr. Hiss (reading):

> We have agreed to lend Edgar and Liljenroth for a portion of their time without cost to the Government in the belief that their influence will be helpful toward a proper solution of the problem.

Lieutenant Brannon, have you the personnel of the Naval Consulting Board to which reference has already been made?

Lieutenant Brannon. Mr. Hiss, I took this memorandum from a bound brochure pertaining to different agencies associated with the Council of National Defense. It is not a printed volume. I do not know the authority for it, but I have no reason to question it.

Mr. Hiss. This was an official Government document?

Lieutenant Brannon. It is a document we had in the library, but the author's name is not given, so I cannot attest as to the accuracy other than that we have it in the library and use it for reference purposes.

Mr. Hiss. This is the Naval Consulting Board personnel?

Lieutenant Brannon. Yes.

Mr. Hiss. So far as you know, was that the first board of prominent civilians appointed just before the war to assist the Navy or the War Department in their problems?

Lieutenant Brannon. I think this is the personnel just after we entered the war. There may have been a few changes. I do not suppose there were very many.

Mr. Hiss. Do you know when the Naval Consulting Board was first established?

Lieutenant Brannon. Yes; I have an extract from a book entitled "Handbook of Economic Agencies of the War of 1917–19."

Mr. Hiss (reading):

> NAVAL CONSULTING BOARD, DEPARTMENT OF THE NAVY
>
> A body of scientific experts representing the scientific and technical fields involved in the solution of naval problems. It was appointed by the Secretary of the Navy and met for organization on October 6, 1915. After the organization of the Council of National Defense it became a part of that body, acting as an inventions committee. It handled correspondence relating to naval inventions, and examined such inventions as did the Inventions Section, General Staff, and the National Advisory Committee for Aeronautics. It functioned through the following committees: Aeronautics; Aids to Navigation; Chemistry and Physics; Electricity; Food and Sanitation; Internal-Combustion Motors; Life-saving Appliances; Metallurgy; Mines and Torpedoes; Optical Glass; Ordnance and Explosives; Production, Organization, Manufacture, and Standardization; Public Works; Yards and Docks; Ship Construction; Special Problems; Steam Engineering and Ship Propulsion; Submarines; Transportation; Wireless and Communications. President, Thomas A. Edison; chairman, William L. Saunders.

The personnel of that board as supplied by Lieutenant Brannon consisted of [reading]:

> Chairman, Thomas A. Edison; Washington representative, Capt. William Strouther Smith; secretary, Thomas Robbins; members, Lawrence Addicks, Bion J. Arnold, Dr. L. H. Baekland, Howard E. Coffin, Alfred Craven, William LeRoy Emmet, Peter Cooper Hewitt, Andrew Murray Hunt, Dr. Miller Reese Hutchinson, B. G. Laume, Hudson Maxim, Spencer Miller, Prof. Joseph W. Richards, Andrew L. Riker, William L. Saunders, Matthew Bacon Sellers, Elmer A. Sperry—

That is the inventor of the Sperry gyroscope?

Lieutenant BRANNON. I do not know.

Mr. HISS (continuing reading):

> Frank J. Sprague, Benjamin B. Thayer, Dr. Arthur G. Webster, Dr. W. R. Whitney, and Dr. Robert S. Woodward.

Mr. IRÉNÉE DU PONT. Mr. Secretary, I can now answer those questions about the directorate that you asked. I have been handed a copy of the list of officers and directors of the du Pont Co. on October 5, 1917, in connection with these Old Hickory contracts. Neither the name of Mr. Patterson, referred to, nor Mr. Sprague appears on the board of directors at that time. Mr. J. Haskell was on the board at that time.

Mr. HISS. Thank you.

Colonel Harris, I show you extracts from special orders relating to the Kernan Board.

(The memorandum referred to was marked "Exhibit No. 1242", and is included in the appendix on p. 3836.)

Mr. HISS (reading):

> Under the provisions of section 121 of the act of Congress approved June 3, 1916, a board to consist of Col. Francis J. Kernan, Lt. Col. Charles P. Summerall, Maj. Lawson M. Fuller, Mr. Benedict Crowell—

Was Mr. Crowell at that time Assistant Secretary of War, do you know, Colonel Harris, or was he later appointed?

Lieutenant Colonel HARRIS. I think he was appointed later. I do not have the record.

Mr. HISS (reading):

> and Mr. R. Goodwyn Rhett—

Was Mr. Rhett at that time president of the United States Chamber of Commerce, Colonel Harris, do you happen to know?

Lieutenant Colonel HARRIS. I do not know.

Mr. HISS. I understand that he was at that time. [Continues reading:]

> is appointed to meet in this city at the call of the senior member of the board for the purpose of investigating and reporting upon the feasibility, desirability, and practicability of the Government manufacturing arms, munitions, and equipment.

I also offer in evidence excerpts from a letter of December 5, 1916, from Mr. Bascom Little, chairman of the United States Chamber of Commerce Executive Committee on National Defense addressed to or, rather, found in Mr. Pierre du Pont's files.

(The excerpt from letter referred to was marked "Exhibit No. 1243", and appears in full in the text.)

Mr. HISS (reading):

> The Chamber of Commerce of the United States has been keenly interested in the attempt to create an entirely new relationship between the Government of the United States and the industries of the United States. It is hoped that the atmosphere of confidence and cooperation which is beginning in this country, as shown by the Federal Trade Commission, the Federal Reserve Board and other points of contact which are now in existence, may be further developed, and this munitions question would seem to be the greatest opportunity to foster the new spirit.

Senator CLARK. What is the date of that letter, Mr. Hiss?

Mr. Hiss. The date of that letter is December 5, 1916.

May I offer in evidence at this time a memorandum furnished by the du Pont Co. showing their subscriptions in the year 1934 to various chambers of commerce, manufacturers associations, trade associations, and technical associations? The 1933 total payment of dues or contributions to chambers of commerce totaled $14,563; to manufacturers associations, $10,398; to trade associations $49,416; and to technical associations $3,257. A grand total of $77,636.

(The memorandum referred to was marked "Exhibit No. 1244", and is included in the appendix on p. 3836.)

Mr. Hiss. Referring to page 20 of the report of the War Industries Board, the personnel of the advisory commission to the Council of National Defense, which was organized, according to the report to which I am referring, on October 11, 1916, consisted of Daniel Willard, Hollis Godfrey, Howard E. Coffin, Dr. Franklin H. Martin, Bernard M. Baruch, Julius Rosenwald, and Samuel Gompers.

Reading from the page referred to:

> Each of these commissioners took charge of a special field. One was assigned to transportation, one to engineering and education, one to munitions and manufacturing, one to medicine and surgery, one to raw materials, one to supplies, and one to labor—

Who was presumably Mr. Gompers. [Continues reading:]

> A system of contracts through "committees of the industries" was worked out by the commissioner in charge of raw materials, and it was on March 3, 1917, that the idea of a large organization was made effective.

Colonel Harris, are you familiar with the Council of National Defense subcommittee or committee known as the Munitions Standards Board? I show you excerpts from a meeting of that council dated February 28, 1917.

(The memorandum referred to was marked "Exhibit No. 1245", and appears in full in the text.)

Mr. Hiss (reading):

> Chairman Willard read the following list of men nominated by the Commission to compose a "Munitions Standards Board":
>
> W. H. Vandervoort, Root & Vandervoort, builders of special machine tools and president of the Moline Automobile Co.
>
> E. A. Deeds, formerly general manager of the National Cash Register Co., president of the Dayton Engineering Laboratories Co., and interested in many industrial activities.
>
> Frank A. Scott, Warner & Swasey Co., Cleveland, manufacturers of automatic machinery and optical instruments.
>
> Frank Pratt, General Electric Co., Schenectady.
>
> Samuel Vauclain, Baldwin Locomotive Works, Remington and Westinghouse Cos.
>
> John E. Otterson, vice president Winchester Arms Co.

Colonel Harris, what were the duties of the Munitions Standards Board when it was first created?

Lieutenant Brannon. As I understand it, the Munitions Standards Board was created for the purpose of standardizing specifications for munitions.

Mr. Hiss. On page 21 of Mr. Baruch's report there is a statement that a month after the appointment of the Munitions Standards Board the General Munitions Board was established, with the duty of coordinating the buying of munitions by the War and Navy Departments and to assist those Departments in acquiring raw materials and manufacturing plants to meet their requirements. This new and larger board had the same chairman, and included the civilian personnel of the Munitions Standards Board.

According to that statement the General Munitions Board had a wider scope of duty than the Munitions Standards Board. Is that correct, so far as you know?

Lieutenant BRANNON. As I understand it, the war was declared before the Munitions Standards Board had an opportunity to do very much, and the need then was to assist the War and Navy Departments in actually procuring munitions, so that the General Munitions Board was formed.

Mr. HISS. Colonel Harris, can you identify Colonel Hawkins, who was in the War Department during the war?

Lieutenant Colonel HARRIS. Col. J. H. Hawkins?

Mr. HISS. Yes.

Lieutenant Colonel HARRIS. He was an officer in the Ordnance Department during the war. He was a man of legal training and had to do with legal matters.

Mr. HISS. I would like to offer for the record excerpts from his testimony before the Graham committee, to be marked as an exhibit.

(The excerpts from testimony referred to was marked "Exhibit No. 1246", and is included in the appendix on p. 3840.)

Mr. HISS. Can you identify Colonel McRoberts, who was referred to in these excerpts?

Lieutenant Colonel HARRIS. Colonel McRoberts was an officer of the Ordnance Department in charge of the Procurement Division of the Ordnance Office, having to do with the placing of orders and making contracts.

Mr. HISS. Do you know what his services had been before?

Lieutenant Colonel HARRIS. He was a banker in New York City.

Mr. HISS. Do you know what bank he was connected with?

Lieutenant Colonel HARRIS. I do not recall just now.

Mr. HISS. Colonel Hawkins in his testimony stated that he was with the National City Bank.

Mr. LAMMONT DU PONT. Mr. Chairman, might it be proper for us to see copies of these matters that are being presented now?

(Copies of the exhibits were handed to Mr. Lammot du Pont.)

Mr. HISS. Colonel Harris, you referred yesterday to the function of some non-War Department agency in time of war in controlling prices. That was the function during the World War of a special committee, a price-fixing committee of the War Industries Board, was it not?

Lieutenant Colonel HARRIS. It was a price-fixing committee, the chairman of which reported directly to the President. The chairman happened to be a member of the War Industries Board, but the committee, while it had personnel from the War Industries Board, was a separate committee answerable to the President.

Mr. HISS. It had separate legal authority of its own, apart from the War Industries Board?

Lieutenant Colonel HARRIS. Yes, but it used the War Industries Board as its source of information.

Mr. HISS. The personnel of the War Industries Board as stated on page 22 of Mr. Baruch's report was Frank A. Scott, chairman of the Board; Bernard M. Baruch; with whom were associated L. L. Summers—can you identify Mr. Summers, Mr. Irénée du Pont?

Mr. IRÉNÉE DU PONT. I recall having met him. I could not identify him; no sir.

Mr. HISS. Perhaps it will refresh your recollection: You wrote a memorandum on April 16, 1917, relating to a conference in Washington, in which you referred to Mr. Summers as late assistant to Mr. Stettinius. Do you remember that?

Mr. IRÉNÉE DU PONT. I do not recall that; no, sir.

Mr. HISS. Alex Legge, Eugene Meyer, Jr., J. L. Replogle, S. H. MacDowell, M. F. Chase, O. F. Weber, E. A. Pierce, and Fred Allen. They were associated with Mr. Baruch, who was commissioner of raw materials.

Robert S. Brookings, commissioner of finished products; Robert S. Lovett, priorities commissioner; Hugh A. Frayne, labor commissioner; Colonel, later Brig. Gen. Palmer E. Pierce, Army representative; and Rear Admiral F. F. Fletcher, Navy representative.

Was Colonel Pierce succeeded by other officers as the Army representative?

Lieutenant Colonel HARRIS. Yes. in the development of the War Industries Board he was succeeded by General Goethals.

Mr. HISS. And was General Goethals in turn succeeded by another representative of the Army?

Lieutenant Colonel HARRIS. I think he was succeeded by Hugh Johnson. Mr. Hiss, I might state that the record of the Board does not show General Johnson, it shows General Goethals, but General Johnson was associated with the Board. I do not know whether he was a member or not.

Mr. HISS. As an Army representative?

Lieutenant Colonel HARRIS. As an Army representative.

Mr. HISS. I call your attention to the fact that at a meeting of the Council of National Defense and the advisory commission on February 14, 1917, Mr. E. S. Stettinius, a member of the firm of J. P. Morgan & Co., addressed the meeting on the manufacture in this country of munitions for the Allies.

(The memorandum containing the excerpt referred to and other excerpts from minutes of meetings of the Council of National Defense was marked "Exhibit No. 1247". and is included in the appendix on p. 3843.)

Mr. HISS. Do you know when Mr. Stettinius became Assistant Secretary of War, Colonel Harris?

Lieutenant Colonel HARRIS. The records I had yesterday showed that he became Assistant Secretary of War on April 11, 1918.

Mr. HISS. Will you turn to page 5 of those excerpts, Colonel Harris?

Mr. HISS [reading "Exhibit No. 1247"]:

> Excerpts from meeting of the Council of National Defense, March 3, 1917. Secretary Baker requested Director Gifford and Mr. Clarkson to retire during the consideration of the election of a director and secretary. Following upon this, Mr. W. S. Gifford was elected as director, and Mr. Grosvenor B. Clarkson as secretary of the council.

On page 8 of the excerpts you have:

> Report of Commissioner Coffin on formation of munitions standards boards and problems of manufacture in aeronautics.
>
> The report of the Advisory Commission's committee on munitions is one of progress. The Munitions Standards Board, created by the Council of National

Defense, following recommendation of the Advisory Commission, held its meeting Wednesday, March 21.

Then there is stated on page 9 the following:

> By formal action, the Board resolved itself into six subcommittees, and by appointment of the Chair the members were assigned to the chairmanship of subcommittees as shown in the following list:
>
> J. E. Otterson: Small arms, including machine guns and small arms ammunition;
>
> Samuel Vauclain: Army artillery and the ammunition therefor;
>
> W. H. VanDervoort: Naval artillery and ammunition therefor;
>
> Francis Pratt: Gages, specifications, jigs, and fixtures;
>
> E. A. Deeds: Time fuses and detonators;
>
> Frank Scott: Scientific instruments, including optical and range-finding apparatus.

Are you familiar with the patent situation in the aeronautical field at this time, Colonel Harris?

Lieutenant Colonel HARRIS. I am not.

Mr. HISS. Will you turn to page 11 of " Exhibit No. 1247 ", which refers to the report of Commissioner Coffin. These are excerpts from the same report of Commissioner Coffin which I quoted before.

PATENT SITUATION

> On March 22, there occurred in this city a meeting of all the manufacturers of airplanes and the members of the National Advisory Committee for Aeronautics. The difficulties in the way of a rapid development of the airplane business were discussed in detail, and two definite actions were taken, which should go far towards clarifying the situation. Through the first of these actions, there was created a committee representing the American Aircraft Manufacturers' Association, for active cooperation with the National Advisory Committee in the investigation and elimination of the difficulties preventing progress in quantity production. The second important step had to do with the patent situation. A tentative agreement was reached whereby all manufacturers agreed to execute a cross-licensing patent agreement, as of date of March 2. The agreement further provides that each manufacturing member of the association shall pay into the treasury of the association a certain stipulated sum for each plane made and sold. A quarterly accounting period is provided. Of the sum thus created, a certain percentage per plane is paid to the Wright-Martin Co. over the period of 6 years for which the Wright patents run. Another definite but smaller percentage is to be paid to the Curtis-Burgess interests during the 15-year period of the life of the Curtis patents. or until such time as the payment to the Curtis Co. has equalled the total sum paid to the Wright Co. during the 6-year period above mentioned.
>
> * * * * * * *
>
> In looking over the purchasing records of the War and Navy Departments during the 8-year perior prior to 1916, four names are found responsible for the development of the art during this time when Governmental support was almost entirely lacking. These names are Wright, Curtis, Burgess, and Martin. Peculiarly, Wright has joined Martin, and Burgess has joined Curtis, thus setting up two groups of patents representing the early development of the art and combining in these two camps the men to whom we owe most for aeronautical development in this country. In the recognition which it is proposed to accord the patents controlled by these two groups, there is a recognition also of the moral obligation to these four men. Through an arrangement such as outlined above, the total tax upon the industry has been reduced to a figure considered reasonable, and the airplane manufacturers of the country have been joined together in a closely knit and cooperative organization, and the danger of patent litigation between manufacturing members has been removed for many years and probably for all time. Moreover, an organization thus firmly knit together insures a definite channel of contact between the industry, the National Advisory Committee for Aeronautics, and the departments of the Government, which will bring about the greatest possible development within the briefest space of time.

Mr. HISS. Do you know whether the cross license or patent pool referred to in this report has remained in effect in the aviation field since that time, Colonel Harris? [1]

Lieutenant Colonel HARRIS. They have just had a study made on that in the office, but I am not familiar with the results. I can find out and answer your question later.

Mr. HISS. Colonel Harris, will you please turn to page 29 of " Exhibit No. 1247 ", excerpt from minutes of joint meeting of the Council of National Defense and Advisory Commission, June 2, 1917:

> Commissioner Willard read the following letter, of date May 31, 1917, from E. H. Gary, chairman of the committee on steel and steel products, of the Advisory Commission:
>
> " I send you herewith copy of letter just received from one of the manufacturers in reply to our request for detailed information concerning the supply of ferromanganese on hand. I do not add the names. The letter speaks for itself. If there is any question in regard to these matters we should know it now.
>
> " The letter referred to by Mr. Gary reads as follows:
>
> " ' Ferromanganese consumption approximately 250 gross tons per month. Two months' supply on hand May 1. Contracts on open market for 6 to 8 months additional. Do not use Spiegel.'
>
> " We are anxious to do everything we can to assist the Government, and have complied with their request for detailed information regarding all of our business, including the steel mill. We are very doubtful, however, as to how far it is safe or proper for us to cooperate with some of the committees that are endeavoring to assist in the matter. I was called to Washington a few weeks ago in connection with some of this committee work, and found that they were operating in flagrant disregard of the Sherman Law, the Clayton Law, and all the other statutes that are supposed to regulate business, particularly big business.
>
> " The Government officials who were sitting in at this conference admitted that they had no authority for doing so, and upon a little further inquiry we were advised that the Government officials' presence at the conference would not in any way protect us. As a matter of fact, we have recently made a settlement with the Treasury Department of a transaction which took place in 1903, notwithstanding the fact that the Government admitted that we had acted in good faith at the time, and under the explicit instructions of the official representative of the Treasury Department. The present administration takes the position that the former contracts were wrong, and not in conformity with the law; therefore we must be punished for doing exactly what we were told to do by the authorized representative of the department at the time.
>
> " It seems to us that if the Government desires cooperation on the part of the business interests in helping them with their problems, the least they could do would be to have Congress pass a resolution suspending operation of these laws during the period of the war. Until such time as such action is taken to protect us against persecution in the future, we should prefer to do our bit by responding to the direct requests of the several branches of the Government for assistance, and this we are doing practically every day."
>
> The director was requested to send the foregoing letters to the Attorney General with the statement that the council and commission, and the various committees acting thereunder, are constantly encountering the difficulty referred to, and if there is any expression on the subject that the Attorney General can make, the council will be glad of his helpful cooperation.

Senator CLARK. What is the date of that letter?

Mr. HISS. This is quoted from a meeting of June 2, 1917, and Judge Gary's letter was May 31, 1917, after war had been declared.

---

[1] Under date of March 29, 1935, Colonel Harris submitted the following information respecting aviation cross-license agreements: " With reference to the patent pool mentioned in ' Exhibit No. 1247 ', the Manufacturers Aircraft Association, Inc., has continued an agreement for the cross licensing of aircraft patents. The original agreement has been modified from time to time to meet changed conditions, but the principle has remained in effect."

Do you know, Colonel Harris, or Lieutenant Brannon, what was decided as to the antitrust laws during the war?

Lieutenant Brannon. I do not recall, except I do remember there was conflict between the different agencies of the Government. In other words, I remember there was some lack of cooperation between the Attorney General's office and either the War and Navy Departments and some of the agencies under the Council of National Defense, but I haven't any data here as to the particulars.

Mr. Hiss. If you will look at the bottom of page 30 of "Exhibit No. 1247"; this is from a meeting of the Council of National Defense, June 8, 1917:

> The director read the following letter, of date June 6, 1917, from the Attorney General, in response to inquiry made of the Attorney General as directed by the council on June 2, 1917:
>
> "I have your letter of the 4th instant transmitting a copy of a letter from Mr. E. H. Gary, chairman of the committee on steel and steel products of the Advisory Commission, Council of National Defense, together with a copy of a letter from an unnamed manufacturer. You inquire whether the Department of Justice desires to express an opinion on the question raised by these letters.
>
> "As I read the letters, the question raised is whether the operation of certain laws, more especially the Sherman law and the Clayton law, should be suspended by resolution of Congress during the period of the war. This is not a legal question, but a question of national policy, in respect of which I do not feel that I should express an opinion unless requested to do so by the President."

So far as you know, they were not suspended during the war?

Lieutenant Brannon. I do not think so.

Senator Vandenberg. Were there any subsequent prosecutions growing out of the situation to which Judge Gary referred?

Mr. Hiss. None have been called to my attention, Senator.

Senator Clark. The incident spoken of there in 1903 occurred at a time when the United States was not engaged in war.

Mr. Hiss. I will offer this next document for appropriate exhibit marking.

(The excerpts from meetings of the War Industries Board were marked "Exhibit No. 1249" and are included in the appendix on p. 3848.)[1]

Mr. Hiss. May 28, 1918, a meeting of the War Industries Board was held, according to these excerpts of minutes, at which were present Mr. Baruch, chairman, Mr. Brookings, Brig. Gen. Hugh S. Johnson, Mr. Frayne, Mr. Legge, Judge Parker, Mr. Peek, Mr. Replogle, Mr. Summers, and Mr. Ingels, secretary.

Under the subject of "Price fixing", I read:

> Attention of the board was called to the probable differences in rulings of the Price Fixing Committee and the Board of Appraisers of the War Department now operating under the direction of the Surveyor General of Purchases. If a manufacturer or producer refuses to deliver his product to the Government at prices fixed by the Price Fixing Committee and the product is commandeered, under the present arrangements, it is the function of the Board of Appraisers to determine a fair and just compensation. Considering the demoralizing effect that would result from having the Board of Appraisers fix prices different from those fixed by the Price Fixing Committee, Mr. Brookings was requested to discuss with General Johnson the advisability of—
>
> 1. Having the Board of Appraisers work with the Price Fixing Committee, or
> 2. To have the Price Fixing Committee take over the work now being done by the Board of Appraisers.

---

[1] There was no exhibit marked "No. 1248."

Page 9, Colonel Harris, excerpts from meeting of the War Industries Board on Tuesday, June 18, 1918. Present Mr. Baruch, chairman, Mr. Legge, Admiral Fletcher, General Johnson, Mr. Brookings, Mr. Frayne, Judge Parker, Mr. Peek, Mr. Replogle, Mr. Summers, Judge Ritchie—the general counsel of the War Industries Board was Albert C. Ritchie, isn't that true?

Lieutenant Colonel HARRIS. He was.

Mr. HISS. Mr. Ingels, Secretary. Under the heading of "Curtailment of Industry (Pooling of Production)", "Exhibit No. 1249" reads:

> Judge Ritchie reported that he had considered the question referred to him by the Board on June 11, 1918, namely, when the output of plants in the congested area was cut down, whether it would be legal to require the pooling of the output of all plants of the same character, both within and without the congested area, in order to prevent the plants outside that area, where output was not cut down, from undue profiting at the expense of the plants within the area, where output was cut down.
>
> Mr. Ritchie's opinion was that a pooling agreement of this kind would not violate the Sherman Law, provided the Government was a party to it, because he thought that under the circumstances the pooling agreement could not be construed as unreasonable. The only difficulty he saw was that he knew of no act of Congress authorizing the War Industries Board, or even the President, to enter into such an agreement relating to industries controlled by this Board, but Mr. Ritchie felt that, even without such an act of Congress, the President's war powers were sufficient to authorize him to enter into or direct such an agreement with the industries affected.

On April 9, 1917, the General Munitions Board's minutes show that the advisory committee of the Council of National Defense assignment to various subcommittees or subdivisions was as follows:

Raw material, Bernard M. Baruch, chairman; industrial, Howard E. Coffin, chairman; supplies, Julius Rosenwald, chairman; medicine, Dr. Franklin Martin, chairman.

I offer General Munitions Board minutes for appropriate marking as the next exhibit.

(The minutes referred to were marked "Exhibit No. 1250" and are included in the appendix on p. 3849.)

Mr. HISS. At a meeting held on June 1, 1917, of the executive committee of the General Munitions Board——

Lieutenant Brannon, these boards all continued to some extent overlapping, didn't they, during this period?

Lieutenant BRANNON. The General Munitions Board had, I think, the same personnel as the Munitions Standard Board, except that a representative from the Army and a representative from the Navy were added.

Mr. HISS. Under the heading of "Publicity Campaign," the minutes contained the following—

Lieutenant Colonel HARRIS. What page are you on, Mr. Hiss?

Mr. HISS. The last page, page 16 [reading]:

> At the suggestion of Mr. Coffin, the chairman advised that a publicity campaign to guard against adverse public opinion was to be begun immediately. It was suggested that Major McArthur, Captain Marshall, and Maj. Preston Brown be appointed members of this committee. The chair advised that all information would have to come through Mr. Creel, chairman of the Committee on Public Information, and that he would take this matter up with Mr. Clarkson.

I offer the next set of excerpts from minutes of the General Munitions Board for appropriate marking as the next exhibit.

(The excerpts from minutes were marked "Exhibit No. 1251", and are included in the appendix on p. 3851.)

Mr. HISS. On the first page, on June 5, 1917, at a meeting of the General Munitions Board, we have the following:

> Military instruments: A communication from the Ordnance Department was submitted relative to a proposed arrangement with the Warner & Swasey Co. of Cleveland, covering the manufacture of 3,000 panoramic sites for the use of the field artillery.
>
> Chairman Scott retired—

Chairman Scott had been connected with the Warner & Swasey Co.?

Lieutenant BRANNON. Yes.

Mr. HISS (continuing reading "Exhibit No. 1251"):

> And Colonel Blunt presided. Colonel Blunt stated that this company had agreed to take this work only after considerable pressure from the Ordnance Department.
>
> It was moved by Mr. Rosenwald and seconded by General Aleshire, that the price of $300 being fair and just, the proposition would be approved, and it was recommended that orders be placed.

Meeting of June 19, 1917, under the heading, "Organization: Investigation by Major Stimpson", we have the following:

> Mr. Scott stated that now that the emergency in connection with the work of the board is somewhat lessened, that it seemed right to so organize the Board and the members of its subcommittees that the board and the members of its subcommittees shall be free from reasonable criticism. This is particularly necessary in relation to the membership on a board or subcommittee of a man who is actively interested in a concern which may benefit by the awarding of a contract concerning the recommendation of which the subcommittee or board has some authority. To investigate this condition, Mr. Scott suggested that the Board ask Major Stimpson if he would be willing to give his time to this matter. Major Stimpson stated that he would be glad to do this. He thereupon asked what functions the board and its subcommittees had and was informed that the final decision regarding the awarding of contracts did in no case rest with the board or its subcommittees. He asked whether the final decision by the Government officer was simply based on the experience of the board's recommendation and was informed that this was not always the case as recommendations of the board had been reversed on several occasions, the contractor for the cantonment at Chillicothe, Ohio, being mentioned, likewise reversal of the decision by the Secretary of the Navy of the recommendation of the board regarding the price of gun forgings to be placed with the Bethlehem Steel Corporation.
>
> Major Stimpson asked whether it would help matters if a small body of men constituted by law took the place of the heads of the Departments in making final decisions and awards. Mr. Scott stated that the present plan of the board was to coordinate and supplement the work of the departments and that with the present arrangement the small-board idea is impossible.
>
> Mr. Rosenwald give his opinion that a central purchasing body was necessary.
>
> Colonel Dunn stated that the order of the Secretary of War removing the necessity of bids for purchases led the Ordnance Department to believe that the prices submitted by the General Munitions Board were correct and thus accepted them.
>
> Colonel Hodgson outlined for the benefit of Major Stimpson the method pursued in recommending purchases by the Committee on Supplies.
>
> Major Pierce stated that the General Staff had been greatly relieved by the result of the methods used, and complimented the board on the prices received.

Excerpts from June 20, 1917, meeting of General Munitions Board:

A memorandum from Colonel Littell, approved by the Secretary of War, was presented, asking the board to reconsider their recommendation for contractor to build cantonment at Yaphank, Long Island, because of the interest which Chairman W. A. Starrett had in the Thompson-Starrett Co., which firm had been previously recommended.

The matter was referred to Mr. R. J. Bulkley, to investigate the exact standing of Mr. Starret relative to the Thompson-Starrett Co., and likewise the George A. Fuller Co.

Then on June 21, "Exhibit No. 1251", the same subject is referred to:

Cantonments: Request for reconsideration of Yaphank, Long Island, recommendation:

In accordance with action of the Board, Mr. Bulkley presented a report showing that Mr. W. A. Starrett has not had any connection with the Thompson-Startett Co. for a period of more than 4 years.

The first paragraph of this communication was approved without changes. The second paragraph was altered by the addition of a list of contractors to be furnished by the Committee on Emergency Construction, who might have the ability to build the above cantonment.

Mr. Bulkley likewise reported by request, relative to Mr. Starrett's alleged connection with the George A. Fuller Co. showing that Mr. W. A. Starrett has no connection with said company; but that one of his brothers is the president of the George A. Fuller Co.

Page 7, Colonel Harris. On June 26, 1917, under the heading of "Prices, Steel", we have the following:

The chairman outlined the conference held with President Farrell of the Steel Corporation originally called to settle the matter of priority, and eventuating into a discussion as to the prices of steel for the Shipping Board, etc.

A memorandum submitted on the price question to the Secretary of War and to the Secretary of the Navy as being the sense of the conference, was read, together with an answer by the Secretary of War asking that nothing be done at present, but stating that he had informed the governmental purchasing departments that steel should be bought now at pre-war-time prices and the difference in prices adjusted at a later date.

It was thereupon suggested that Mr. Scott find out what was meant by "pre-war-time prices", and that if the prices previous to the war, August 1914 was meant, that the sense of the Board was not in accord with the suggestion of the Secretary.

July 13, 1917, minutes of the executive committee of the General Munitions Board, page 11:

Machine-gun committee: Resignation of Mr. Hanson. A communication from Mr. Hanson, chairman of the machine-gun committee, was presented stating that due to his having accepted a position with the Colt's Patent Fire Arms Manufacturing Co., who were to receive and had received Government orders for machine guns, he felt it necessary to tender his resignation as chairman of that committee.

Mr. Hanson's resignation was ordered accepted and the Secretary was instructed to advise Mr. Hanson of the regret of the Board at his action and to express the Board's thanks for the valuable assistance he had rendered.

Page 15, Colonel Harris, meeting of the executive committee of the General Munitions Board, July 28, 1917:

Present: Colonel Pierce, Colonel Blunt, Colonel Hodgson, Paymaster Hancock, Mr. Meyer, Mr. Rosenwald, Dr. Simpson, Major Starrett, Mr. Scott presiding, and Mr. H. P. Bingham secretary.

Investigation: A telegram from Mr. Rosenwald to the President, bearing on the rider which was to be attached to the food bill relating to the employment of men in an advisory capacity, and regarding such men interested in companies receiving orders, was read and a copy of this telegram together with the President's letter to Senator McKellar on this subject was ordered made a part of the record.

Copy of a telegram forwarded July 2, 1917, to President Woodrow Wilson at the White House, Washington, D. C., from Mr. Julius Rosenwald:

"DEAR MR. PRESIDENT. It is of the most vital importance that the rider in the food bill referring to the Advisory Commission and its method of securing supplies be stricken out. To cast suspicion on men in many industries who without exception have been eager to serve the Government rather than themselves will destroy a spirit which should be encouraged. The committees representing these industries have succeeded in instilling and securing a loyalty to the Government from many in their own lines that could never have been produced under the old system. Even at this early stage of the war the savings to the Government due to this desire to serve, runs into many tens of millions of dollars. Having been intrusted with a responsibility to protect and serve their Government interests a patriotism has been aroused in these men which is absolutely necessary to secure rapid production. It is probably impossible to devise any plan which is dishonesty proof but any man of standing in his profession or industry will sacrifice everything rather than be unfaithful to his trust. At any rate, such has been my experience with the men who have served as advisers to the Commission which I have had the honor to appoint. The present system should not be destroyed until a better one is found. If changes in method are desirable they can be made after proper investigation. It is vital that the cooperation which has already been established should be maintained and furthermore it is of greatest importance that confidence exist between Government and industry and that suspicion which has existed on the part of both be eliminated."

Do you know, Lieutenant Brannon, the provision to which Mr. Rosenwald referred in his telegram?

Lieutenant BRANNON. I am not familiar. As I understand it, considerable criticism was made against the General Munitions Board and the subcommittees, because in some cases the same men were representing both the Government and industry. I believe there was a provision in the Food and Fuel Control Act which prohibited officers or advisers of the Government having any interest in corporations receiving Government contracts. I believe a reference was made to that earlier in the discussion this morning.

Mr. HISS. On the last page of "Exhibit No. 1251", page 17, Colonel Harris, meeting of August 6, 1917, of the executive committee of the General Munitions Board, under the head, "Artillery forgings", we have the following:

> Attention of the Board was called to the question of the distribution of forgings to the Midvale Steel Co. and the Bethlehem Steel Co., particular attention being called to the plan of Midvale furnishing the Navy forgings and the Bethlehem Steel Co. furnishing the Army forgings. Mr. Scott referred to an understanding with these two companies, that each of them was to furnish Army and Navy forgings at a certain fixed price, this price being based on the Navy forgings being divided equally between them. He stated that he did not believe Bethlehem would agree to accept only Army forgings at the prices agreed upon.

The CHAIRMAN. The committee will be in recess until 2 o'clock.

(Whereupon, at 12:20 p. m., the committee recessed until 2 p. m.)

AFTERNOON SESSION

The hearing was resumed at 2 p. m., pursuant to the taking of the recess.

FURTHER TESTIMONY OF LT. COL. C. T. HARRIS, LT. E. M. BRANNON, LAMMOT DU PONT, IRÉNÉE DU PONT, EDWIN PUGSLEY, C. K. DAVIS, E. C. HADLEY, J. H. CHASMAR, E. E. HANDY, AND W. U. REISINGER

(The witnesses were previously duly sworn by the chairman.)

The CHAIRMAN. The committee desires for a few moments to go to the——

Senator CLARK. Mr. Chairman, before you do that, may I offer an exhibit?

The CHAIRMAN. Surely, Senator.

Senator CLARK. I have before me the document to which I referred yesterday, the Industrial Mobilization Plan, Revised, 1933, approved by the Secretary of War February 1, 1933, approved by the Secretary of the Navy February 23, 1933. from the Government Printing Office, 1933. This is a public document, but I understand that the supply of it was exhausted within 48 hours after it was printed last year, at the time of its publication. I ask that it be made a committee exhibit and be published separately.

The CHAIRMAN. That is ordered.

(The Industrial Mobilization Plan was marked "Exhibit No. 1252", and was published separately as Committee Print No. 2.)

Mr. IRÉNÉE DU PONT. Mr. Chairman, you granted us permission to put in, under an appropriate number reserved for it, charts showing the relative prices paid for powder and other commodities.[1]

The CHAIRMAN. Yes.

Mr. IRÉNÉE DU PONT. I desire to do that now, and if you will permit me just a few minutes to explain the charts, I think it will clear up any indefiniteness.

The CHAIRMAN. When you say "a few minutes" is that what you mean?

Mr. IRÉNÉE DU PONT. If you do not ask me too many questions, I can do it in 5 minutes.

The CHAIRMAN. Because the committee has an intense week ahead of it.

Mr. IRÉNÉE DU PONT. I think, Mr. Senator, this is a very important phase of it, because some of the curves going on that chart I think are very striking.

The CHAIRMAN. Very well. Let us proceed to that consideration.

Mr. IRÉNÉE DU PONT. Mr. Chairman, I prepared in writing a description of what I am about to say, but my eyes are none too good, but I shall try to follow it accurately, and I would like to attach this as an exhibit to the chart.

This first chart which they are putting up, which you can read, is the price per pound of Army and Navy cannon powder, air-dried. The data was taken from War Industries Board information, the data used for powder and powder materials.

Raw material prices, which are the double line, are weighted, again all the data taken from the War Industries Board. You will notice the dotted line is the powder price paid by the United States. That is according to the War Industries Board's figures. Of that powder, the vast bulk came from the du Pont Co. I do not know whether it is 96, 98, or 93 percent, but it is substantially du Pont prices, and our prices would probably be a little lower because at that time, to encourage other manufacturers, they were given a little bit higher price than the du Pont Co. were given on their powder.

---

[1] Hearings, Part XIII, p. 2928.

That double line there represents the cost of ingredients in powder, weighted, as I say, to get the amount of ingredients per pound of powder.

All these lines refer to 100 percent, being the 1913 price of the commodity.

The full black line is the same as you had on your charts, the general average commodity prices. You will note from this that powder declined quite materially from pre-war prices, in spite of the fact that the raw materials entering into it are considered double what they were prior to the war.

A small part of the time they were above that, and for a considerable time quite a little bit below it, but most all at least 150 percent throughout the whole period.

That refers to the United States alone.

·Now as to powder sold to foreign nations——

Senator Clark. Mr. du Pont, does this dotted line include also the price of the powder made by funds furnished by the United States?

Mr. Irénée du Pont. I presume it does, but I do not think that will disturb the cost much because our manufacturing cost—to the Government on the relatively small production of powder at Old Hickory—was just a little bit above our selling price on powder made in our own plants, and, if anything, it would tend to raise the price, and I think that is negligible.

The second chart shows the prices charged the foreign nations. You will note the large bulge in the dotted line, beginning in January 1915 or December 1914 and starting in January 1917; that bulge represents the amortization of the plants, which we had to build, the facilities which had to be created to meet the demands, and which, of course, would be worthless after the war.

If you can draw a straight line across the 100 percent line connecting those two dots, it will represent what was charged for the powder, that is, the balance being amortization.

That is again compared with the upper two lines, the United States lines, showing how it affected manufacturing for foreign shipment.

The foreign line is essentially all du Pont manufacture. The contribution by other manufacturers was very small, and I would state the Government made none of it.

Senator Clark. Mr. du Pont, I notice on both of these charts that in 1917, after there had been a steadily growing cost of powder raw materials, there began to be a very marked drop on both charts. That is due to the fact the United States Government took charge of the matter of raw materials?

Mr. Irénée du Pont. Yes, sir; and I want to bring that out, showing in a later chart the control of raw-material prices.

This third chart represents the price of cotton as compared with the same all-commodity price, the dotted line being cotton, the upper one of those two, and the lower one being the general commodity price, showing that cotton went up even more than other commodities.

That is, you might take in one of our ingredients, which is cotton, and it went up unduly high compared with the price of powder, at least even more than other commodities.

The chart below is the wheat price and the corn price, which undoubtedly affect the price of alcohol, in that alcohol has to be made from grain or molasses, and the molasses price got out of control entirely, which indicates how the grains went up 'way above the ordinary increase in general commodities. That, of course, in turn influenced the cost of raw materials going into powder, which had to be absorbed, and are included in the smaller prices of powder on the first of the charts. We had to absorb part of the increase.

The corn price, you will find on the right. Mr. Senator, and it indicates about the same as the wheat. We put up both grains, because one might be substituted for the other.

Now the last chart to which I would like to call attention may seem 'way afield from powder, namely, flaxseed. Flaxseed comes from the Argentine essentially. That is the product which represents its price. That requires shipping from the Argentine to the United States and, due to the scarcity of shipping, undoubtedly, it went unduly high, as you will see.

Nitrate also comes from Chile, in the southern part of South America, and undoubtedly it, too, would have skyrocketed in price had not the Government intervened and fixed merchant marine rates, at least attempted to fix them, held them down somewhat, although nitrate prices did actually about double in this period.

Senator Clark. Flaxseed does not enter into the manufacture of munitions, does it?

Mr. Irénée du Pont. Not at all, but it shows the general ocean freight rates which might have applied to nitrates, had the Government not gone back and attempted to fix prices of raw materials.

I want to point out this: That that astonishing price of powder was the result not of fortuitous circumstances. Powder might have been expected to cost a great deal more. The labor rates went up a great deal in this period, as well as the raw material prices. But I think it is a monument to show what organized efficiency can do.

At the peak I think the du Pont Co. had approximately 100,000 men organized. Each division knew what they were doing and how to do it, and had competent men in charge, and we applied the principle of rewarding those men especially well if they could do especially well.

Now take alcohol, a point which I keep always bringing up as a case in point. We were able to reduce the amount of alcohol, which had become very valuable, and thereby effect economies in the cost of manufacture of our product.

I think I have covered everything in this memorandum which I would like to put in as an exhibit, but the striking part, to my mind, is that the real profiteers on war are not the powder manufacturers. The real profiteers, the ones who did not have to do any additional work, but got two and sometimes three times the price of their product, are the raw-material manufacturers, essentially the farming group.

I do not know how the case of profiteering is going to be done away with, but it is evident that there was much more than any profiteering in the manufacture of powder.

(The memorandum on the charts referred to was marked "Exhibit No. 1253" and is included in the appendix on p. 3854.)

(The charts referred to were marked "Exhibits No. 1253–A to 1253–F" and appear in the appendix on pp. 3855 to 3857.)[1]

The CHAIRMAN. Mr. du Pont, are you aware of the fact that the urge which was upon the producers, for example, of wheat and flaxseed, particularly flaxseed, the urge which was upon them by the Government to produce more, has inflicted upon the flaxseed-producing area an injury that is certainly not yet overcome and won't be for a long time? The farmers went out and turned over sod which ought never to have been done, because the Government was urging them to produce flaxseed. Therefore, we are today having conditions in those regions which I do not know how we are going to solve, or when we are going to catch up ourselves on it, because of the response given when the urge was upon the farmer to produce those things which the Government was calling for.

Mr. IRÉNÉE DU PONT. I appreciate that there are very many bad things which flow out of war, and that is one of the reasons why I am against war. But I simply want to point out to you the real expenditure of money above the normal price of commodities does not lie in powder, but it lay in the matter of raw materials, mostly agricultural, that is, from that point of view.

Perhaps the other may be agricultural—I do not know, but the things which enter into powder went higher up compared with the price of powder, and I think those charts conclusively prove it.

The data on agriculture is taken from the Department of Agriculture, Bureau of Agricultural Economics, and the powder tables are taken from the War Industries Board, price data used for powder and powder materials.

Are there any further questions on that? I am afraid I took a little bit over 5 minutes.

The CHAIRMAN. Mr. Pugsley, do you want to be heard?

Mr. PUGSLEY. Yes, sir. I have three documents here in connection with the Geneva Convention, which we thought might be helpful to the committee to have, and we ask that they be inserted in the record.

They are, first, a transcript of the hearings before the Committee on Foreign Relations, United States Senate, Sixty-ninth Congress, Supervision of International Trade in Arms, dated April 28, 1926.

(The document referred to was marked "Exhibit No. 1254" and is included in the appendix on p. 3858.)

Mr. PUGSLEY. The second is a copy of the message from the President of the United States transmitting a convention for the supervision of the international trade in arms and ammunition and in implements of war, signed at Geneva, Switzerland, on June 17, 1925.[2] It was confidential, and was made public on the 18th of May this year.

(The letter of transmittal from the President referred to was marked "Exhibit No. 1255" and is included in the appendix on p. 3866.)

---

[1] See Hearings, Part XIII, p. 2928, appendix, pp. 3011 to 3014, for committee charts on commodity prices, "Exhibit No. 1115–A to 1115–F."

[2] The text of the Convention for the supervision of the international trade in arms and armaments and in implements of war is included in the appendix to Committee Print No. 1, on p. 80.

Mr. PUGSLEY. Third, we have a report of the Foreign Relations Committee to the Senate on the Geneva Convention, which is dated May 18, 1934.

(The document referred to was marked "Exhibit No. 1256" and is included in the appendix on p. 3866.)

Mr. PUGSLEY. In connection with this report of the Foreign Relations Committee, I call attention particularly to the letter on page 2 of the report, from the Hon. Cordell Hull, Secretary of State, to Senator Pittman, in which the Secretary states that the convention of 1925 was signed at Geneva and in all essentials was based upon the preliminary draft adopted at Geneva in 1924, and which has been argued in this proceeding was essentially altered by the conference.

I also call attention to the fact that the resolution, as adopted by the Senate June 15, 1934, and as appearing in this report of the Foreign Relations Committee, recommends the approval of the treaty by the United States.

I quote from the report:

> * * * subject to the reservation that the said convention shall not come into force so far as the United States is concerned until it shall have come into force in respect to Belgium, the British Empire, Czechoslovakia, France, Germany, Italy, Japan, Sweden, and the Union of Soviet Socialist Republics.

Senator CLARK. I think the last exhibit is already in the record.

The CHAIRMAN. Of course, if any part of it is in the record, the reporter will make note of that. They will be received and given exhibit numbers.

Senator CLARK. Mr. Pugsley, on the subject of these exhibits, did your company have a representative on the committee which prepared a recommendation as a result of this conference in the commerce department, which is its first recommedation recommended the removal of automatic pistols and revolvers from the category of military weapons?

Mr. PUGSLEY. Mr. Beebe was on that committee.

Senator CLARK. I have no objection to these exhibits.

RELATIONS BETWEEN MUNITIONS MAKERS AND WAR DEPARTMENT AND WAR DEPARTMENT OFFICIALS

The CHAIRMAN. The committee desires to turn, for a moment, to the question of relationship between the munition manufacturers with the War Department and with the officials of the War Department. I want to direct my questions mostly to Mr. Hadley.

The committee has before it a letter dated October 25, 1933, signed by Mr. Frank J. Kahrs, promotion and advertising manager for the Remington Co., addressed to Lt. Col. Townsend Whelen, headquarters Seventh Corps Area, Corps Area Ordnance Office, Omaha, Nebr., which I offer for appropriate number.

(The letter referred to was marked "Exhibit No. 1257" and appears in full in the text.)

The CHAIRMAN. That letter states:

> My Dear T. W.:—

Is Lieutenant Colonel Whelen still in the service, Mr. Hadley?

Mr. HADLEY. I have the impression that he is.

The CHAIRMAN. Colonel Harris, are you aware?

Lieutenant Colonel HARRIS. That is Lieutenant Colonel Whelen. He is still in the service; yes, sir.

The CHAIRMAN. Lieutenant colonel.

Lieutenant Colonel HARRIS. Yes, sir.

The CHAIRMAN. I read from "Exhibit No. 1257":

> Our foreign department would like us to furnish them with an article dealing with the subject of what the United States Government is doing in training marksmen with .22 rifles and ammunition.
>
> Along the lines we discussed the whole proposition when you were here at the factory some time ago, I wish you would get up something for me that we could furnish some of our foreign publications which would be informative and perhaps furnish the incentive for them to do likewise.
>
> Of course, we are entirely selfish in this because, naturally, we would benefit by the increased sale of our excellent .22 L. R. Kleanbore cartridge to the various countries.
>
> As you know we have two excellent rifles for this purpose, both modeled along military lines, models 33 and 34 N. R. A., and it would give our representatives abroad an opportunity to place these before the various foreign governments who might become interested in training their troops in the same manner as our own Government.
>
> This is just a little more propaganda, of course, and I am sure that you could treat it in a way that would make it very interesting as well as inspirational. I think one fairly long article with complete information would be better than several shorter articles, although I would leave that to you. We could probably do the rewrite stuff here and send out as many articles as we desire from the basic information that you would furnish.
>
> If you happen to have any photographs so much the better.

I will read, also, the concluding paragraph:

> Haven't heard from you in some time. They tell me that you are still on active service, in other words not yet retired.
>
> Hope you will drop me a line when you have the opportunity.

Mr. Hadley, to what extent has Lieutenant Colonel Whelen done propaganda work for you?

Mr. HADLEY. I should say, so far as I am aware, that the work that he has done has been primarily literary—in fact, that he has been writing for certain magazines and thereby aiding in creating an interest in small-bore rifle shooting.

The CHAIRMAN. The article which was referred to, the article which you referred to in this letter, was it ever furnished?

Mr. HADLEY. I am not aware as to whether it was or not.

The CHAIRMAN. The committee is advised by its investigator that it was furnished by Lieutenant Colonel Whelen.

Mr. DAVIS. I do not believe that was ever used, Senator. I am not sure of that. I will check it up, but I do not believe it was ever used.

The CHAIRMAN. Why was it not used?

Mr. DAVIS. I cannot answer the question.

The CHAIRMAN. But it was furnished?

Mr. DAVIS. I am not sure of that, either. I would be glad to check it up.

The CHAIRMAN. In the article which was furnished, did it specifically mention your brand, your line of ammunition?

Mr. DAVIS. I did not see the article. I am sorry to say.

The CHAIRMAN. Mr. Wohlforth, what reference does the article which was prepared by Lieutenant Colonel Whelan make to this matter?

Mr. Wohlforth. I requested that article, Mr. Senator, and on page 3 of the article which was supplied to me by Mr. L. K. Larson, the assistant treasurer of the Remington Arms Co., the following paragraph is included, and this is from the article which Lieutenant Colonel Whelen furnished [reading]:

> Another matter which has operated for the economy of this system of training with a .22 caliber rifle is the noncorrosive ammunition which was first developed by the Remington Arms Co. The United States Government purchases only noncorrosive ammunition.

The Chairman. Very well.

Mr. Handy. I am sure, Senator, that that article was not used.

The Chairman. Why was it not used?

Mr. Handy. I do not know. We just got it from the colonel.

The Chairman. It was available for use, if you wanted it, was it not?

Mr. Handy. Yes, it was.

The Chairman. Have there been other articles written by him which were not used?

Mr. Handy. I think he has written a handbook on small-bore shooting, which has not been used either.

The Chairman. At whose request did he write that?

Mr. Handy. I believe at Mr. Kahrs'.

The Chairman. Is there a regulation against Army officers making statements on the method of service and supplies for advertising purposes?

Mr. Handy. I do not know, I am sure.

The Chairman. Colonel Harris?

Lieutenant Colonel Harris. I do not know whether there is a written regulation, but I should be glad to look into it.

The Chairman. I have before me a letter written by Major Gatchell to the Remington Arms Co. on April 27, 1931, which I offer as an exhibit.

(The letter referred to was marked "Exhibit No. 1258" and is included in the appendix on p. 3875.)

The Chairman. I read from it:

> In reply, you are informed that there is an Army regulation forbidding the officers or other agencies of the War Department from making statements on the merit of services or supplies furnished for the Army for use in advertising by commercial firms. This would clearly prevent this office from authorizing you to use either Colonel Whelen's or Colonel Schull's letter in full or in part in any advertising.
>
> It would not, however, in the opinion of this office, prevent you from incorporating in the advertisement a statement as to what accuracy figures were obtained in the official test of the 40,000,000 rounds of caliber .22 long rifle Kleanbore ammunition recently furnished to the Government. The statement of the accuracy figures should appear as your own statement and not as the statement of a Government official.

Does that, Colonel Harris, coincide with your own thought as to the regulation?

Lieutenant Colonel Harris. Yes, sir.

The Chairman. Does this state the reason why you have not used Lieutenant Colonel Whelen's article that he furnished you with?

Mr. Davis. I do not think so, Senator. I did not know that there was any such regulation.

Mr. Hadley. Senator Nye, it may well be that that is a reason why it has not been used in that particular form. This particular letter that you read, signed by Gatchell, referred to a certain specific statement which was made to us after the test of this 40,000,000 rounds by the commanding officer at Springfield Armory, who was charged with the test of that ammunition. The results that he obtained were so satisfactory that he freely mentioned them to us. It was the possible use of that that we had in mind when we wrote the letter to which this is a response. But, of course, this precluded the possibility of our using that information or that statement, so that we were guided by this letter and never made use of it.

The CHAIRMAN. The fact remains, does it not, that this kind of work done by Lieutenant Colonel Whelen is of great value and service to the country? You do make much use of his studies and his writings?

Mr. HADLEY. We feel that his published writings which create and continue interest in shooting certainly are of benefit to those who make small arms ammunition of .22 caliber. That was the particular thing that he was writing about.

The CHAIRMAN. Whelen is recognized as something of a writer, is he not?

Mr. HADLEY. I should say that he is decidedly recognized as a person of not only Army experience but also extended experience in hunting, also in target shooting of this nature, .22 caliber target shooting.

The CHAIRMAN. Relative to his response, I have before me a confidential memorandum supplied to me to J. B. Smiley.

Who is Mr. Smiley?

Mr. HADLEY. He was a former president of Remington Arms Co.

(The letter referred to was marked "Exhibit No. 1259", and appears in full in the text.)

The CHAIRMAN. This is by Pete Carney, manager of the advertising department:

> Attached find Whelen's letter in reference to Kleanbore and my answer to him.
>
> Whelen is a real high type of writer who can be trusted in every way. It is just such things as Whelen wants to do that I would like to do because what he can do for us we could not buy for many thousands of dollars and a written article by Whelen in an honest-to-goodness magazine will bring us more return than any amount of paid advertising.

So you do recognize in Lieutenant Colonel Whelen's writings a large degree of authority, and when you can quote him or when you can use his writings, it reverts to your very decided advantage, does it not?

Mr. HADLEY. As an authoritative writer on the subject; yes.

The CHAIRMAN. What does Lieutenant Colonel Whelen receieve from your corporation for such services as he performs?

Mr. HADLEY. I am not aware that he has received anything.

The CHAIRMAN. Mr. Davis?

Mr. DAVIS. I think he has been paid a small hourly rate. I do not know what it is.

The CHAIRMAN. He has been paid a small hourly rate?

Mr. DAVIS. I think so. That is my understanding.

The CHAIRMAN. What do you mean by "an hourly rate"?

Mr. DAVIS. So much per hour for his writing.

Senator CLARK. You mean he writes by the hour?

Mr. DAVIS. In his spare time.

The CHAIRMAN. Are you prepared to say in the aggregate what has been paid to Lieutenant Colonel Whelen for his writings?

Mr. DAVIS. No, sir; but I think it is a very small sum indeed.

The CHAIRMAN. Do you pay him anything in any other than that manner for his service?

Mr. DAVIS. No, sir.

The CHAIRMAN. Have you given him rifles and ammunition as gifts?

Mr. DAVIS. Not to my knowledge. I do not know.

The CHAIRMAN. Mr. Hadley?

Mr. HADLEY. I am not aware of any rifles that have been given to him as gifts. I can say that certain new rifles have been put into his hands for test, so that we could perhaps gain the benefit of his opinion on the subject.

Senator CLARK. Is he still testing them?

Mr. HADLEY. I should say that the test was only as a new product.

Senator CLARK. Is he still testing them or does he return them after he has tested them?

Mr. HADLEY. I have no information on that.

Mr. WOHLFORTH. There is a letter here that may be marked as an exhibit, and I would like to read an excerpt from it.

(The letter referred to was marked "Exhibit No. 1260", and is included in the appendix on p. 3875.)

Mr. WOHLFORTH. It is dated November 17, 1933, to Lt. Col. Townsend Whelen, from Mr. Kahrs.

In part it says:

> I have the story that you wrote for the export department. It is fine. I have turned it over to them. I don't think I want to accept this without compensating you in some form. Isn't there a rifle or a shotgun that you need? Let me know about this.

The CHAIRMAN. How have you accounted for the payments that have been made to Colonel Whelen?

Mr. DAVIS. I cannot answer that question.

The CHAIRMAN. You are quite confident he has been paid?

Mr. DAVIS. I think he has; yes, sir.

The CHAIRMAN. The only information our agents are able to ascertain on that score involved the payment of $100 to him at one time, but it was made to appear that this $100 payment was to cover expenses that he had been put to in bearing witness in a lawsuit in which your company was interested. That lawsuit was known as the Hoen case.

What was the Hoen case?

Mr. DAVIS. What was the date of that, Senator?

The CHAIRMAN. In 1930.

Mr. DAVIS. That was before my time with the Remington Arms.

Mr. HADLEY. I can answer that. The Hoen case was one in which .22-caliber cartridges were used in a gallery in New York—that is, one of these galleries that you walk into from the street. There was an injury that was caused to Hoen. It was either in one of these galleries or else it was in some performance, some stage performance; I am not sure which. He suffered an injury, I believe, to his eye. The cartridge which caused it was the subject of the discussion, whether that was because of defective manufacture or possible carelessness in manufacture or whether it was simply an act of God.

The Chairman. What testimony could Lieutenant Colonel Whelen have borne in such a case?

Mr. Hadley. I do not know specifically what he would have done, except such evidence as his long experience in shooting might have shown.

The Chairman. A memorandum before me indicates that though Lieutenant Colonel Whelen went to New York twice on this case, he never was called upon to testify. You are not prepared to know just what it is that he might testify to in that case?

Mr. Hadley. No; I do not know specifically, but my recollection is that the case was compromised rather than brought to a final trial in court. It may have started, but it seems to me there was a compromise of some sort, as the result of which it was dropped without there being any conclusion in the court.

The Chairman. Mr. Hadley, has Lieutenant Colonel Whelen's service in the way of writing for your company been very large?

Mr. Hadley. I am glad you asked that question because I wanted to perhaps clarify it, or at least I feared there might be a misunderstanding in respect of what has been said on his writing. He has written quite a good deal, as has been stated heretofore. My impression is that any writing that he has done for us specifically has been very small in quantity compared with his general writings. I recall one writing in connection with a sporting-rifle stock, and I believe that in our book of instructions on how to assemble and disassemble, there is something that was written by him. But certainly the major part of his writings I should say we have nothing to do with whatever.

Incidentally, I should perhaps remark in respect of that rifle which he tested, or ammunition which he tested, that that is not something that is peculiar to him, as far as our company goes, nor yet as far as other companies are concerned, because the practice is when a new product is brought out for different companies to supply those who write in different magazines with those new products so that their opinions on the subject may appear simultaneously, more or less, in the magazines with the bringing out of the article in question.

Senator Clark. Did you pay Lieutenant Colonel Whelen for going to New York on these two occasions to testify as an expert witness in this lawsuit?

Mr. Hadley. The Senator stated something about that. I do not know myself.

The Chairman. The record reveals that he was paid $100 to cover his expense on those two trips to New York.

What, in addition to money, if anything, has been used to reward Lieutenant Colonel Whelen for the services that he performed for your company, Mr. Davis?

Mr. Davis. I know of nothing, Senator.

The Chairman. Has he ever been offered a position in the company?

Mr. Davis. Yes, sir; he was. We established in the Empire State Building an exhibit of all of our arms and ammunition. We were looking for a man to take charge of that exhibit, also take charge of our rifle promotional work. His name was suggested to us. We wrote to him, and he informed us——

The CHAIRMAN. By whom was his name suggested?

Mr. DAVIS. I think it was Mr. Kahrs that suggested it. We received a telegram back from Lieutenant Colonel Whelen as follows:

> Retired officers employed by firm doing business with Government cannot draw retired pay. Sorry cannot draw. Letter follows.
>
> TOWNSEND WHELEN.

The CHAIRMAN. Let us turn to that letter that followed. The reasons that he ascribes for his refusal to accept the position rather interest me, and I am sure they will the committee.

I offer this letter of February 9, 1934, as an exhibit.

(The letter referred to was marked "Exhibit No. 1261", and is included in the appendix on p. 3876.)

The CHAIRMAN. I read the letter not in its entirety, but almost. The letter is written from Omaha, Nebr., to Mr. Frank J. Kahrs, Remington Arms Co., Bridgeport, Conn.

> DEAR FRANK: I have your letter of February 6 relative to the position in your New York office. It sounds very attractive and a splendid opening, and I wish so much that I could accept it, but, unfortunately, I cannot do so.
>
> About 10 years ago, when General Harbord retired from the Army to accept the position as president of the Radio Corporation of America, certain soreheads in Congress, peeved because he was bettering himself so much, introduced and passed a law which provides that if a retired officer is employed by any firm which does business with the Government, that officer cannot draw his retired pay. This position which you have in view would prevent my drawing my pay, which, in event of retirement, would be $375 a month, and, of course, I could not therefore consider it.
>
> Perhaps I had better tell you just how I am situated. I had planned to retire last fall after my daughter's marriage, but the expense of the wedding and the general financial depression at that time made me hesitate. Just now I am approaching my promotion to full colonelcy, and should get it within 8 months, perhaps a little less. It seems wise to wait until that time, when I will then be entitled to slightly more retired pay, and will also have the satisfaction of retiring with the highest rank which I can normally expect. Mrs. Whelen and I have practically made up our minds that we will then retire—that is next fall or early winter.
>
> When I do retire I have been planning that I would go back to Washington where I own and home and there hang out my shingle as a consulting ordnance engineer, specializing on design, publicity, and selling counsel. In this way, being in business for myself, I shall be free to work for Remington, or for any other individual or company, billing them in the usual manner for the work done.
>
> In the eyes of the law I will not then be employed by any firm doing business with the Government or otherwise. I will simply be selling my own product as any other business man might. In fact, I have already done a little of such work. Recently, you will remember, I did work of this kind, and sold my own product to you for the Remington Arms Co. I have also done a small amount of work for other companies from time to time.
>
> It seems to me that I might do work for the Remington Arms Co. from time to time under such conditions in a way that would be very satisfactory to you, and also more economical to you than under the conditions you suggest. I will be a free lance, and I can go anywhere, or do anything that you might wish, merely billing you for the services on completion of the project. I have no idea of charging exhorbitantly, as you already know.

It strikes me, Mr. Davis, that Lieutenant Colonel Whelen here is saying in effect, "I cannot work for you but I can work for you." What are we to make of this?

Mr. HANDY. Our understanding, Senator, is that an Army officer while in the service is permitted to write and sell his articles. I was wondering if Colonel Harris could answer that point for us.

Lieutenant Colonel Harris, what thought do you have on it?

Lieutenant Colonel HARRIS. An officer is permitted to write on his own time and sell his articles subject to written Army regulation limitations.

The CHAIRMAN. Here we have a man who serves in a rather dual capacity. He is in the Ordnance Department and at the same time he is an ammunition expert. That opportunity which the Government has given him makes him one whose service can be extremely valuable to a company like the Winchester Co.

Lieutenant Colonel HARRIS. I would say that he is a hunting ammunition arms expert rather than a military arms ammunition expert.

Mr. DAVIS. I think that is correct.

The CHAIRMAN. What is he doing in the Ordnance Department, then?

Lieutenant Colonel HARRIS. He is an officer. All officers in the Ordnance Department are not necessarily expert on all matters. He gives satisfactory service in the Ordnance Department. But my statement was that as to being an expert, I thought with his long hunting experience and long interest in shooting, he would qualify more as an expert on sporting types of arms and ammunition than on military.

Senator CLARK. That is no part of his duties in the Ordnance Department, is it, Colonel?

Lieutenant Colonel HARRIS. He has been on duty at Frankford Arsenal, which manufactures small arms and ammunition. He came into the Ordnance Department right after the war. He was an Infantry officer. All this shooting was with the background of Infantry service.

Senator CLARK. This .22 caliber ammunition that you have been talking about is considered an adjunct to military service, is it not?

Lieutenant Colonel HARRIS. It is a training ammunition.

Senator CLARK. It is a training ammunition. In other words, you can teach a man the position, the handling of his piece, the trigger squeeze, the use of the sights, and everything else on a miniature range with .22 ammunition just as well as, in fact, better than you can with a high-powered Army rifle on a regular Army range, is not that true?

Lieutenant Colonel HARRIS. That is true. In that respect, he is an expert on that phase of it.

The CHAIRMAN. Mr. Davis, what utility would these articles which Lieutenant Colonel Whelen wrote be to you except as he could be advertised as being of the Ordnance Department and an expert on ammunition in the Army? Supposing he had never had those Army contacts, would his service have been of the value to you that it was?

Mr. DAVIS. Just as much.

The CHAIRMAN. Just as much?

Mr. DAVIS. Yes, sir.

Mr. HANDY. There are quite a few writers, Senator, on the same subject, who have no connection with the Army; quite a few sporting writers around the country.

Mr. DAVIS. He is an expert on small-bore shooting, and one of the most outstanding experts in the country. Regardless of whether he was attached to the Ordnance Department or not, his opinion would be very valuable to us.

The CHAIRMAN. In the conclusion of his letter, "Exhibit No. 1261", Colonel Whelen says:

> Under these conditions I do not see why I cannot do any work that the Remington Arms Co. desires, and it will be the greatest pleasure to cooperate with them. Indeed, I have always tried to do so in the past, and I think that from time to time I have been of some little help. Of course, until I am actually retired I cannot travel, but my pen is at your service now as always. After retirement I am a free lance.

I want to go back to that again. Does not the fact that Colonel Whelen is connected with the Army lend considerable weight to his request?

Mr. DAVIS. I do not think so, Senator; no. I think his knowledge of small-bore rifle shooting and——

The CHAIRMAN. What is the writing that has been published?

Mr. DAVIS. I do not know.

Mr. HADLEY. He has written a book. I think it is entitled, "The American Rifle." In this he treats of all the sporting rifles at length of all different makes. My impression is that that was published about 15 years ago—some time ago. His interest in sporting rifle shooting is clearly shown there.

The CHAIRMAN. I suppose that when his articles are published they are published as coming from one Townsend Whelen, without any reference to his Army connection?

Mr. HADLEY. I cannot say as to that. My observation is that most Army officers use their titles day in and day out, as it were. But I do think that his reputation as a writer is sufficiently broad to stand on its own, even though he had no connection with the Ordnance Department.

The CHAIRMAN. But it would be pretty safe to declare that there have been no articles published by him or no articles published which he has written without drawing attention to the fact that he was connected with the Army?

Mr. HADLEY. I could not speak with finality on that.

Mr. WOHLFORTH. Lieutenant Colonel Whelen's reputation is founded upon his skill and knowledge as a military shot, is it not, rather than as a hunter and on revolver shooting?

Mr. DAVIS. I do not think so.

Mr. WOHLFORTH. Can you answer that?

Mr. HADLEY. I should say that from our point of view his interest is a twofold one; primarily that is the .22 caliber shooting, and also the big game shooting that he has done, as I recall it. He has shot big game in various countries as well as the United States. He has had a broad experience in that way.

The CHAIRMAN. I want to digress from that for just a moment long enough to make reference to a solicitation which was made of the Remington Arms Co. for an advertisement in the Army and Navy Journal. Colonel Harris, is the Army and Navy Journal privately owned?

Lieutenant Colonel HARRIS. It is.

Senator CLARK. General Reilly's?

Lieutenant Colonel HARRIS. I do not know.

Senator CLARK. Formerly with the Thirty-third Division?

Lieutenant Colonel HARRIS. He had some connection with it at some time.

Senator CLARK. He owned it?

Lieutenant Colonel HARRIS. I do not know whether he does or not, now, Senator.

The CHAIRMAN. You do not know where the ownership rests?

Lieutenant Colonel HARRIS. No. The reputation is as of a privately owned magazine.

The CHAIRMAN. This evidence to which I refer is a letter dated January 4, 1934, addressed to Mr. E. E. Handy, vice president of the Remington Arms Co., Inc., Bridgeport, Conn.

(The letter referred to was marked "Exhibit No. 1262", and appears in full in the text.)

The CHAIRMAN (reading):

> DEAR MR. HANDY: Colonel O'Laughlin has written to me from Washington stating that the Remington Arms contract for the Army-Navy Journal has expired.
>
> Ed Ferriday has already undertaken to get for us the 28 half-page du Pont contract. I know how busy you are so I shan't take any more of your time than to wish you a most successful 1934. The rest I'll leave to your inference. Can we count on you?
>
> Yours very respectfully,
>
> LT. B. R. CHADWICK.

Who is Lieutenant Chadwick?

Lieutenant Colonel HARRIS. I do not know, Senator. I can find out.

The CHAIRMAN. Mr. Handy, who is Lt. B. R. Chadwick?

Mr. HANDY. I do not know him, Senator, other than that. That is all I know about it.

The CHAIRMAN. This letter soliciting this advertising was written on War Department stationery. Is Lieutenant Chadwick by any chance stationed in the War Department here?

Mr. HANDY. I am certain I do not know.

The CHAIRMAN. I will read that part of the letter again [reading]:

> I know how busy you are so I shan't take any more of your time than to wish you a most successful 1934. The rest I'll leave to your inference.

What is the rest that is left to your inference?

Mr. HANDY. I do not know. We had a request to take an ad in the Army and Navy Journal, as I recall it, some time during 1933. I think we did so at a cost of around $100 or such a matter.

Senator CLARK. Did you infer that this lieutenant was asking you to take an ad? He said he left it to your inference. Did you infer that he was asking you to put an ad in the Army and Navy Journal when you got this letter?

Mr. HANDY. Yes. I think that was the request. I do not think there was any inference with respect to that.

Senator CLARK. He says he leaves it to your inference.

The CHAIRMAN. He reminds you that your contract has expired, and the inference, of course, would be in part at least that you renew that contract for the new year.

Mr. HANDY. That is right. I think that Remington had previously taken ads in the Army and Navy Journal.

The CHAIRMAN. Lieutenant Chadwick in a postcript to his letter, which is "Exhibit No. 1262", says [reading]:

> Thank you very much for your help last year. We appreciate it very much.

I assume that means your help in the way of advertising in the Army and Navy Journal.

Mr. Handy. I presume it does. That was just prior to the time, Senator, that du Pont took control, or about the time.

The Chairman. Who is Ed Ferriday, who is referred to in the letter?

Mr. Handy. He has charge, or formerly had charge of the contractors section, I believe, of the explosives department of the du Pont Co.

The Chairman. Do you know Mr. Ferriday very well?

Mr. Handy. Quite well.

The Chairman. Does he not have a very high regard for Lieutenant Chadwick?

Mr. Handy. That I do not know. I presume he does.

The Chairman. He wired you, Mr. Handy, on January 6 of this year as follows [reading]:

> Would appreciate very much if you would give Lieutenant Chadwick Army-Navy Journal same advertising space as last year, or more if possible, as we have wonderful contact with U. S. Engineers, from General Markham, Chief, down the line, great friends of ours, and du Pont will sell plenty of dynamite on projects under their direction. Please go as far as you consistently can. Regards and happy New Year.
>
> E. C. Ferriday.

(The telegram referred to was marked "Exhibit No. 1263", and appears in full in the text.)

The Chairman. Mr. du Pont, what contracts with General Markham or the engineers have you or your company had?

Mr. Irénée du Pont. I really do not know, sir. I do not know.

Mr. Lammot du Pont. I do not know of any, Senator.

Senator Clark. What is Mr. Ferriday's position?

The Chairman. Mr. Casey?

Mr. Casey. That is a commercial proposition with which we have nothing whatsoever to do. The only contact that we have with the engineers is the development of a special demolition bomb.

Senator Clark. When you say "we", you mean your department of the du Pont Co.?

Mr. Casey. Yes.

Senator Clark. Mr. Ferriday is also connected with the du Pont Co., is he not?

Mr. Casey. Yes.

Senator Clark. In what capacity?

Mr. Lammot du Pont. Mr. Ferriday is in charge of the contractors division of the explosives department, commercial explosives. Of course, contractors have worked with the United States Government and for the United States Government, and we frequently furnish powder for those purposes.

Senator Clark. Apparently very wonderful contacts, too, according to this telegram.

The Chairman. Your man Ferriday's telegram says [reading]:

> We have wonderful contact with United States Engineers from General Markham, Chief, down the line—great friends of ours—and du Pont will sell plenty of dynamite on projects under their direction.

Mr. Lammot du Pont. If General Markham is the Chief of the United States Army Engineers, I can understand how Mr. Ferriday might have contact with him. I didn't know that was the gist of your first reading.

The CHAIRMAN. What is General Markham at the present time?

Mr. LAMMOT DU PONT. I understand the United States Engineers have charge of these river and harbor projects for the Government and large quantities of explosives are used in those projects.

The CHAIRMAN. In order to stand in with the Engineers, is it necessary to advertise in the Army and Navy Journal?

Mr. LAMMOT DU PONT. I would not think so.

The CHAIRMAN. It would seem to be a part of the program and his work, inviting that cooperation, is it not, from this correspondence?

Mr. LAMMOT DU PONT. I do not think that is correct, Senator.

Mr. CASEY. I think it would be more pertinent to advertise in the United States Engineers Journal.

The CHAIRMAN. What was that, Mr. Casey?

Mr. CASEY. I would think it would be more pertinent to advertise in the United States Engineers Journal, which is a private publication.

The CHAIRMAN. That you do as well; don't you?

Mr. CASEY. No.

Senator CLARK. Apparently Mr. Ferriday does not agree with you, Major. He says [reading]:

> Would appreciate very much if you would give Lieutenant Chadwick Army Navy Journal same advertising space as last year or more if possible as we have wonderful contact with United States Engineers.

In other words, he assigns some wonderful contact with the Corps of United States Engineers for du Pont to sell plenty of dynamite for projects under their direction as a reason for giving Lieutenant Chadwick of the Army and Navy Journal the same space as last year, if possible.

Mr. CASEY. I do not know what contact Mr. Chadwick had with the Army and Navy Journal. That is a very old publication. It was published by Church in New York for a great many years.

Senator CLARK. Yes; I know.

Mr. IRÉNÉE DU PONT. Mr. Chairman, isn't this another sales letter? Mr. Ferriday wanted to get a little advertising out of the Remington Co.

The CHAIRMAN. Why is it, Mr. du Pont, every time we get a communication here that affords the least bit of embarrassment, it becomes a sales letter?

Mr. IRÉNÉE DU PONT. Mr. Chairman, I didn't say it was a sales letter. I asked you the question, doesn't it seem so? I never heard of it before.

The CHAIRMAN. It does not seem that way at all, for we find Mr. Ferriday of your company telling Mr. Handy of the Remington Arms Co. that—

> We have wonderful contact with United States Engineers from General Markham, Chief, down the line. Great friends of ours, and Du Pont will sell plenty of dynamite on projects under their direction; please go as far as you consistently can. Regards, and happy New Year.

Senator CLARK. Considering that this is a telegram sent from an official of a company which controls the Remington Arms, it seems to me it gets somewhat out of the category of a sales letter.

The CHAIRMAN. I was just going to ask Mr. Handy, what does it mean to you to know that the Chief of Engineers and the Engineering Department are going to purchase large quantities of dynamite.

Mr. HANDY. From the standpoint of Remington it did not mean anything. We merely continued our advertising in the Army and Navy Journal, as I recall it. Remington had been accustomed to do it in the past.

The CHAIRMAN. Why did Mr. Ferriday feel that you ought to be advised of what the du Pont Co. was going to get?

Mr. HANDY. I assume he was soliciting the continuation of that advertising, Senator. It must have been the case.

The CHAIRMAN. And he realized that if you could be made to realize how large a contract for explosives was in the offing, you would be more inclined to renew your advertising contract; is that correct?

Mr. HANDY. That might have been the way he felt about it.

Senator VANDENBERG. Mr. Chairman, you said this was written on War Department stationery. I call your attention to the fact that it is written on War Department stationery and also the United States Engineer's Office of the War Department.

The CHAIRMAN. I am glad the Senator calls attention to that fact.

Senator VANDENBERG. I think it is quite pertinent to find out whether Lieutenant Chadwick was in active service at the time he wrote this letter making this solicitation.

The CHAIRMAN. Colonel Harris, will you ascertain for us just what Lieutenant Chadwick's status is?

Lieutenant Colonel HARRIS. I will, sir.

The CHAIRMAN. At the present time, and what it was in January of this year.

Lieutenant Colonel HARRIS. B. R. Chadwick, is that the name?

The CHAIRMAN. B. R.; yes. This letter was written from Detroit, engineer's office in Detroit.

Lieutenant Colonel HARRIS. I will be prepared at the next session to give you that information.

The CHAIRMAN. Now, Mr. Davis, has Lieutenant Colonel Whelen performed any services for you beyond those that have already been referred to?

Mr. DAVIS. I know of none, Senator.

The CHAIRMAN. Hasn't he been more or less of a contact man for you in the War Department?

Mr. DAVIS. No, sir; not to my knowledge.

The CHAIRMAN. Hasn't he interested himself in matters of legislation, matters in which you have had an interest?

Mr. DAVIS. I do not know as to that. Not for us.

The CHAIRMAN. Here is a letter dated April 27, 1929, by Mr. Kahrs, the assistant advertising manager at that time, to Mr. Saunders Norvell, who was president of the corporation at the time. The letter has reference to one which was written by Lieutenant Colonel Whelen on the subject of legislation having to do with the sale of firearms. I will offer that for the record for appropriate marking.

(The letter referred to was marked "Exhibit No. 1264" and is included in the appendix on p. 3877.)

The CHAIRMAN. I read from Mr. Kahrs' letter to Mr. Norvell:

> Colonel Whelen's letter is the result of one I wrote at the suggestion of Mr. Strugnell that we try to get the War Department on record as being opposed to legislation of this type, as it affects the War Department's plans for mobilizing industrial and manufacturing concerns in time of peace for war service.
>
> The thought was inspired by a telegram sent by the War Department to the Legislature of Massachusetts early in the present legislative session, requesting that certain stringent firearms bills before the Massachusetts Legislature be not passed. My purpose in bringing this to your attention is to recommend that you write the letter to the Assistant Secretary of War, recommended by Colonel Whelen, and, knowing the colonel as I do, I am sure that he has everything prepared in Washington so that favorable action will be taken.

What possible interest could Lieutenant Colonel Whelen have in this controversy?

Mr. DAVIS. I cannot answer that.

The CHAIRMAN. This legislation?

Mr. DAVIS. I cannot answer that. It is the first time I have known anything about it.

The CHAIRMAN. Doesn't it begin to look as though possibly Lieutenant Colonel Whelen was something of a contact man for your corporation here?

Mr. DAVIS. I cannot answer that.

The CHAIRMAN. In the War Department?

Mr. DAVIS. I cannot answer that.

The CHAIRMAN. It seems, in the light of what further evidence is to be offered, that he was at least in the position of paving the way for the accomplishment of things that the company wanted. You notice that language there that Mr. Kahrs was sure that Colonel Whelen has everything prepared in Washington so that favorable action will be taken, providing, of course, the War Department can be prevailed upon to ask for the thing that has been prepared.

Mr. DAVIS. I know nothing of this case, Senator, but is it criticism of our bringing matters to the attention of our legislators?

The CHAIRMAN. No; I am trying to bring out how through devious paths, perhaps, there is accomplished through the War Department things that might not be so readily accomplished but for the fact that there were those within it ready to pull the strings, and that maybe Lieutenant Colonel Whelen was one of those pulling the strings.

Mr. DAVIS. We have always felt if there is any prospective legislation detrimental to our industry that we certainly have the right to bring it to the attention of our legislators. If we cannot go to them with our problems and our difficulties, to whom can we talk?

The CHAIRMAN. But in this case you were asking or your company was asking the War Department for a service that would be forthcoming if the War Department decided to afford the service, and Colonel Whelen would have everything ready when the War Department so decided.

Senator CLARK. More than that, this letter indicates that you were suggesting that the letter be written on the suggestion of Colonel Whelen. In other words, Colonel Whelen suggests to Mr. Kahrs and Mr. Kahrs suggests to the president of the company, Mr. Saunders Norvell, according to this here, that Colonel Whelen will have the whole thing prepared in the War Department so that the

Secretary of War will accede to the request made by the Remington Co.?

Does that seem to you to be the ordinary course of business for an officer in the Army, to be recommending to a manufacturer of munitions that he write a letter to the Secretary of War and preparing the War Department to have the Secretary accede to that request?

Mr. Davis. Senator, I know nothing except what is in this letter. I have never seen it before.

The Chairman. To indicate that Colonel Whelen is something of a contact man for you in the War Department, I am going to read a letter written by the president of the Remington Arms Corporation to Hon. Patrick J. Hurley, Assistant Secretary of War, on April 30, 1929, which I will offer as an exhibit.

(The letter referred to was marked "Exhibit No. 1265", and is included in the appendix on p. 3877.)

The Chairman. I will start reading with the third paragraph:

> In these two connections we find that our business throughout the country is being constantly jeopardized and in some cases injured by injudicious legislation which is introduced and sometimes passed in the legislatures of the various States. We refer particularly to legislation to curb the use of firearms in the commission of crimes. Some of this legislation is good, some of it we realize is necessary, but the great mass of bills so introduced will, we believe, not accomplish the results desired and they interfere with the legitimate use of firearms in the promotion of rifle practice and of healthy sport. It is necessary for this company to combat such unwise legislation or matters would soon reach such a state that our company would be obliged to discontinue the manufacture of arms and ammunition, which in turn, would be very detrimental to national defense, as we believe our own company, together with other manufacturers of arms and ammunition, form a very considerable asset to the United States Government in the event of war.

What was the occasion for this letter, Mr. Davis, in the light of the evidence already before us?

Mr. Davis. I cannot answer the question, Senator. I was not there at that time and I have never seen it before.

The Chairman. Was it not a suggestion that if a letter of that kind were written to the Secretary of War, everything would be ready to accomplish an expression from the War Department, that the expression would be ready?

I am going to read on, the next paragraph in that letter:

> We have found that one of the best ways to combat such legislation in the various States is to have it done by our traveling representatives and our salesmen, who bring attention of the legislatures to the unwise character thereof. In this connection our own standing and that of our representatives would be very greatly strengthened if we could have from you, as representative of the War Department, a statement as to the War Department policy regarding such legislation. I hope you will understand that we do not complain about that legislation which is wise and necessary and well thought out to curb the use of firearms in the commission of crimes, but we do consider that our work could be very greatly assisted could we have from you a statement that the War Department is opposed to any legislation which would restrict legitimate use of rifles and shotguns in target practice and in proper sport, or any legislation which would seriously interfere with the properly controlled manufacture of arms and ammunition in this country.

That was written on April 30, 1929. May 15, 1929, brings a response from W. P. Wooten, colonel, Corps of Engineers, Director of Procurement, written on War Department stationery, from the office of the Assistant Secretary. The letter is addressed to Mr. Saunders

Norvell, president, Remington Arms Co., Inc., which letter will be offered as an exhibit.

(The letter referred to was marked "Exhibit No. 1266", and appears in full in the text.)

The CHAIRMAN. This letter reads:

> Your letter of April 30, addressed to The Assistant Secretary of War, in which you ask for a definite expression of the policy of the War Department with regard to legislation concerning the manufacture of small arms and small-arms ammunition, has been received and has been handed to me for reply.
>
> During the World War privately owned arms and ammunition plants produced approximately 95 percent of our small-arms ammunition, about 50 percent of our rifles, and almost all of our machine guns and our pistols. In a future war they would be absolutely essential for the production of about 90 percent of our small-arms ammunition and a large percentage of our machine guns and pistols, as our arsenals do not have a productive capacity sufficient to fill more than a small percentage of our requirements.
>
> It is, therefore, regarded as essential to our proper national defense that private manufacturers be in a position to undertake the production of these items. Because of the fact that it is not possible to produce small arms in quantity from newly created facilities where highly trained personnel is required in less than a year to 18 months, it is vitally important that the small-arms industry be continued in existence in peace time.
>
> Although the maintenance of our munitions industries is highly important, it cannot of course be stated, in advance, what position the War Department will take in regard to any specific legislation affecting the manufacture of small arms and ammunition. That can only be determined after the Secretary of War shall have had an opportunity to study the particular measure proposed.

Mr. Davis, that letter was a very valuable one, was it not, to you, from the standpoint of the call that was upon the company to combat legislation pending in certain State legislatures?

Mr. DAVIS. I don't know what use was ever made of this letter, Senator, if any.

The CHAIRMAN. This letter which your representatives and your agents whom Mr. Kahrs had declared did a great deal of work with legislatures in setting them right and letting them know what the facts were—a letter like this would be a great asset, wouldn't it, to them? Did not the company consider it that at the time?

Mr. DAVIS. I do not know.

The CHAIRMAN. The facts are that President Norvell lost only 1 day in replying to this letter. This letter is dated May 15, 1929. On May 16, 1929, Mr. Norvell wrote, mind you, not to Colonel Wooten, but wrote to Lieut. Col. Townsend Whelen, office of the Chief of Ordnance, Washington, D. C., which I will offer as the next exhibit.

(The letter referred to was marked "Exhibit No. 1267" and appears in full in the text.)

The CHAIRMAN. This letter reads:

> We are this morning in receipt of a letter from Col. W. P. Wooten, Corps of Engineers, Director of Procurement, copy of which is attached.
>
> This letter is just what we need, to use against all this legislative effort against arms and ammunition. We will, of course, use this letter in such a manner as to stir up just as little animosity as possible.
>
> Our Mr. Dodge tells me of his interview with you in Washington. Allow me to thank you for your interest in this situation.
>
> I trust when you visit New York that you will be sure to call on us.

Who is Mr. Dodge?

Mr. DAVIS. Mr. Dodge was formerly a president of the Remington Arms Co. and I think chairman of the board at that time.

The CHAIRMAN. Can we draw any other conclusion, that there was a very close contact afforded for you in the War Department through Lieutenant Colonel Whelen?

Mr. DAVIS. Senator, I cannot say that there ever was.

The CHAIRMAN. What would you say on the face of the evidence that we have just gone over?

Mr. IRÉNÉE DU PONT. Mr. Chairman, I would like to answer that question if you will permit me. I never saw any of these letters before. My mind is just as open to it as anybody's. It seems to me that this gentleman who is being criticized is a fan on ammunition, small-arms ammunition, small-arms shooting. He is naturally interested in the thing, and I think is doing a public service in his interest. It is perfectly natural for an industrial company to utilize as best they can those things.

The CHAIRMAN. Why don't they go direct to the Secretary of War and state what they want? Why do they work around through those who are employed and paid out of the treasury of these companies for service that they render?

Mr. IRÉNÉE DU PONT. Now, Mr. Chairman, I don't think that is fair. This man is evidently a fan on small-arms shooting. I never heard of him before. I may have, but I have forgotten about him if I did. But we did write a letter—I say " we "—I mean the former president of the Remington Co. wrote a letter to the Secretary of War telling him what they wanted. There is nothing sinister in that.

Senator CLARK. Why did the president of the Remington Co. thank Colonel Whelan for a letter that had been written to him the day before by Colonel Wooten?

Mr. IRÉNÉE DU PONT. You ask why that is?

Senator CLARK. Yes; why did he thank Colonel Whelen for a letter written to him the day before by Colonel Wooten?

Mr. IRÉNÉE DU PONT. If I knew an expert who is a fan in the game, I would like to give him information to help him along, and help us too.

Senator CLARK. But that wasn't it. He wrote back the next day to Colonel Whelen thanking him for Colonel Wooten's letter.

Mr. IRÉNÉE DU PONT. Thanking him for it?

Senator CLARK. Thanking him for Colonel Wooten's letter.

Mr. IRÉNÉE DU PONT. I didn't get that, then.

The CHAIRMAN. Let us get this again. Colonel Wooten had written this letter which was so much desired, and Mr. Norvell, instead of thanking Colonel Wooten, thanks Lieutenant Colonel Whelen.

Mr. IRÉNÉE DU PONT. I don't see anything like that. What is that?

The CHAIRMAN. That is a letter of May 16.

Mr. IRÉNÉE DU PONT. Where is the word " thanks," sir? I didn't get it.

The CHAIRMAN. Well, there isn't any " thank you " in it.

Mr. IRÉNÉE DU PONT. That is the point. He was not thanking him. He was simply telling him that——

The CHAIRMAN. Could he explain his thanks any more keenly than he did in this letter?

Mr. IRÉNÉE DU PONT. He was thanking Mr. Wooten for getting it. He is not thanking Mr. Whelen. I think you are reading all sorts of sinister things in this.

The CHAIRMAN. Why did he write to Colonel Whelen?

Mr. IRÉNÉE DU PONT. Because Colonel Whelen is a fan on small arms shooting. He is interesting himself in stopping the prohibition on the use of small arms. Here is some valuable aid to him in his effort. Senator, I would have written just such a letter.

Mr. DAVIS. He is quite a sportsman. He is trying to protect the interests of 15,000,000 sportsmen in America, the same as we are.

Mr. LAMMOT DU PONT. It occurs to me if you saw a copy of the bill in question, you would better understand the position of the War Department and the Remington Co. opposing such legislation. Have you a copy of that bill?

Mr. WOHLFORTH. But, Mr. du Pont, that is not the point, as I get it. Colonel Whelen is in the office of the Chief of Ordnance. A letter was written to the Assistant Secretary of War. The reply comes back from the office of the Chief of Ordnance, and then the president of the Remington Co. thanks, not the writer, but Colonel Whelen. The reply acknowledges the letter.

Mr. IRÉNÉE DU PONT. He does not acknowledge it, sir.

Lieutenant Colonel HARRIS. The letter did not come back to the Chief of Ordnance.

The CHAIRMAN. Let us go back to the letter of April 27, 1929, "Exhibit No. 1264", which Mr. Kahrs, assistant advertising manager, wrote to Mr. Saunders Norvell, telling him just how to proceed. [Reading:]

> My purpose in bringing this to your attention is to recommend that you write the letter to The Assistant Secretary of War, recommended by Colonel Whelen, and, knowing the colonel as I do, I am sure that he has everything prepared in Washington so that favorable action wil be taken.

Evidently he did have everything prepared.

Mr. IRÉNÉE DU PONT. What is the date of the letter?

The CHAIRMAN. April 27. And the letter from Mr. Norvell to Colonel Whelen is May 16, only a matter of 18 days intervening.

Mr. IRÉNÉE DU PONT. But the April letter was certainly written before the May letter.

The CHAIRMAN. Oh, yes, but I am trying to show you here how Colonel Whelen had engineered the whole thing.

Mr. IRÉNÉE DU PONT. That is the point I have been trying to make. He is a fan on small arms, small shooting arms, and he is interested in it, and the Remington people evidently knew it.

Senator CLARK. They must have known it, because Whelen suggested to the Remington people that they write a letter to the Assistant Secretary of War. Then the president of the Remington Co. wrote the letter suggested by Colonel Whelen, the recommendations being transmitted through Mr. Kahrs. Then in answer to that there is a letter to the Remington from Colonel Wooten. Whereupon the proposition is again stated to Mr. Whelen, who has been stated in the Kahrs' letter to have fixed things in the War Department in the first place.

The CHAIRMAN. I can imagine Colonel Wooten, if called on the stand, would have a hard time admitting he had ever written the letter, and would probably admit he never had written it. Mr. Davis, did Colonel Whelen perform any service beyond those we have been discussing, for your corporation?

Mr. Davis. I know of no service. In fact, I do not know Colonel Whelen. I have never met him.

Mr. Hadley. Mr. Senator, may I interpose a remark there. Before Mr. Davis came with the company there was one occasion when there was some consultation with Whelen on the shape of the stock for high-power sporting arms. We had had one on the market for some time and we had had some criticism of it, and thought to change it, and Colonel Whelen at that time consulted with us a bit as to the shape which we had in mind for the modification of that rifle.

The Chairman. Back there in 1929 there were certain regulatory bills pending in the House of Representatives, bills having to do with the regulation of arms manufacture and sales. Did Colonel Whelen perform any service for your corporation at that time?

Mr. Hadley. I am not aware of any, sir.

The Chairman. He appeared before the Ways and Means Committee, didn't he?

Mr. Hadley. I don't know.

The Chairman. Mr. Wohlforth, will you state for the information of the committee from the record of the hearings before the Ways and Means Committee just what Colonel Whelen's attitude was?

Mr. Wohlforth. On page 2317 of the hearings before the Committee on Ways and Means of the House of Representatives, Seventieth Congress, second session, volume 3, there was a statement by Lt. Col. Townsend Whelen, Ordnance Department, United States Army. The gist of it is this: That the Secretary of War asked Colonel Whelen to present to the committee the matter of the value to the United States of our existing arms and ammunition manufacturers from the point of view of national defense, and then Colonel Whelen goes on and in substance tells the story about the same as it was in the letter of Colonel Whelen, referring to the number of rounds produced and the importance of the private manufacturers in the last war.

Mr. Irénée du Pont. May I see that, sir?

Lieutenant Colonel Harris. May I make a remark there, Mr. Chairman?

The Chairman. Yes, Colonel.

Lieutenant Colonel Harris. In this connection, I believe the Remington Arms could have gotten that letter from the Secretary of War by just writing to him, without all of this.

The Chairman. That may well be.

Mr. Wohlforth. That is right.

The Chairman. That may well be.

Mr. Irénée du Pont. Mr. Chairman——

The Chairman. But evidently, Colonel Harris, there were those in the fraternity in the industry who did not want to take any chances on a thing like that. They had other ways of getting it.

Mr. Irénée du Pont. Mr. Chairman, this testimony of Mr. Whelen or Lieutenant Colonel Whelen starts off:

> Colonel Whelan. The Secretary of War has asked me to present to the committee the matter of the value of the United States existing arms, etc.

The Chairman. I wonder if the Secretary of War's interest in this was occasioned or was brought about in the same manner that the interest in obtaining the letter we have just had so much discussion about was put forth.

Mr. Irénée du Pont. You may have that information. I know nothing about it, but I rather gathered you were planning something else.

The Chairman. The chairman of the board, Mr. Dodge, seemed to have a pretty high opinion of Lieutenant Colonel Whelen and thought he might be of some value as a lobbyist when issues were pending before the House and Senate here in Washington. I have a letter here written by Mr. Dodge, who was chairman of the Board, to Mr. Norvell, dated June 14, 1929, which I will have marked with the appropriate number.

(The letter referred to was marked " Exhibit No. 1268 ", and appears in full in the text.)

The Chairman. This letter reads:

> I had a telephone call from Walsh yesterday and he gave me this idea. It seems to me very important.

Who is Walsh?

Mr. Davis. Walsh was one of the company's attorneys.

The Chairman (continuing reading):

> He says that Senator Reed, who is chairman of the subcommittee which decides paragraph 365 of the arms tariff, is also chairman of the Military Affairs Committee of the Senate.
>
> He suggests that we get someone from the War Department to inform him of the great importance to the Government of keeping those who are familiar with automatic machinery on arms at work, and to state how important this industry is to the Government.
>
> I am wondering what is the best way to do this. Colonel Whelen who helped us with the tariff is most familiar but he is not big enough to speak to a United States Senator or does he have the authority to do so unless the Secretary of War directs him.

Mr. Casey. He is at least 6 foot 1, and he still isn't big enough.

The Chairman. I wonder if Mr. Dodge or if Mr. Norvell found anyone who was bigger in the way of rank than Lieutenant Colonel Whelen to perform service of that particular character. Does anyone know?

Mr. Davis. I do not know; no, Senator.

The Chairman. Colonel Harris, do you have knowledge of efforts that are made to win officials or officers in the Army over to the status of lobbyists for private interests or corporate interests that are removed from the issue of national defense?

Lieutenant Colonel Harris. I have no knowledge of anything of the kind. Nobody has ever attempted to use me in that regard.

The Chairman. Mr. Davis, have you tried to have lobbyist representation before Congress?

Mr. Davis. We certainly have not, Senator.

The Chairman. Mr. Casey, when the du Ponts took over the Remington control, I think we have in evidence some assertion as to what you advised Mr. Davis and the corporation to do in the way of making themselves serviceable to the Government.

Mr. Casey. Yes, sir.

The Chairman. It was language to the effect that they should consider themselves, consider the corporation, a subdivision of the War Department.

Mr. Casey. Right.

The CHAIRMAN. In the light of what transpired just before that, they did not need much coaxing, did they, to make themselves such a subdivision?

Mr. CASEY. I did not know exactly what their contact was before.

Senator CLARK. You did not know how close akin they were, did you, Major?

Mr. CASEY. Maybe not. But what I wanted them to do was to get the people in the Ordnance Department to realize that under du Pont management they must "play ball" with the Ordnance Department the way the Ordnance Department wanted them to.

Senator CLARK. Major, I will read you from the minutes of a meeting held at Bridgeport, Conn., on September 7, 1933, at which there were present: C. K. Davis, E. E. Handy, W. U. Reisinger, D. F. Carpenter, J. H. Chasmar, E. C. Hadley, H. J. Strugnell, F. J. Monaghan, H. A. Brown, L. Reed, and L. K. Larson.

This was an excerpt from the minutes of the meeting of the Remington Co., was it not, Mr. Hadley?

Mr. HADLEY. Very possibly. I cannot identify it as yet.

Senator CLARK. Paragraph 3 states [reading]:

> Mr. Hadley stated that Major Casey at Wilmington had informed the United States Ordnance Department that it was our wish that they would consider the Remington Co. in the same light as they consider the du Pont Co.—that is, almost a subdivision of their own Department.

What did the Ordnance Department say to you when you made that representation, that you desired the Remington Co. to attain the status of the du Pont Co., the status of a little brother of the du Pont Co.?

Mr. CASEY. I took Mr. Hadley around the Ordnance Department.

Senator CLARK. What did the Ordnance Department say when you said you wanted them to be a subdivision of their Department?

Mr. CASEY. I did not use that language.

Senator CLARK. Mr. Hadley, did you quote Major Casey's conversation?

Mr. HADLEY. I do not know whether it is the verbatim language used, but the principle, I think, is clear enough, that du Pont had relations with the Ordnance Department, in a much broader way than we had had in the past, because of the diversity of things where they had occasion to contact the Ordnance Department. Our field was more limited. Major Casey took me around, as he has just stated.

Senator CLARK. What I am trying to get at is, Mr. Hadley, in this report of September 7, 1933—

> that Major Casey, at Wilmington, had informed the United States Ordnance Department that it was our wish that they would consider the Remington Co. in the same light as they consider the du Pont Co.—that is, almost a subdivision of their own Department.

Did the officials of the Ordnance Department seem to be startled at this characterization that the du Pont Co. is almost a subdivision of the Ordnance Department?

Mr. HADLEY. I am not aware of that.

Senator CLARK. You used that language.

Mr. HADLEY. Did I say he used those express words?

Senator CLARK. I will read it again: This is an excerpt from the minutes of the staff meeting, Mr. Hadley [reading]:

> Mr. Hadley stated that Major Casey at Wilmington had informed the United States Ordnance Department that it was our wish that they would consider the Remington Co. in the same light as they consider the du Pont Co.—that is, almost a subdivision of their own Department.

That is your language and not mine, Mr. Hadley.

Mr. HADLEY. I should say that represents substantially the thought, but unless it is in quotation marks, Senator, I should say that there was no inference that he had used that language in speaking to them.

Senator CLARK. What did he say to them? You were with him, according to Major Casey.

Mr. HADLEY. Yes; I was with him.

Senator CLARK. Did he tell anything to the officials of the Ordnance Department about the du Pont being almost subdivision of their own Department?

Mr. HADLEY. I do not recall that expression. I do not recall he used the expression quoted.

Senator CLARK. What did he say?

Mr. HADLEY. I do not recall his exact words, but, nevertheless, the substance of it was in it.

Senator CLARK. You mean the substance of it was that the du Pont Co. was almost a subdivision of the War Department?

Mr. HADLEY. No; I should not put it that way, in that language, perhaps.

Senator CLARK. That is the language you did put it in in reporting to your own staff meeting.

Mr. CASEY. Senator, let me report what I did say. I said I wanted the Ordnance Department to feel that they can look to the Remington Co. the way they looked to du Pont; that is, they would consider du Pont the same as they would consider a Government arsenal, to be depended on to give them what they wanted when they needed it.

Senator CLARK. Mr. Hadley, is that your recollection of what Major Casey said?

Mr. HADLEY. I do not remember his exact words.

Senator CLARK. At any rate, the impression that Major Casey's language made on your mind is what you reported to this staff meeting, the du Pont Co. is almost a subdivision of the War Department. Is that true?

Mr. HADLEY. In the matter of cooperation and service, I believe that is true.

Senator CLARK. You did not put any qualifications in your report.

Mr. LAMMOT DU PONT. He said "almost".

Senator CLARK. You are standing on the word "almost", are you Mr. du Pont? [Laughter.]

Mr. CASEY. Senator, I can readily see that somebody might take what I did say and interpret it in another way.

Senator CLARK. What I was really trying to find out, Major, is the impression that this language on your part made on the officers of the War Department, and what response there was.

Mr. CASEY. Why not ask them?

Senator Clark. As to whether they agreed to bring in the Remington people.

Mr. Irénée du Pont. Senator, he made the suggestion, why not ask some of the men he talked to what their impression was.

Senator Clark. If I knew the War Department Official to whom Major Casey was talking about that I would be very glad to find out his reaction.

Mr. Casey. I can tell you, sir.

Senator Clark. Then we can find out about that.

Mr. Casey. Major Hatcher.

The Chairman. What is his capacity?

Mr. Casey. He was in charge of small arms and anti-aircraft in the general manufacturing division.

Senator Clark. Of what? The Ordnance Department?

Mr. Casey. Of the Ordnance Department.

Senator Clark. We will try to see what the major had to say.

Mr. Casey. And Major Glen P. Wilhelm.

Senator Clark. Maybe you were conducting a conversation we can find out about. Do you recall whether in fact they were to be made a subdivision of the War Department?

Mr. Casey. They stated they were glad to feel that they could dependent on Remington the way they always felt they could depend on du Pont.

The Chairman. Even when the Government requested Old Hickory to be built?

Mr. Casey. And a lot of other things. They asked us to make smokeless powder, load tracer, and incendiary bullets, when we did not know one end from the other, bag loading, shell loading; anything they wanted during the war they stated, "Let du Pont do it."

Mr. Reisinger. Mr. Chairman, you stated that the President did not reply to Lieutenant Colonel Whelen's letter of May 15 but replied to Colonel Wooten's letter.

The Chairman. Did not reply to Wooten's letter?

Mr. Reisinger. Did not reply to Wooten's letter, but replied to Whelen.

The Chairman. The committee did not have a letter written to Colonel Whelen. It did not seem very material. If you want the record to show a letter written, all right. What is the date?

Mr. Reisinger. May 16.

The Chairman. The same day one was written to Lieutenant Colonel Whelen?

Mr. Reisinger. I would like to read this into the record [reading]:

Colonel W. P. Wooten,
Corps of Engineers, Director of Procurement,
War Department, Office of The Assistant Secretary of War,
Washington, D. C.

Dear Sir: Your letter of May 15 received and is just what we needed. We, of course, will use this letter with discretion, as it is not our desire to stir up any more controversy than is necessary. However, there undoubtedly is a great deal of ignorance among our legislators in the various States as to the general situation of arms and ammunition. This letter will help us do a little educational work and, of course, is from the very highest authority.

Again thanking you, I am,
Yours,

Saunders Norvell.

Mr. Davis. Senator, that letter was pulled by the investigators, I think.

Mr. Hiss. There was some testimony, you will remember, Colonel Harris, yesterday, as to the 6-percent return as a fee under the adjusted compensation contract on the estimated valuation of that part of the plants engaged in carrying out the proposed adjusted compensation contract. Do you remember that particular testimony?

Lieutenant Colonel Harris. Yes, sir.

ADJUSTED-COMPENSATION CONTRACT FORM—ACCEPTABILITY TO CONTRACTORS OF 6 PERCENT FEE

Mr. Hiss. There was some testimony from various of the witnesses, other than the representatives of the War Department, as to whether on behalf of their companies they could state that they considered a 6-percent fee a sufficient fee. Mr. Lammot du Pont was not present, and, consequently, no direct testimony from the present executive head of the du Pont Co. was possible. Mr. Pierre du Pont said he could not speak on behalf of the company, and I believe Mr. Irénée du Pont spoke in a similar vein.

Mr. Lammot du Pont, are you familiar with the proposed adjusted compensation contract, included in the mobilization plan or procurement plan of the War Department, which Colonel Harris has testified would be used primarily in ordnance purchases?

Mr. Lammot du Pont. I am not familiar with it; no, sir.

Mr. Hiss. It provides, according to evidence introduced yesterday, a fee of 6 percent on the estimated valuation of the contractor's plant, or, rather, that part of the plant used in complying with the contract. In your opinion——

Lieutenant Colonel Harris. May I interrupt?

Mr. Hiss. If that is not accurate, please correct me.

Lieutenant Colonel Harris. There is a little bit more to be added. If there is an estimated cost of the work to be performed, and if there is a saving on that estimated cost of the material, there is a fee in addition to the 6 percent of one-fourth of the difference in percentage. And if there is a failure to meet the estimated cost by exceeding it, there is a penalty of 1 percent for each percent of failure. So that the 6 percent has slight adjustments.

Mr. Hiss. Just limiting the question to the 6-percent valuation—Colonel Harris is perfectly correct; there is a bonus for bettering cost, and there is a penalty for exceeding estimated costs—but, leaving that part of it aside, and limiting yourself to the 6-percent compensation, in your opinion is that an adequate compensation for war-time contracts, Mr. Lammot du Pont?

Mr. Lammot du Pont. May I ask what the 6 percent is applied to?

Mr. Hiss. Six percent of the estimated valuation of that part of the contractor's plant utilized in fulfilling the particular contract.

Mr. Lammot du Pont. I would say that might not be fair.

Senator Barbour. Mr. Hiss, I do not know that I know exactly what you mean by "that part of the plant." As a manufacturer myself, that would be a very ambiguous designation unless I know what you have in mind.

Mr. Hiss. Lieutenant Brannon, will you read the exact language, and then explain it?

I find the same difficulty.

Mr. Irénée du Pont. Mr. Secretary, might I correct something in my answer yesterday? I did not understand that it was only the plant. I should think the materials provided by the contractor should also get some return. For instance, if you are manufacturing white lead, you might have 3 months' output tied up in the process, and if you had to take 3 months in addition to the flat 6 percent, that might be very inadequate. I thought you said the capital engaged in that particular branch of the business.

Mr. Hiss. Lieutenant Brannon, have you the specific provision?

Lieutenant Brannon. Yes, sir.

Mr. Irénée du Pont. Also the land on which the plant is located might have some value.

Mr. Hiss. I understand the land would be included.

Lieutenant Brannon. Yes, sir.

Mr. Irénée du Pont. Is the working capital included?

Lieutenant Brannon. Yes, sir. In the first place, the Government pays the cost of manufacture, which includes direct labor, direct materials, overhead, salaries of officials of the company; it pays the cost of new facilities; it pays an amount agreed to in advance for depreciation; it pays an agreed amount for rehabilitation at the end of the contract in case the plant has had to be converted; and pays, first, the figure—and reaches an agreement with the contractor as to the estimated value of the buildings, machinery, and facilities owned by the contractor and to be used in connection with the work.

Then the estimated percentage of the buildings, machinery, and facilities required in performing the work.

In other words, an agreed value as to the plant and then if only a part of the plant is used an agreed percentage for the part of the plant which is to be used.

That cost is determined. To that is added an estimated amount to be provided by the contractor, and that is the current payments plan, reimbursed by the Government.

In other words, the value of the plant devoted to the Government work, and the value of the amount of capital which the contractor will have to use in order to get advance payments.

Mr. Hiss. May I interrupt there, Lieutenant Brannon?

Lieutenant Brannon. Yes, sir.

Mr. Hiss. That capital means the capital throughout any average period, does it not?

Lieutenant Brannon. The estimated amount of cash, and I take it it would be an average for meeting pay rolls and interest payments.

Mr. Hiss. You would not add the first, second, and third months?

Lieutenant Brannon. No; that is estimated average amount of capital.

Mr. Hiss. The estimated amount at any one time?

Lieutenant Brannon. Yes, sir. That is, of course, subject to agreement. This is agreed to: The agreed payments to the plant, the agreed percentage of the plant which will be used in case the contractor gets his material.

Senator CLARK. When is that agreement to be made, Lieutenant? After war starts?

Lieutenant BRANNON. There is a provision for a preliminary estimate to be submitted by the contractor as a part of procurement planning.

Senator CLARK. How many of the preliminary estimates are on hand down there now?

Lieutenant BRANNON. None that I know of, sir.

Then a rate of 6 percent per annum on the value of the plant, and the amount of cash capital which is agreed upon.

Senator CLARK. That is an ordinary cost-plus contract, is it not, Lieutenant?

Lieutenant BRANNON. I would not say ordinary. It is a cost-plus contract, but not a cost-plus percentage of cost, which is the objectionable form of contract, as I understand it.

Senator BARBOUR. That is true. There is that difference.

Mr. HISS. Mr. Lammot du Pont, addressing yourself to the fee as described by Lieutenant Brannon, in your opinion is that a fair fee or a sufficient fee for war-time procurement, so far as your company is concerned, in your opinion?

Mr. LAMMOT DU PONT. I think that it is fair to the company, to the contractor; yes, sir.

Mr. HISS. Colonel Harris, have you found unanimity of opinion on the question from the other manufacturers; that is, manufacturers other than those present here today, or whose representatives are here present today?

Lieutenant Colonel HARRIS. This contract has been in the course of preparation for a number of years and has been discussed with, I should think, hundreds of contractors on the various stages of its development, and many think that it is not liberal enough and many think that it is satisfactory. So that there is a difference of opinion; but as to how many, I do not know.

Senator CLARK. You do not profess to have there anything but a tentative plan, do you, Colonel?

Lieutenant Colonel HARRIS. This contract is in tentative form.

Senator CLARK. I mean, you do not undertake to fix the percentage of profit which they are going to get, do you? I notice in the excerpts from the mimeographed memorandum, dated February 20, 1934, headed "War-time Contracts Forms and Emergency Codes", page 5 says [reading "Exhibit No. 1225"]:

> The question of the amount of profit to be allowed the contractor is one of the most critical in any form of cost-plus contract. The fee adopted should be fair alike to the producers and the Government. In the adjusted compensation contract the fee is based primarily upon the rental value of the facility. It is true that the contractor assumes few of the risks of an entrepreneur for which profit is paid. He does, however, have certain risks of management and certain expenses for which no compensation is made. The committee believes that some increase in the present figure might well be made, but doubts the advisability of attempting to determine the exact amount until war is imminent. It can then be decided on the basis of then-existing conditions.

Having in mind, as Lieutenant Brannon states, you have in your approximation of value of new facilities to be employed at the present time, that simply means if war were declared you would go back to the old system of scuffling around as to how much profit was to be made and straighten it out after the declaration of war by agreement.

Lieutenant Colonel Harris. I would like to state, Senator, I felt somewhat as you express yourself, and am responsible for the recent activity to try to straighten out the thing and bring it to some reasonable conclusion.

Senator Clark. I think that is very desirable, Colonel. We have been going along for 15 years and it seems to me we ought to be getting somewhere.

Mr. Hiss. Colonel Harris, have you a copy of the excerpt I gave you yesterday?

Lieutenant Colonel Harris. Which one?

Mr. Hiss. Excerpts from a mimeographed memorandum dated February 6, 1934, headed "Comments, criticisms, and proposals on the adjusted-compensation contract form, approved December 20, 1931", which was introduced as "Exhibit No. 1227."

Lieutenant Colonel Harris. Yes, sir.

Mr. Hiss. Will you turn to the second page of that, at the top of the second page, under the general heading on the first page, Boston Ordnance District. Colonel Harris, will you explain what ordnance districts are, please?

Lieutenant Colonel Harris. The territory of the United States is divided into geographical districts for decentralized procurement in war. There are 14 ordnance districts and a lesser number of districts for the other supply branches, the minimum number being four. In each one of these districts' headquarters there is a skeleton organization engaged in the field development of industrial planning. This Boston district represents one of those districts.

Mr. Hiss. And the contract forms have been submitted to the various ordnance districts? Is that correct?

Lieutenant Colonel Harris. Yes, sir; that is true, and in each one of the ordnance districts a board has been assembled to analyze some of the recommendations as to the matter of this contract form.

Mr. Hiss. The contract forms have been discussed within each district with some of the major industrial companies that might be involved in procurement. Is that correct?

Lieutenant Colonel Harris. That is true.

Mr. Hiss. Referring again to "Exhibit No. 1227", under the heading Boston Ordnance District, it states [reading]:

> The cost-plus contract offers the ideal conditions for profiteering. It seems to the writer questionable whether the Government would have received such whole-hearted cooperation from manufacturers during the World War had all opportunity for profiteering been eliminated. In other words, it seems that there are incentives to the best efforts of the manufactures in both the fixed price and the cost-plus contracts which are absent from the adjusted-compensation contract.

Then, again, at the top of page 3 of "Exhibit No. 1227"—this being an excerpt from the Cincinnati ordnance district—it states [reading]:

> We note from the contract that the War Department does not propose to have included in the cost of producing War Department material any charges for interest on funded and other debts. However, this expense of doing business must be covered in some way, so we will assume it is to be taken care of in the profit allowed the contractor.

Then, again, on the fourth page, it states—and this is a comment from the St. Louis ordnance district—[reading]:

> It is the general concensus of opinion among owners and executives of industrial plants in this vicinity that the adjusted-compensation contract, while getting away apparently from the cost-plus contract, still retains some features highly objectionable and subject to prolonged argument. Some of the firms are frank to state it would be extremely difficult for them to voluntarily enter into such a contract in either peace or war time. * * *
>
> There is no question but that the proposed contractors in this vicinity think the reward inadequate and unjust. This is particularly true of companies having a large bond issue and an issue of preference accumulative stock whereby the fee and the uncertain bonus would not be sufficient to protect the company and the investors of the preference stock.

Then at the bottom of the page it states [reading]:

> It is the opinion of this office, based on the discussions at the various conferences held on this subject, that the present form of adjusted-compensation contract includes a number of fundamental objectionable features and is not satisfactory to the contractors in general.

Now, under the San Francisco ordnance department, on the next page, it states [reading]:

> After careful perusal of the Bridgeport district report on the adjusted-compensation contract, it is believed that the contract is impracticable, and that its use would involve intolerable delay in the initiation of procurement.

That memorandum referred to the report of the Bridgeport district? Do you know what that was?

Lieutenant Colonel HARRIS. I have an idea they are talking about this contract.

Mr. HISS. You think it is the present form of contract?

Lieutenant Colonel HARRIS. I think it refers to this contract, but I am not sure.

Mr. HISS. And instead of that suggested some alternative forms. In the third paragraph of their alternative suggestion the following appears:

> It should be expected that the set price will permit of a profit of at least 10 percent on the gross price to the average bidders.

By "gross price" under the cost contract that must mean 10 percent of cost. Do you not think so, Lieutenant Brannon?

Lieutenant BRANNON. I was trying to see the entire part of that San Francisco observation, Mr. Hiss.

Mr. HISS. That appears at page 10 of the memorandum, I think, lieutenant. I think I quoted the entire part of that.

Senator BARBOUR. Colonel Harris, I was wondering if it would be a practical suggestion—I make this only as an individual and not officially—to try to work out several different cases with respect to materials that you are interested in with that manufacturer, what the cost would be, and what the problem would be in relation to this contract which you have made. In other words, to get examples as to what this problem is going to be. I do not mean for publication, necessarily, but in relation to some actual production problem. If you work out a few of those examples, in my judgment, you would find very valuable experience.

Lieutenant Colonel HARRIS. I think your suggestion is a good one, Senator, and we will endeavor to follow it out. I am perfectly willing to confess that I see lots of things wrong in this situation, lots of causes for delay, argument, and confusion, but I do not know how to take the profits out of war and get the material we have to get.

Senator BARBOUR. We certainly want to limit them and get them out as much as we can.

Mr. HISS. Colonel Harris, we cannot be sure at the present time that the present 6-percent provision in the adjusted-compensation contract can, as a matter of practical necessity, be retained in the event of war?

Lieutenant Colonel HARRIS. To be perfectly frank, I am very doubtful.

EXAMPLES OF SCOPE OF ACTIVITIES OF WAR INDUSTRIES BOARD

Mr. HISS. Turning to the topic that we were discussing just before recess, relating to the understanding of the problems arising during the World War, before the War Industries Board, I show you, Colonel Harris, some excerpts from minutes of meeting of the Council of National Defense held July 28, 1917, which I offer for appropriate number.

(The excerpts referred to were marked "Exhibit No. 1269" and are included in the appendix on p. 3878.)

Mr. HISS. That reads:

> All members of the Council and the Director were present.
>
> There ensued a discussion of the reorganization plan, which was finally approved and released for the press in the following form:
>
> "The Council of National Defense today decided, with the approval of the President, to create a small body to be known as the War Industries Board."

Then, jumping to the second page, the second full complete paragraph reads:

> Of this Board, Mr. Baruch will give his attention particularly to raw materials; Mr. Brookings, to finished products; and Mr. Lovett, to matters of priority. These three members, in association with Mr. Hoover, so far as foodstuffs are involved, will constitute a commission to arrange purchases in accordance with the general policies formulated and approved.

Colonel Harris, what was the duty, in your opinion, so far as you can remember it, of the War Industries Board in connection with the arrangement of purchases?

Lieutenant Colonel HARRIS. At this time the War Industries Board was still a part of the Council of National Defense, and their relation was more of an advisory one. They were exerting influence on agreed prices for raw materials. They were finding new facilities for production, and they were advising on overloading certain geographical districts, and in other ways assisting the procurement program, but, generally speaking, in an advisory capacity.

Mr. HISS. So that the statement that the "three members" mentioned, "in association with Mr. Hoover, so far as foodstuffs are involved, will constitute a commission to arrange purchases" is perhaps an overstatement of the case, in your opinion?

Lieutenant Colonel HARRIS. I think they were looking ahead, to getting more authority or taking more authority. I do not know which. I think they could have probably taken the authority, if they had gone ahead and done it.

Mr. HISS. Referring to the last paragraph on the page, Colonel Harris, it states [reading]:

> The purpose of this action is to expedite the work of the Government, to furnish needed assistance to the Departments engaged in making war purchases, to devolve clearly and definitely the important task indicated upon direct representatives of the Government not interested in commercial and industrial activities with which they will be called upon to deal, and to make clear that there is total disassociation of the industrial committees from the actual arrangement of purchases on behalf of the Government.

On the next page, Colonel Harris, it states [reading]:

> It was voted that the five civilian members (exclusive of the two Army and Navy representatives) of the War Industries Board should receive a salary of $400 per month.

Do you know whether that resolution was ever carried out? It is my understanding that the members of the War Industries Board served without compensation. Do you have any information on that?

Lieutenant Colonel HARRIS. I have the same information as you have.

Mr. HISS. Would it be possible for you to attempt to find out about that?

Lieutenant Colonel HARRIS. I will try to find out.

Mr. HISS. I show you a further set of excerpts, Colonel Harris, Which I will ask be appropriately numbered.

(The excerpts referred to were marked "Exhibit No. 1270" and are included in the appendix on p. 3879.)

Mr. HISS. Will you turn to page 5? Excerpts from a Meeting of the Price Fixing Committee, March 20, 1918, subject, Steel Prices. Reading from the verbatim statement of Judge Gary:

> We are anxious to get at facts and figures, and to arrive at some conclusion that is fair and reasonable to all concerned. If it was a question of bargain only, then the manufacturers would be trying to secure as much as possible for their product, and your board would be endeavoring to secure as low prices for the Government, its Allies, and the general public as possible. But we don't feel like approaching the subject from any such point, and I am sure you don't.

Then, turning to page 10, Mr. Brookings' statement [reading]:

> We appreciate the attitude the steel people have always shown. We are in entire sympathy with practically all of the things you have stated.

Then on page 11 it states [reading]:

> None of us are steel people and therefore we have been perfectly willing to be more or less guided by you, and I think we have been wisely guided.

Do you know whether the price-fixing committee and the War Industries Board dealt with the whole range of industries vital to the Government in time of war, Colonel Harris?

Lieutenant Colonel HARRIS. At this time, March 20, 1918, the final War Industries Board had been constituted under the authority of the President of the United States and in charge of all of the industrial field except that portion for which there were other corporations, such as food, fuel, and transportation, for which other organizations were organized.

Mr. HISS. Was it not an extremely difficult, almost superhuman task for a board of five men, exclusive of the Army and Navy representatives, to be expertly familiar with all the industries that came before them and with which they had to deal?

Lieutenant Colonel Harris. Please understand that was a governing board. They had an organization of many hundreds of people assisting them, and in their organizations they did have men of experience covering each sector of the field.

Mr. Hiss. I call your attention to a collection which has been prepared by the committee's staff, showing a sample of the work which the War Industries Board had to take up in a single month. This is by no means complete, and they had undoubtedly other duties in addition to this. This is for December 10, 1917, to January 10, 1918, consisting of excerpts from the minutes of the War Industries Board.

(The document referred to was marked "Exhibit No. 1271" and is included in the appendix on p. 3885.)

On December 10, 1917, there was a meeting called to consider steel prices with representatives of the steel industries.

The War Industries Board personnel attending this conference were Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Mr. Frayne, Judge Lovett, Col. P. E. Pierce, and Mr. Bingham, secretary; also Mr. Legge, Mr. Replogle, Mr. Davies of the Federal Trade Commission, Mr. Blavalt representing the Fuel Administrator; also the following representing the steel industry:

F. N. Beegle, president, Union Draw Steel Co., Pittsburgh, Pa.
James B. Bonner, representative, American Iron & Steel Institute, Washington.
James A. Burdon, president, Burdon Iron Co., Troy, N.Y.
E. A. S. Clarke, president, Lackawanna Steel Co., New York, N.Y.
A. C. Dinkey, president, Midvale Steel & Ordnance Corp., Philadelphia, Pa.
James A. Farrell, president, United States Steel Corp., New York, N.Y.
W. J. Philbert, comptroller, United States Steel Corp., New York, N.Y.
Judge E. H. Gary, chairman, United States Steel Corp., New York, N.Y.
F. H. Gordon, general manager of sales, Lukens Steel Co., Coatesville, Pa.
E. G. Grace, president, Bethlehem Steel Co., South Bethlehem, Pa.
W. S. Horner, president, National Association of Sheet and Tin Plate Manufacturers, Pittsburgh, Pa.
A. F. Huston, president, Lukens Steel Co., Coatesville, Pa.
Eli Joseph, member of firm, Joseph, Joseph & Brother, New York, N.Y.
Willis L. King, vice president, Jones & Laughlin Steel Co., Pittsburgh, Pa.
W. Vernon Phillips, president, F. R. Phillips & Sons Co., Philadelphia, Pa.
Karl C. Roebling, general manager of sales, John A. Roebling's Sons Co., Trenton, N.J.
Charles M. Schwab, chairman, Bethlehem Steel Co., South Bethlehem, Pa.
John A. Topping, president, Republic Iron & Steel Co., New York, N.Y.
Roy A. Rainey, Rainey Coke Co., New York, N.Y.
Scott Stewart, assistant to Roy A. Rainey, Rainey Coke Co., New York, N.Y.

Mr. Willard, chairman, explained that while the cost data in course of preparation by the Federal Trade Commission was not yet at hand it had been felt advisable to call the representatives of the steel industry to Washington to discuss the general situation as brought about by the prices fixed and by general conditions in order that the Board could approach the subject more intelligently and a decision be arrived at more expeditiously when the Federal Trade Commission data came to hand, it being understood that in the terms of the previous price agreements it had been stipulated that prices would be reconsidered prior to January 1, 1918.

Then on December 13 there was a meeting at which were considered chemicals—plan from War Minerals Committee to increase supply of pyrites; and machine guns—arrangements covering royalties for Lewis machine gun patents; and chemicals—compact for power for Muscle Shoals nitrate plant.

On December 14 there was a special meeting of the copper industry to consider conditions in the copper industry as bearing on possible revision of prices. There were present the same members of the War Industries Board as referred to in the meeting of December 10, plus Prof. Walter M. Adriance, representing the War Trade Board, and Mr. Sidney H. Solomon, representing the War Trade Board; also Mr. Lewis A. Haney representing the Federal Trade Commission, Mr. Eugene Meyer, Jr., of the raw materials division, and Mr. Pope Yeateman, of the raw-materials division.

There were also present representatives of the following copper interests:

C. F. Kelley, Anaconda Copper Co.
Joseph Clendennin, American Smelting & Refining Co.
R. Agassiz, Calumet & Hecla Mining Co.
S. Rosenstamm, Miami Copper Co.
T. Wolfson, United Metal Selling Co.
James MacNaughten, Calumet & Hecla Mining Co.
P. Todd, Copper Range, Quincy Copper Co.
N. L. Amster, Shannon Copper Co.
James A. Nelson, Cuba Copper Leasing Co., Norfolk Smelting Co.

Then on December 20 they considered TNT—royalty agreement with Flurscheim for manufacture of TNT.

On December 21 they considered chemicals—order for smokeless powder with Aetna Explosives Co.

December 22 they again considered fixing steel prices.

December 24 they considered the fixing of steel prices.

December 28, the fixing of steel prices.

Then there were present in addition to the men named representing the Government at the meeting of December 10, Judge Gary, Mr. Farrell, Mr. Topping, Mr. Clark, Mr. Burden, Mr. Grace, Mr. Dinkey, Mr. Dalton, Mr. Filbert, Mr. Bonner, and Mr. King.

On January 2 they considered the question of an order for 30,000,000 pounds of smokeless powder from the Hercules Powder Co.; considered action to secure necessary raw materials for explosives program; they considered a request for assistance in securing explosives from the Ordnance Department; and they also considered cooperation with the Allies.

On January 4 they considered the subject of crude TNT as explosives, and the fixing of prices for nickel.

On January 9 they considered the fixing of copper prices and the fixing of aluminum prices.

On January 10 they again considered the fixing of aluminum prices.

That is a pretty full month's outline, is it not, Colonel Harris?

Lieutenant Colonel Harris. It seems so.

The Chairman. Mr. Harris, how good and how thorough a job could men, however industrious and intelligent they might be, do with great problems like these many that were being thrown on their desks day after day?

Lieutenant Colonel Harris. They were worn out. It was just a stupendous burden to carry.

The Chairman. But could they do a thorough job?

Lieutenant Colonel Harris. At the end of the war, toward the end of the war when the War Industries Board was fully developed, they did have a grasp of the situation and were prepared then to carry the load. But this is early in the game when everything was in much confusion, and they themselves were not very well organized and had not worked out a smooth working arrangement. I think in the latter part of the war, the last 2 or 3 months of the war, the War Industries Board was capable of functioning properly.

The CHAIRMAN. But certainly the experience was such that we ought to want to be better prepared at another time than we were at that time and have as many of these controverted matters out of the way as we can.

Lieuenant Colonel HARRIS. Entirely so, sir. I must say that our industrial planning is in the hope of commencing the next war somewhat as we were performing at the end of the last war, due to the experience; but there will be many confusions.

Mr. IRÉNÉE DU PONT. Mr. Chairman, I would like to ask if it is proper that Colonel Harris give his views on what the effect would be of nationalization of industry, which I understood had been advocated as a substitute for the past method. I think that might be rather important testimony here.

The CHAIRMAN. Mr. Du Pont, we are going to have sessions devoted to that phase under the resolution at which Colonel Harris and many other technical advisers will be asked to offer testimony.

Mr. IRÉNÉE DU PONT. That will be before the committee, not before Congress?

The CHAIRMAN. Assuredly before the committee.

Mr. HISS. Colonel Harris, will you explain the nature and the functions of the war service committees during the war?

Lieutenant Colonel HARRIS. The war service committees started off with each committee being composed of a group of men familiar with the subject. The different situation between the Government side and the industries side was not so well marked, and there was objection naturally to that situation and a desire on the part of those operating the system to get away from that. Toward the end of the war they developed a system of a commodity committee composed of a financially disinterested membership familiar with the subject, and in contact with them a war service committee that was avowedly on the side of industry. Here you had a Government group with an industry group, each one knowing exactly what the other one stood for. That is the system that we are carrying over into our industrial plans that we now have.

Mr. HISS. What was the function of the war service committees in their later phase?

Lieutenant Colonel HARRIS. There were some 54 commodity committees covering most of the raw materials and many of the finished and some unfinished commodities. On the opposite side of each of these commodity committees was the war service committee.

The function of the war service committee was to give information on new sources, rates of production, and any other pertinent data that industry could furnish. It was the duty of the commodities committee on the Government side to use that information, analyze it, weigh it, and come to a conclusion for the Government. The war service committee did not take part in the conclusion except in an advisory, data-furnishing capacity.

Mr. HISS. Were they regarded as representing industry, the specific industries to which they were assigned?

Lieutenant Colonel HARRIS. Generally speaking, they were; yes.

Mr. HISS. Did they undertake to estimate for the Government whether or not certain policies should be carried out within their respective industries?

Lieutenant Colonel HARRIS. They were asked by the commodities committees for their opinions on these subjects, and gave them.

Mr. HISS. I would like to read in just for the record certain personnel of some of these committees which appear in appendix 44 of the report heretofore referred to by Mr. Baruch, on page 395.

The war service executive committee had as its chairman Mr. Harry A. Wheeler.

Do you know who Mr. Wheeler was?

Lieutenant Colonel HARRIS. I am afraid I do not.

Mr. HISS. The automobile committee had Mr. Chalmers, Mr. Willys, Mr. Rice, Mr. Graham, and many others.

The iron and steel committee, appearing on page 402, had Mr. Gary, Mr. Farrell, Mr. Burden, Mr. Dinkey, Mr. King, Mr. Grace, Mr. Schwab, Mr. Topping, Mr. Dalton, and Mr. Huston. They were the names that appeared previously in the price-fixing meetings. Undoubtedly that was a meeting with that particular war service committee. Is that correct?

Lieutenant Colonel HARRIS. Yes. These committees you are naming now are the committees representing industry.

Mr. HISS. Right.

I call your attention to further excerpts from meetings of the Price-Fixing Committee.

(The memorandum referred to was marked " Exhibit No. 1272 " and is included in the appendix on p. 3887.)

Mr. HISS. Meeting of June 1. It does not appear whether it is 1917 or 1918. This is under the heading of " Lumber."

> At this point Mr. Brookings surrendered the chair to Dr. Taussig, as he had an interest in this industry and did not wish to take part in the committee's deliberations.
>
> Copper: At this point Mr. Brookings took the chair.
>
> Mr. Brookings read a letter from M. R. L. Agassiz, of the Calumet & Hecla Mining Co., taking issue on several points which occurred in the meeting of the representatives of the copper industry on May 22.

On June 21, 1918—page 3 of the memorandum—a meeting of the price-fixing committee with representatives of the iron ore, pig iron, and steel industries. That is presumably the war service committee that we referred to, is it not, Colonel Harris, that you see there listed on the first page, the names that have been read in from the report plus certain additional representatives here?

Lieutenant Colonel HARRIS. Yes. This has both the commodity committee and the industry committee.

(The minutes of June 21, 1918, referred to was marked " Exhibit No. 1273 ", and is included in the appendix on p. 3888.)

Mr. HISS. Quoting from the third page, statement of Judge Cary:

> Our committee does not appear here as an advocate, but more as a judge or as an advisory committee, having in consideration the interests of the Government and the interests of the steel-producing and the iron-producing fraternity.

Would you say that these conferences with the various war service committees were as Judge Gary described them in that particular passage, in your opinion were those meetings in the nature of discussions across the table as to reasonable prices to be fixed, or did they constitute what Judge Gary here refers to, a meeting at which the committee appears as a judge?

Lieutenant Colonel Harris. I do not know what he could mean by that. Certainly the detailed negotiations of that particular conference would show that Judge Gary was not a judge on that occasion.

Mr. Hiss. Quoting from minutes of a meeting of the War Industries Board with representatives of the automobile industry for the determination of what action is to be taken with regard to the situation, dated May 7, 1918, I read the following:

(The memorandum referred to was marked "Exhibit No. 1274", and is included in the appendix on p. 3893.)

Mr. Hiss. (reading):

> Mr. Durant. Can we increase the supply of pig iron and what would it be necessary for us to do to obtain the increase?
>
> Mr. Baruch. Those suggestions are referred to us daily; we have made every move possible to increase pig-iron capacity. It has been a matter of fuel and transportation; all of those things have occurred to us, and, no doubt, have occurred to you, because you have perhaps made a more intensive study of the situation. We don't approach this subject any different from any one of you; I realize this is a mutual problem and we have to look to you to help us, and we don't take from the producer of steel a market of steel. We don't want to take from the consumer of steel his ability to use it; but it wouldn't be well to have this production of steel lie around for no purpose. We want suggestions from you as to how we are going to meet the problem.

Lieutenant Colonel Harris. I may state, Mr. Hiss, that to my mind that is the proper procedure on that sort of negotiation.

Mr. Hiss. Then on May 9, 1918, there was a conference regarding fixing aluminum prices. This is the stenographic transcript of the conference.

(The memorandum referred to was marked "Exhibit No. 1275", and is included in the appendix on p. 3895.)

Mr. Hiss. On page 4 of this memorandum Mr. Brookings made this statement:

> After arguing the matter for some length, we fixed the price at 32 cents, which seemed to be fair and seemed to offer Mr. Davis and his people an opportunity to make a fair profit, a liberal profit. We recognized the fact, however, that there was more or less a monopoly, and we felt that he met us not in the spirit of a monopolizer at all but a good American citizen who wanted to be a patriotic citizen; in fact, he had shown that disposition in the price he made the Government, and the supplies he had furnished the Government, and we recognized it when we adopted that price. We felt, after hearing all Mr. Davis had to say about it, and taking into consideration the probable increase as raises [wages] were going up, and we fixed the price at 32 cents.

Then on page no. 10 at the top, Mr. Brookings later in the same memorandum said:

> Mr. Yeatman, in order to enable these gentlemen to maintain a monopoly I think it would be a very healthy thing to keep the price down. Don't you? Keep these other fellows from getting in—that is the best way to promote a monopoly. What do you think about a 25-cent price?—that was your old price.

Lieutenant Colonel Harris. May I make a remark there?

Mr. Hiss. Yes, sir.

Lieutenant Colonel Harris. I have not seen this report, but I think that the subject matter must have been the high-cost producers of copper, trying to get greater production and bring in high-cost producers.

Mr. Hiss. On page 14, marked at the top, next to the last page of the memorandum, Mr. Brookings said:

> Frankly, Mr. Davis, we don't understand that. We wanted to give you something to take care of this advance in labor since March. We won't send you out again. We have reconsidered this and we have made up our minds to advance the price of ingots a pound, so that you will get something, making it 33 cents instead of 32 cents, and still leave these differentials as they are, which you apparently get very little of; and to give you in addition to that—we want to be fair—while I told them at the time we fixed the 32-cent price—it was a battle royal! Judge Lovett and some of us thought that 30 cents was an awfully big price and we stood and worked on 30 cents for a long time. I don't know but I had that too much in my mind at that time. Whether you got too much then or not, it is perfectly evident that there has been or will be certainly some advanced costs in labor. While labor is a small part of your costs, as compared with some other things we deal with—we thought in giving you the differential we were giving you nine-tenths of a cent a pound or 1 cent a pound on your product. We want to make it good and we will fix it at 33 cents, and we hope you will be perfectly satisfied.

Mr. Hiss. Turn to the second page of this memorandum of the meeting of the price-fixing committee with representatives of the nickel men.

(The memorandum referred to was marked "Exhibit No. 1276", and is included in the appendix on p. 3904.)

Mr. Hiss. Mr. Brookings said:

> All morning we have kept you waiting because the history of the industry's costs at different periods of time have not been available until this morning and we had to look them over and discuss them before we saw you. We have not had time to do them justice really, but some of the committee felt that so long as we have brought you here we ought to explain to you why we brought you here and ask you whether you have given any thought to the question of prices and whether you have any figures of your own as to any additional cost of producing nickel during the past 6 months or a year. Of course we know that our war needs have enormously increased the consumption of nickel. The Navy program and the Army program have required nickel for alloying certain steel and has doubled your production and has, of course, enormously increased your profits. We are not in an attitude of envying you your profits; we are more in the attitude of justifying them if we can. That is the way we approach these things.

Please turn now to pages marked 9 and 10 of this document.

(The memorandum referred to was marked "Exhibit No. 1277", and is included in the appendix on p. 3905.)

Mr. Hiss. This is a meeting of the price-fixing committee on April 3, 1918. This relates to fixing the price of copper.

Mr. Brookings said:

> You complain that you are unfortunate for having made contracts for a long period of time. We would have to take into consideration two things. One, the fixing of the price of copper, and, two, the fact that contracts made by you which you haxe expected to be profitable contracts have become unprofitable contracts. Have we not all been in that position in our lives? On the best judgment we have, feeling that the average over a period of time is going to be a profitable one, have we not all made contracts? As a matter of fact, I made some contracts with your father 40 years ago.

Did not the price-fixing committee and the War Industries Board, in general, have continually before them the manifold complicated questions of prices, costs, and all the matters that were so difficult of determination in any one industry? Did not they have them continually before them in almost all industries?

Lieutenant Colonel Harris. They did.

Mr. HISS. On July 2, 1918, Colonel Harris, page 26. This is a meeting of the price-fixing committee with representatives of the copper industry for the purpose of fixing prices.

(The memorandum referred to was marked " Exhibit No. 1278 ", and is included in the appendix on p. 3911.)

Mr. HISS. Quoting a statement of Mr. Brookings:

> We have made the statement that any shipments, any deliveries, made after the date at which the price was fixed was subject to the revision of price by the Government. Just as soon as this information commenced to come in on increased cost, we did try to protect the producer in asking the Government not to place any large orders of copper with the producer, because we would be responsible for that, and having it in mind, we feel that we ought to at least spare you all that.

How long after the armistice had been signed, Colonel Harris, did the War Industries Board continue in existence, do you know?

Lieutenant Colonel HARRIS. Mr. Baruch resigned very shortly. The organization continued on for a longer period. I have not the date when they were actually discontinued.

Mr. HISS. Do you know what their duties were after the war ended?

Lieutenant Colonel HARRIS. I have the impression that they turned over the settlement of the war to other agencies and got out.

Mr. HISS. Did they continue in the price-fixing field even after the war had ended?

Lieutenant Colonel HARRIS. I cannot say.

Mr. HISS. Were there not problems of readjustment back to peacetime levels which required Government control over prices for some time after the war, Lieutenant Brannon?

Lieutenant BRANNON. I think I can find in the book where Mr. Baruch says that due to the lack of authority the Board did not have control of that transition period from war to peace. He intimates. I believe, in his book—I think I can find it—that he thinks it would have been very desirable had the War Industries Board had that authority.

Mr. HISS. Do you know whether it continued to function informally?

Lieutenant BRANNON. As I remember, some of these from the record. some of these agreements, and so forth, were for a definite period of time. several months in advance, and as I remember there was some clearing up to do. Of course, the Government attempted some later price fixing.

Mr. HISS. I offer two letters for the record, a letter of November 9, 1918. just before the armistice, and a letter of November 11.

(The letters referred to were marked " Exhibit No. 1279 ", and are included in the appendix on p. 3911.)

Mr. HISS. The letter of November 9 is from Mr. Clarke, secretary of the American Iron and Steel Institute, to Mr. Brookings:

> Articles appear from time to time in the newspapers in regard to the fixing of price on rails, but naturally we do not know whether they are authoritative. The price of rails ought, in justice to rail manufacturers, to be determined very shortly.

The reply is dated November 11, 1918:

> The fixing of a price on rails, of course, mainly involved the interest of the Railroad Administration, and, as you probably know, they have felt that as the rails they buy are, by the nature of their leases, a matter of interest to

each of the railroads, they could not justify themselves in paying the price which the price-fixing committee recommended. As we had never fixed the price of rails, and as the Railroad Administration was so overwhelmingly the largest interest involved, we submitted the question to the President for his determination.

While I saw the President in person regarding the matter, and have had some little correspondence with him since, he has been so occupied with weighty matters of state recently that I hated to bother him further about it for the present. However, I realize the importance to the rail manufacturers, and while I presume you are collecting for rails furnished at the prices you mention; i. e., $55 and $57 per thousand, as long as it is simply a tentative price, subject to our final ruling, you naturally feel that the matter should be settled without any unnecessary delay. I am called to St. Louis for 2 or 3 days, and on my return, the middle of next week, I will take the matter up with the President again.

Please consider this for the information of those only who are interested, as we are in no way responsible for the newspaper articles you mention, and will trust to your seeing that nothing of this kind gets into the press.

If you are likely to be in Washington any time soon, after Thursday of next week, I wish you would let me know, as I think the problem which we discussed at our meeting a few days ago has been anything but exhausted, and it seems to me that, without reducing labor, there might be some adjustments on two or three articles that would satisfy the Navy and the Railroad Administration, and yet leave the steel industry a fair profit.

You have probably noted in this morning's press that McAdoo recommends the wiping out of all excess-profit taxes on next year's business. I think we will all agree that this is wise.

Lieutenant Colonel Harris. Mr. Hiss, are you interested in the developments of the War Industries Board after the War?

Mr. Hiss. Yes.

Lieutenant Colonel Harris. There is a paragraph here that might be of interest.

Mr. Hiss. Will you please read that, Colonel Harris?

Lieutenant Colonel Harris. Perhaps Lieutenant Brannon will read it.

Mr. Hiss. Will you just read that, Lieutenant?

Lieutenant Brannon. This is from the preface of Mr. Baruch's book, "American Industry in the War."

Lieutenant Colonel Harris. It is a letter to the President.

Lieutenant Brannon. It is in the form of a letter to the President in submitting a statement of the activities of the Board.

Mr. Hiss. Just give the page, please.

Lieutenant Brannon. It is on page 8. [Reading:]

Between the time of the signing of the Armistice and the discontinuance of the War Industries Board, the problem was faced of reversing the Board's machinery in order to demobilize from war service and assist it back to its normal channels. The German collapse had been spectacular in its suddenness. When fighting ceased war production in the United States was reaching its peak. Every unit of the vast machinery was keyed up to high speed. There is no doubt but that knowledge of this fact contributed materially to Germany's sudden realization of the hopelessness of her position. The Board did all that was possible to prevent any injury to industry as it was put back on a peace basis. The price-fixing committee of the Board determined as a general policy that price agreements should continue for the period originally fixed. The President directed the various departments of the Government not to market, in competition with private producers, materials in which there was no shortage and which were not of a perishable nature. The Board, through recommendations and advice, aided in cancelation of contracts so as to stabilize as far as possible the flow of materials, labor, and plant facilities back to peace channels. It was arranged with all of the war-making agencies of the Government that the Board should be advised of revisions and adjustments of all Government contracts in excess of $100,000. The Board's facilities section, for a brief time, remained as the clearing house for all information relating to contract adjustment. Contact also was maintained with the Labor Department, so that as labor was released from war work it was distributed to peace-time industries needing it. If the proper authority had been at hand, it would have been possible for the War Industries Board to have continued its functions during the period of readjustment. Much good could have been accomplished. But with the signing of the Armistice, the purchases by the Allies and our own great departments coming to an end, the power of the Board, without further additional legislative authority, ceased and it was possible to do only what was done—to wind up its work as quickly as possible.

Mr. Hiss. Colonel Harris, I show you another collection of excerpts. These are from a meeting of the price fixing committee of the War Industries Board with the representatives of the steel industry, December 11, 1918, for the purpose of considering the advisability of discontinuing the existing maximum prices on steel.

(The minutes of meeting referred to were marked "Exhibit No. 1280" and are included in the appendix on p. 3912.)

Mr. Hiss. On page 2 Mr. Brookings said:

> Now it simply leaves us nothing to do at this meeting but to express, in words that I should like to have the privilege to compile more at leisure for our records, the earnest appreciation which the price fixing committee have of the manner in which the steel industry has met us more than half way in doing practically everything that we have asked them to do in the way of not only allocating their production, but in increasing their production and investing their funds in additional capacity at a time when costs were probably double normal; and I wouldn't care to have what I say informally here now to fully express our appreciation of that; I can do it very much better by taking a little time and formulating it for our records and we may have something which we would be glad to send you a copy of.

Judge Gary replied:

> We have no disposition to return to this Board the beautiful bouquet of flowers that has been bestowed upon us by the chairman in his words of praise and appreciation for we cherish their possession. We would, if capable, fully reciprocate, though we have no disposition to resort to fullsome praise. A mere statement of the facts uppermost in our thoughts concerning the Board in its treatment of us would be praise enough for anyone.

On the next page:

> In order to secure the largest production of steel—to permit the operation of all of the facilities of all the companies, and firms—it was necessary to arrive at a basis of prices which, as applied to many of the corporations, yielded large profits, yet at the same time did not permit an unreasonable profit to many of the high-cost mills. Therefore we need not be especially grateful because you permitted profits which seemed to be large in many instances, but rather because we know that your motives were right, that you recognized your obligation to your country, and still at the same time in the performance of your duties you were always considerate, friendly, and fair, and were as liberal in your conclusions as your duty to the Government you represented permitted. We have reason to be grateful that the Board has consisted of men who had not only the disposition but the intelligence to rise to a plane of action where exact justice could be done to all concerned.

Colonel Harris, does not this refer to one of the difficulties experienced during the war, namely, the fixing of prices so as to encourage maximum production, so that the prices would have to be high enough to permit high-cost producers to produce at a profit so as to be able to continue in business, which means for the low-cost producers rather high returns?

Lieutenant Colonel Harris. Yes.

Mr. HISS (continuing reading):

> To come in contact with Government officials, dealing at arm's length, and to get through with all our work with the belief that our intercourse has been satisfactory, agreeable, and pleasant, is a most remarkable thing.

Mr. IRÉNÉE DU PONT. Mr. Chairman, is it essential if you pay a high-cost producer a rate that you have to pay a lower-cost producer the same rate, because my impression was that the Aetna Powder Co. got a very much higher price for powder than we got at the same time?

Mr. HISS. Mr. Irénée du Pont, this relates to the fixing of prices in industries throughout the country, not those set by contract.

Mr. IRÉNÉE DU PONT. Not dickering for prices?

Mr. HISS. Not contract.

Lieutenant Colonel HARRIS. This is not contract work. This is basic prices.

Senator CLARK. Is it not a fact, Colonel, that in the case of steel, for instance, the great bulk of steel produced in this country was produced by the low-priced factories or low-priced steel mills? In other words, the United States Steel Corporation and some of the big ones were able to produce steel much more cheaply, so I have understood, than the smaller mills, which did not have the facilities and did not own their own coal mines and iron and transportation facilities, so that the fixing of this uniform price throughout the country on a basis to allow a margin of profit to the small and relatively inefficient producer did result in enormous profits to the biggest producers and to the bulk of the production. Isn't that true?

Lieutenant Colonel HARRIS. The low-cost producers made much higher profits than the high-cost producers.

Senator CLARK. Yes; and that represented the great bulk of steel production in the country, didn't it?

Lieutenant Colonel HARRIS I don't know. I imagine it did.

Senator CLARK. I am not certain of that, but that is my information.

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. On page 9 of this memorandum of excerpts, Colonel Harris, Mr. Replogle has this to say:

> As director of steel supply, I want to express my appreciation for the 100 percent cooperation which we have gotten on all occasions. It has been perfectly wonderful, and one of the delights of my life has been to work with you, and I thank you from the bottom of my heart—all of you.

I have next to present for the record a report of the meeting of the price-fixing committee on December 20, 1918, with representatives of the copper industry, which I offer as the next exhibit.

(The report of meeting referred to was marked "Exhibit No. 1281", and is included in the appendix on p. 3917.)

Mr. HISS. Mr. Brookings has this to say, on the first page:

> As the price fixing committee has always functioned through the commodity section of the War Industries Board, it goes without saying that the necessity for fixing future prices has ceased and that we are allowing all prices fixed heretofore to expire by limitation and as the copper prices expire by limitation at the end of this month, about the only business that justified our holding this meeting today was the desire of meeting the copper people again and to express to them the Government's appreciation of the splendid spirit with which they have assisted us in solving next to the most important problem we have had to solve in connection with out war needs. Steel and copper, of course. have

been fundamentally the few industries that were most directly concerned in our war needs in everything pertaining to stimulating production and in agreeing with us upon what was a fair price for the Government and our Allies and the public, we feel that while we have endeavored to agree with you upon a price that was fair and profitable and sufficiently profitable to maintain a maximum production, it was not very profitable to some concerns and rather more than normally profitable to others; but we recognize through efforts made to stimulate production and through excess-profit prices——

That should be "excess-profit taxes", should it not, Colonel?

Lieutenant Colonel HARRIS. I assume it is "excess-profit taxes."

Mr. HISS (continuing reading):

and through excess-profit taxes none of the industries have profited beyond what seems to be perfectly fair and reasonable.

Mr. ROSENSTAMM. It is permissible for me to ask what the Government proposes to do with the surplus of copper in the hands of the consuming interest?

Mr. BROOKINGS. We have never had anything to do with the Government's orders, the commodity sections representing contracting departments of the Government have submitted price-fixing problems to us and we fixed the prices and passed them back for administration of the department and we have absolutely no knowledge or connection with them.

Mr. SUSSMAN. The thought Mr. Rosenstamm wished to ask you was if you could enlighten us as to the copper that the Government has on hand. You did express yourself as to that last week, as to whether they were going to throw that on the market or whether it is going to further assist the trade by withholding it for a while until it is stabilized. I don't ask this as an authoritative matter but as general information.

Is that not one of the problems that must be faced at the termination of any war, Colonel Harris? That is, the disposal of surplus stocks that the Government has on hand, without upsetting prices to too great an extent?

Lieutenant Colonel HARRIS. It is.

Mr. HISS. Then Mr. Brookings says [reading]:

I don't remember having expressed an opinion on that. I am perfectly willing to express a personal opinion growing out of the knowledge that we all have in the War Industries Board. The general policy of the Government seems to be that as far as it can it is going to protect the industry against competing with anything which they have on hand or accumulated in large quantities and by advice and cooperation with the industry would endeavor to prevent the sale of their stuff, demoralizing the market. That has been given out publicly and I believe has been pretty widely published as the policy of the Government.

I next refer to the meeting of December 10, 1918, of the War Industries Board, page 3, the last page. I will offer this document for appropriate exhibit marking.

(The document referred to was marked "Exhibit No. 1282", and is included in the appendix on p. 3918.)

Mr. HISS. After the war, I think you have already stated, Colonel Harris, there was considerable difficulty with reference to many contracts, which were regarded, for one reason or another, as outside the power of the War Department or as having been improperly executed, is that correct?

Lieutenant Colonel HARRIS. Please state that over. I don't think I quite got that.

Mr. HISS. I say during the war there arose a number of cases of contracts which were deemed by the War Department or some other agency to have been improperly executed or not finally executed or for one reason or another imperfect, although production had gone ahead at cost to the producer under those contracts.

Lieutenant **Brannon**. There were two general classes of cases, Mr. Hiss. Under Revised Statute 3744, the contract has to be signed at the end by the contracting parties. A number of contracts in the heading stated that they were contracts made between such and such contractor and such and such officer as the contracting officer of the Government. Due to pressure of business a number of those contracts were signed by subordinates. The Comptroller of the Treasury ruled that they did not comply with Revised Statute 3744.

Another class of cases was where contractors had been given what are called "procurement orders", that is, orders to go ahead, which fixed the amount and the price and ordinarily the drawing of specifications, but not a complete contract with the understanding that a contract would be executed as soon as it could be worked out, the general details being fixed in advance. But after the armistice the Comptroller again ruled that due to the fact the Government no longer needed the supplies contracted for, a contract could not be entered into merely to protect the contractor.

That was cared for by the Dent Act.

Mr. **Hiss**. At this meeting of December 10, 1918, there is the following statement under "Legislation" [reading]:

> Mr. Peek and Mr. Ritchie submitted draft of a bill which, after several conferences with the War Department, they had prepared to legalize war agreements and orders which had not been executed or drawn in compliance with legal requirements.

That is probably what is referred to, is it not?

Lieutenant Colonel **Harris**. I have not found the reference, Mr. Hiss.

Mr. **Hiss**. It is on the third page.

Lieutenant Colonel **Harris**. December 10?

Mr. **Hiss**. Yes. It is on the third page under the heading of "Legislation."

Lieutenant Colonel **Harris**. I see; yes.

Mr. **Hiss**. (reading):

> Mr. Peek and Mr. Ritchie submitted draft of a bill which, after several conferences with the War Department, they had prepared to legalize war agreements and orders which had not been executed or drawn in compliance with legal requirements.

Lieutenant Colonel **Harris**. That unquestionably must be it.

Mr. **Hiss**. Lieutenant Brannon can possibly explain it.

Lieutenant **Brannon**. I do not remember which one that was, but the Dent Act was the final one.

Mr. **Hiss**. This continues [reading]:

> and which draft, they thought, should be submitted to the War Department, and then to the Military Committees of the Senate and House, with the recommendation that it be substituted in place of the bill on the same subject now pending before them. The draft was approved, and the chairman was requested to send the same to the said committees, and also to the United States Chamber of Commerce, which was interested in the subject.

The **Chairman**. The committee will be in recess until 10 o'clock tomorrow morning.

Mr. **Irénée du Pont**. Mr. Chairman, I would like to ask on behalf of the company whether we could find when a hearing is going to take place on the operations under Government ownership and what might be expected of it. I think possibly we might have some witnesses on that, if we are permitted, and if we have notice.

The Chairman. Mr. du Pont, you will surely have notice of it in due time.

Mr. Irénée du Pont. Thank you.

The Chairman. Ten o'clock tomorrow morning, gentlemen.

(Whereupon, at 4:45 p.m., the committee recessed to 10 a.m. of the following day, Wednesday, Dec. 19, 1934.)

This concludes that part of the testimony known as "Part XV, Old Hickory Contract (continued) and Industrial Organization in War (examples in World War and plans for next war)." At this point the committee continued with the subject of Industrial Organization in War. (See Part XVI.)

APPENDIX

Exhibit No. 1197

All communications should be addressed to "The Gun Division, Office of the Chief of Ordnance, U. S. A., 1330 F Street, Washington, D. C."

[ajh/ig]

War Department,
Gun Division, Office of the Chief of Ordnance,
1330 F Street, Washington, October 3, 1917.

In replying refer to no.

(Memorandum for Colonel Buckner.)

1. Referring to our conversation of this morning and to the urgent need for an increase in the capacity of this country for the manufacture of smokeless powder, I will be pleased to have you take up with your company the following:

(a) Would your company be willing to create additional capacity for the manufacture of smokeless powder to the extent of 500,000 pounds of finished powder per day; also, would they be willing to create new capacity for twice that amount; the plants to be the property of the United States?

(b) The principle is appreciated that this increased capacity should in some form or other be paid for in its entirety by the United States, as it will have practically no value except its salvage value at the conclusion of the war. I would, therefore, like to know under what terms the company would be willing to undertake the design and erection of these new plants, as well as their operation. This will probably involve the selection of sites, the purchase of the land, as well as the procurement and erection of a plant complete in all respects for the manufacture of finished powder.

(c) The plan would be for the Du Pont Company to operate the plant as the agent of the United States Government, either on a cost plus profit basis, a flat fixed price basis, or on a flat price basis adjustable to the fluctuating prices of certain raw materials.

2. It is evident that, if such an agreement is entered into, it would be necessary for the Government to do everything in its power to assist the company in procuring all the material needed, as well as the necessary labor, and, furthermore, it is conceded that the contract could extend no further than binding the company to use its best endeavors to erect the buildings and to operate them in the manner contemplated by the agreement.

Exhibit No. 1198

Washington, D. C., *Oct. 4, 1917.*

(Construction of smokless powder plants.)

Chief of Ordnance, U. S. A.,
Washington, D. C.

Dear Sir: In accordance with your request of October 3, E. I. du Pont de Nemours & Co. beg to present the following propositions for your consideration:

1. The Du Pont Co. offers to select two or more sites, prepare necessary plans and erect plants capable of producing 1,000,000 pounds per day of water-dried smokless cannon powder, with all possible dispatch.

2. For this service the Du Pont Co. request that the U. S. Government pay to it monthly the exact cost of such construction work, including cost of the land, all materials and equipment purchased for the plant, all labor (including superintendence on the ground), insurance, both fire and personal liability, plus 15% of the total of the foregoing to cover the cost of preparing the plans, main office supervision, purchasing expense, and the company's profit on this work.

3. The U. S. Government to audit the accounts each month as rendered, which audit must be completed by the 15th of the following month, at which time payment shall be made.

4. The Government to place in the Du Pont Company's hands full control of the character of the design and quality of the construction work, as the Du Pont Co. cannot otherwise be held responsible for the operation outlined below.

5. The Du Pont Company's estimate, based on past experience with its best knowledge as to the allowance that should be made for increased cost of construction work, is that the necessary plans to manufacture 1,000,000 lbs. per day of water-dried smokleess cannon powder will cost approximately $90,000,000, which would include sulphuric and nitric acid manufacturing and recovery plants, cotton purification, guncotton, water supply, waste disposal, power, land, lines of communication and transmission lines, storehouses, freight yard with broad gauge tracks, plants for the manufacture of ether and diphenylamine, and water-dried cannon powder manufacturing facilities, houses for workmen to the extent which we have found at our existing plants, administrative building, laboratories, shops, etc., but would not include a box factory.

The above proposition is made only upon the understanding that the following proposition for the operation of the plants is accepted at the same time:

1. That the Du Pont Co. be appointed agents to operate the above plants for a period for not less than one year, provided their operation is necessary, in which event the Du Pont Co. proposes to agree to manufacture up to 1,000,000 of water-dried smokeless cannon powder per day at these plants on the following basis.

2. The Government to pay monthly the entire mill cost of the powder manufactured during the previous month on the same terms of payment and audit as in the foregoing proposition for construction of the plants, plus 5¢ per lb. to cover main office supervision, purchasing expense, administrative and profit. Should such mill cost of water-dried smokeless cannon powder, exclusive of boxes, be less than 44½¢ per lb. in any month the difference will be divided equally between the Government and the Du Pont Co., which would result in the cost to the Government and compensation to the Du Pont Co. as per the following table:

Mill cost of powder	Cost to Government	DuPont's compensation
Cents	*Cents*	*Cents*
44. 5	49. 5	5
42. 5	48. 5	6
40. 5	47. 5	7
38. 5	46. 5	8
36. 5	45. 5	9
34. 5	44. 5	10

Should the Government desire a part of the powder to be air-dried a sliding scale of payment would be increased by 2½¢ per pound as follows:

Mill cost of powder	Cost to Government	DuPont's compensation
Cents	*Cents*	*Cents*
47	52	5
45	51	6
43	50	7
41	49	8, etc.

3. It would be our intention that these plants would be erected in units of 100,000 pounds, so that the first might be expected to begin operation in about 8 months from the time the land is secured, additional units to follow monthly, so that the full output would be obtained in about 18 months, which is equivalent to the 10 units starting operation in 13 months. The time of completion would depend very largely upon the extent of the help that the Government would give us in obtaining early deliveries of essential building materials, equipment, and workmen.

In both parts of the foregoing proposition the du Pont Co. would be acting purely as the agent of the United States Government and any expenditures thereunder would be for the Government's account.

If it is desired by the Government, the above proposition could be amended to provide for plants with an output of 500,000 pounds of water-dried smokeless cannon powder per day.

Yours very truly,

E. I. du Pont de Nemours & Co.,
By ——— ———,
Vice President.

Exhibit No. 1199

STATEMENT BY DU PONT ENGINEERING COMPANY OF THE FACTS CONCERNING THE AUDIT OF EXPENDITURES UNDER THE CONTRACTS BETWEEN THE UNITED STATES GOVERNMENT AND THE DU PONT ENGINEERING COMPANY

The contracts are as follows:

Penniman Shell Loading contract, P 2337–1228–A.
Old Hickory Smokeless Powder Plant, P 4755–711–E.
Seven Pines Bag Loading Plant, P 9050–960–E.
Tullytown Bag Loading Plant, P 3509–643–E.
Ives T. N. T. Plant, P 15271–1433–E.

Accounting and auditing system during operating period.—Prior to the starting of operations by the contractor, the Ordnance Department provided inspection and auditing units consisting of inspectors and auditors in charge of commissioned officers and civilians at the main office of the contractor and in the field at the site of each operation.

The following plan for making, checking, and recording disbursements and keeping a record of the contractors' business, approved by the representatives of the United States in charge at the time, was modeled on the system which has been followed by the E. I. du Pont de Nemours & Company, and found by experience to be satisfactory.

Certain proficient employees were appointed to direct and supervise the work of the several departments retained for the purpose of constructing and operating the plants. Whenever the procurement of material or equipment was necessary, requisitions were issued by the departments responsible, and forwarded to the purchasing agent in Wilmington, unless the need was sufficiently urgent to necessitate ordering direct by telegraph or otherwise. In all cases, however, requisitions were sent to the purchasing agent for record. Orders for materials specified on such requisitions were issued by the purchasing department, and numbered in series, copies being sent, respectively, to the vendors, plants, and accounting department, one being retained by the purchasing department for comparison with the vendors' invoices.

Vendors were required to show the order number on the face of each invoice for identification. Each invoice, after receipt at the home office was compared with the orders, and checked as to terms, quantity, and price by the purchasing department; forwarded to the plant which issued the requisition, where certification was made as to receipt of material, and the approval of the plant representative affixed; then returned to the home office. The vouchers were then approved by the departmental director responsible for such expenditures, and the charge distribution noted thereon, after which the accounting department functioned, checking extensions, recording, and issuing checks in payment therefor.

When vouchers had been audited, recorded, approved and paid by representatives of the contractor, they were transmitted to the contracting officer of the United States, who checked and verified the expenditures until satisfied that the requirements of the contracts had been fulfilled. He then indicated his approval on each voucher, and forwarded all vouchers applicable to construction projects to the disbursing officer, who recorded the approved expenditures on public vouchers, and issued instructions for the contractor's reimbursement.

Whereas vouchers applicable to the operating projects were checked and approved in the manner described above, the contractor was reimbursed as provided by the several contracts in accordance with bills rendered to the United States for the cost and profits agreed upon under each contract. The cost of manufactured products in total is equivalent to the cost of the materials and labor utilized or consumed in production, and was verified in total by checking the material cost with the cost of the materials used and on hand at the close of operations.

In connection with the above statements, certain exceptions to the system described were found necessary as the work proceeded; viz, invoices were sometimes paid prior to certification for receipt of material in order to obtain cash discounts, which otherwise would have been forfeited. Pay rolls, which had been held up for reimbursement on account of delays on the part of the United States auditors, were reimbursed for 90% of the total in certain instances prior to complete audit, with the understanding that the completion of the audit would be made in regular routine, in order that the contractor might be placed in possession of funds necessary to carry on the work.

Under normal conditions it was the practice of the purchasing department, prior to placing orders for materials in quantity, to request vendors to submit bids or quote prices for comparison; but throughout the war period, this procedure was not always followed, as the interests of the United States were frequently best served by securing the materials required in the shortest possible time. The saving of a few dollars on the price of materials at the expense of delay meant loss of time in the production of the munitions urgently needed. Whereas it was the policy of the contractor to consider the factor of price, and the prices paid for materials and equipment were fair and equitable under the conditions then existent, ability to furnish materials when required on the part of the vendor was also a paramount consideration.

After shipments arrived at the plants, a record was made of the materials in each consignment as promptly as possible by employees of the contractor assigned for the purpose. This record, however, was not in all cases perfect, owing to the impossibility of avoiding errors in counting, weighing, and computing measurements of the vast quantities of materials of various kinds arriving at the plants during periods of congestion. The cars, however, had to be unloaded, as the contractor was under threat of embargo by the Railroad Administration if held longer than a specified time, regardless of the practicability of immediately checking and recording the contents.

The recording and distribution of materials received at the plants was a stupendous task, as the work was progressing with such speed that usually the workmen were ready to utilize any materials available immediately upon arrival; therefore in addition to the difficulties described above in securing sufficient labor to unload cars and record shipments it was difficult to prevent the removal of such materials by overzealous employees before checking and recording could be completed.

When field work was at its peak at Old Hickory, cars were arriving at the rate of 300 per day, and as many as 800 cars have been held on the sidings at one time due to the inability of the contractor to obtain sufficient laborers and checkers to unload cars as rapidly as they were received.

The United States also provided inspectors and auditors who checked and verified the contractors receiving records and whose reports were available to the contracting officer in charge for the verification of invoices. The pay-roll departments, located for convenience at the several plants, were divided, respectively, into three units, each under the direction of a chief clerk or supervisor as follows:

Pay-roll department which recorded time, prepared pay rolls, recorded deductions to be made from employees' wages, and prepared and signed the checks for payment of wages.

The paymaster's department, which functioned in the actual paying off of employees, kept a record of the pay-roll receipts, unclaimed wages, etc.

The auditing department, which maintained a checking system over the other departments and carefully investigated all complaints by employees or others.

The United States Government also provided a force of accountants at each plant under the direction of an auditor which maintained a rigorous supervision and check of the contractor's pay-roll records. The work of the Government auditing staff was carried on concurrently with the work of the contractor, and owing to the vigilance and close cooperation between the Government auditing staff and auditing staff of the contractor, losses on account of errors, fraud, or dishonesty were reduced to a minimum.

It is estimated by the contractor that the cost to the United States for maintaining the inspection and auditing system carried on throughout the period of construction and operation, excluding the cost of the contractor's office personnel, prior to October 1919 was approximately $1,000,000.00.

In the manner described above 76% of the disbursements made by the contractor under its several contracts with the United States had been approved for reimbursement by the War Department prior to the beginning of the reaudit authorized by the Philadelphia Claims Board in October 1919.

Reaudit.—When the negotiations were in progress, which culminated in the cancellation of the agency contracts, and the execution of the contracts which superseded the cancelled contracts, the United States was confronted with the necessity of promptly providing plants and facilities for the manufacture of munitions which were essential for the protection of the lives of its citizens and the successful prosecution of the war.

These contracts with the Du Pont Engineering Company were unusual; but unusual methods were necessary to cope with an unusual condition; and the War Department was cognizant of the fact that the Du Pont Engineering Company was competent to build such plants and manufacture the munitions specified in the several contracts, provided it was not hampered by the necessity of following the usual War Department procedure, and was allowed to use its discretion and initiative as to ways and means.

After the armistice, however, when the munitions then being produced in quantities exceeding the most optimistic anticipations of the War Department officials, were no longer required, and field operations under the several contracts were terminated, the persons designated by the War Department to succeed the representatives in charge of the audit of the contractors accounts during the operating period for the purpose of completing the audit, were unwilling to recognize the authenticity of the approvals of their predecessors, and consequently a complete reaudit was ordered by the Philadelphia Claims Board in October 1919.

The vouchers, cancelled checks, and other records used during the reaudit were in the possession of the United States auditors, or were made available and accessible to them, and most of the primary records were held by them from sometime prior to January 1919 until June 1, 1922.

Notwithstanding the fact that the audit was from 75 to 80 percent complete prior to the beginning of the reaudit, for nearly three years a large staff of men were intensively engaged in making this reaudit at a cost, which the contractor estimates was not less than $500,000.00, including the cost of maintaining the contractor's office force employed in furnishing information in connection with the audit.

Throughout the progress of this reaudit, the contractor was the recipient of hundreds of questionnaires listing thousands of vouchers, which indicated an exhaustive attempt on the part of the auditors to obtain evidence and information. There is no doubt that all of the primary vouchers and cancelled checks were examined and passed upon during this period. The present condition of some of the vouchers is mute testimony that they were handled and rehandled many times. Many are nearly worn to shreds, and nearly all are marked up with notes or have attached checking memoranda.

Powder produced and delivered to the United States at Old Hickory was attested by acceptances signed by a representative of the United States.

The United States was not billed with shells or loaded bags, as the essential materials were furnished by the United States and the bills rendered were for the cost of loading.

Production records were kept at the plant, and the United States Government inspectors kept their own records in addition thereto. The cost is substantiated in total by the contractor's record of disbursements. Materials procured for conversion into finished products, other materials acquired for operating purposes, and semifinished products on hand at the close of operations were recorded on inventories which were signed by representatives of the United States and the contractor.

Prices.—With the exception of prices on certain specified component materials, the contractor was not limited under the terms of its several contracts as to the prices which were to be paid for materials or equipment required in the construction and operation of the several projects and whereas the contractor was enabled to save the United States a considerable sum on account of availing itself of the services of the organized purchasing department of the E. I. du Pont de Nemours & Company and the experience of its employees, it should be borne in mind that throughout this period the prices of all commodities including such commodities as were regulated by the various price-fixing bureaus of the United States, were unusually high, and frequently materials were very difficult to obtain regardless of prices offered. Prices of the principal materials purchased were compared with the prevailing market prices by the contractor and also by the United States Government contracting officer throughout the progress of the original audit.

While the reaudit was in progress the contractor was occasionally requested to explain prices which were alleged to be excessive, which is an indication that such prices had been compared with standards of some kind, and if this was done in the instances mentioned it would be fair to infer that the prices were to some extent subjected to scrutiny and audit.

Materials purchased from E. I. du Pont de Nemours & Co. and subsidiaries.—Certain component operating materials approximating $2,000,000.00 in value were purchased from E. I. du Pont de Nemours & Company which could not be procured advantageously from other sources, and it was the intent of the vendor to bill the contractor with such materials at cost. However, through an error in the purchasing department in omitting to adjust the cost of linters and shavings, the contractor was charged in excess of actual cost the sum of approximately $300,000.00. This overcharge was promptly refunded to the United States when the error was located and brought to the attention of the contractor. Although a rigid investigation was prosecuted by the Government auditors for further errors of this nature, no additional discrepancies in the prices charged by the E. I. du Pont de Nemours & Company for such materials were brought to the attention of the contractor.

Certain special materials and equipment aggregating in value approximately $7,600,000.00 were purchased from E. I. du Pont de Nemours & Company under a contract which provided that E. I. du Pont de Nemours & Company would bill same at cost plus a profit of 10%. E. I. du Pont de Nemours & Company, however, waived this profit and billed the material at cost including amortization of certain facilities which were installed for fabricating the equipment.

The total profit which would have accrued to E. I. du Pont de Nemours & Company on account of this contract would have been $760,000.00, whereas the charge made by E. I. du Pont de Nemours & Company for amortization of additional facilities aggregates approximately $475,000.00.

Automobiles manufactured by General Motors Corp., in which E. I. du Pont de Nemours & Company is financially interested, were purchased from dealers in the vicinity of the several plants, but a greater number of cars of other makes were specified in our requisitions. Automobile and accessory bills were all carefully audited by the United States as indicated by the questions on record pertaining thereto.

Paints and varnishes were bought to some extent from the Harrison Paint Works, a subsidiary of the E. I. du Pont de Nemours & Company, as deliveries were assured.

No considerable purchases other than above were made from subsidiaries or companies in which the E. I. du Pont de Nemours & Company was financially interested, nor was any preference given to such corporations.

Substantiation and proof of expenditures.—The several contracts entered into between the United States and the du Pont Engineering Company contained practically the same fundamental provisions which may be stated as follows:

The contractor was authorized to do all things necessary or convenient in connection with the work.

The contractor was to be reimbursed for all expenditures of every character and description upon presentation of satisfactory proof of disbursement.

The contractor was to be protected from any and all liabilities arising out of or in connection with contracts.

All vendors' invoices were numbered in series and entered on registers, the total of which were periodically posted to a controlling account on the general ledger as a credit. All disbursements in payment of invoices were recapitulated from check stubs and posted periodically to the same controlling account as a debit. The balance in this account at the end of any period indicating the total of unpaid vendors' invoices. This balance was reconciled periodically by comparison with the total of unpaid invoices entered on the registers, thus mathematically proving that the disbursements were in accord with the invoices recorded as paid.

The Government auditors, during the progress of the audit and also during the reaudit, "substantiated" disbursements by comparing canceled checks endorsed by the vendors with the invoices.

Law courts regard an endorsed, paid check, after identification with a specific invoice, as conclusive evidence of payment, consequently it would appear that the paid canceled checks of the vendor are "satisfactory" evidence of disbursement.

Authority.—Under the terms of the contract the Du Pont Engineering Company was authorized to do all things necessary or convenient in connection with the construction or operation of the plants, therefore, no further Government procurement orders or further Government authority was required or obtained for making specific expenditures.

The contractor delegated, to direct various departments, certain experienced employees, whose duty it was to know the requirements of such departments and procure such materials, labor, supplies, etc., as might be required for the prosecution of the work, and when invoices were received the departmental directors' approvals thereon indicated that the said materials, supplies, etc., were necessary and were for use in connection with the projects specified.

The United States Government, as herein above stated, maintained a staff of men at the plants who were instructed to check up and to audit bills in connection with materials received, and inspectors to report any delinquincies which might have existed on the part of employees of the contractor.

Applicability to contract.—Throughout the progress of the reaudit thousands of vouchers were returned to the contractor with requests from the United States contracting officers to establish "applicability to the contract". Applicability to the contract, the contractor assumes, is proof that the materials in question were for use in constructing the plants or for the purpose of producing finished products. Preceding paragraphs relate the methods adopted and used by the contractor for procuring materials and certification of expenditures therefor.

Materials purchased were either utilized in construction, consumed in the production of manufactured products, or left on the premises at the several plants and turned over to the United States property custodian with the plants, with the exception of certain waste products and salvage, which were sold in accordance with Government orders. No history was written or certifications recorded regarding the utilization or final disposition of the specific materials billed on each invoice, consequently the approvals or accredited representatives of the contractor and the United States are the only available proofs of "applicability". It is obviously impracticable at this date to identify any purchase of specific material with the actual material in its present location and condition, and any number of audits would prove futile in the production of supplementary proofs of "applicability".

Receipt of material.—All vouchers transmitted to the contracting officers of the United States were approved by the contractor's representative for receipt of material, and inasmuch as no further certification was required under the terms of the contracts, which provided that the contractor should do all things necessary or convenient in connection with the construction and operation of the plants. However, it was noted that most of the vouchers suspended by the auditors for alleged lack of proof as to receipt of materials were supported by the plant receipt of material records, most of which had been approved by representatives of the United States, and by transportation companies receiving records.

Major R. R. Farr, special representative of the Assistant Secretary of War, delegated to supervise the audit of the Du Pont Engineering Company contracts, investigated the conditions asserted by the contracting officer in reference to receipt of material, and issued a decision accepting the existing proofs as evidence that such material was received, with exceptions as to known shortages, which subject was acted upon later by supplementary decisions supporting the contractor's position.

Losses on account of miscounts, errors, goods lost in transit, etc., were recouped whenever possible by instituting claims and other methods of procedure usually practiced in such cases. In this manner a considerable amount was collected and refunded to the contractor. There were, however, losses which could not be recouped on account of the inability of the contractor to produce evidence of loss and in some cases alleged losses were undoubtedly the result of errors on the part of receiving clerks in properly recording and counting material arriving at the plant. Such losses are unavoidable in the carrying on of operations of great magnitude in times of stress and the contracts provide for such contingencies, stipulating that the contractor was to be reimbursed for all expenditures of every character and description.

Commissary losses.—Losses consequent to the establishment and maintenance of stores, restaurants, cafeterias, etc., usually referred to as commissary losses, in connection with contracts whereunder both construction and operating projects were involved, were distributed between construction and operation costs in the ratio of the respective total labor cost. This method and ratio having been agreed to by the contracting officer in charge at the time. Charges and credits to this account in the form of vendors' invoices, cash vouchers, etc., were checked by the United States Government auditors, who also familiarized themselves with the method and ratio used, but made no objections during the original audit or throughout the reaudit to the procedure or ratio used in distributing commissary losses.

Comptroller's decision.—The contracts provide that all matters in dispute between the United States and the Du Pont Engineering Company shall be adjudicated by the Secretary of War, consequently Major Farr, who had been delegated by the Assistant Secretary of War to act as his representative, was apparently acting within his rights in disregarding the alleged decisions of the Comptroller relating to certain vouchers, which had been presented to him by the contracting officer.

General.—Throughout the reaudit the contracting officers ignoring the approvals on the face of the vouchers establishing authority and applicability, and the canceled checks "substantiating" the disbursements, returned thousands of such vouchers with requests for information or evidence to establish authority, applicability, substantiation, receipt of material, etc.

Most of the recommendations for disallowance and suspensions made by the contracting officer were disposed of by Major R. R. Farr, who was appointed to act as special representative of the Assistant Secretary of War in directing the contract unit employed in auditing the accounts of the Du Pont Engineering Company. In some instances, however, appeals from Major Farr's decisions were made to the War Department Claims Board and the Assistant Secretary of War.

The persons who supervised and directed the reaudit of the Du Pont Engineering Company at the beginning were apparently obsessed with the idea that they expected to find something which the contractor was desirous of concealing and consequently an air of secrecy and mystery prevailed for several months thereafter. Employees assigned by the claims board to carry out this audit refused to consult with employees of the Du Pont Engineering Company or to disclose their objects in seeking various records and in certain instances made statements to the effect that they had been instructed by their superiors not to discuss anything with employees of the Du Pont Engineering Co. as all matters requiring discussion would be presented to the Du Pont Engineering Company through the proper channels. Thus a great deal of time was lost by the Government employees in vainly seeking for facts or information which the employees of the contractor could have furnished in a very much shorter time. No record of hidden transactions existed and obviously the persons who had expected to find "something big" were disappointed.

Later a different line of tactics was tried out, viz. the listing of thousands of vouchers and appending at the bottom of such lists indefinite questions, followed by a statement that the contractor was invited to submit any information or evidence which it desired to substantiate disbursements. Inasmuch as the contractor considered that the evidence already presented was sufficient to comply with the requirements on the contracts it was practically impossible for it to determine from such questions the specific information which the auditors desired, but nevertheless all such questions were answered by the contractor to the best of its ability. This course was pursued for approximately a year when it became obvious to all parties concerned that no great progress was being made toward bringing the reaudit to an end. Every invoice apparently was subjected to a microscopic examination in an effort to find something lacking, which was technically required by such rules and definitions as had been adopted for carrying on the reaudit.

Vouchers were not checked by one set of accountants only, but were apparently rehandled by different persons and if any stone was left unturned in the effort to discover dishonesty, fraud, or wilfull negligence on the part of the contractor or its employees, it must have been an exceedingly small pebble and so thoroughly hidden that a microscope would not reveal its presence. Whereas thousands of vouchers were suspended by the auditors, erroneously in some instances, on account of their failure to locate offsetting entries, or to observe attached papers and approvals, most of the disallowances were the result of the contractor's inability to produce, several years after the completion of the work, certain kinds of technical evidence which were required under their interpretations of certain rules and definitions which had no part in the contracts between the United States and the Du Pont Engineering Company.

EXHIBIT NO. 1200

[Reprinted from the New Republic of Oct. 3, 1934]

OTHER PEOPLE'S MONEY

THE DU PONTS ARE LESS THAN FRANK—A SUCCESSFUL REORGANIZATION—WHEN ARE WAR PROFITS NOT WAR PROFITS?

At the hearings of the Senate Committee on Munitions, Senator Gerald P. Nye sought to show that the foundation of the great Du Pont industrial empire was the profits made from the war. This Mr. Pierre du Pont flatly denied and later Mr. Lammot du Pont energetically explained away by saying that the vast acquisitions made by the Du Pont company since the war were made, not out of profits, but chiefly by absorption of other companies through an exchange of stock involving no cash outlay whatever. In this I think the Messrs. du Pont were less than frank. And I shall try to prove it.

First let me preface this with the statement made by Mr. Pierre du Pont that at the conclusion of the war the Du Pont company booked its surplus as $71,000,000 and that though this was a goodly sum, it represented all that the company had to show for the so-called "vast war profits."

I shall put aside for the moment the simple arithmetical calculation that this is the sum required to pay 200,000 men in the trenches for a full year. It is not to be supposed that these 200,000 men have $71,000,000 left at the end of a year of fighting. The entire amount is consumed in caring for the families or in meeting the simple wants of the soldier himself. This $71,000,000 was what the Du Pont company had left, over and above all salaries, outlays, expenses, at the end of the war. If this were all, it seems to me it would be quite enough.

But the facts are something different. I beg the reader to follow these figures closely in order to see how well the carefree statements of great financiers will stand examination.

At the end of 1913 the Du Pont company had assets amounting to $74,816,826. Against these, however, there were outstandng bonds, preferred stock, bills payable, deferred liabilities, etc., amounting to $39,708,437. The common stock, therefore, had a valuation on the company balance sheet of $29,426,100. To this must be added the surplus of $5,682,289. Thus the free assets, the value allocated to the common stockholders, was $35,109,389.

Then came the war in Europe. The Du Ponts began to make enormous sales to the Allies. In the year before the war the net profits were $5,769,132. In 1915 they were $57,840,788. This only partly states the fact. Huge sums in cash were advanced by the Allies to the company to enable it to make plant expansions. In each year, these expenditures, made out of these advances, were written off gradually.

Then in 1915 a new company was formed. I will not befuddle this account with names. The new company, which really represented only a slight change of name, bought out all the assets of the old company for $120,000,000, which it paid for in stock. When this was over, the new company had the business. The old company had all the stock issued by the new company, amounting to $120,000,000.

Then the old company proceeded to call in the preferred stocks and the bonds standing against the old company. These were valued at $33,990,801. (There may be a discrepancy of a few thousand dollars in these figures.) They were exchanged for stock. After buying them up, therefore, and canceling them, the common stockholders of the old company had for themselves $120,000,000 of stock paid to them by the new company, less the $33,990,801 paid for retiring the preferred and bonds. This left them debenture and common stock valued on the new company's balance sheet at $86,009,199.

This, then, was the first gain of the Du Pont common-stock holders. They gained in this reorganization the difference between the old $29,000,000 of common and the new $86,000,000 of common and debenture stock which they retained. I assume they continued to hold it.

At the end of the war, then, they had this $86,000,000 of common and debenture stock plus the $71,000,000 of surplus which had been piled up.

But they had a good deal more. They had the approximately $141,000,000 in cash dividends which had been declared.

In those war years they bought powder factories, chemical factories, paint and lacquer companies, and other related industries and all out of earnings. There were no exchanges of stock. Moreover, they bought a one-fourth interest in the stock of the General Motors Corporation, and this was bought with earnings. How much this is worth to the company may be seen from this simple fact. In 1929, the last big year, the dividends from the General Motors stock amounted to over half of all the earnings of all the extensive Du Pont enterprises. That stock is now carried at a book value of $147,000,000 on the company's books and in the six years up to and including 1929 brought into the du Pont company $142,000,000 in earnings.

After the war, with this vast foundation, these huge earnings, the immense power and prestige of the company, it was able to acquire a large number of industries by an exchange of stock. But to say that they made only $71,000,000 out of war, that the swollen war profits are not the foundation of their far-flung interests of today, is to impose on the credulity and common sense of their listeners.

Mr. Irénée du Pont made another remark over and over again. He insisted that his company had made no profit out of its American war orders. It had made profits, of course, but these profits were less than the taxes the Government took back from the company during the war. Here again Mr. du Pont was less than frank. In those two war years the Du Pont company made enormous profits out of its sales to the Allies and to the United States Government. On those total sales it paid income taxes. It may be that the total income taxes were more than the profits made from the United States. But all the income taxes paid out were not paid on the profits made from America. If the taxes allocated to the American profits are measured against the American profits then it will be seen that the Du Ponts did make a handsome profit out of this Government during the war. They should not be allowed to do that again.

John T. Flynn.

Exhibit No. 1201

War Department,
Washington, Dec. 10, 1934.

Honorable Gerald P. Nye,
Chairman Special Committee Investigating the Munitions Industry,
United States Senate.

Dear Senator Nye: Reference your letter dated November 30, 1934, pertaining to War request no. 31, there is inclosed herewith two photostatic copies of records of this office, indicating the experience of George R. Foulke, Jr., prior to his commission in the ordnance department.

A statement of total advances to the du Pont American industries and the purposes of such advances has not as yet been located, but will be supplied as soon as possible.

Copy of letter from Major Booton to Arthur Carnduff, special assistant to the Attorney General, dated June 15, 1923, is inclosed herewith.

In accordance with telephonic request from Mr. Higgins, there is also inclosed twenty photostatic sheets from the records at Frankford Arsenal indicating the papers withdrawn from the files stored there pertaining to the du Pont Engineering Company and turned over to James H. Fortune, accountant of the Department of Justice, in connection with an investigation being made approximately ten years ago.

Very sincerely yours,

Geo. H. Dern,
Secretary of War.

Subject: Extra compensation to employees—Du Pont Engineering Company.

1. Attention is invited to letter addressed to this office dated May 2nd, FCA 2488/177 Miscl., Finance Division, O. O., War Department.

2. Under this cover please find all inclosures accompanying letter of May 2nd, and in addition thereto letter addressed to the writer under date of June 4th, 1919 by Mr. Wm. Coyne, vice president, E. I. du Pont de Nemours & Company.

Report of findings is made as follows:

Proposed extra compensation to employees for meritorious service on construction; proposed extra salary compensation to employees discharged due to cessation of war work; proposed moving and travelling expenses paid to employees discharged due to cessation of war work on contracts as follows: P–4755–711–E, Old Hickory smokeless powder plant; P–2337–1228–A, Penniman shell and booster ld. plant; P–15271–1433–E, Ives T. N. T. plant; P–3509–643–E, Tullytown bag-loading plant; P–9050–960–E, Seven Pines bag-loading plant.

3. The principle upon which bonus for meritorious service was based is explained in Mr. Coyne's letter of June 4, 1919, attached, which conforms with the general policy of E. I. du Pont de Nemours & Co.

4. Attention is directed to the detail schedule on which is shown salary received by each employee interested as of January 1918, March 1918, August 1918, and May 1919, as well as the date of his transfer from the parent company, as well as the extra compensation which he received on account of his being released from the service of the contractor, due to the cessation of work. The point is raised as to whether in the case of an employee receiving both extra compensation and a meritorious bonus there was not dual payment. Contractor holds, however, that such is not the case, and that the meritorious bonus was granted for signal services rendered during the time of employment, and that the extra compensation was in lieu of a formal notice usually given an employee dropped through no fault of his own.

5. It is the opinion of this office that in no case should an employee be eligible for more than one month extra salary compensation under the ruling of E. I. du Pont de Nemours & Company's executive committee, as the contract was in force less than one year. The term of service is shown on the detail schedule, so that the contracting officer may be guided in making his final decision.

---

[1] Credit.

6. This office deemed it necessary to establish the fact as to whether the proposed meritorious bonus was more liberal than those established in previous years, and the audit of this office discloses the following facts:

Du Pont Engineering Company		E. I. du Pont de Nemours & Co.		
Name of dept.	Extra compensation as percent of salaries paid 1918	B bonuses paid percent of salary 1918	B bonuses paid percent of salary 1917	B bonuses paid percent of salary 1916
Engineering	14.39	47.8	129.8	124.7
Purchasing	20.16	40.48	156.04	146.35
Treasurer's	4.78	24.79	43.19	41.49

7. It might also be mentioned that in quite a number of instances grants of both common and debenture stock have been made to individuals whose names appear on this schedule, increasing the net amount of the bonuses. This may be made more clear by the following explanation: It has been the practice to set aside a certain block of stock each year for an individual, it being understood that he is to receive all the earnings of that stock and to acquire title to one-fifth its value each year, full ownership being vested in him at the end of the fifth year. Therefore, in making our computations for the years 1916, 1917, and 1918, there was taken into account only the amount *earned* i. e., dividends on the full amount of stock, plus one-fifth of its book value at the close of 1916; dividends plus two-fifths at the close of 1917 and dividends plus three-fifths at the close of 1918.

8. It is suggested that this meritorious bonus, if reimbursed, be without profit.

9. Relative to travelling and moving expenses and salaries allowed account of discharge due to cessation of work, schedules are submitted marked respectively a, b, c, and d, covering extra-salary compensation allowed to employees. It is impossible to submit a schedule covering travelling and moving expenses, as these expenses are submitted for reimbursement on individual vouchers, and are scrutinized and passed on their individual merits. Doubtless, however, figures submitted by the contractor as an aggregate represent the amount which he has disbursed, and for which amount he will seek reimbursement, such reimbursement to be made through cost accounting branch on nonquestionable items, and by the cost accounting branch through district claims board on items of dispute.

10. It is also suggested that reimbursement of travelling and moving expenses, if made, be without profit.

11. Attention is also invited to letter written by Mr. Wm. Coyne, dated April 2d, to C. B. Landis on the question of whether employees returning to the parent company were allowed the salaries the same as if they had been discharged. Mr. Coyne's statement while no doubt made in perfectly good faith is not borne out by the facts, as this office finds that in only about twenty-five (25) cases did employees return the difference between their new and old rate, and thereby cure their former employment record. In the majority of cases, in fact, in all of the cases except in the twenty-five (25) just hereinbefore mentioned have the employees retained the amount of extra salary given them for "release on account of cessation of war work", and accepted the status of a new employee with E. I. du Pont de Nemours & Company, or subsidiaries. ,

12. Attention is also invited to a misstatement in letter of January 15tht paragraph 1, written by Mr. Wm. Coyne to Col. R. P. Lammott, Procuremen Division, relative to the item of return transportation. In this letter it is stated that pay rolls employees were to be returned to the place of their being recruited. In actual practice, employees were not only returned to their domicile, but were allowed an amount equivalent to a return to their domicile, and, in some cases were allowed amounts in excess of that figure. These items are being individually and specifically questioned, and wherever the cost accounting branch, as represented by this office, cannot approve for reimbursement, such differences are held as being in "dispute" and will be submitted to the district claims board for final adjudication.

13. Respectfully submitted.

C. H. Hartman,
Supervising Accountant in Charge,
Ordnance Department, U. S. A.

Accountant, Department of Justice.
Per B. P. WHEATLEY.

Office of the Director of Accounting Investigation,
War Transactions Section, Department of Justice,
105 Old Land Office Building, Washington, D. C., May 12, 1924.

Du Pont Engineering Company

Received from Colonel Odus C. Horney, commanding officer, Frankford Arsenal, Philadelphia, Pa., the following contracts, in connection with the above company:

1. Typewritten copies of contracts:
   (*a*) Old Hickory, old agency contract, dated Jan. 29, 1918 (printed) (30 pages).
   (*b*) Old Hickory, new contract, dated Mar. 23, 1918 (18 pages).
   (*c*) Penniman supplemental agreement, dated July 17, 1918 (2 pages).
   (*d*) Penniman supplemental articles of agreement, dated Sept. 5, 1918 (3 pages).
   (*e*) Ives supplemental contract, dated Oct. 2, 1918 (2 pages).
   (*f*) Ives subcontract between Dunn-McCarthy Co. and Du Pont Engineering Co., dated Nov. 2, 1918 (7 pages).
   (*g*) Contract between Mason & Hanger Co. and Du Pont Engineering Co., dated March 23, 1918 (subcontract) (9 pages).

James H. Fortune.

The above lists are those of extra copies in the files given to Mr. Fortune for his files.

Philadelphia, Pa., *September 13, 1924.*

Received this date from F. K. Wildermuth, Frankford Arsenal, Philadelphia, Pa., copies of summaries #694 to 752, inclusive, Old Hickory construction, Also copies of summaries of payments made to Du Pont Engineering Co., and direct to vendors in connection with them at Old Hickory powder plant covered by contract 100211, January 29, 1918. Old agency contract.

B. P. Wheatley,
Accountant, Dept. of Justice.

For Mr. J. Fortune, in charge, Dept. of Justice investigation of Du Pont Engr. Co. contracts.

Also received: Copy of statement of recoupment of advances dated Jan. 1923. Copy of pages 233 to 238; testimony of Col. McRoberts, at War Dept. Cl. Bd. Mtg. Information and explanation of summaries applied against contractual advances. Information and explanation of disbursements made on old agency contracts, Penniman, and Old Hickory.

[Copy]

May 22, 1919.

Mr. C. H. Hartman,
Accountant in charge, Ordnance Department, Old Court House.
(Attention Mr. L. W. Koch)

Dear Sir: Our file C-1 and C-5. Du Pont Engineering Company, treatment of employees resigned or laid off on account of cessation of war work. We are enclosing herewith the following for your use in connection with the audit covering the figures given you by Mr. Britton of Mr. Coyne's office in connection with this subject:

1. Old Hickory: Recapitulation—detailed statement of transportation of pay-roll employees.
2. Old Hickory: Details showing individuals for whom transportation was paid, disbursement sheet numbers, etc.
3. Penniman: Copy of letter from Mr. D. D. LeFevre to us dated March 28, subjected "Transportation of pay-roll employees".
4. Penniman: Copy of telegram from Mr. C. H. Trask, resident engineer at Penniman, to us dated March 22.
5. Penniman: Carbon copy of letter from Mr. C. H. Trask, resident engineer at Penniman to us dated March 19, 1919, subjected "Transportation of pay-roll employees."
6. Penniman: Details showing expenditures as covered by disbursement sheets listed in Mr. Trask's letter of March 19, 1919.
7. Ives: Copy of letter from Mr. Lynch to us dated March 19, subjected "Return transportation furnished employees."

8. Ives: Details showing employees, disbursement sheet numbers, etc. from whom transportation was paid.

9. Old Hickory: Memorandum dated March 25, 1919, showing traveling and moving expenses allowed pay-roll and salary-list employees.

10. Old Hickory: Carbon copy of letter from Mr. A. J. Brandt, resident engineer at Old Hickory, to us dated March 22 showing how above details were arrived at.

11. Penniman: Memorandum dated March 25, 1919, showing traveling and moving expenses allowed pay roll and salary list employees.

12. Ives: Memorandum dated March 25, 1919 showing traveling and moving expenses allowed pay-roll and salary-list employees.

The expenditures shown for Penniman and Ives are to February 28 inclusive with the exception of Edward E. Pease and Jud Cleveland listed in the last sheet of details for Ives, which were paid after March 1. The figures for Old Hickory are to March 14, inclusive.

Please return enclosures after they have served your purpose.

Yours very truly,

H. M. PIERCE, *Chief Engineer.*
Per W. J. M.

(Please receipt and return carbon copy.)

AUGUST 14, 1919.

From: Contract section, administration division, O. O.
To: Cost accounting section, administration division, O. O.

Subject: Du Pont Engineering Company—Extra compensation to employees.

P-4755-711-E, Old Hickory smokeless powder plant; P-2337-1228-A, Penniman shell and booster ld. plant; P-15271-1433-E, Ives T. N. T. plant; P-3509-643-E, Tullytown bag loading plant; P-9050-960-E, Seven Pines bag loading plant.

1. Upon consideration of yours of July 22, 1919 (FCA 160-36763), the undersigned, as contracting officer, under date of July 24, 1919, gave contractor a letter as follows:

"It is the opinion of the contract section and also of the undersigned as contracting officer, that the above contracts provide for, cover and include payments by the contractor to its employees of bonuses, compensation upon discharge, traveling expenses, railroad fare, etc., according to the general classification of statements furnished by you, the amounts of which bonuses, compensation upon discharge, traveling expenses, railroad fare, etc., to be determined according to the plan in use during the same period and previously by the contractor and contractor's parent organization, E. I. du Pont de Nemours & Co."

2. It is the understanding and interpretation of this section and the contracting officer that all these classes of items used by contractor in statements submitted, and also specifically designated in attached letter, dated at Wilmington, Delaware July 15, 1919.

(F. C. A. 248.8-216 Misc.), by C. H. Hartman, supervising accountant in charge to administration division cost accounting section, namely:

(*a*) Proposed extra compensation to employees for meritorious service on construction,

(*b*) Proposed extra salary compensation to employees discharged, due to cessation of work,

(*c*) Proposed moving and traveling expenses paid to employees discharged, due to cessation of work, are included in and covered by the contracts,

and are obligations of the United States, and that contractor is entitled to be reimbursed on account thereof.

3. The exact amount of the various items to be reimbursed to contractor under the several classes and under the several contracts shall depend on the audit of the cost accounting section.

4. It is understood that your section will function as to items and the determination of amounts, also including the certification of vouchers.

5. Such other action as may be needed or required of the contracting officer to accomplish the above purpose will be furnished.

By order of the chief of administration division.

R. H. HAWKINS,
Lt. Col., Ord. Dept., U. S. A.,
Chief of Contract Section.

EXHIBIT No. 1203 [1]

OGDEN L. MILLS,
15 Broad Street, New York, December 14, 1934.

THE CHAIRMAN SENATE MUNITIONS COMMITTEE,
United States Senate, Washington, D. C.

DEAR SIR: The New York press of this morning publishes a list of individuals whose annual income was a million or over during the years 1915 to 1918, reported to have been made public by your committee.

This list includes my name.

---

[1] "Exhibit No. 1112", list of individuals reporting net incomes of $1,000,000 or over for any one or more of the years 1917 to 1920. Mr. Ogden L. Mills' name is not included in this list although that of his father, the late Mr. Ogden Mills, is included. See Hearings, Part XIII, p. 2923.

In including my name in this list, your committee has been guilty of an error which I must ask you to correct.

During the years mentioned, my income from all sources averaged approximately $138,000 a year.

No part of this income was remotely connected with the munitions business except, conceivably, dividends received on 250 shares of the Lackawanna Steel Company.

It may be that your committee has confused me with my father, the late Mr. Ogden Mills. If so, may I add that I have examined his books, and that the facts do not justify the implication that his income was in any way connected with the war or munitions business. Except dividends on a comparatively small number of shares of Lackawanna Steel Company, which may or may not have manufactured war materials, his income was totally unconnected with any business engaged in the manufacture of war materials.

Very truly yours,

OLM:T.

Ogden L. Mills.

Exhibit No. 1204

Marine Barracks,
Navy Yard, Phila., Penna., Nov. 17, 1932.

Mr. Walter B. Ryan, Jr.
20 Pine Street, New York City.

Dear Mr. Ryan: I got in touch with Capt. Edson in regard to the Nicaraguan order for 61 guns. He informed me that he considered that the new style compensators would be preferable on this order. I did not wire you for he said that he was getting in touch with you by telephone.

Will you kindly send me one dozen of the new catalogues when they come out? Also send a few copies to the colonel, for he will be able to place them at the War College.

I have been thinking over the foreign sales proposition and I have a proposal to make. I would appreciate it if you could see your way clear to extend the same discounts to me on foreign sales that you extend to Federal Laboratories. It is not our intention to compete with them. However, we also have many contacts and orders are apt to come through us at any time. In all probability, these orders will come from different sources than those available to Federal Laboratories. I am not saying that our contacts are better than theirs, but in some cases it is only natural that this should be so. But, in any case the proposition of commissions is the important point. You are familiar with the fact that these have to be passed around on all foreign sales. Naturally, if Federal Laboratories should figure in on a sale in which they have had no part, there are going to be objections. This is all the more true for in every sale that we make there are going to be more people figuring in on the deal than would be the case if Federal Laboratories were to make the sale direct. This is due to the fact that we have had to first establish our contacts over here, and it will be necessary to take care of these contacts.

Fortunately, or unfortunately, our contacts are all big ones and they just won't be bothered unless the financial return is commensurate. They are not interested in small stuff.

You are out to move guns and I feel confident that we can help you move them just as well as Federal Laboratories; that is, if we can make it worth our agents' while.

I do not see where Mr. Young will have an objection for he has granted us discounts on all of his equipment and gas that we may sell. If an order comes in for guns there will be an order for gas, etc., to go along with it. In other words, he also stands to profit—so it is reciprocal all along the line including compensators.

Next, in regard to Nicaragua. This is a foreign sale and does not come under Federal Laboratories' existing agreement for domestic sales. If you know the history of the T. S. M. G. in Nicaragua you will know that at the beginning the powers that be were against the gun, speaking of the Marines. They did not even wish to give the gun a trial on the trails. Fortunately, we had an active agent who gave many demonstrations and after intensive effort on his part he finally brought the necessary high ranking officers around to his point of view. Then the playing up of the gun in the reports was not accidental. True, the gun did its stuff—but so did the other weapons. Next, our friend was made ordnance officer of the Nicaraguan Government and the initial orders for T. S.

M. G.'s for the Nicaraguan government came through. All the above occurred in Nicaragua.

You are now getting what will probably be the final order before the Marines pull out. A new government, the Sacasa gov. has come into power—a new deal all around. I have asked for commissions on foreign sales in general which we are able to make. But here is what I plan doing specifically. I want Nicaragua. If you can grant this I will have our friend make the necessary contacts probably the minister of war. We will have the commission on this sale of 61 guns to pave the way, and it ought to make a nice incentive for sales to follow. Then, when the Marines pull out, the good work will continue. If this is not done, this order will probably be the last except for replacements. On the other hand, if we have the right party down there working for us and receiving a commission, the situation presents an entirely different picture.

Would you kindly draw up the necessary papers, similar to the ones you are now making out for Young. You see, I really have to have some credentials before I am in a position to go ahead. In this agreement will you kindly include Nicaragua specifically?

Next, if you see what I am working for, and I believe you will, will you kindly let me know what the commission will be on this Nicaraguan order so that I may go ahead and make my plans. The commission should be the same as for other foreign sales.

The time is short before the Marines pull out, and there is much to be done by air mail, so the favor of an early reply is requested.

I am looking into the future on this stuff and I am out to help you sell guns. As you know, our record to date has not been bad, and I am certain that my plan is going to work.

I forgot to mention, but will you kindly let me know what the commission is on spare parts? The best thing, if possible would be to send me the dope on commissions on everything that you handle.

With best wishes, I am

Cordially yours,

(Signed) R. M. Cutts, Jr.,
Cutts compensator.

P. S.—I do not know the price of the last guns that you sold to Nicaragua. If they were $147.50, they were at the U. S. Govt. price and they never should have gone out at this price. It cannot be continued after we withdraw and the time to make the break is now. I feel that this can be done and save face with the new model compensators providing you stamp the guns as per the Army specifications. The new gun could then be called a new model and the price of $225.00 could be charged. If the Marine Corps sold the guns to Nicaragua at the U. S. Govt. price I feel that they had no business doing it. At any rate we must let that pass and build for the future. Please let me know the price you are quoting on these guns and the price quoted on the old guns as soon as possible and I shall see if I cannot arrange things on this end. It may be possible to do so without killing the deal. Of course, I shan't do that.

R. M. C., Jr. (Sgn.)

Exhibit No. 1211

[Copy]

S.E.B.S.,
Paris, le. July 19th 1934.

Lieutenant R. M. Cutts,
Headquarters U.S. Marine Corps,
Washington.

Dear Dick: The clipping from the Washington Post duly received and most hearty congratulations. When will the big event take place?

Your telegram as follows:

Conferring Russian next week. Will "Carnot result. Bigard has 6 rifle compensators. His contract now up for renewal. Writing Hotchkiss. Contact Neuhaus on compensated Schmeisser. Thanks."

has been received, also a copy of the letter which Neuhaus recently sent to you.

The French army is very interested in the application of compensators to submachine guns which they find are practically valueless because of the jump. They are not interested in rifles because of the bayonet, nor are they interested in the larger machine guns because they have very firm basis, and the compensator would interfere with the flash preventer which they use at nighttime and which, they feel, is more valuable than the compensator.

They have at least one or more models of every type of machine guns, so the thing for you to do is to send immediately a compensator for a Thompson or other similar machine gun, properly labelled as to sizes, bullets, etc. . . . and with complete instructions.

The letters of recommendation, etc. . . . which you sent me are being translated by Carnot, and he decided not to remove anything from the War Department until he had heard from you, so that we could not in any way interfere with the business in case Bigard is to handle it.

I am very hopeful that business can be done in submachine guns within six months, and I will try to find out if Bigard was sent any compensators for machine guns, which he did not mention, and he only showed us one compensator which he got out of a cupboard near his desk; perhaps there were others there.

I have spoken about the business of interesting private manufacturers, and a Mr. P. Cunisset-Carnot, cousin of Claude, is interested in approaching some of the manufacturers as he is a well-known hunter and sportsman and feels that, even if not used for regular production, a considerable number of guns could be fitted with compensators each year among the limited number of people who go hunting.

Claude Carnot feels that there is so little busines to be had in the sporting field that it is scarcely worth going after as compared with the introduction of the unit into the army, for, as he says, what is there to hunt and where?

As soon as he hears from you and is in a position to collect the various material scattered around, we will turn the compensated rifles over to Cunisset, as the army will be through with them, and Cunisset will take them around to gun manufacturers, repair shops, etc. . . . .

As to Germany, the Schmeisser gun is in Germany and both Germany and Belgium export rifles. However, as you know, no money in the way of royalty is allowed to be sent out of Germany, and therefore it will not do you much good if they manufacture and you will flood the markets of the world with compensated guns on which you will receive no royalty and which will be sold at prices less than is possible with guns manufactured in U.S.A. and elsewhere on which you will have royalty paid. I will see Neuhaus next week and talk over the matters with him as he cannot or will not see this face of the matters, being such a loyal German. Have you any patents in Japan, for they will probably sell machine guns, compensators and all, for $6 or 7, if they follow their present practices of selling watches for 15 cents, bicycles with tires for $2 and the equivalent of a Ford automobile for $150. . . . .

I may still be here in time to receive the letter which you will write to Claude Carnot and I will be able to help him getting business under way.

With sincere regards,

Ever yours,

George.

11 FRANCIS ST., NEWPORT, R. I., *August. 11, 1934.*

MR. BERNARD S. BARRON,
10 E. 40th St., New York City.

DEAR PETE: I am at home as you can see by the heading, for father is quite seriously ill. I expect to return to Washington around the twentieth.

In the meantime the inclosed inquiry came in and was fowarded up here. Needless to say, I am quite helpless at the present time due to force of circumstances. It looks as though it is bona fide.

I would suggest that you get in touch with the quartermaster at Washington and request a list of those firms from whom the Marine Corps purchases khaki, also the name of the company to whom a contract was last awarded. You will then be in a position to get bids. Since you are in the Reserve you should be able to get a line on the price if you request same properly.

As soon as you get this dope shoot it along to me and I'll try to get the interested parties lined up.

Sorry that I am out of the running at this time but I believe you understand.

My very best to you and Pat,

As always,

——— ———,

EXHIBIT NO. 1213

WASHINGTON, D.C.,
2400 16th Street NW., September 5, 1934.

From: R. M. Cutts, Jr.
To: The Special Committee Investigating the Munitions Industry, U.S. Senate.
Subject: The Governmental Service Company.

1. The Governmental Service Company was originally organized on the possibility of acting as purchasing agents for the Government of Santo Domingo.

2. I soon realized that it would not be proper for me to be actively associated with a company engaged in this type of business.

3. It was therefore decided to continue the Governmental Service Company as a "blind."

4. All inquiries on equipment of various kinds that came into the Governmental Service Company have been referred to the proper manufacturing companies. This was necessary in order that the Governmental Service Company would appear to be operating as a company. However, this company has made no sales, nor has it accepted any commissions.

5. A great many "so-called" agents from other countries make inquiries from the Governmental Service Company. During the necessarily involved correspondence resulting therefrom the true status of the agent is generally quickly ascertained.

6. The above method of operation acts as a safeguard to prevent Cutts compensators falling into the hands of irresponsible parties.

7. There is practically no overhead in conjunction with the operation of the Governmental Service Company inasmuch as it operates from the office of Mr. Bernard S. Barron, 10 East 40th St., New York City, and its operation has proved of value to Cutts compensator only along the lines indicated.

R. M. CUTTS, JR.,

Exhibit No. 1215

Memorandum With Respect to the Settlement of Contracts Entered Into by the United States With the Dupont Engineering Company

I

In October 1917 Congress passed an urgent deficiency appropriation bill providing, among other things, for the manufacture, prior to September 1, 1918, of 300,000,000 pounds of powder. At that time the powder situation in this country and abroad had reached a very critical stage. The United States had outstanding orders for 67,000,000 pounds of powder for the Army, and 56,000,000 pounds of powder for the Navy, and practically the entire capacity of the plants in this country was taken up until June 1918.

The situation in France was such that its factories working at their utmost capacity fell short nearly 19,000,000 pounds per month of the quantity required by the French armies, and to add to their troubles, their stock of nitrate of soda would last only until December 1917. Their supply had to be brought from Chile, and the submarine had played such havoc with transportation that the question of securing additional supplies was difficult and uncertain.

General Pershing, in a cable dated August 23, 1917, recommended that the United States furnish all powder and explosives needed for present contracts with the French Government, and further, that the United States Government prepare to furnish by December 1917 three hundred tons per day of explosives and two hundred tons per day of powder for French consumption.

The procurement of powder became one of the pressing problems before the War Industries Board. That Board in its survey determined that the total estimated requirements of powder for the Allies and the United States to be produced in the United States up to November 1, 1918, was 1,016,748,000 pounds and that the capacity of the plants in this country was about 472,000,000 pounds of powder—in other words, that our factories could produce less than half of all of the powder needed.

The powder-making plants of the United States had increased their capacity from slightly over 1,000,000 pounds per month in August 1914 to approximately 35,000,000 pounds per month in October 1917. The increases in plants and facilities of our nationals had been paid for by the Allied Governments, and the President of the United States very properly established the policy that we would assist the Allies in taking full advantage of the facilities they had amortized. To secure the supply of powder needed by this Government and its Allies, it became necessary to construct additional plants, and steps were taken immediately by the Ordnance Department and the War Industries Board to provide these additional facilities.

II

On December 15, 1917, Mr. D. C. Jackling was appointed director of explosives without compensation, and was given a free hand and full authority over the work of constructing and operating powder plants.

Mr. Jackling had been prominently connected with large and successful mining enterprises, but up to that time he had no experience in the construction and operation of smokeless powder plants. Needless to say, he entered into a difficult undertaking.

Upon Mr. Jackling's appointment as director of explosives, he entered into a contract with the Thompson-Starrett Company for the construction of a smokeless powder plant at Nitro, West Virginia, near Charlestown—this plant to be constructed under the direct supervision of the Government. Mr. Jackling soon realized that a difficult task confronted him, and that, in view of the urgent need for powder, it was necessary to secure the assistance of others experienced in the construction and operation of powder plants. He, therefore, solicited the aid of the Du Ponts, as the concern best fitted to construct and operate smokeless powder plants. Mr. Jackling, therefore, entered into negotiations with the Du Ponts and on January 24, 1918, made a tentative agreement, which later became an *agency contract* dated January 29, 1918, under which the Du Pont Engineering Company agreed to construct and operate a smokeless powder plant near Nashville, Tennessee, capable of producing 500,000 pounds of smokeless powder per 24-hour day.

E. I. du Pont de Nemours & Company had not been engaged in the business of acting as an agent, and did not desire to do so. The Du Pont Engineering Company, with all of its capital stock owned by E. I. du Pont de Nemours & Company, had been organized in the fall of 1917, and in view of the fact that E. I. du Pont de Nemours & Company did not desire to act as agent, and also for accounting reasons, the contract was entered into between the Du Pont Engineering Company and the United States. E. I. du Pont de Nemours & Company agreed to furnish the Du Pont Engineering Company the services of all of its departments, thereby securing to the Government precisely the same service that it would have received if the contract had been entered into with the parent company.

Under the agency contract, the Du Pont Engineering Company was to be paid a fee of $500,000 for designing and preparing the plans for the plant, and in addition thereto, a profit of 3% on the cost of the construction of the plant, which profit of 3% was limited to a maximum of $1,500,000. The estimated cost of the plant was approximately $50,000,000. The profit to the Du Pont Enginneering Company for the operation of the plant was to be a fixed compensation of 3½ cents per pound for each pound of powder produced, and 50% of the saving if the powder was produced below a certain base price stated in the contract.

The agency contract required that the Du Pont Engineering Company should first secure the approval of the special director on all drawings and specifications, and should follow all instructions issued by him from time to time ordering changes in drawings and specifications and for additional work. The written approval of the special director had to be obtained from time to time as authority for the Du Pont Engineering Company to purchase and procure material and labor, and for salaries and expenses of officers and employees. The United States was to make all disbursements through its own disbursing officers.

It was estimated that the first unit of the plant would be ready for operation in eight months and the entire plant was to be completed in fourteen months.

The office of the special director was located in New York City, and he also had an office in Washington. It was necessary that the Du Pont Engineering Company employees explain drawings, specifications, equipment, necessity for material to be purchased, prices, labor rates, etc., in order that the approval of Mr. Jackling might be secured from time to time. Obtaining such approvals resulted in serious delay in the construction of the plant.

III

In February 1918 the demand for smokeless powder became more and more urgent. Several divisions of our troops had reached France. The draft had called into service a tremendous number of citizens, and the special director was advised by the War Department that it was necessary to provide additional smokeless powder capacity, and it was suggested that a third plant be built similar to the two then under construction at Nitro, West Virginia, and Nashville, Tennessee. Mr. Jackling pointed out the difficulty in securing organization and talent to construct the third plant and recommended, as a more practical plan, the increase in capacity of the then existing plants in the United States and Canada, and the enlarging of the plants to be built at Nitro, W. Va., and Nashville, Tenn. He communicated his views on this matter to the president of the du Pont Engineering Company and asked his opinion as to what modifications of the terms of the agency contract of January 29th would be necessary. To his request the du Pont Engineering Company, on March 1, 1918, replied in part, as follows:

"You have explained to me the urgency of this work, as well as the necessity of its undertaking by E. I. du Pont de Nemours and Company. It is only this necessity that warrants our considering the burden. The latter is so great that the question of compensation is of less importance than the question of the saving of man-power, especially that of the administrative end of the business.

"I therefore urge upon you to arrange that the carrying out of this work may be placed in the hands of our company entirely without hindrance as to supervision and approvals. In return for this concession, we are prepared to place the question of compensation beyond possibility of criticism."

Briefly, the Du Pont Engineering Company proposed, in subsequent conferences, in line with the letter above quoted, that if the Government desired to enter into a new contract with the Du Pont Engineering Company and give that company authority to proceed with the construction and operation of the plant in its own way, and according to the methods and plans, as used by E. I. du Pont de Nemours and Company in the construction and operation of its plants, the Government to bear all costs and expenses of every character and description incurred or made in connection with the construction and operation of the plant, the Du Pont Engineering Company would waive all profit in connection with the construction work, including the profit which had already accrued—the profit on operation to remain the same as in the agency contract. This proposal the United States accepted, and on March 23, 1918, a new contract, approved by the Acting Secretary of War, superseding and cancelling the agency contract of January 29, 1918, was entered into, under and by the terms of which the only profit that could be paid to the Du Pont Engineering Company on account of construction was the nominal profit of $1.00.

Under the contract of March 23, 1918, the capacity of the plant was increased from a 5-unit plant, estimated to produce 500,000 pounds of smokeless powder per day, and at an estimated cost of approximately $50,000,000, to a 9-unit plant, estimated to produce 900,000 pounds of smokeless powder per day, at an estimated cost of approximately $75,000,000, which estimate was later increased, by amendment to the contract, to $90,000,000, due largely to the increased cost of labor, material, and freight rates.

Under the contract of March 23, 1918, the Du Pont Engineering Company was to receive an advance of $18,750,000 on account of construction work, without interest. Prior to the execution of the contract, it was carefully examined by the Secretary of War, by Mr. Stettinius (then Second Assistant Secretary of War), by Colonel Samuel McRoberts, Chief of the Procurement Division, Ordnance Department, and by Major Mudd (representing Mr. Jackling), and, although Mr. Stettinius pointed out the fact that the contractor would be reimbursed for every expenditure, even to the extent that if the contractor made mistakes the Government would have to pay for them, the Secretary of War stated that he would approve the contract, and it was thereupon executed.

IV

Thereupon Mr. Jackling ceased to have supervision of the construction of the smokeless powder plant at Nashville, Tenn., and the plant was constructed and operated by the Du Pont Engineering Company with such diligence that the first unit was in operation and powder was actually produced on July 2, 1918, a little over three months from the date of executing the contract.

The plant was constructed at what is known as Old Hickory, Tenn., about twelve miles from Nashville, in a bend of the Cumberland River. Approximately 6,000 acres of land were acquired for the purpose.

The Du Pont Engineering Company built a railroad seven miles long to connect the plant with the main lines of the Tennessee Central Railroad and the Nashville, Chattanooga and St. Louis Railroad. They constructed huge switching yards with miles of spur track in and about the plant. It was necessary to construct a village with all the adjuncts thereof, such as schools, hospitals, fire departments, water supply, etc., to care for the tremendous number of employees at the plant.

The Du Pont Engineering Company employed all the local labor that was possible, but was obliged to import a large number of employees from other sections of the country, wherever they could be obtained, to carry on the work of construction and operation. At one stage of the work approximately 43,000 employees were carried on the pay roll.

On November 11, 1918, when the armistice was signed, the entire plant was approximately 93% completed. The du Pont Engineering Company was able to produce powder at the Old Hickory plant at a low cost, and when we take into consideration the magnitude of the task, the performance by the du Pont Engineering Company must always be considered as a remarkable achievement.

V

In addition to the contract for the construction and operation of the Old Hickory powder plant, the du Pont Engineering Company entered into four additional contracts with the United States for the construction and/or operation of explosives plants, making a total of five contracts, as follows:

Contract numbered P–4755–711–E; contract numbered P–2337–1228–A; contract numbered P–3509–643–E; contract numbered P–9050–960–E; contract numbered P–15271–1433–E.

Contract War Ord. P–2337–1228–A, dated April 12, 1918, referred to above, for the construction and operation of a loading plant for shells and casings at Penniman, Va., superseded and canceled an agency contract dated December 31, 1917, between the du Pont Engineering Company and the United States. Under the agency contract of December 31, 1917, the du Pont Engineering Company was to be paid, in addition to the cost of the construction and equipment of the plant, a sum equal to 10% of the cost of construction as compensation and profit.

The construction of the Penniman shell loading plant was also under the direction of Mr. Jackling, and the same delay was encountered in the work of construction under that contract as was encountered under the agency contract for the construction of the Old Hickory powder plant. The du Pont Engineering Company, therefore, submitted a proposal to the Government that if the Government would agree to a contract similar to the contract of March 23, 1918, for the construction and operation of the Old Hickory powder plant, the du Pont Engineering Company would waive all profit on account of construction of the Penniman shell loading plant This proposal was accepted by the Government and on April 12, 1918, a new contract, similar to the Old Hickory contract, was entered into, the du Pont Engineering Company waiving all profit on account of the construction work.

All of the five contracts, specified above, contained similar provisions with respect to reimbursing the du Pont Engineering Company for all costs and expenditures incurred. As an example of the provisions of these contracts, with respect to reimbursing the du Pont Engineering Company, we shall quote the following from the contract dated March 23, 1918, for the construction and operation of the Old Hickory powder plant:

"CONSTRUCTION

"Art. I.—'The contractor agrees to proceed with a survey of the site and general layout of the plant, to design and prepare all plans, drawings, and specifications, to procure all the necessary labor and materials, and to construct on a site owned by the United States, at or near Nashville, Tennessee, a complete plant for the manufacture of smokeless powder to consist of nine (9) sections or units, each with a capacity of one hundred thousand (100,000) pounds of smokeless powder per day of 24 hours,' etc.

* * * * * * *

"Art. II.—'The contractor is hereby authorized to do all things necessary or convenient in and about the construction of the plant including the purchase and procurement of all materials and labor necessary therefor, except that the United States shall furnish the requisite amount of platinum, estimated at approximately 13,000 ounces, to be paid for by the contractor and charged to the cost of construction. In order that the contractor may expedite the work of construction, it may in its discretion, from time to time, pay extra compensation for materials or services, subject, however, to the approval of the contracting officer, which extra compensation shall be charged to the cost of construction.* * *

* * * * * * *

"'The United States shall reimburse the contractor for all costs and expenses of every character and description, incurred or made in connection with the construction and equipment of the plant, or any part thereof, including the pro rata share properly attributable to the construction work under this contract (a) of the expense of maintaining the contractor's offices at Wilmington, Delaware, or elsewhere, and (b) of the salaries and traveling expenses of all officials, and employees of the contractor and of E. I. du Pont de Nemours & Company.

"'In order that the work of construction may proceed with the utmost promptness and dispatch, the contractor shall, from time to time, make the expenditures and pay the costs aforesaid, and the United States, upon presentation of satisfactory evidence of such expenditures and payments, shall promptly reimburse the contractor therefor.'

* * * * * * *

"OPERATION

"ART. IV.—'(a) As each section is completed the contractor shall forthwith proceed to operate it and shall do all things necessary or convenient in and about the operation of the plant, or any part thereof, including the purchase and procurement of all necessary materials and labor therefor. The contractor shall not, except with the written consent of the contracting officer, purchase raw materials for the manufacture of powder in excess of the amounts required for the complete fulfillment of this contract. The United States shall bear all costs and expenditures of every character and description, incurred or made in connection with the operation of the plant, or any part thereof, including the cost of labor, materials, and their conversion, repairs, power, transportation, general works expense, works accidents as provided in article XIV hereof, plant superintendence, maintenance of guards, and also the pro rata share properly attributable to the operation of the plant, or any part thereof, (1) of the cost and expense of maintaining the contractor's offices at Wilmington, Delaware, or elsewhere; and (2) of the salaries and traveling expenses of all officials and employees of the contractor and of E. I. du Pont de Nemours & Company.'

* * * * * * *

"ART. IX.—'The contractor shall keep complete records as to all construction and operation expenses, all of which records shall at all times be open to the inspection of the United States or its duly authorized representatives. The United States may examine all work as it progresses and shall audit all accounts, but in such a manner as not to interfere with the contractor proceeding with the construction and operation in any manner and by any means that in its judgment will best produce the desired results under this contract.'

"ART. X.—'To facilitate prompt payments to the contractor, the United States shall detail paymasters at the plant and at the contractor's home office. Any payments by the United States shall be subject to correction for errors, if any.'"

All of the above contracts were suspended, following the signing of the armistice, and early in 1919, the United States took over all the plants, equipment, and materials.

VI

During the period of construction and operation of the above plants, the United States had a corps of employees engaged in checking the receipt of material and auditing expenditures by the du Pont Engineering Company.

After the armistice, the du Pont Engineering Company decided that it was inadvisable, in the interest of the Government, to carry a large force of employees to complete the construction, and to carry on the operation of the plants, and rather than expend money for paying wages and using up a lot of material that could be sold commercially, they disbanded their organization as rapidly as possible.

After the plants were turned over to the Government early in 1919, the Philadelphia district ordnance office was charged with the work of settling all five contracts. That office appointed a corps of auditors and instructed them to check up all expenditures of every nature made by the du Pont Engineering Company during the period of performance. These auditors carried on this work up to and including May 1922 at an expense to the United States of approximately $1,000,000.

During the period of this audit there arose a number of questions concerning the expenditures made, and these questions were submitted to the War Department Board of Contracts and Adjustments, or to the War Department Claims Board. Such questions as these boards were unable to settle were finally ruled upon by Mr. Wainwright, Assistant Secretary of War.

In the settlement contract, herewith submitted, the rulings of the Assistant Secretary of War and of the above boards have been followed, and where a ruling was adverse, deduction has been made in the amount of expenditure claimed by the Du Pont Engineering Company.

One of the points that came before the Assistant Secretary of War was with respect to the fee to be allowed Mason & Hanger Company, subcontractors of the Du Pont Engineering Company on construction work. The legal aspects of this question were such that the Secretary of War decided to refer the matter to the Attorney General for an opinion. The Attorney General ruled that the fee as paid to Mason & Hanger was correct, and in accordance with the terms of the contract, and that the Du Pont Engineering Company should be reimbursed therefor.

While the above matter was pending before the Attorney General, rumors in connection with the construction and operation of the Old Hickory plant came to the attention of the United States district attorney, at Nashville, Tenn., who reported to the Attorney General that fraud and crime had been committed by the Du Pont Engineering Company during the period of construction and operation of the Old Hickory powder plant.

The charges that the district attorney made were referred to the war transactions section of the Department of Justice, and that section called upon the War Department for its records in the case. All of the records of this office were placed at their disposal. Special counsel were appointed to examine into these various contracts that are covered by this settlement, and the result of the investigation, as made by the Attorney General, is embodied in a letter (exhibit A), addressed to the Secretary of War, under date of August 5, 1925, from which we quote the following:

"An extensive investigation of the charges of fraud or crime above referred to has failed to disclose reasonable or probable grounds for believing that during the performance of the contracts in question the du Pont Company committed the offenses with which it has been charged, or any crimes, and in my opinion there is no warrant either for further investigation along these lines or for the institution of proceedings against the company based upon charges of fraud or crime."

The Department of Justice, in the letter above referred to, question certain of the expenditures made under these contracts as being proper charges thereunder. These expenditures fall under six heads and we quote from their letter, as follows:

"The expenditures which I have in mind may be classified, as follows:

"1. So-called 'meritorious bonuses.'

"2. Thirty days' pay on discharge of men employed on the work.

"3. Return transportation and moving expenses furnished employees to the places from which they had come in order to engage in the work.

"Payments made to discharged employees for living expenses after they arrived at their home stations and the cost of returning their families to their homes, would, in my opinion be governed by the same principles as the items numbered 2 and 3 above.

"4. Payments to banks for losses which the banks sustained in establishing branches at the points at which work was being performed under the contracts.

"5. A sum variously stated as $45,572.27 or $42,354.98, being the excess of the price of certain cotton shavings above the price prescribed by the contract.

"6. Expenses incurred by the contractor in the course of the Government's audit."

With respect to the first three of these items, the Attorney General states, as follows:

"I realize that the contracting officer approved the meritorious bonus before payment and approved or ratified the other bonuses after payment under the contract. However, he had no authority to approve payments of extra compensation unless made to expedite the work of construction. If not made for that purpose, his approval would be without warrant in the contract. Nevertheless, in view of the broad terms of the contract, the length of time which has elapsed since the payments were made, the enormous task performed by the contractor, the urgent necessity for not disturbing the labor market by turning loose upon it numbers of penniless men, and the possibility that under such circumstances a court might be inclined to indulge every intendment in favor of the Du Pont Company, the contracting officer's approval or ratification of the bonus payments might possibly be regarded as conclusive of the purpose for which they were made and as binding upon the Government. Accordingly, I do not feel that in case of a legal action to recover the amount of this bonus payment the Government could feel absolute assurance of success.

"2. Thirty days' pay on discharge.

"3. Return transportation and moving expenses.

"These two classes of bonus payments, in my opinion, are governed by the same considerations as the so-called meritorious bonus."

VII

Each one of the points raised by the Attorney General had been previously carefully considered by representatives of the Secretary of War and the findings are as follows:

1. *Meritorious bonuses.*

The above item was incurred under the following contracts: P–4755–711–E, Old Hickory smokeless powder; P–2337–1228–A, Penniman Shell loading plant, P–15271–1433–E, Ives, T.N.T. plant.

During the period of negotiations that led up to the making of these contracts, the Du Pont Engineering Company, as evidenced by letters of its president in the files in the Ordnance Department and the War Industries Board, stressed the fact that it was their policy to award employees of their organization certain bonuses for meritorious services, and it was made clear to all the representatives of the United States engaged in the negotiation of these contracts that the Du Pont Engineering Company intended to pursue this policy, for only by so doing could it expect to get the maximum results.

The War Department was in the position that it had to have these various plants constructed as readily as possible, and if, by the payment of a bonus to certain of the employees for meritorious work performed, it could get the plants erected and in operation earlier than the time contemplated, it was in the interest of the Government to pay such bonuses. Accordingly, there was inserted in the contracts a clause reading as follows:

"In order that the contractor may expedite the work of construction, it may, in its discretion, from time to time, pay extra compensation for material or *services subject, however, to the approval of the contracting officer,* which extra compensation shall be charged to the cost of construction."

It requires no argument to show that a bonus for meritorious services could not be paid until the completion of the work, for until such time it could not be determined which of the employees were entitled to receive same.

That the work was prosecuted with dispatch is beyond question.

When contract P4755–711E for the Old Hickory powder plant was negotiated, it was the opinion of all concerned that the first unit would not be ready for operation before eight months from the date when work was begun, and that each month thereafter another unit would be put in operation. Ground was broken on March 8, 1918, and powder was actually being produced in the first unit on July 2, 1918, and the entire plant was 93% completed on the date of the armistice.

We mention the above merely to show that the work was expeditiously performed, and the Du Pont Engineering Company, realizing its obligation to certain of its employees who made this performance possible, prepared a list of such employees and the amount of extra compensation or bonus which they proposed to pay for meritorious services. This list was submitted to the contracting officer in April 1919, and, in accordance with the contract, the contracting officer, who himself was an attorney, ruled that, according to the terms of the contract, the United States was obligated to pay such bonuses, and they were thereupon paid by the Du Pont Engineering Company.

In view, therefore, of all the circumstances of the case—

(1) That the payments as made were first submitted to the contracting officer for approval and that such approval was given;

(2) In view of the ruling of Col. Morrow, vice chairman of the War Department Claims Board, dated November 19, 1921, that these meritorious bonuses should be allowed; and

(3) In the light of the statement of the Department of Justice that in case of legal action to recover, the Government could not feel absolute assurance of success:

we have in our settlement contract included the payments already made as meritorious bonuses. The total amount involved is $199,650.

2. *Thirty days' pay on discharge of men employed on work.*

For years it had been the practice of the E. I. du Pont de Nemours & Company to pay salaried employees a month's salary at the time of discharge, this salary being in lieu of a month's notice. Upon the signing of the armistice, the Du Pont Engineering Company endeavored to close down the work as promptly as possible, so as to save the Government unnecessary expense. The large force of employees engaged on the work at these different plants was disbanded as rapidly as the conditions would permit, and salaried employees, when their work reached the point where their services were no longer needed, were given thirty days' pay in lieu of notice of discharge, as was the practice of the parent company. The action of the Du Pont Engineering Company in making this payment was approved by the contracting officer as being an item of expense under article VI of the contract which reads as follows:

"When the operation of the plant shall cease, or upon termination or cancellation of this contract under article XV, the United States shall reimburse the contractor for all costs and expenses of every character and description incurred or made in, or connected with, the construction, equipment, or operation of the plant, or any part thereof, including the cost of all labor, freight, and all apparatus and materials purchased, whether delivered or undelivered, in connection with the construction and equipment of the plant or the operation or contemplated operation thereof; all obligations of the contractor incurred hereunder, outstanding at the date of such cessation or termination or which may thereafter arise, shall be assumed by the United States and the United States shall save harmless the contractor in respect of any liability whatsoever in connection therewith. At the option of the United States, the contractor shall assign or transfer to the United States, or its nominee, all contracts then outstanding entered into by the contractor hereunder."

The remarks of the Department of Justice, referred to under the heading "Meritorious bonuses", apply with equal force to this item. The question of this extra compensation was made the subject of study by the War Department Claims Board, and Colonel Morrow, vice chairman of that Board, on November 19, 1921, ruled that this item was an allowable expense, and the payment therefore has been included in this settlement contract.

3. *Return transportation and moving expenses furnished employees to the places from which they had come in order to engage in the work.*

During the period of construction and operation, it was necessary to bring large numbers of employees from various points in the United States to the plants which were being erected and operated under these contracts. In some cases these plants were located at considerable distances from large centers of population, and it was necessary to pay the expenses incident to the transportation of these employees from the point at which they were hired, to the plant, and it was found necessary to assure these men of their return transportation when the work was terminated. As stated before, the Du Pont Engineering Company very properly stopped their construction work and disbanded their operations as soon after the armistice as possible. This threw large numbers of men and women out of employment. Many of these people had no funds with which to return to their homes. The policy of the War Department at that time was not to throw large numbers of people out of employment, and create undue hardships, and so the Du Pont Engineering Company, in accordance with its assurances to these employees, paid their transportation to other centers where the employees believed their services could be utilized, relying on the United States to reimburse them for such travel expenses, in accordance with the contracts under discussion. It so happened that in some cases the Du Pont Engineering Company paid travel to points farther distant than those from which the employees came, and the matter became the subject of consideration before the War Department Claims Board and The Assistant Secretary of War. The contracting officer had previously ruled that the payments, as made by the Du Pont Engineering Company, were just and proper expenditures under the contracts, but the War Department Claims Board and The Assistant Secretary of War reversed the ruling of the contracting officer and decided that only such part of the payments for transportation as represented the travel to a point no more distant than that from which the employee had been hired should constitute an expense under these contracts. In accordance with the ruling of The Assistant Secretary of War, that portion of the expenditures of the Du Pont Engineering Company in excess of the cost of transporting employees to a point no more distant than that from which they were obtained, was disallowed and stands in this settlement contract as a disallowance.

Again, we might add that the remarks of the Department of Justice, referred to under "Meritorious bonuses" with respect to the doubtful possibility of recovering all or any part of this payment, apply with equal force to this item.

4. *Payments to banks.*

The total expense charged to the United States under this item is $33,700.62. The actual amount paid by the Du Pont Engineering Company was some $7,000 in excess of this item, and relates to the contract at Penniman, Va. The expense which is allowed, viz, $33,700.62, applies only to the Old Hickory powder plant.

As we have stated heretofore, this plant was located approximately twelve miles from the city of Nashville, Tenn., and in the earlier period of construction the employees found it necessary to leave the plant and go to Nashville to get their checks cashed. As the banks in Nashville were open only until 3 o'clock in the afternoon, there was a considerable loss of time after each pay day, by reason of employees being absent. To get around this, the Du Pont Engineering Company conceived the idea of paying these men at the plant and it was estimated that the expenses of providing the facilities to pay these employees during the period of the contract would cost the United States approximately $75,000. If an arrangement could be secured with a bank in Nashville to handle the funds and to pay these employees at the plant, the Du Pont Engineering Company believed that the bank could do it more economically than the Du Pont Engineering Company, and further that these employees would not have to absent themselves from their work after each pay day. Accordingly, an arrangement was made by the treasurer of the Du Pont Engineering Company with the Fourth and First National Bank of Nashville, Tenn., by which that bank established a branch at Old Hickory under an agreement with the Du Pont Engineering Company that it would be reimbursed for any losses that it might sustain in providing such facilities.

In the Spring of 1918 a branch was established by the Fourth and First National Bank, and it functioned in the capacity of cashing checks and handling the accounts of these employees all through the period of construction and operation. It was clearly to the interest of the Government to have some such institution at the site of the work. It did away with the necessity of employees absenting themselves after each pay-roll period; it insured prompt payment in cash to the employees on each pay day; it enabled those who lived in the village to carry accounts, etc.; all of which cost the bank a considerable sum of money, and in return for which the bank, by reason of deposits made with it, derived some benefit.

When the work was terminated and the Du Pont Engineering Company were ready to turn over the plant to the United States, the bank set up a statement of account, in which it showed the moneys it derived, by reason of interest on balances on deposit, and against that it set out the losses which it sustained by reason of payment of salaries to its employees in the branch bank, and other expenses incident thereto,—the difference being the net loss above referred to.

Under the agreement which the Du Pont Engineering Company made with the bank, they believed they were obligated for that loss, and under the estimate prepared by the treasurer at the time he entered into the agreement, the United States was saved approximately $42,000 assuming that the treasurer's estimate was correct. The Du Pont Engineering Company believed that this was a proper charge under the contract, and when the question was presented to the Assistant Secretary of War for decision, he ruled on April 12, 1922, that this was an allowable expense under the contract.

It will be noted that the Attorney General, in his remarks, makes the following statement:

"Should it be established to your satisfaction that these payments were made pursuant to agreements between the Du Pont Company and the respective recipients antedating the performance by the banks of the services for which the payments were made, I think they would be proper charges against the Government. The facts presented to me, however, fall short of establishing this.

"One of these claims, amounting to approximately $7,000, appears to have been withdrawn by the Du Pont Company itself. Another amounting to approximately $33,000, was denied by various War Department boards, and upon appeal denial was affirmed. It was paid by the Du Pont Engineering Company only after these denials."

The facts are as outlined in my previous statement. An agreement was actually made between the respective recipients antedating the performance of the banks. This was properly established before the Assistant Secretary of War made his decision.

The claim of $7,000, which was disallowed, refers to the Penniman contract, and that still stands as a disallowance, because no such arrangement was made at Penniman, as was made at Old Hickory. Both questions, viz, the payment of the $7,000 at Penniman and of the $33,000 at Old Hickory, were brought up for decision, and the Penniman payment was disallowed by all of the various boards, but the payment of $33,000 to the bank at Nashville was allowed by the Assistant Secretary of War, because it was conclusively shown that an agreement had been entered into in that case.

5. *A sum variously stated as $45,572.27, or $42,354.98, being the excess of the price of certain cotton shavings above the price prescribed by the contract.*

The amount involved, according to the records of this office, is $42,354.98. According to the terms of its contract, the Du Pont Engineering Company were authorized to pay not more than 20% in excess of certain base prices for raw materials, as set out in a schedule. The base price of cotton shavings was 4.22 cents per pound; subsequently, they were authorized to pay not more than 25% in excess of the base price, or 5.275 cents per pound, delivered at Nashville, for the reason that they were unable to procure cotton shavings for less than this amount. The Railroad Administration increased the freight rates on this class of material and the Du Pont Engineering Company was faced with a condition, where it either had to stop the manufacture of powder, because it could not buy shavings, delivered at Nashville, for the price stipulated in the contract, or await the approval of the contracting officer for an increased price.

On October 18, 1918, the Du Pont Engineering Company at a conference with the procuring officers, stated that the price should be 5¼ cents per pound, f. o. b. point of production, and confirmed their conversation by a letter of that date. The purpose of the confirmation was to have in writing the authorized approval of the contracting officer, which approval had been tentatively given during the conversation.

Confirmation of the increase price, however, was not actually forthcoming until November 8, 1918, but the Du Pont Engineering Company had secured a considerable quantity of this material, and paid the increased price, amounting in all of $42,354.98. When the auditors examined the payments made by the Du Pont Engineering Company for these cotton shavings, they took exception to the payment of the increased price. The matter became the subject of an appeal to the Assistant Secretary of War. It was pointed out to the Assistant Secretary of War that the increase in the price paid was due largely to the fact that the Railroad Administration had increased the freight rates; that the Railroad Administration was a part of the Government; that the increase in price paid accrued to the Government; and that, in fact, it was taking the money out of one pocket of the Government and putting it in another; and because of this state of facts, the Assistant Secretary of War ruled that the amount paid was an allowable cost under the contract, and has been included as a cost under this settlement contract.

6. *Expenses incurred by the contractor in the course of the Government audit.*— During the settlement of these contracts, it was necessary for the Du Pont Engineering Company to furnish the Government with records, information, and assistance in making the audit. The expense incurred in connection with this work was tremendous, and the Du Pont Engineering Company claimed that, under the terms of its contract, it should be reimbursed for the total amount. The War Department took the stand that the amount claimed by the Du Pont Engineering Company, included, among other items, the salaries and expenses of certain officers of the company, who were really defending the claims as distinct from the employees of the company, who were engaged in assisting in the audit of the accounts, and the Assistant Secretary of War ruled that only such part of the expense in connection with this audit as was incurred in explaining entries and such necessary rental of office space and traveling expenses as these employees incurred, was a proper charge under the contract.

Accordingly, the allowance included in this settlement contract covers only the salaries and expenses of the employees engaged in assisting the Government in making an audit of these contracts.

The Attorney General, in his letter, stated that "if the expenditures of the contractor in the course of the Government audit were made primarily for the purpose not of furthering and helping that audit and of furnishing information to the Government, but on the contrary, of opposing the Government's audit and of defending against and refuting such claims as the Government might raise against the company, the legality of charging the contractor's expenses in this audit against the Government would be open to serious question. This becomes a question of fact, of course, and I have not sufficient information before me to enable me to determine the matter."

The letter of the Attorney General confirms the views of the Assistant Secretary of War, and, as stated before, only such expenses have been included as were made primarily for the purpose of furthering and helping the audit, and furnishing information to the Government.

VIII

In the settlement contract herewith submitted we have left out all reference to disallowances. The Du Pont Engineering Company expended approximately $300,000 over and above the amounts allowed in this settlement, and it contended that the United States was obligated under the contracts to reimburse this expenditure as it was made in good faith; but the War Department held that the above sum which covered numerous items was not reimbursable. However, for the purpose of settlement, the Du Pont Engineering Company is willing to accept the findings of the War Department.

In conclusion, it may be stated that the entire cost of construction and operation, under the five contracts, is approximately $129,000,000, and on this expenditure, the Du Pont Engineering Company have made a net profit, after deducting Federal taxes, of approximately $400,000.

The net result of this settlement is that the Du Pont Engineering Company will make refund to the United States of $352,840.35.

P. J. O'Shaughnessy,
Major, U. S. A., Ret.

Exhibit "A"

Office of the Attorney General,
Washington, D. C., August 5, 1925.

00160/28592
Du Pont Co.
The Honorable, the Secretary of War.

My Dear Mr. Secretary: Heretofore you have referred to the Department of Justice for study and investigation certain criminal charges against the Du Pont Engineering Corporation in connection with its performance of certain war contracts with the Government. A reference of the case to this Department was also recommended by a committee of the joint board of survey of which the chairman was the Assistant Secretary of War.

Since, however, you indicated in your letter of May 23, 1924, that upon the determination of the question of criminality you desired the case returned to your Department for administrative settlement of the contracts involved, I have ordered the files returned to the War Department.

An extensive investigation of the charges of fraud or crime above referred to has failed to disclose reasonable or probable grounds for believing that during the performance of the contracts in question the Du Pont Company committed the offenses with which it has been charged, or any crimes, and in my opinion there is no warrant either for further investigation along these lines or for the institution of proceedings against the company based upon charges of fraud or crime.

However, in the course of this Department's investigation, its attention was called to and it made a study of certain expenditures of the Du Pont Company. On the basis of the information before me, I have concluded that there is grave doubt as to such expenditures being properly chargeable against the Government. I, therefore, felt it my duty to call them to your attention, especially since, in your letter of May 23, 1924, you invite my advice on any phases of the matter which may become the subject of special study by this Department.

The expenditures which I have in mind may be classified as follows:

1. So-called "meritorious bonuses."
2. Thirty days' pay on discharge of men employed on the work.
3. Return transportation and moving expenses furnished employees to the places from which they had come in order to engage in the work.

Payments made to discharged employees for living expenses after they arrived at their home stations and the cost of returning their families to their homes, would, in my opinion be governed by the same principles as the items numbered 2 and 3 above.

4. Payments to banks for losses which the banks sustained in establishing branches at the points at which work was being performed under the contracts.

5. A sum variously stated as $45,572.27 or $42,354.98, being the excess of the price of certain cotton shavings above the price prescribed by the contract.

6. Expenses incurred by the contractor in the course of the Government's audit.

My reasons for believing that on the basis of the information in my possession there is grave doubt as to propriety of charging the Government with the expenditures above mentioned, are very briefly as follows:

1. Meritorious bonuses. Some reasonable sanction for each payment must be found within the contract or else such payment was not properly chargeable to the United States. The language of article II seems to have been relied on by the Du Pont Company as supporting this class of bonus payments. Article II, it will be remembered, deals exclusively with the construction of the plant, not with its operations after completion, article II reads as follows:

The contractor is hereby authorized to do all things necessary or convenient in and about the construction of the plant including the purchase and procurement of all materials and labor necessary therefor * * *. In order that the contractor may expedite the work of construction it may, in its discretion, from time to time, pay extra compensation for materials or services subject, however, to the approval of the contracting officer, which extra compensation shall be charged to the cost of construction.

I will not discuss in detail the reasons for my conclusion that article II applies to construction only and not to operation, but, if I am correct in this, it follows that no authority can be found therein for any part of these bonus payments made to operating, as distinguished from construction employees.

As far as such payments to construction employees are concerned, I have seen no evidence except the unsupported statement of the company that such bonuses were paid pursuant to any agreement between the recipients and the company, made when such recipients were employed or subsequently, to the effect that at the end of the work they would receive a bonus for meritorious services. If it turns out that no such agreements were made or can be proved, then I question whether the Du Pont Company could charge the amount of this bonus against the Government on the theory that it expedited the work. Moreover, on the company's own statement, so far as my information extends, the only promises which they claim to have made to their employees were that the men transferred from E. I. du Pont de Nemours Company to the Du Pont Engineering were not to lose their status as employees of the former or their eligibility to a bonus or extra compensation under the system prevailing in the former company. But I call your attention to the fact that the system of bonuses of the parent or E. I. du Pont de Nemours Company did not contemplate the payment of cash bonuses under such circumstances as those arising under the Du Pont Engineering Company's contracts and did not involve the positive obligation to pay bonuses at all. The parent company did pay cash bonuses as a reward for inventions or conspicuous service, but these were paid on an entirely different theory from the bonus now in question.

Article II authorizes the payment of extra compensation for the purpose of expediting the work. A bonus after the conclusion of the work pursuant to no prior agreement could not have had that effect. Except article II, I find nothing in the contract which expressly or impliedly permits the payment of bonuses or extra compensation, or which, in the absence of previous agreement with the recipients would make the bonus contracts legal charges against the United States.

I realize that the contracting officer approved the meritorious bonus before payments and approved or ratified the other bonuses after payment under the contract. However, he had no authority to approve payments of extra compensation unless made to expedite the work of construction. If not made for that purpose, his approval would be without warrant in the contract. Nevertheless, in view of the broad terms of the contract, the length of time which has elapsed since the payments were made, the enormous task performed by the contractor, the urgent necessity for not disturbing the labor market by turning loose upon it numbers of penniless men, and the possibility that under such circumstances a court might be inclined to indulge every intendment in favor the Du Pont Company, the contracting officer's approval or ratification of the bonus payments might possibly be regarded as conclusive of the purpose for which they were made and as binding upon the Government. Accordingly, I do not feel that in case of a legal action to recover the amount of this bonus payment the Government could feel absolutely assurance of success.

2. Thirty days' pay on discharge.

3. Return transportation and moving expenses.

These two classes of bonus payments, in my opinion, are governed by the same consideration as the so-called "meritorious bonus."

4. Payments to banks. Should it be established to your satisfaction that these payments were made pursuant to agreements between the Du Pont Company and the respective recipients antedating the performance by the banks of the services for which the payments were made, I think they would be proper charges against the Government. The facts presented to me, however, fall short of establishing this. One of these claims, amounting to approximately $7,000, appears to have been at one time withdrawn by the Du Pont Company itself. Another, amounting to approximately $33,000, was denied by various War Department boards and on appeal the denial was affirmed. It was paid by the Du Pont Engineering Company only after these denials. In the absence o proof, such as is not contained in the files before me, to the effect that these banks were entitled to be repaid their losses under preexisting agreement with the Du Pont Company, I question that these payments constitute proper charges against the Government.

5. Excess price of cotton shavings. The contract prescribed limits for the price to be paid by the Du Pont Company for these shavings. The contractor exceeded this price but relies on a letter from the War Department authorizing and permitting an increase in that price. That letter, while doubtless sufficient authority for making subsequent purchases at the increased price, in my opinion does not support the contention of the contractor that the increase in price was to be retroactive.

6. Contractor's audit expenses. I suggest for your consideration, that if the expenditures of the contractor in the course of the Government's audit were made primarily for the purpose, not of furthering and helping that audit and of furnishing information to the Government, but, on the contrary, of opposing the Government's audit, and of defending against and refuting such claims as the Government might raise against the Company, the legality of charging the contractor's expenses in this audit against the Government would be open to serious question. This becomes a question of fact, of course, and I have not sufficient information before me to enable me to determine the matter.

You will appreciate that this letter contains only a brief summary of the reasons for my opinion as to the items mentioned. If, in the course of your administrative settlement of this case or at any other time, you desire a more full statement of these reasons, or if this Department can be of any service to you in that connection, I shall be glad to have you call upon me.

In passing, I also note that the War Department has disallowed claims of the contractor for general overhead expense of the E. I. du Pont de Nemours Company, and for an adjustment of profits on the bonus for saving amounting to $55,862.28, due to the manner in which freight between Nashville and Jacksonville, Tennessee, had been accounted for by the contractor. Both of these disallowances are, in my opinion, correct under the contracts.

In conclusion, may I emphasize the fact that, in accordance with my understanding of your wishes, expressed in your letter of May 23, 1924, this Department has made no general investigation into the payments made to the Du Pont Company in the course of its work under the contracts in question. I am therefore making no suggestions as to the propriety of any payments except the ones above mentioned. Furthermore, this Department has for obvious reasons made no effort to pass upon the accuracy or completeness of the War Department's audit in this case, except that, incident to this Department's investigation of the general payments above referred to, its accountants determined the amounts paid on account of the so-called "meritorious and discharge bonuses."

Sincerely yours,

(Sgd.) John G. Sargent,
Attorney General.

Exhibit No. 1216

BOND TO UNITED STATES OF AMERICA BY DU PONT ENGINEERING COMPANY, PRINCIPAL, AND E. I. DU PONT DE NEMOURS & COMPANY, SURETY. IN PENAL SUM, $20,000,000

Know all men by these presents, That we, Du Pont Engineering Company, a corporation organized under the laws of the State of Delaware, as principal, and E. I. du Pont de Nemours & Company, a corporation organized under the laws of the State of Delaware, as surety, are held and firmly bound unto the United States of America in the penal sum of twenty million dollars ($20,000,000), for the payment of which sum, well and truly to be made, we bind ourselves, and our successors, jointly and severally, firmly by these presents.

The condition of this obligation is such, That whereas the above bounden Du Pont Engineering Company has on the 23d day of March, 1918, entered into a contract with the United States, represented by Samuel McRoberts, Colonel, Ordnance Department, United States National Army, whereby the said Du Pont Engineering Company has agreed to do all things necessary for the construction, on a site owned by the United States, at or near Nashville, Tennessee, of a complete plant for the manufacture of smokeless powder, and whereas in and by said contract it is agreed that the United States is to advance on account of said construction work to said Du Pont Engineering Company, contemporaneously with the signing of said contract, the sum of eighteen million, seven hundred fifty thousand dollars ($18,750,000);

And whereas, by the terms of said contract said advance is to be kept separate from the funds of said Du Pont Engineering Company and expended exclusively upon the construction and equipment of said plant and for no other purpose;

Now, therefore, if the above bounden Du Pont Engineering Company, or its successors, shall and will, in all respects, duly and fully observe and perform all and singular the covenants, conditions, and agreements in and by the said contract agreed and covenanted by said Du Pont Engineering Company to be observed and performed by it, regulating the use, expenditure, disposal or return of said advance payment, according to the true intent and meaning of said contract, and as well during any period of extension of said contract that may be granted, or during any period when the time limit may be waived on the part of the United States as during the original term of the same, then the above obligation shall be void and of no effect, otherwise to remain in full force and virtue.

In witness whereof, The parties hereto have executed this instrument under their seal this 29th day of March, 1918; the name and corporate seal of said principal being hereto affixed and these presents duly signed by its vice president, pursuant to resolution of its board of directors passed on the 6th day of February, A. D. 1918, a copy of the record of which is hereto attached; and the name and corporate seal of said surety being hereto affixed and these presents duly signed by its president, pursuant to resolution of its board of directors passed on the 27th day of March, A. D. 1918.

Du Pont Engineering Co. [seal]
By (sgd.) E. G. Buckner [seal]
Vice President.
By (sgd.) Pierre S. du Pont [seal]
President.

In presence of—
(sgd.) Alexis I. du Pont,
Secretary.
(sgd.) Alexis I. du Pont,
Secretary.

Attest:

I hereby certify that the following is a correct copy of a resolution of the Board of Directors of E. I. du Pont de Nemours and Company as the same appears in the minutes of a meeting of said board held at the principal office of the company in the city of Wilmington, Delaware, on the 27th day of March, 1918, at which meeting there was present a quorum of said board, viz:

"Resolved that P. S. du Pont, president, or E. G. Buckner, vice president of this company, be and either of said officials is authorized and directed to execute for and on behalf of this company, and in its corporate name as surety, that certain bond in the penal sum of twenty million dollars ($20,000,000), wherein the du Pont Engineering Company, a corporation organized under the laws of the State of Delaware, is principal, and this company is surety, securing the performance by said principal of all and singular the covenants, conditions and agreements agreed by it to be performed in a certain contract entered into March 23, 1918, by said principal, as party of the first part, and Samuel MacRoberts, Colonel, Ordnance Department, United States National Army, as party of the second part, covering the construction of a smokeless powder factory at Nashville, Tennessee, and Alexis I. du Pont, Secretary, is hereby authorized and directed to affix this Company's corporate seal to said bond."

I further certify that I am the custodian of the records of said company including the minutes of the meetings of the board of directors, and that said resolution has not been revoked, annulled or amended in any manner whatever.

In witness whereof I have hereto set my hand and affixed the corporate seal of the company this 27th day of March, 1918.

(Signed) Alexis I. Du Pont,
Secretary.

Extract from minutes of executive committee meeting no. 4, April twenty-six 1918, Du Pont Engineering Company.

The following resolution was offered and unanimously adopted:

Resolved, that the president and any vice president of this company, or either of them, is authorized and directed to procure, on any terms that they or either of them deem expedient, an advance payment or payments on any one or more contracts now existing, or hereafter made, between this company and the United States of America, or any department thereof, and to execute and deliver in the name and on behalf of this company all notes, bonds, obligations, amendatory contracts, supplemental contracts, and/or other contracts that the United States, or any department thereof, may require in respect of the making and repayment of any such advance payments, and to give such security therefor as may be required, and to affix the seal of this company to any papers requiring the same, and to do such other acts and things, and execute and deliver such other instruments as the United States may require in the premises.

Resolved further, that any previous action in conflict with the above be and the same is hereby rescinded.

Exhibit No. 1217

BOND TO UNITED STATES OF AMERICA BY DU PONT ENGINEERING COMPANY, PRINCIPAL AND E. I. DU PONT DE NEMOURS & COMPANY, SURETY. IN PENAL SUM, $6,318,000

Know all men by these presents, that we, Du Pont Engineering Company, a corporation organized under the laws of the State of Delaware, as principal, and E. I. du Pont de Nemours & Company, a corporation organized under the laws of the State of Delaware, as surety, are held and firmly bound unto the United States of America in the penal sum of six million three hundred eighteen thousand dollars ($6,318,000.00) for the payment of which sum, well and truly to be made, we bind ourselves, and our successors, jointly and severally, firmly by these presents.

The condition of this obligation is such, that whereas the above bounden Du Pont Engineering Company has on the 23d day of March 1918 entered into a contract with the United States, represented by Samuel McRoberts, Colonel, Ordnance Department, United States National Army, whereby the said Du Pont Engineering Company has agreed to do all things necessary for the operation, on a site owned by the United States, at or near Nashville, Tennessee, of a complete plant for the manufacture of smokeless powder, and whereas in and by said contract it is agreed that the United States is to advance on May 15, 1918, on account of said operation, to said Du Pont Engineering Company, the sum of six million three hundred eighteen thousand dollars ($6,318,000.00);

And whereas, by the terms of said contract said advance is to be kept separate from the funds of said Du Pont Engineering Company and expended exclusively upon the operation of said plant and for no other purpose;

Now, therefore, if the above bounden Du Pont Engineering Company, or its successors, shall and will, in all respects, duly and fully observe and perform all and singular the covenants, conditions, and agreements in and by the said contract agreed and covenanted by said Du Pont Engineering Company to be observed and performed by it, regulating the use, expenditure, disposal or return of said advance payment, according to the true intent and meaning of said contract, and as well during any period of extension of said contract that may be granted, or during any period when the time limit may be waived on the part of the United States as during the original term of the same, then the above obligation shall be void and of no effect, otherwise to remain in full force and virtue.

In witness whereof, the parties hereto have executed this instrument under their seals this 13th day of May 1918; the name and corporate seal of said principal being hereto affixed and these presents duly signed by its vice president pursuant to resolution of its executive committee passed on the 26th day of April A. D. 1918, copy of the record of which is hereto attached; and the name and corporate seal of said surety being hereto affixed and these presents duly signed by its president, pursuant to resolution of its finance committee passed on the 13th day of May, A. D. 1918;

DU PONT ENGINEERING COMPANY EXECUTIVE COMMITTEE

The following resolution was offered and unanimously adopted:

Resolved, That the president and any vice president of this company or either of them, is authorized and directed to procure, on any terms that they or either of them deem expedient, an advance payment or payments on any one or more contracts now existing, or hereafter made, between this company and the United States of America, or any department thereof, and to execute and deliver in the name and on behalf of this company all notes, bonds, obligations, amendatory contracts, supplemental contracts, and/or other contracts that the United States, or any department thereof, may require in respect of the making and repayment of any such advance payments and to give such security therefor as may be required, and to affix the seal of this company to any papers requiring the same, and to do such other acts and things, and execute and deliver such other instruments as the United States may require in the premises.

Resolved further, That any previous action in conflict with the above be and the same is hereby rescinded.

This is to certify that the above is a true and correct copy of resolution adopted by the executive committee of the Du Pont Engineering Company, at meeting held on April 26, 1918.

——— ———,
Secretary Du Pont Engineering Co.

E. I. DU PONT DE NEMOURS & COMPANY FINANCE COMMITTEE

The following resolution was offered and unanimously adopted:

Resolved, That the president or any vice president, of this corporation be and they, or either of them, are hereby authorized to execute in the name and behalf of this corporation, under its corporate seal to be attested by the secretary, or an assistant secretary, on any terms that they or either of them deem expedient, all contracts and obligations, guarantees, bonds, or instruments, either as principal or surety, necessary, convenient, or incidental, to the execution and/or performance of contracts heretofore or hereafter entered into by this corporation, or the Du Pont Engineering Company, with the United States of America, or any department thereof, including the execution, either as principal, or surety, of obligations for the purpose of the procurement by Du Pont Engineering Company of payments in advance or otherwise, on account or in respect of, said contracts with said United States Government; hereby ratifying and confirming all acts, instruments, or obligations performed, signed, or executed in pursuance of the foregoing authority.

This is to certify that the above is a true and correct copy of resolution adopted by the finance committee of E. I. du Pont de Nemours & Company at meeting held on May 14th, 1918.

Signed M. D. Fisher,
Asst. Secy. E. I. Du Pont de Nemours & Co.

EXHIBIT No. 1219

E. I. DU PONT DE NEMOURS & COMPANY RESOLUTION ADOPTED BY THE BOARD OF DIRECTORS AT MEETING HELD MARCH 27, 1918

EXECUTION OF BOND IN RE NASHVILLE PLANT

On motion, duly made and seconded it was

Resolved, That P. S. du Pont, president, or E. G. Buckner, vice president of this company, be and either of said officials is authorized and directed to execute for and on behalf of this company, and in its corporate name, as surety, that certain bond in the penal sum of twenty million dollars ($20,000,000), wherein the du Pont Engineering Company, a corporation organized under the laws of the State of Delaware, is principal, and this company is surety, securing the performance by said principal of all and singular the covenants, conditions and agreements agreed by it to be performed in a certain contract entered into March 23, 1918, by said principal, as party of the first part, and Samuel MacRoberts, colonel, Ordnance Department, United States National Army, as party of the second part, covering the construction of a smokeless powder factory at Nashville, Tennessee, and Alexis I. du Pont, secretary, is hereby authorized and directed to affix this company's corporate seal to said bond.

MAY 10, 1924.

Mr. R. H. WILLIAMS,
First National Bank Building, Chattanooga, Tenn.

DEAR SIR: Among the subjects which we discussed in reference to the Old Hickory contract, while I was in Chattanooga, was the methods used by the purchasing department in connection with the procurement of material for the Old Hickory projects. You requested me, at the time, to furnish you with evidence which would illustrate that prior to placing orders for materials the purchasing department obtained competitive price quotations. In this connection I am enclosing herewith a special report citing transactions wherein competitive prices were obtained by purchasing department prior to placing orders for materials procured in connection with the Old Hickory powder plant, and a copy of a report dated January 18, 1919, addressed to Mr. David D. Rankin, asst. purchasing agent, which was prepared by Mr. T. W. Harris, one of the purchasing department employes.

In this connection I would like to call your attention to the fact that a great many materials used in connection with the Old Hickory construction and operating projects were purchased at prices fixed by the Government, for example: Cement, lumber, pig iron, steel plate, rails, sheet steel, high silicon iron castings, carbon tetrachloride, benzol, methyl alcohol, acetone, toluol, acetate of lime, coal, fuel oil, cotton linters.

Large purchases of sulphur were made in connection with the Old Hickory operation and it might be pertinent to add that sulphur was purchased by us at a price agreed upon between the principal producers and the United States.

Most of the sulphuric acid used in connection with the Old Hickory operation was manufactured at Old Hickory, but in the early stages of the operating period, it was necessary to purchase quantities of sulphuric acid aggregating 594,138 pounds. It is my understanding that this material was procured at prices fixed by the Government. You of course, understand that the price of sulphuric acid varies in the ratio of strength.

Trusting that this information will serve your purpose, I am

Yours very truly,

W. A. SHAFER,
Assistant to the Treasurer.

WAS:p.

SPECIAL REPORT—CITING TRANSACTIONS WHEREIN COMPETITIVE PRICES WERE OBTAINED BY PURCHASING DEPARTMENT PRIOR TO PLACING ORDERS FOR MATERIALS PROCURED IN CONNECTION WITH THE OLD HICKORY POWDER PLANT

TRANSACTION #1

Exhibit 1, copy of requisition USN–769–1/2L.
Exhibit 2, copy of letter from Republic Iron & Steel Company.
Exhibit 3, copy of letter from American Steel & Wire Company.
Exhibit 4, copy of letter from director general, Military Railways.

Requisition USN–769–1/2L was issued by the construction division and transmitted to the purchasing department, which proceeded to obtain competitive quotations from two purveyors:

Republic Iron & Steel Company.
American Steel & Wire Company.

The order for the material specified on requisition 769–1/2L was ultimately placed with the Dilworth Porter Co., Inc., as per instructions of the Director General of Military Railways at the price specified in his letter, viz, $4.05 per cwt.

TRANSACTION #2

Exhibit 5, requisition USN–768–1/2L.
Exhibit 6, letter from Light Railway Equipment Company.
Exhibit 7, letter from Lorain Steel Company.
Exhibit 4, letter from Director General Military Railways.

Requisition USN–768–1/2L was issued by the construction division and transmitted to the purchasing department, who then obtained competitive quotations from—

Light Railway & Equipment Company.
The Lorain Steel Company.

The order for material specified on requisition 768–1/2L was ultimately placed with Lakewood Engineering Company, Cleveland, Ohio, as per instructions of the Director of Military Railways, at prices specified in his letter (exhibit 4).

TRANSACTION #3

Exhibit 8, letter from Bass Foundry & Machine Company.
Exhibit 9, letter from Buffalo Foundry & Machine Company.

The order for the material specified was placed with Buffalo Foundry & Machine Company. Requisitions USN–2460–1/2A, 2462–1/2A, 2463–1/2A.

TRANSACTION #4

Exhibit 10, letter from Eagle Tank Company.
Exhibit 11, letter from Wendnagel & Company.
Exhibit 12, letter from Challenge Company.

As the need for these materials was urgent, the orders were divided among the three bidders to facilitate prompt delivery.

TRANSACTION #5

Exhibit 13, letter from Dover Boiler Works.
Exhibit 14, letter from W. H. Thompson & Company.
Exhibit 15, letter from Tippett & Wood.
Exhibit 16, telegram from Chattanooga Boiler & Tank Company.

Order for the material specified on requisition USN–6854–1/2X was placed with the Chattanooga Boiler Works.

TRANSACTION #6

Exhibit 17, letter from Dover Boiler Works.
Exhibit 18, letter from Tippett & Wood.
Exhibit 19. Coatesville Boiler Works.

The order for materials specified USN–8001–1/2G was placed with Coatesville Boiler Works.

TRANSACTION #7

Exhibit 20, letter from Chattanooga Boiler & Tank Company.

Exhibit 21, letter from Tippett & Wood.

Exhibit 22, letter from Dover Boiler Works.

The order for material specified was placed with Chattanooga Boiler & Tank Company, requisition USN–5632–1/2X.

TRANSACTION #8

Exhibit 23, letter from W. H. Thompson & Company.

Exhibit 24, letter from Coatesville Boiler Works.

Order for material specified was placed with Coatesville Boiler Works, requisition USN–7518–1/2A.

TRANSACTION #9

Exhibit 25, letter from Geo. D. Wetherill & Company, Inc.

Exhibit 26, letter from John Lucas & Company, Inc.

Exhibit 27, letter from John T. Lewis & Brothers, Company.

Order for materials specified was placed with the lowest bidder, Geo. D. Wetherill & Company, Inc., req. GOH–719.

[All agreements contingent upon strikes, accidents, and causes beyond our control prices subject to change without notice]

SALES DEPARTMENT,
AMERICAN STEEL & WIRE COMPANY,
30 Church Street,
New York, October 22nd, 1918.

DU PONT ENGINEERING CO.,
Wilmington, Del.

GENTLEMEN: We have your letter of the 21st, file "HMA", enclosing copy of telegram and would state that we have no record of having received this telegram. However our price on 100 kegs, 4 x 7/16 railroad spikes is $5.15 per 100 lbs., f.o.b. Pittsburgh and the less car lot rate of freight from Pittsburgh to Racine, Wis., is 42½¢ per 100 lbs. plus the war tax of 3% on the freight. We also charge the freight on the tare of the kegs and the keg weight, 10 lbs. As near as we can estimate we have about five weeks work on railroad spikes at the present time, but shipment of the 100 kegs for you could possibly be made in two to three weeks.

Terms, thirty days net or ½ of 1% discount if paid within ten days from date of invoice or thirty days net.

Yours truly

AMERICAN STEEL & WIRE CO.,
O. B. COLES, *Sales Agent.*

HJM:AN

The prices quoted for the materials named herein are subject to revision to a basis that may be fixed by the proper U. S. Government agency, by agreement or otherwise, as the public or market price for such materials at the time of shipment.

[FAM*AFC. In reply refer to file no. G. File C. R. H.]

WAR DEPARTMENT, CORPS OF ENGINEERS, U. S. ARMY,
OFFICE OF THE DIRECTOR GENERAL OF RAILWAYS,
734 Fifteenth Street NW.,
Washington, D. C., March 13th, 1918.

DU PONT ENGINEERING COMPANY,
Wilmington, Del.

(Attention Mr. F. A. LaMotte, Jr.)

GENTLEMEN: 1. Since writing you on the 8th instant we have received certain rail orders for 25# rail accessories and turn-outs, which are herewith returned you.

2. As stated in my letter of March 8th, arrangements have been made in your behalf in respect to the allotment and prices of the 25# rail, and it is further arranged for you to place your order, instead of this office, in the following manner:

Arrangements have been made with the Cambria Steel Company to furnish the tonnage on order 118–P, for 408,000 ft. of 25# rail should read—1,574 gross tons 25# A. S. C. E. section rail in accordance with specifications of D. G. M. Ry. dated March 4th, 1918, together with 16,520 pairs of splices, the rail at 3¢ per cwt., splices at 38¢ per pair. All of the above rail should be 30 ft. lengths, excepting 56 gross tons, which should be requested in 455 pieces 32 ft. 10 in. in length, which will take a price of .309¢, and should be consigned to the Lakewood Engineering Company, Cleveland, Ohio, for the fabrication of your 365 turn-outs. The above prices are f. o. b. Johnstown, Pa.

Your order 116–P should be made to the Lakewood Engineering Company, covering 365 #4 turn-outs, 3 ft. gauge, to be made of rail as furnished without charge f. o. b. their works, at a price of $32.75 each, plus $16.50 for switch stands.

Your order 117–P, covering 400 kegs of 4 by ½″ railroad spikes should be made to Dilworth, Porter & Co., Inc., Pittsburgh, Pa., at a price of $4.05 per cwt., f. o. b. Pittsburgh, Pa.

Your bolt requirement consists of 275 kegs approximately, or 54,400 pieces 2⅛ by ½″, priced at 4.9¢ per pound, f. o. b. Pittsburgh, and can be taken care of by the Oliver Iron & Steel Company, Pittsburgh, Pa.

3. The above-named firms have been notified of the above and are awaiting your formal order.

Very respectfully,

S. M. Felton,
Director General Military Railways.

(Your file "DSW", Requsition USN–768½–L.)

DEAR SIRS: In response to your letter of the 12th instant, addressed to our Johnstown, Pa., office, for quotation on 365 turn-outs of #30 lb. rail, we are pleased to quote you price of $45.70 per set f. o. b. cars our works, Johnstown, Pa., based on each set being made up as follows:

Rigid split switch 5′0″ long, complete with 1 head rod and 1 tie rod with clips and bolts, and 4 slide plates, and equipped with parallel ground throw; #4 riveted plate frog, 4′8″ long; two (2) 5′0″ guard rails; built of #30 lb. ASCE tee rail; gauge of track, 3′0″; ground throw to be of the type shown at the top of page 39 of our #19 catalog; frog to be of the type shown on page 88 of same catalog.

Cuts mentioned are enclosed herewith.

We have enough rail in stock to take care of approximately 75% of the material required, and this rail is offered for immediate acceptance and subject to prior sale. The balance of rails required for this work can be secured from rolling within 2 to 3 weeks, and in order that we may secure from this rolling it will be necessary that your order be received immediately. On this basis we can make shipment at the rate of 65 sets in 28 working days and 100 sets per week thereafter, after receipt of order and full information, although this promise is made subject to nonpenalty.

Trusting this proposition will prove of interest and that we may be favored with your order to cover promptly, we await your further advices.

Very truly yours,

THE LORAIN STEEL COMPANY,
W. N. BRANDT.

Bid on castings for Nashville, Tenn.

D. S. WOOD,
Asst. Pur. Agt., E. I. du Pont de Nemours & Co.,
Wilmington, Delaware.

DEAR SIR: Referring to your inquiry of the 12th instant, file "DSW", inviting our price on castings for Nashville, Tenn., beg to advise that we are prepared to bid on one double unit only, for your July or August schedule of delivery. There were some discrepancies in your specification sheet as compared with the blueprint sent us. You failed to send us details of castings 3953–B and 1239–B but with these exceptions we are bidding on the other castings as follows:

4 #4125–A1 supports.
4 #4125–B perforated plates.

128 #4125–D2 grids.
16 #4125–C supports.
4 #3953–A tower tops.
20 #1245–A lantern inlets.
20 #1243–A lantern bodies.
20 #1243–B lantern covers.
8 #3958–A inlet sleeves.
20 #1242–B shield plates.
20 #1242–C wearing plates.
20 #1241–A spray saucers.
20 #1242–A gradings.
80 #1244–A supports.
8 #3958–B gas sleeves.
40 #1244–C gas sleeves.
20 #1244–B blank flanges.
20 #189–A base plates.
620 #4607–A grates.
620 #4607–B grates.
620 #4607–C grates.
620 #4607–D grates.
12 #1244–D acid sleeves.
12 #1238–C inlet sleeves.
4 #4168–A sleeves.
15 #4213–C ring flanges 3″.
5 #4213–D ring flanges 4″.
5 #4213–E ring flanges 5″.
5 #4213–F ring flanges 6″.
4 #4149–B 16″ x 23½″ blank flange.
4 #4149–A1 manifold (cast steel).
4 #4268–A fillers.
4 #4268–B fillers.
16 #3990–A1 furnace fronts.
16 #3989–F weights.
8 #3991–A sills.
16 #920–A ash pit frames.
16 #920–B ash pit doors.
16 #920–C ash pit doors.
32 #3989–E sheaves.
16 #3989–B arch plates.
16 #3989–D side frames.
16 #3989–G side frames.
8 #3991–B bar supports.
24 #3965–B lug guides.
24 #3965–C slot guides.
8 #3965–A straight pipe.
288 #3965–D1 sleeves.
144 #3940–C u-pipes.
120 #3940–A u-boxes.
8 #3942–A inlet manifolds.
8 #3941–A outlet manifolds.
80 #3939–A plain roof bars.
72 #3939–B lug roof bars.
40 #921–A frames.
40 #921–B doors.
32 #3989–C doors 12 x 24.
32 #3989–A frames 12 x 24.
20 #1207–C pipe saddles.
20 #1207–D saddle shoes.
2 #3940–B split collars.
16 #4091–A floor plates.
32 #4091–B floor plates.
72 #3888–E base blocks.
8 #3884–A1 bottom sections.
40 #3885–A intermediate sections.
8 #3886–A covers.
80 #3888–A grills.
200 #3888–B distance bars.

80 #3888–C segments.
192 #3888–D1 spring washers.
2 #4125–A1 supports.
2 #4125–B perforated plates.
64 #4125–D2 grids.

We estimate the total weight of all the foregoing to be 941,090 pounds and our total price for same, including all machine work where called for, would be $59,047 f. o. b. Fort Wayne. If the four manifolds from pattern #4149–A1 are made of cast iron instead of cast steel, our price would be reduced $1,700.00. We could have all of these castings shipped during July but as there are about 15 carloads of castings involved, we would no doubt begin shipping as early as June and probably sooner, but we would not care to be pushed for any of the castings before July, owing to Government work already on our books.

A majority of the necessary patterns our records show to be in existence. We give below separate prices for such patterns as our records do not show we have previously had in our possession, as follows:

Patt. #4125–A1 support, $54.00.
Patt. #4125–B perforated plate, $15.00.
Patt. #4125–D2 grids, $39.00.
Patt. #4125–C support, $49.00.
Patt. #1245–A lantern inlet, $18.00.
Patt. #4168–A sleeve, $18.00.
Patt. #4213–C flange, $1.00.
Patt. #4213–D flange, $1.00.
Patt. #4213–E flange, $1.50.
Patt. #4213–F flange, $1.50.
Patt. #4149–B flange, $6.00.
Patt. #4149–A1 manifold, $80.00.
Patt. #4268–A filler, $5.50.
Patt. #4268–B filler, $5.50.
Patt. #1207–C pipe saddle, $3.75.
Patt. #1207–D saddle shoe, $5.50.

Trusting this proposition will receive favorable consideration, we remain,

Very respectfully,

THE BASS FOUNDRY & MACHINE CO.,
By WILLIAM E. SLATER.

BUFFALO FOUNDRY AND MACHINE CO.,
Buffalo, N. Y., Mar. 4, 1918.

Mr. D. S. WOOD, P. A.,
War Department, du Pont Engineering Co.—Agents,
Wilmington, Del.

MY DEAR MR. WOOD: Referring to the writer's conversation with you on Saturday, beg to advise that we this morning carefully went over this matter, and in view of the fact that we desire to help you out, we finally decided that the lowest price we could make would be six and one-half cents (6½¢) per pound, which really leaves us little or no profit. Our former quotation should be the price we ought to ask, but appreciate the position you are in, and, therefore, reduced our price as above, which we embodied in the following telegram we a few moments ago sent you—

"After careful consideration find best price can make on rough iron castings is six and one-half cents pound f. o. b. Buffalo. Patterns $865.00 additional. Machine work $11,272.00 additional. If only part order is placed divided over entire quantity pattern charge will be same but machine work will be on proportionate quantity. Please wire decision."

which we hereby confirm.

Thanking you for past kind favors, and trusting to be favored with your order, we are

Yours very truly,

BUFFALO FOUNDRY & MACHINE CO.

All to be worked up to their proper size and shape by machinery; staves convex and concave; joints all smoothly planed (not sawed) and thoroughly dowelled. Hoops made to proper length, threaded and bent to circle.

	Each	Total
32 (thirty-two) wood bleach tanks, 13′ 8″ dia. x 12′ 6″ deep, inside dimen. with 13 ⅞″ round screw hoops, 2 lugs on each @ Can furnish 16 tanks.	$339.00	-----------
32 stuff tanks, 15′ 6″ dia., 10′ 8″ deep, inside dimen. with 12 ⅞″ round screw hoops, 2 lugs on each @ Can furnish 16 tanks.	345.00	-----------
20 hot water tanks, 13′ dia. 13′ deep, inside dimen., with 13 ¾″ round screw hoops, 2 lugs on each, @ Can furnish 10 tanks.	316.50	-----------
64 tanks, print 9942-A, 13′ dia. inside 18′ full length of stave. These tanks to have two bottoms, one flat and one sloping. The supports under tanks and slide valves not included herein. Each tank to have nine ⅞″ and nine ¾″ round screw hoops, 2 lugs on each, @ Can furnish 21 tanks.	471.50	-----------
12 tanks, 8′ diam. inside, 16′ staves, with sixteen ¾″ round screw hoops, 2 lugs on each, @ Can furnish 12 tanks.	195.00	-----------
760 boiling tanks, 10′ 5″ diam. 6′ 2″ deep, inside dimen., with eleven ⅞″ round screw hoops, 2 lugs on each, @ Can furnish 100 tanks.	171.00	-----------
240 poachers, 13′ dia. 11′ deep, inside dimen. with thirteen ⅞″ round screw hoops, 2 lugs on each, @ Can furnish 120 tanks.	295.00	-----------
5-35,000-gal. water tanks, 18′ dia. outside 20′ stave, with 20 ⅞″ round screw hoops, 2 lugs to each, with conical cover covered with ruberoid and to have apex, brackets, and hinged manhole door. A wooden ladder inside of tank and a steel ladder outside, also a 30′ high steel tower for each tank, tank and tower to receive one coat of paint at factory, f. o. b. cars Chicago	1,498.00	-----------
These five tanks and towers we will furnish f. o. b. Chicago and erect on supports provided by you, at Nashville, you to pay freight and do the necessary cartage, for Can furnish five equipments.	2,045.00	-----------

This lumber will all dress to 2¾″.

Please note that we have included inside wood ladders and outside steel ladders for the 35,000-gallon water tanks in this proposition. These are not called for in your specifications, nor is the ruberoid covering which we specified.

We make the same price on the yellow pine and fir tanks, and regard one as being just as good as the other. We guarantee them first-class in every detail and should like to have the option of furnishing either.

Yours very truly,

WENDNAGEL & CO.,
By WM. WENDNAGEL.

P.S.—We did not give you the totals as we did not know whether you want the total figures of the number of tanks specified or the number of tanks we can furnish.

W. & Co.

du Pont Engineering Co.,
Mr. D. D. Ranken, A. P. A., Purchasing Department,
Wilmington, Del.

Gentlemen: Replying to your valued favor of the 16th instant, file TWH, Req. USN–6854½–X, and confirming conversation of today with your Mr. T. W. Harris, would advise we are pleased to quote you $520.00 f.o.b. Pottstown, Pa., for supplying:

One steel tank 71–A–54, blueprint 71#54, to measure 4′ in diam. by 12′ long and made of ¼″ and 5/16″ thick steel, as indicated on drawing. One head to be flanged and dished, other head to be flat and bolted to place. Shell seams to be lapped and single-riveted and caulked inside and out to a standard of 60 lbs. pressure per square inch. Tank equipped with cast-iron nozzles, reinforced outlets, and one built-up coil of 2½″ wrought-iron pipe and pipe supports, as shown on blueprint.

We desire to state for your information, however, that in making this coil cast-iron return bends would be used, and the lengths of wrought pipe would be screwed to place in same and coil would not be constructed with welded joints and steel return bends, as indicated on drawing, as we have learned upon investigation that it would require at least three months to secure cast-steel return bends.

We could make shipment of tank constructed as outlined above, in about eight weeks.

Hoping to have the pleasure of serving you, we remain,

Very truly yours,

JMT/DE W. H. Thomson & Co.

This proposition is for immediate acceptance, subject to change without notice, and is based on today's mill and shop conditions; with the proviso that Federal or State authorities do not increase operating costs prior to completion of this work.

NOTICE.—On account of present extraordinary conditions all our quotations are made for immediate acceptance and subject to our ability to handle the business when same is placed with us. General conditions are such that we cannot leave anything open. Therefore, all orders are accepted by us under the condition that we are not to be held liable for nondelivery because of nontransportation facilities, labor strikes, fires, war, flood, accidents at factory, inability to secure labor or materials required to fill the contract, or any other unavoidable cause. The above is a part of this proposal.

COATESVILLE BOILER WORKS,
Phila., June 25, 1918.

DU PONT ENGINEERING CO.,
Agents for U.S. Government,
Wilmington, Del.

GENTLEMEN: We propose to furnish you steel plate work as per schedule attached hereto and forming part hereof at prices, delivery, terms, etc., as hereinafter stated.

The material furnished comprises: Three (3) steel tanks detail 1514–A, each 4′6″ diameter by 24′0″ long.

Delivery.—F.o.b., Coatesville.

Price.—Nine hundred ninety-seven dollars ($997.00) each.

Terms of payment.—Net, 30 days.

Time of shipment ten days to two weeks after receipt of all materials.

The time of delivery named herein is the approximate date of shipment from our works, and this company shall not be responsible for delays or nonperformance occasioned by strikes, fire or other causes beyond its reasonable control.

The acceptance of the material when delivered shall constitute a waiver of all claims for damages caused by any delay.

The title to and property in the material, shall remain in this company until payment shall have been completed, risk of fire or other casualty shall be in the purchaser.

The material shall at all times be and remain personal property notwithstanding the manner of its annexation to realty.

The foregoing proposal is subject to the approval of an executive officer of this company, and shall not be binding upon this company until so approved, nor unless accepted by the purchaser within reasonable time.

All previous communications between the parties hereto, either oral or written, with reference to the subject matter of this proposal, are hereby superseded, and this proposal, when duly accepted and approved, shall constitute the agreement between the parties hereto, and no modification thereof shall be binding upon the parties, or either of them, unless such modification shall be in writing, duly accepted by the purchaser and approved by an executive officer of this company in writing.

Prices quoted are based on present prices of materials to this company and are subject to change accordingly.

There are no understandings or agreements outside of this written proposal.

Respectfully submitted.

[PROPOSAL]

COATESVILLE BOILER WORKS

BOILERS AND STEEL PLATE CONSTRUCTION

SCHEDULE

To: Du Pont Engineering Co.

Three (3) Steel Tanks, detail 1514–A, each 4′6″ dia. 24′0″ long. Shell to be made of ½″ steel in 3 sheets.

Heads to be made of ½″ pressing steel, dished as shown on drawings.

Tanks to be complete with nozzles, manholes and other connections, of material specified as shown on drawing. All castings, of cast steel and cast iron, must be made from good clean metal, free from blow holes, sand dirt, or shrinkage cracks.

All parts to be machined and finished to size and shape specified on drawings.

All seams to be lap, single riveted.

Tanks to be used as acid containers. Size and spacing of rivets to be manufacturers standard for this class of work. No dutchmen will be permitted.

All seams to be caulked both inside and outside and subjected to a hydrostatic test pressure of 80 lbs. per sq. inch. Tanks to be given one coat quick drying black paint on outside before shipment and after inspection. Tanks to be subject to inspection by representative of engineering department before shipment and before painting. Workmanship and material must be first class in every respect.

Per specification sheet 223–A, dated June 22, 1918, Rq. USN 8001½–G.

The price herein quoted is based on present price of steel as fixed by the Government, namely 3¼¢ per pound, base Pittsburgh. If the Government increases the price of steel plates before the mills deliver the plates to our shops, you are to pay us additional for such increase, provided the mills charge us such increase, and on the other hand, if the Government price of steel goes below the present price before the plates are delivered to us by the mills, we are to credit you with the decrease in price, provided the mills allow us such decrease in price.

In regard to delivery, it will be necessary for you to secure priority certificate from the Government in order to facilitate shipment from the mills to our works.

Standard flanging and dishing has been figured as per list of January 1, 1917. If there should be any change in this price, you are to pay us for any increase and we will make you an allowance for any decrease.

Exhibit No. 20

Chattanooga Boiler & Tank Co.,
Chattanooga, Tenn., April 30, 1918.

Du Pont Engineering Co. *Agents,*
Wilmington, Del.
(Attention Mr. T. W. Harris.)

Gentlemen: We received your inquiry this morning. Yours of April 26th, specification sheet #183–A, Req. USN–5632½–X, covering two tanks 8′ diameter x 10′ high. We wired you as follows this morning:

"Your inquiry April 26 received, Req. USN–5632 one-half X, covering two tanks. We can furnish these tanks from our stock at Seven Hundred Dollars each Chattanooga. Shipment between June fifth and tenth. Answer." As this was the only way we could get quotation to you in time. We have all material in stock for these tanks, but will have to make the head in two pieces. This, we judge, will be entirely satisfactory to you, as we could either weld this, or put a butt strap on it, either of which will be just as safe as the other joint in the tank.

We are forced to do this because we require sheet at least 102″ wide to make this head, otherwise we would follow your specifications. We hope to hear from you some time this week advising that we can go ahead with this business.

We would like to have promised you better shipment than June 5 to 10th, but believe this is about the best we can do for you.

Yours very respectfully,

Chattanooga Boiler & Tank Co.,

RÉSUMÉ OF YEAR'S WORK, 1918

The following data has been accumulated covering the amount of purchases that have been made in my office during the year 1918, and these purchases have been divided into two main divisions, viz:

A—Materials purchased not on contract, but as each individual order presented itself.

B—Material purchased under contract.

Division A.—Below are listed 14 subdivisions of the actual cost of material purchased with the average competition or market price at time of purchase determined by averaging all quotations obtained, including the firm obtaining the business, if such quotations are comparable, viz: Only such firm's quotations were considered who could render as good workmanship as the successful bidder and who could make deliveries possibly not as soon but at least within a reasonable time for the delivery required. Thus as a rule all bidders' quotations were considered as we very seldom approach firms who do not render us the workmanship required, or who were in such a position as to have impossible deliveries.

Subdivision #1.—Autoclaves, mixers, and dephylagamators:

Cost	$113, 137. 00
Competition	119, 547. 00
Saving	6, 410. 00

This covered all purchases of special mixers, jacketed autoclaves, etc., required mostly for the dye plant and for which requirements there appears to be a future for 1919. It covers the purchases from such firms as:

E. B. Badger & Sons
J. P. Devine Co.
Stokes Machine Co.
J. H. Day Co.

Gedge-Gray Co.
Buffalo Foundry & Machine Co.
and the tank manufacturers such as:
Bass, Foundry & Machine Co.
Struthers-Wells Co.
W. H. Thomson & Co.

Subdivision #2.—Breechings:

Cost	$56, 819. 00
Competition	63, 600. 00
Saving	6, 781. 00

This includes breechings purchased for the du Pont Engineering Company for Old Hickory, etc., and covers in nearly 100%, cost of the large power-house breechings in which the price of steel was figured at 3¼¢ per lb., base Pittsburgh, or approximately 3½¢ per lb. delivered at the fabricator's plant, and at a fabricating cost of 3½¢ per lb.

Subdivision #3.—Steel stacks:

Cost	$35, 613. 00
Competition	37, 608. 00
Saving	1, 995. 00

These stacks including preheater stacks purchased for Old Hickory plant and Ives, were based on a 3¼¢ per lb. steel price, f. o. b. Pittsburgh, or approximately 3½¢ per lb. delivered at the fabricator's plant, with a cost of fabrication of approximately 2¾¢ per lb. The competition on this class of work was very keen in that the southern fabricators, such as Walsh-Weidner Co., could fabricate these tanks in the early part of the year 1918 at very low costs, due to low labor charges. The other competing firms at the same time were also anxious to get this kind of work in order to fill this end of their shops which was somewhat stagnant during this year. Therefore, the purchase price was very low and the saving shown was relatively low.

Subdivision #4.—Tanks and towers:

Cost	$20, 775. 00
Competition	22, 010. 00
Saving	1, 235. 00

There were very few tanks and towers purchased during the year 1918, and those that were purchased were bought mainly from the Chicago Bridge & Iron Works. The cost per pound for same averaged approximately.

Subdivision #5.—Steel plate work including tank plates, heads, cans, ventilating ducts, casings, etc.:

Cost	$73, 926. 00
Competition	84, 696. 00
Saving	10, 770. 00

This did not include the cost of the plate and heads for the tanks for the Ives plant, as the cost of this item alone amounted to $156,170. We have this cost, however, figured in the cost of the tanks for the Ives plant. Of course this was purchased at Government price and there was no possible competition. The steel was allocated by Washington and the price fixed by the U. S. Government. However, this subdivision does include mostly fabricated plate work so that a saving could be made.

Subdivision #6.—Apron conveyers:

Cost	$61, 105. 00
Competition	69, 374. 00
Saving	8, 269. 00

In making the original purchases for the United States Government Penniman plant the engineering department had obtained from the Link Belt Co. their quotation and requested me to get into the conference with them for placing the order. Their price seemed high, so even though the order was placed with the Link Belt Co. we obtained quotation from the Alvey-Ferguson Co. and found their price to be 14% lower. We took this matter up with the Link Belt Co. and told them we did not feel justified in having them go ahead with the order at this high price for equipment going into a U. S. Government plant. Upon taking this up with Mr. Tallman he felt that the attitude we had taken was correct, and finally the Link Belt Co. abandoned the installation, not being willing to meet the competition.

Subdivision #7.—Freight and bucket elevators and repair parts including chain, kickers, etc.:

Cost	$87, 167. 00
Competition	104, 662. 00
Saving	17, 495. 00

A percentage of these elevators were Otis elevators, regarding which the engineering department refused to accept a substitute due to dangerous operations at the plant. Therefore, we could now show a larger saving, although we did hold Otis down to a very low price compared with their regular selling price, but this was not shown in the form of a saving. We were able to make some substitutes. supplying Speidel elevators, thereby showing a saving over the Otis, which has been entered in the above total, and also we were able to substitute at the Penniman Plant, Otis hydraulic elevators for Craig Ridgway's, which substitute proved very satisfactory in the operation at the Penniman Plant, and in which purchase considerable saving was made.

Subdivision #8.—Coal handling machinery:

Cost	$287, 869. 00
Competition	348, 133. 00
Saving	60, 264. 00

This includes the coal-handling equipment for Old Hickory, which amounted to $212,800 for handling 600 tons per hour with storage capacity of 100,000 tons, competition $268,548. This competitive estimate was determined from the difference in cost derived from the average cost for complete installation, less the actual cost of complete installation of the equipment purchased. The purchase of the coal-handling equipment for all plants, exclusive of one installation at Hopewell and one at Deep Water Point, which were purchased by Mr. DeWolf, was made in this office. On account of the fact that after the end of March it was found that due to the necessity for me to oversee the urging of steel tanks which in turn took so much of my time it was possible for me to purchase not only the steel materials covered by subdivisions 1 to 5 inclusive, and 12, 13, and 14, but also for me to make the purchases of the coal-handling equipments as required with the exceptions as mentioned above, especially for the reason that when the equipment was purchased for Racine Mr. deWolf was ill and this part of his work was turned over to me.

Subdivision #9.—Concrete bunkers:

Cost	$38, 465. 00
Competition	39, 763. 00
Saving	1, 298. 00

This saving was so low, due to the fact that there was practically a Government fixed price on cement, sand, stone, and lumber, or the material going into the construction of the bunkers with prices for labor fixed at the plant so that the cost per cubic yard averaged from $30.00 to $40.00 throughout the year on all competitive bids, and it was merely a question of deciding upon the most reliable contractor, Ferdinand Barre building three bunkers and Chas. Bond Company one. All the bunkers were built within the time required, if not sooner.

Subdivision #10.—Brick stacks:

Cost	$90, 486. 00
Competition	98, 457. 00
Saving	7, 971. 00

This does not include the stacks for Old Hickory for units 6 to 9, as the purchase of same did not come through this office. These stacks were purchased at approximately $15.00 per ton of brick for Old Hickory, and $20.00 per ton for Racine.

Subdivision #11.—Miscellaneous equipment, including coils, hand trucks, stirring equipment, screw conveyors, flat cars, gas holders, hoists, temperature regulators, filter presses, and blower engines:

Cost	$72, 565. 00
Competition	79, 037. 00
Saving	6, 472. 00

Subdivision #12.—Miscellaneous wooden tanks, total number 672:

Cost	$73, 735. 00
Competition	80, 761. 00
Saving	7, 026. 00

These tanks were purchased mostly for the dye plant and were to a large extent made of cypress, although we have endeavored and have been successful in a good many attempts in getting this end of our manufacture to use yellow pine or fir, as the cost of this lumber is so much less than cypress, and cypress itself is of an inferior grade at present, due to insufficient drying. Where we have been able to substitute yellow pine for cypress the life of the tub appears to be nearly as long as cypress, and the saving in dollars and cents amounts to from 40 to 50%. However, as this saving would be hard to show due to insufficient data as to the life of the tubs made from present-day cypress and those made from yellow pine or fir, this saving has not been included in the above item.

Subdivision #13.—Wooden tanks for Old Hickory, units 1 to 5, total number of tanks 1,139:

Cost	$234, 209. 00
Competition	240, 956. 00
Saving	6, 747. 00

This does not include the tanks for Old Hickory units 6 to 9 which were purchased by Mr. Fulton, but at the quotations we had obtained, he placing his additional orders on the same basis, except for a warranted increase in price. This price is based on the tanks being made of yellow pine or fir with lumber at $60.00 to $65.00 per M delivered, and skilled labor 60 to 70¢ per hour. At the time of purchasing these tanks quotations were also obtained for tanks practically equal to the $234,209 for the Thompson-Starrett Co. which has not been shown in this report, due to the fact that it was not a Du Pont purchase, but were to assist the Government.

Item #14.—Steel tanks:

Plant	No. of tanks	Cost	Competition	Saving	Total weight	Cost per pound
Old Hickory:					*Tons*	
Units 1 to 5	1, 974	$1, 117, 894	$1, 278, 717	$160, 823	6, 471½	$0. 08638
Units 6 to 9	1, 231	719, 567	794, 690	75, 123		
Barksdale	392	251, 766	280, 847	29, 081		
Indian Head	129	83, 587	86, 280	2, 693		
Racine	688	416, 236	451, 992	35, 756	1, 916	. 10861
Misc	1, 409	465, 461	505, 424	39, 963		
Total	5, 823	3, 054, 511	3, 397, 950	343, 439		

The purchases for the plants are made in the order in which the tanks were bought during the year, except in the case of the miscellaneous tanks which covers a year's purchase. The miscellaneous tanks were bought mostly for the dye industry, and there is no doubt from all indications that there will be considerable purchases in 1919 along the same lines as these tanks are mostly special and cannot be obtained from our surplus stocks at the present closed plants. As can be noted the competition is very keen, due to the fact that the manufacturers have been brought down to the lowest possible basis of profitable manufacture with efficient production, the tanks having been selected for manufactures taking into consideration those best adaptable to the manufacturer's shop, and also taking into consideration the steel mills available in their locality. This has special reference to the size of heads as some mills are very limited in size in turning out steel for these heads. The cost per pound of fabrication is higher than it might have been if we could have obtained wider plates, but due to the great scarcity of steel plate the only plate available was from the narrow steel mills, which necessarily increased the cost of fabrication. This cost of fabrication reached the maximum at the purchases for the Racine plant where the Government price for steel, including the cost of the heads amounted to $0.04075 and the cost of fabrication $0.06786 per pound. In this case in order to expedite delivery we actually made the purchase of these plates and heads ourselves, and regardless of the fact that the steel situation was so bad we obtained shipments of practically all of the plates and heads two to three weeks after the orders were placed, this being due to the high priority of A–3 which we received, and also to personal visits made by myself to the steel mills.

Division B.—This division includes all materials contracted for, and they can be subdivided as follows:

Subdivision #1.—Fire brick and clay, including fire tile with some chemical brick:

Cost	$314, 376. 00
Competition	342, 863. 00
Saving	28, 487. 00

This includes 3,000,000 brick for Old Hickory plant and we were able to contract at the beginning of the year 1918 for high grade boiler brick from the Union Mining Co., being their best brand "Mt. Savage" capable of standing 3200° F. at $47.50 per M, f. o. b. factory. We also contracted for Ohio brick, capable of standing 2700° F. at $30.00 per M, f. o. b. factory, and these prices were held throughout the year, being considerably under the market price; in fact being under the price unofficially set by the U. S. Government for these qualities of brick.

Subdivision #2.—Bilge barrels, total purchase 4,000:

Cost	$42, 040. 00
Competition	47, 440. 00
Saving	5, 400. 00

These drums were purchased from the Detroit Range Boiler Co. at contract price, the contract price being for the year 1918 and the last quarter of the year 1917, being based on a sliding scale for steel with a fixed price for labor, overhead, and profit. The contract proved to be $1.35 per drum under contracts in effect during 1918, as the cost of labor advanced so considerably, and in fact at the present time the Detroit Range Boiler Co. will only contract at a 90¢ per barrel advance.

Subdivision #3.—Gravity conveyors:

Cost	$77, 368. 00
Competition	84, 331. 00
Saving	6, 963. 00

These conveyor systems were purchased on a contract basis agreement at $2.90 per lineal foot, and consist of concave wood rollers with iron collars 14″ long spaced at 6″ center, and were bought mostly for the Penniman shell-loading plant, and saving is based on actual figures obtained at time of contract.

Subdivision #4.—Gauges. Although the actual handling of the gauge contract after it was executed did not come under my supervision, yet the negotiation of the contract was made in my office, and the contract closed previous to the transferring of the purchases on this contract to another office. This contract with Schaeffer & Budenberg Mfg. Co. has proved very satisfactory and saved our company considerable money, due to the fact that from them we obtain all classes of gauges, including high pressure and ammonia gauges which at one time were purchased at high prices from Crosby Steam Gauge & Valve Co. owing to this gauge having been determined upon by the Standards Committee, and also low pressure gauges which were previously purchased from the Ashcroft Mfg. Co. The prices submitted by Schaeffer & Budenberg Mfg. Co. were very much lower, amounting to as much as 20 to 30% less than those submitted by Crosby and at the time the Schaeffer & Budenberg Mfg. Co. submitted the contract this contract was held up for almost a month as we felt their prices on the low pressure gauges were too high compared with Ashcroft. Finally S. & B. Co. met our offer and the contract was negotiated; thereby we have received not only good prices but excellent service, in view of the fact that all our gauges were purchased from one manufacturer and they have made very prompt shipments. This has been advantageous also in having one source for repairs.

Subdivision #5.—E grade asbestos fibre. Although the actual handling of the requisitions on this material was done by Mr. deWolf, yet as Mr. Niles had stated that he wished us to clean up this subject before turning it over to Mr. La Motte's division, and in view of the fact that we had purchased fibre at $70.00 per ton from the Asbestos & Rubber Wks. of America, which had not proved satisfactory and against which we had to collect from $5,000 to $6,000 credit, I continued to work on this subject. After collecting this credit the Asbestos & Rubber Wks.'s quality of fibre was brought up to that furnished by Johns-Manville Co., and Mr. Niles requested me not to turn it back to Mr. La Motte but to contract for the next year, which was done October 1, 1918. During the year of 1918 to October 1, we purchased this fibre at from $67.50 per ton delivered Hopewell, Va., to $70.00 per ton, compared with $98.00 per ton quoted by Johns-Manville Co. This comparison was fair in view of the fact that where the Asbestos & Rubber Wks. of America did not furnish fibre up to the quality of Johns-Manville for a while, yet on all fibre furnished by them of inferior grade they rendered us a credit on the basis of furnishing us equal quality of fibre as Johns-Manville at $70.00 per ton.

Cost	$58, 800. 00
Competition	78, 645. 00
Saving	19, 845. 00

It might be well to mention that Johns-Manville Co. dropped their price to $78.00 delivered Hopewell for the last three months of 1918, so that the saving at that time was not as much as the first nine months.

Grand total:	
Cost	$4, 792, 966. 00
Competition	5, 339, 833. 00
Saving	546, 867. 00, or 11.4%

(This is 2½ times the purchases made in this office in 1917.)

During the month of December most of my time was taken up in cancelling or arranging for cancellation of such war material as was not required after the signing of the armistice on November 11th. Without going into detail on this subject, it might be well to mention the fact that we have been able to cancel a large amount of material without cost to the du Pont Company, including such material as 100,000 fire brick from the Union Mining Company, 7 carloads of asbestos fibre from the Asbestos & Rubber Works of America, amd also a large amount of steel plate from the steel mills for the du Pont Engineering Company, together with numerous other items. As the policy of actual adjustments for orders cancelled against which there was a cancellation expense was not determined until very late in the year of 1918, this end of the work has practically come during the year 1919, and, therefore, no summation of same will be made in this report.

In summing up the above it might be well to call attention to the fact that greater savings could not be made in quite a few cases in view of the fact that the Government had fixed the price of materials, either in the case of the finished article or at least of raw materials going into the production, so that the competition in many cases would be very similar, and the success of the purchase depended largely in choosing a manufacturer best capable of turning out the equipment as required, both in respect to time and workmanship. However, all these purchases were made after bringing in considerable competition, as I was handling practically no equipment standard with the engineering department, or equipment which could only be purchased from one manufacturer, such as in the case of American Tool wringers, etc. This naturally meant that the above purchases took considerable time in analysing and ordering, yet it would have been possible to handle a considerably larger amount of purchases had it not been necessary for me to apply the months of May, June, and July, also one-half of April, August, and October, mapping out a campaign and supervising the urging of steel tanks purchased for Old Hickory, Barksdale, Indian Head, and Ives plants. This required considerable chart making, which I did personally for the Old Hickory plant and had done by draftsman in the case of the Ives plant, and also required a lot of time and study in keeping charts up-to-date and seeing that the object for which the charts were originated was carried out. This also required my making trips to the steel mills and tank fabricators.

I would like very much to go back several years and call attention to certain firms whom I have actually brought into the furnishing of our requirements of certain commodities, or have done considerable towards developing them for these lines of purchases.

Tanks: Quaker City Iron Works, Walsh-Weidner Boiler & Tank Co.
Radiators: National Radiator Company.
Fire brick and fire clay: Union Mining Co.
Bucket elevators: Webster Mfg. Co.
Asbestos fibre: Asbestos & Rubber Works of America.
Brooms: Indianapolis Brush & Broom Co.
Piveted bucket conveyors, etc.: C. W. Hunt Co.
Gravity & apron conveyors: Alvey-Ferguson Co.
Brick stacks: Rust Engineering Co.

Concrete bunkers: Chas. Bond Co., Ferdinand Barre.
Drums (steel): Steel Barrel Co. of America.
Bilge barrels: Detroit Range Boiler Co.
Wooden tanks: Eagle Tank Co., Challenge Co.
Pipe coils: Whitlock Coil Pipe Co.
Automobile tires: Kelly-Springfield Co.

These firms have been very successful in furnishing us with materials which met our needs both as to workmanship, delivery required, and also for furnishing these materials at a much lower cost than the concerns with whom we previously dealt, and which were in quite a few cases concerns which the engineering department were wedded to, and who charged us high prices for our having standardized to a certain extent on their equipment.

The prospects of work along these lines of purchases which we have made heretofore are of course dependable upon the extent to which the du Pont Company will operate along industrial lines, but as has been mentioned in this letter, there appears now as though there would at least be considerable purchases in the line of special tanks, steel and wood steam jacketed autoclaves and mixers for the ensuing year. How far the other lines of purchases will be required it is very hard to analyze, although at the present time there is in project form some Badger equipment for the synthetic camphor plant, and considerable paint equipment for the new paint plant proposed near Chicago. This paint equipment will be to a certain extent oil tanks similar to the Bowser small tanks.

There is also another line of work which will take considerable time and which is dependable to a certain degree upon the records which we have kept in this office covering the cost of tanks in past years; i. e., under the present status of work where the du Pont Co. is purchasing tanks from the du Pont Chemical Co., we send an inquiry to the du Pont Chem. Co. and outside concerns. This necessitates considerable analysis to determine the price which should be paid the du Pont Chem. Co. for their second-hand equipment, comparing same with quotations at the present market price, and making allowances for depreciation in value for the second-hand equipment. We have already had quite a few cases along this line, and feel that as this is purely a purchasing department function unquestionably this will require considerable time and application.

In closing I would like to state that the work performed during the year 1918 in this office has of course been accomplished only through cooperation with and advice from yourself, and has also been greatly assisted by the help of my secretary, Miss Fitzpatrick, who has done much toward handling the office end of the work, telephoning, originating correspondence, etc., and also by Miss McNerney who has been very valuable in taking dictation, and also in tabulating and recording work which has been vitally necessary in the running of the office. The work which Miss Fitzpatrick has undertaken has required initiative and that of Miss McNerney of accuracy, and they have both proved to be very capable and have applied themselves to this work with a marked degree of satisfaction.

TWH/MPF.

Exhibit No. 1221

October 19, 1918.

Major J. W. Sholes.

Du Pont Engineering Company,
Mr. E. G. Buckner, *Vice President*,
Wilmington, Delaware.

Gentlemen:

Subject: Prices of Raw Materials for Old Hickory Plant—benzol and alcohol.

1. The Chief of Ordnance directs me to acknowledge your communication of the 15th, with copy of letter from Mr. W. W. Richards, which is attached thereto.

2. Although matters of this kind were not specifically provided in the contract mentioned, it is believed that whenever you cannot purchase raw materials in good and reasonable accordance with prices at which the United States could supply them, that then the Government should be given every reasonable opportunity to save from unnecessary costs.

3. The letter from Mr. Richards does not satisfactorily explain the prices paid for alcohol and benzol, and or why any contract engagements for this material did not include protection against extra declines.

4. Perhaps you will also agree that it was a little extraordinary to feel that long-term contracts were necessary when material is required by the Govern-

ment, and when the United States could always commandeer that material whenever necessary or desirable to do so.

5. This Division has not paid over 3.18 on any bookings for benzol which have been made since May.

6. As regards alcohol, the highest price which the Government has paid is 9.6¢ per pound, and the average is probably about 9.2 cents per pound. Furthermore, it has been generally understood between a sufficient number of alcohol distillers and the United States, that the price could not at any time exceed 65¢ per gallon, unless by special agreement, and there is really no excuse for any Government agency to pay more than that price.

7. In view as above, it is suggested that at least on the raw materials which could be supplied by this Division, that your purchasing department be so kind as to submit prices which you can obtain, or permit this Division to advise prices at which it can furnish any of the raw materials which it attends.

8. Your cooperation as herein will be appreciated.

Respectfully,

RAW MATERIALS SECTION,
W. M. MACCLEARY,
Major, Ord. Dept., U. S. A.
By W. H. GELSHENEN,
Major, Ord. Dept., U. S. A.

Exhibit No. 1224

"OLD HICKORY"

"Old Hickory", the largest military powder factory of its day, was designed to "practically double" the capacity of the then existing factories of E. I. du Pont de Nemours & Company which had been constructed to meet the military powder needs of England, France, Russia, Italy, and Belgium in the Great War (See Record p. 5018).

The magnitude of powder requirements had not been anticipated in the spring of 1917. A letter of the Ordnance Department, written April 21, 1917, gives "anticipated needs of the Ordnance Department of the Army for smokeless powder during the next twelve months, 78,500,000 lbs." (See Ex. 1121), but by October 4th, 1917, this estimate had increased to 500,000,000 lbs. prior to January 1st, 1919 (Record p. 5004).

Meantime, there had been no total lack of preparation. On March 22, 1917, E. I. du Pont de Nemours & Company had addressed a letter to Secretary of War Baker, with copy to the Secretary of the Navy, submitting data on the powder manufacturing capacity of that company and its commitments to the "Entente Allies". This letter covered also the situation with respect to all essential raw materials and to the manufacture of TNT (See Ex. 1118, R. 4974).

On February 7th, 1917, four days after the breaking of diplomatic relations with Germany, E. I. du Pont de Nemours & Company started a search for sites suitable for smokeless powder plants, resulting in the recommendation of two that eventually were chosen for the building of the two great war plants, "Old Hickory" near Nashville, Tennessee, and "Nitro", near Charleston, West Virginia.

The first definite announcement of Government powder plant construction on a large scale was made on October 3rd, 1917 (See testimony P. S. du Pont 12/14/34) when Col. Hoffer of the Ordnance Department addressed a letter to the vice-president of E. I. du Pont de Nemours & Company, asking if that company would be willing to create additional capacity for the manufacture of smokeless powder amounting to 500,000 lbs. per day and for double that amount. (See Ex. —). It was stated that the plants should be the property of the United States and should be operated by the du Pont Company, either on a cost-plus or other basis.

It is to be noted that the du Pont Company had already examined into and recommended the proper sites for these plants and had actually constructed, during the preceding 30 months, powder-making capacity for the "Entente Allies" of over 1,000,000 lbs. daily capacity. The engineering and other forces needed for the undertaking, though temporarily diverted to other work, were held ready to move on a moment's notice.

The day after receipt of Col. Hoffer's inquiry the du Pont Company made a proposal to construct and operate all or part of the plants contemplated. This proposal estimated the cost of the 1,000,000 lbs. daily capacity at $90,000,000, and the probable time of first operation about July 1st, 1918, with completion about April 1, 1919.

The actual outlay on this plant, finally of 900,000 lbs. daily capacity was $83,000,000, and the first powder was manufactured early in July 1918. On the signing of the armistice, November 11, 1918, the plant was 93% completed and over 50% in full operation with every prospect of completion on or before March 1st, 1919.

Such is the record of private industry in emergency.

The original proposal of the du Pont Company as of October 4th, 1917, was elaborated and submitted to the Chief of Ordnance on October 8th, 1917 (see Ex. 1126, R. 5004, 5006). These proposals were reduced to a final order of the

Chief of Ordnance and accepted by E. I. du Pont de Nemours & Company on October 25, 1917 (see Ex. 1130, R. 5023).

Meantime, on October 11th, 1917 (see Ex. 1127, R. 5018), the Chairman of the War Industries Board had stated to his fellow members that the Chief of Ordnance "had practically decided to recommend that they (the du Pont Company), be permitted to expend additional $90,000,000 to double their smokeless-powder capacity, and that the Chief of Ordnance expected to recommend this without bringing the matter before the War Industries Board." The record does not show protest by that Board against the proposed procedure.

On October 16th, 1917 (see R. p. 5018), the Chairman of the War Industries Board reported "that he had been verbally advised by the Ordnance Department that the Secretary of War has given his approval to the plan authorizing the du Pont Company to practically double their capacity for the manufacture of smokeless powder at an expense of approximately $90,000,000."

The minutes of that meeting stated, "It was the unanimous opinion of the Board that immediate and drastic action should be instituted as the explosive situation was regarded as critical and of supreme importance."

On October 31, 1917 (see Ex. 1131, R. page 5035), three weeks after notice of the proposed order, the War Industries Board ordered the following letter sent to the Chief of Ordnance:

Oct. 31, 1917.

The Chief of Ordnance,
War Department, Washington, D. C.

Sir: 1. Replying to your communication of October 29th, we beg to say that the only previous definite information the War Industries Board had regarding the contract referred to therein with the E. I. du Pont de Nemours & Company was a telephone message to the Chairman of the Board to the effect that you proposed to make a contract with the du Pont Company involving the expenditure of about $90,000,000 without referring it in any way to the Board.

2. We now understand that you simply advise us of your action as a matter of information.

Respectfully,

H. P. Bingham,
Secretary War Industries Board.

On the same day, October 31, 1917, the Secretary of War sent a telegram to the du Pont Company, as follows:

Washington, D. C., *Oct. 31, 1917.*

Pierre du Pont,
Wilmington, Del.:

Have just had presented to me the details of the proposed contract with regard to increased capacity for powder production, This matter is large, intricate, and important. Do nothing about it until you hear further from me. Stay all action under the order until I can acquaint myself thoroughly with all features of the matter.

Newton D. Baker, *Secretary of War.*

It is to be noted that this telegram was not to cancel an order but "until you hear further from me, stay all action under the order." The essentials of the du Pont proposals of October 4th and 8th, 1917, were (R. page 5032):

1. Complete plants to manufacture all or part of 1,000,000 lbs. smokeless powder per day.
2. An estimated cost of $90,000,000.
3. Estimated time for starting the first complete unit, 8 months.
4. Completion of plants at rate of one additional unit each month.
5. The du Pont Company, or a company to be organized by it, to act as agent of the Government in the construction and operation of the plant or plants, "with the usual power and authority of an agent to contract for and in the name of his principal." The Government to be liable for any expenditure or obligation arising out of the construction or operation of the plants and for loss by accident, fire, flood, or explosion.
6. The Government to furnish sufficient funds to enable the du Pont Company to pay all bills and other obligations.
7. The Government had the privilege of cancelling the agency at any time.
8. Compensation, in event of cancellation, $900,000 per month of construction completed, not to exceed $13,500,000.

9. Compensation for construction, a percentage of profit on cost estimated by the du Pont Company at 0–6½% (exhibit 1134).

10. Compensation for operation, 5¢ per lb. of powder manufactured and packed.

11. Additional compensation, 50% of saving below a cost of 44½¢ per lb. for water-dried powder, or 47¢ per lb. for air-dried powder.

These essentials, excepting nos. 8, 9, 10, and 11, relating to compensation, were substantially preserved in the order of October 25th, 1917; the suggested order of December 11th, 1917, the contract of January 29th, 1918, and the final substituted contract of March 23, 1918.

The proposed compensation in event of cancellation of contract presented no serious problem, though it was several times modified, as may be seen by examination of exhibits.

The proposed compensation for saving in cost was modified in the December draft of order to a base price of 46¢ on water-dried powder, and in the drafts of January 29th and March 23rd, to 45½¢ for air-dried powder.

The proposed compensation for operation, originally written at 5¢ per lb. was changed to 3½¢ per lb., subject to certain charges, in the submitted order of December 11, 1917. This compensation, 3½¢ per lb., was continued in the contracts of January 29th and March 23rd, but was stated in the letter to be above all costs of operation, i. e., a clear profit.

Almost the entire discussion relating to these order contracts was centered upon the question of compensation for construction of the proposed plant or plants.

The original proposal of E. I. du Pont de Nemours & Company was made overnight, and the elaborated proposal within five days. The Company itself offered the undertaking. It was evident that a considerable part of the work was to be done in the engineering, purchasing, and administrative division of the company which were then very active in the operation of other military powder and commercial business. As it was practically impossible to allocate actual charges to the proposed new plants, an estimate, based on the cost of plants recently built for supplying the European governments, was prepared. This estimate was submitted to the Ordnance Department on November 2nd, 1917 (exhibit 1134, Record, page 5049). It showed a balance above cost of 6.8% as a maximum and 0 as a minimum, with an estimated mean of 3.6%. However, as interference with other business of the company was estimated at 2.9–5.5% with mean of 4%, it might be argued that the "out-of-pocket" estimate given should not include such items and that therefore the maximum gross profit should be stated at 9.7%, the minimum at 5.5% and the mean at 7.6%.

Though these figures were carefully explained verbally as well as in the written communication to the Ordnance Department, neither the Secretary of War nor the War Industries Board seemed able to grasp the fact that the 15% charge for named overhead expenses was not a clear profit, all of which was explained in letter to the Chief of Ordnance of November 2, 1917 (exhibit 1134).

Again, letter of November 23, 1917 (Record, p. 5102) confirmed to the Secretary of War the agreement of E. I. duPont de Nemours & Company to construct all or part of the proposed plants or to donate the plans so that the work might be done by others. The company refused only:

1st. To work without proper compensation and with a possibility of loss.

2nd. To divide with others the work at any one site.

Letter of December 1, 1917, addressed to the War Industries Board, agreed to do the work for a compensation of 6½% on construction work or a like sum guaranteed through the operation of the proposed plants.

On November 14, 1917 (exhibit 1142) a member of the War Industries Board wrote the Secretary of War, stating that the du Pont Company had agreed to rebate 6.5% of the total 15% on cost of construction, by charges against profits on operation, and also had agreed to reduce the profit per pound on powder manufactured to 3.5% under certain conditions. However, the members of the War Industries Board declined to approve the contract so modified. The Chief of Ordnance, believing it fair and reasonable, urged its adoption on account of the emergency necessity. (It is to be noted that this 6.5% was the entire estimated actual profit on construction work.) (Exhibit 1134, letter to Chief of Ordnance dated November 2, 1917.)

On November 19, 1917, the Chief of Ordnance addressed an order to E. I. du Pont de Nemours & Company (Record, p. 5149), which reduced the profit per pound to 3.5% as above indicated, but—instead of rebating 6.5%, i. e., the profit item of the 15% allowance of former proposals—6⅓% was named as the percentage allowed for engineering, purchasing, and administrative expense, leaving no profit whatever on construction. Naturally this proposal was not acceptable to the du Pont Company.

On November 27, 1917, the President of the du Pont Company visited the Secretary of War at his request to learn of the decision in regard to Government powder plants. He was shown a communication of the War Industries Board of November 26 (exhibit 1148). This communication proposed an advance of $1,000,000 on account of "net profit or compensation" and a further negotiation as to additional profit. On completion of the entire contract arbitration was offered if it then appeared necessary. It is to be noted that this "net profit or compensation" evidently referred to the disputed 15% on construction, of which at least 9% was out-of-pocket expense for engineering, purchasing, and administrative items. This 9% the du Pont Company was asked to carry for many months before adjustment by arbitration or otherwise.

In a report to the board of directors of the E. I. du Pont de Nemours & Company, by the president (exhibit 1149), the latter stated that at the interview of November 28, 1917, the Secretary of War said that he would be in favor of giving the work to other contractors but had decided to adopt the decision of the War Industries Board, which was thereupon submitted to the board of directors with the recommendation "that we decline the offer of the War Industries Board as presented by the Secretary of War and recommend to the latter that he employ other contractors, as we have reached the conclusion that our services to the Government have not the value that we had supposed." The board adopted this recommendation with the request that the Secretary of War be advised that in any contract entered into the company would agree that the total compensation might be limited to 10% of the actual cost of construction, and 15% of the actual mill cost of powder produced.

On December 1, 1917, the president of the du Pont Company wrote the War Industries Board (exhibit 1151), stating that the letter of the War Industries Board had been submitted to the du Pont Company and "it is with the deepest regret that we find ourselves unable to accept the plan of the War Industries Board."

This letter further points out that the proposed base price on powder (44.5¢ per lb.) is 16% below pre-war price, in the face of an advance in the cost of powder of 10¢ per lb. brought about by increase in prices of essential raw materials. The letter adds that a similar condition with respect to reduction of price does not exist in any other business and that the Government is paying a very substantial advance of pre-war figures in the purchase of all other supplies.

On December 3, 1917 (Exhibit 1153), the Secretary of War informed the War Industries Board that the du Pont Company had refused to undertake the building of the proposed plant on any terms other than those contained in their last proposition, except for a minor change.

Notwithstanding this refusal, on December 10, 1917 (Exhibit 1154), E. I. du Pont de Nemours & Company addressed a letter to the Secretary of War calling attention to the delay that had occurred in the construction of the powder plants as proposed in the order dated October 25th issued by the Chief of Ordnance. It also called attention to the recent visit of the Chief of Ordnance in which he had assured the company that it was necessary to call upon it for assistance. This letter asked an appointment with the Secretary for the purpose of presenting a proposition, copies of which were enclosed. This proposition adopted the views of the Ordnance Department in form of an order submitted on November 19, 1917, and limited maximum compensation to 15% on cost of manufacture and 10% on cost of construction. A further provision agreed to an arbitration of the paragraphs relating to compensation, the arbitration to determine the proper compensation to the company "in view of services to be rendered and in view of compensation provided in similar contracts now being entered into by the departments of the United States Government."

On December 12, 1917 (Exhibit 1157), the Secretary of War notified E. I. du Pont de Nemours & Company that as the du Pont Company had declined to accept the proposition suggested by the War Industries Board on November 27th, "the War Department proceeded to work out a plan for the direct creation of this capacity by the Government itself", that this action had been reported to Messrs. du Pont and Buckner on December 10th, and "that the question would not be reopened and the Government would proceed directly in the matter."

The Secretary added, "I then assured Mr. du Pont of my great appreciation of the generous willingness expressed by your company to aid the Government in its undertaking and I shall be most happy from time to time to call on you for such assistance as in the nature of the case you are most highly qualified to render."

The recital of the above events makes evident several important facts:

(1) Notwithstanding the low Department estimates for powder needed for the year 1917–1918, the du Pont Company did much preparatory work looking to the eventual building of large powder plants.

(2) When the call came for a proposition to construct the largest factory ever planned, a reply proposition was made overnight, on October 4th, 1917, and reduced to definite form within five days.

(3) An order was issued by the Ordnance Department twenty-three days after the receipt of the proposal of the du Pont Company.

(4) The War Industries Board, though it had been informed of the contemplated action of the Ordnance Department three weeks earlier, took no action until October 31st.

(5) Action under the order was held up by the Secretary of War on the same date, but the order was not canceled.

(6) The Secretary of War notified the du Pont Company on December 12 that he had already told the president and vice president of the du Pont Company that as a result of the refusal of the company to accept the plan of the War Industries Board the Secretary had "proceeded to work out a plan for the direct creation of this capacity by the Government itself", and that the case would not be reopened. This was a definite cancelation, on December 1st, of the order of October 25th, and relieved the du Pont Company of further responsibility, although the formal cancelation was not issued until the month of January 1918.

(7) Prior to that date the preparatory work within the du Pont Company went steadily forward in order that completed plans might be available when needed for whoever did the construction. Agreements with subcontractors and others were kept alive and further options on and purchases of land and machinery were made and secured. In these ways the effect of the delay caused by Government representatives was minimized by the du Pont Company in every possible way.

(8) According to the decision announced by the Secretary of War, a contract was let to other parties for the construction of the plant at Nitro near Charleston, West Virginia, and ground broken about January 1, 1918.

(9) Ground was broken during the first week of March at Old Hickory near Nashville, Tennessee, by the du Pont Company under a contract dated March 23, 1918, By expediting the work in every conceivable way this factory started operation on July 3, 1918, the very date originally contemplated in the order of October 25th, notwithstanding the fact that construction work had been delayed practically three months, and at the time of the armistice production was proceeding at the rate contemplated in that contract, and no actual delay in the delivery of powder was experienced.

(10) The total compensation of the du Pont Company for the work at Nashville and other plants constructed or operated for the United States Government, costing approximately $129,000,000, was between $400,000 and $500,000, or about three-tenths of 1%. (Record, p. —.)

JANUARY 9, 1918.

E. G. BUCKNER,
Vice President, E. I. du Pont de Nemours & Company,
Wilmington, Delaware.

DEAR SIR: On December 17th, 1917, I had a visit from Mr. D. C. Jackling who presented a letter from Secretary Newton D. Baker, dated the day previous, introducing him as the appointee to take the business direction and management of organization and construction of the new Government powder plants.

Mr. Jackling announced that he wishes to learn the nature of the assistance that the officers of E. I. du Pont de Nemours & Company were willing to give him and to obtain the preliminary "layout" of the proposed plant which this company was asked to build under General William Crozier's order of October 25th, 1917.

With respect to the assistance to be given him:

The War Department has now proceeded to work out a plan for the direct creation of this capacity by the Government itself. Under such policy our company believes it unnecessary to reveal our practices with respect to such lines of manufacture that are now commercially developed in the United States, such as those of sulphuric acid, nitric acid, cotton purification, diphenylamine and ether, as sufficient information is obtainable elsewhere.

Manufacture of the powder itself has been developed by our company so far beyond the practice of others that we are willing to permit inspection of our processes by accredited representatives of the War Department on written request as to information desired. These representatives may witness the operation of processes; make measurements, sketches or drawings of apparatus, buildings, layouts, etc., as long as such work does not interfere with the operation of safety of our factories. Copies of existing drawings owned by our company will be furnished on application. It is understood that this information is for the use of the United States Government only and that it will not be given to other manufacturers. The company assumes no responsibility as to the use of the data and its application to the new factories that the War Department proposes to erect. In general this company will not attempt to criticize or approve the plans of the War Department as the close interrelation of the parts of the proposed factories makes piecemeal criticism useless and our services as directors of the whole project are deemed by the Government as unnecessary.

With respect to the work already done by us:

We have provided Mr. Jackling with our preliminary "layout" and the memorandum of principal materials needed for the construction work. Our chief engineer has explained this data to him. We will furnish the drawings that we had prepared for the "layout" but none of the information is certified as correct or final for the purposes of the proposed Government plant, and it must be checked out and passed upon by those qualified to do so.

We pointed out to Mr. Jackling that the proposed work involved no problems that cannot be solved by capable engineers of industrial training but that economy and speed of reaching maximum output with a properly balanced plant are out of the question unless the work is in charge of an organization of experience. On that account we will not delegate any of our men as suitable to assist the War Department in its work, knowing full well that the withdrawal of even large numbers of them cannot win satisfactory results for the Government without the backing of our entire organization. Since suspension of General Crozier's order we have taken on important work for the Government which, together with that theretofore on hand, will call for the use of all our forces. On this account we should not be called upon for men. If the War Department decides to set aside this recommendation, we request that negotiations be made with our men direct, though we would appreciate the courtesy of being informed as to what is intended in this respect.

Conversation with Jackling suggested the construction and short-time operation of part of the proposed factories by E. I. du Pont de Nemours & Company. As a result we submitted to him by telephone the following:

> E. I. du Pont de Nemours & Company will construct one plant of five units, capacity 500,000 pounds per day.
>
> E. I. de Pont de Nemours & Company will operate these units when completed until a total output equal in amount to five months' full operation, 62,500,000, has been made.
>
> The War Department will pay as compensation 10% of cost of construction and 10% on cost of manufacture, figured on base price of 45¢, making cost to the Government 49½¢ base. To this compensation is to be added one-half the savings in cost of manufacturing up to a maximum of 15% on base cost of the output of the factory.
>
> If the work is discontinued before completion of the above the War Department is to pay E. I. du Pont de Nemours & Company a sum not less than 15% on construction cost alone.

Mr. Jackling inquired as to the profit expressed in cents per pound which would produce the maximum in the above offer. On being informed that this maximum figure was 6.75¢ per pound he stated that he was not authorized to give more than one-half of that amount. Mr. Jackling's counter offer was rejected by our company because we are informed that contracts are being closed by the Government on terms quite similar to the proposal made by us and we have been given no reason why our services are considered worth less than those of other contractors.

This letter gives a condensed statement of our position as outlined to Mr. Jackling.

Very truly yours,

PIERRE S. DU PONT, *President.*

Exhibit No. 1225

Excerpts from the mimeographed memorandum dated February 20, 1934, headed "War-time contract forms and emergency codes" being a study made by a committee of student officers at the Army Industrial College during the 1933–1934 course.

PRESENT STATUS OF WAR-TIME CONTRACT FORMS

Interdepartmental Board of Contracts and Adjustments.—World War experiences in placing, administering and terminating contracts directed attention to the necessity for changes in the forms used by the Government in its contractual relations. To effect these, in 1921 there was set up inthe Bureau of the Budget an Interdepartmental Board of Contracts and Adjustments, to revise, standardize and simplify the contract forms in use by the Government.

This Board has prepared various contract forms for use in current procurement, and their use by governmental contracting agencies is made obligatory.

Board to standardize war-time contracts. * * *

In 1921 The Assistant Secretary of War convened a Board to standardize war-time contract forms. The Board was composed of a representative from each of the supply arms and services and from the Office of The Assistant Secretary of War. * * *

The Board to standardize war-time contracts in preparing contract forms for use in war recognized the following conditions which affect war procurement contracts:

1. Uncertain labor and material costs which preclude accurate determination of fixed prices.
2. The termination of contracts due to cessation of hostilities.
3. Confusion due to increased industrial activity and unfamiliarity of manufacturers with war equipment and material.
4. Haste incident to the emergency.
5. Opportunities for profiteering.
6. Increased powers of the President and removal of legislative restriction upon the powers of the Government agencies.
7. Recent recommendation of the War Policies Commission "to minimize the profits of war."

(*a*) President's power, in war, to stabilize and adjust prices; to secure use to the Government of any private property needed in the prosecution of war without affording the owner thereof profit due to the war; and to compel contractors to accept war orders.

(*b*) Upon the declaration of war and during the period of the emergency, individuals and corporations shall be taxed 95 percent of all income above the previous three-year average, with proper adjustment for capital expenditures for war purposes by existing or new industries.

(*c*) The cost plus percentage methods of purchase shall be eliminated.

8. Provision for changes in plans and specifications and necessary readjustments of original estimated cost of contract.
9. Inspection clauses—costs and materials.
10. Failure on the part of the contractor to complete his contract satisfactorily.

The Board on War-Time Contracts after much research and collaboration with the supply arms and services adopted certain forms for use in war procurement, These were embodied in a letter to The Adjutant General dated January 25, 1929.

The forms as then adopted by the Board were later referred to another committee appointed by it for further study and recommendations as to revision. This later committee held numerous conferences with representatives of the several supply arms and services and consulted freely with liaison officers of the Navy Department. Consideration was also given to suggestions received from district procurement planning officers and from Reserve officers.

Based on these studies revised drafts of forms were prepared and submitted to chiefs of supply arms and services for further consideration and suggestions. Final redrafts were them prepared by the committee and submitted to the Board. At a formal meeting of the Board on December 22, 1931, the revised forms as submitted by the committee were adopted.

The final redrafts were forwarded to The Assistant Secretary of War in February 1932, together with the recommendation for their approval for use, in their respective fields, for all war procurement purposes except that of large-scale construction projects.

The Construction Division, Office of the Quartermaster General was of the opinion that none of the proposed forms was adaptable to large-scale construction and wished to prepare a form which would be suitable for such projects.

The Assistant Secretary of War, through the Army and Navy Munitions Board, submitted the proposed forms for consideration of the Navy Department as to their suitability for war procurement purposes by that department—with a view to promoting uniform war-time contracts in the War and Navy Departments. After consideration of the forms by the Navy Department they were returned with the notation that while most of the principles contained in them were embodied in forms adopted by the Navy it was not believed advisable or possible to standardize both Department forms into a single form.

In view of recent criticism and suggestions on war contract forms received from procurement district planning officers and industrialists, The Assistant Secretary of War has referred the 1931 war contract forms to the Board on War Contracts for further consideration.

Pursuant to these instructions the Board met on January 11, 1934, and appointed a committee to consider all papers now in the hands of the Board and to present to the Board definite recommendations as to a form of contract based on the adjusted compensation principle and a Manual of Instructions for the drawing of contracts thereon.

Forms recommended.—The Board to Standardize War-Time Contract Forms has recommended adoption of the following forms of contracts for use during war:

- Informal contracts.
  - Purchase orders.
- Formal contracts.
  - Fixed price contracts.
    - Contracts for supplies.
    - Contracts for construction.
  - Adjusted-compensation contracts.

* * * * * * *

(1) In both forms the provision that requires approval by the head of the department for any change involving an estimated increase or decrease of more than five hundred dollars has been deleted. This change will avoid delays incident to securing approval of emergency changes by the Secretary of War.

* * * * * * *

4. Adjusted compensation contract.

The committee believes that in the event of war cases will arise in the procurement of technical noncommercial items where the use of a fixed-price contract will be impractical. The committee further believes that under such circumstances some variation of the cost-plus principle must be adopted. This simply means that the Government will pay the cost of manufacture and will in addition pay the contractor a fee determined by one of several means. In cases where there is no reasonable basis for determining a fixed price for an article, producers cannot well object to the cost-plus principle; but their dissatisfaction will be as to the details of accounting, the various elements of cost, and the amount of profit allowed.[1]

The proposed adjusted compensation contract is essentially a cost-plus form of contract. The Government pays the cost of manufacture plus a fee based on the value of the plant and equipment, provided by the contractor. In addition the fee is increased if the actual cost is below the estimated cost and is decreased if the actual cost is above the estimate.

(a) Accounting.

Any form of cost-plus contract will necessarily involve detailed accounting supervision by the Government. The proposed form does not attempt to prescribe any particular form of accounting. The committee believes that the adoption of standard cost accounting methods as required by the industrial codes will prove of material assistance in administering cost-plus contracts.

The proposed contract does not specify the basis upon which the contractor's plant will be valued.

(b) Elements of cost.

The proposed contract leaves a wide latitude both as to the elements of cost that may be included in the contractor's estimate and in the cost accounting. It does, however, specify certain costs that will not be allowed.

---

[1] Brief on Just Compensation, prepared by Lt. Comdr. E. D. Stanley, Supply Corps, U. S. N., p. 34.

Article III, par. 2 (i) provides that the Government will not reimburse the contractor for "bonus payments to officers and employees, based upon profits earned." The statement has been made that this is unfair because many concerns pay small salaries and rely upon bonuses based on profits. If salaries are less than the services are worth proper figures may be used in the estimate. The committee recommends that in exhibit A the contractor be required to enter the salaries and bonuses paid all officials of the company during the preceding calendar year. This will permit the contracting officer to determine the reasonableness of salary increases and thus prevent the payment of exorbitant salaries as was done by certain aricraft producers during the World War.

(c) Profit.

The question of the amount of profit to be allowed the contractor is one of the most critical in any form of cost-plus contract. The fee adopted should be fair alike to the producers and the Government. In the adjusted compensation contract the fee is based primarily upon the rental value of the facility. It is true that the contractor assumes few of the risks of an entrepreneur for which profit is paid. He does, however, have certain risks of management and certain expenses for which no compensation is made. The committee believes that some increase in the present figure might well be made but doubts the advisability of attempting to determine the exact amount until war is imminent. It can then be decided on the basis of then existing conditions.

(d) Time.

One serious question in connection with the use of the adjusted compensation contract is the possible delay in production incident to negotiating the contract. Theoretically, this is cared for by the use of the preliminary data sheet. Practically, it is difficult to form a satisfactory estimate of costs without a carefully prepared factory plan. Little progress is being made at present in preparing such plans. The committee recommends that consideration be given to the advisability of using compulsory orders in connection with adjusted compensation contracts.

Suppose, for instance, the A company is willing to undertake the manufacture of one million fuses on an adjusted compensation basis. A compulsory order for that number of fuses would be issued and the company would start converting its plant.

In the meantime contract negotiations would go forward. As soon as an agreement could be reached the contract could be substituted for the compulsory order. If for any reason no agreement could be reached both parties would be adequately protected.

(e) Payment.

The contract is so drawn that no matter by how much the contractor exceeds his estimate he will receive 50% of the agreed fee. The committee, therefore, recommends that provision be made for paying the contractor each month upon the approval of the contracting officer one-half of the prorata share of the fee for that month, such payments in no event to exceed 50% of the estimated fee prior to final determination of the contract.

* * * * * * *

The committee believes that the fixed price contract form for construction devised for war-time purposes is only suited to small scale construction projects. It is further the committee's opinion that the adjusted compensation contract form as proposed is unsatisfactory for use in connection with construction projects.

The committee recommends that a form for war-time scale construction projects be considered which will be of the cost-plus a fixed percentage of the estimated cost type.

Such a form would contain the following provisions:

1. Provision for payment of a graduated bonus for reducing the cost, and/or the time of performance below the estimated cost and/or time of performance.
2. Provision for a nominal penalty for exceeding either the estimated cost or time of performance or both.
3. Provision for revising the estimated cost, the estimated time of performance, and the fee, for changes in costs of labor, material, and for delays beyond control of the contractor.

* * * * * * *

EFFECT OF EMERGENCY CODES

* * * Not only had new jobs for white collar and professional workers actually become non-existent but there was a surplus rather than a dearth of

industrial labor as well. Class lines had been clearly drawn, the danger of class hostilities appeared no longer remote but actually on the horizon.

This break-down, it must be realized, led to the creation of conditions favorable to either revolution or counter-revolution. Fortunately, however, the philosophers of the "new deal" refused to agree that the mechanism had failed. They have proceeded to wind it up again and having done that, hope to bring order out of chaos and suspend in balance for all time the existing class relation in American society.

Private ownership of the means of production is to continue, but capitalism is to be prevented from exploiting, on the one hand, the producers of raw materials and, on the other, its labor supply. Agriculture, despite its over-capitalized plant and restriction to domestic markets, will get sufficient profit for the payment of fixed charges and the purchase of capital and consumers' goods. Wage earners will be assured of a means of employment and at least a means of subsistence, if not incomes, conducive to decent standards of living.

The "new deal" has assumed that it is possible to establish a permanent truce on class antagonisms, and as a means to this end is applying that idea known to antiquity and the Middle Ages—the just price.

* * * * * * *

The American farmer was to be restored to the capital and consumption markets by giving him a just price for his commodities on the basis of production limited to the home market. Industry was to be revived by the reasonable assurance of a just price for its production. While there was no guarantee, there was at least the goal of a fair return on investment. Industry was now formed into cartels, working through the agencies of its own trade associations it was to devise codes of fair practice for the purpose of regulating methods of competition.

The first handful of codes prepared under the supervision of the National Industrial Recovery Act indicated the abandonment of laissez faire. Unfair methods of competition, secret rebates, the pirating of trademarks and labels were barred by various codes, but those practices were not very much unlike what the Federal Trade Commission Act so cheerfully set out to accomplish in another day.

More significant was the fact that codes were written and accepted calling for price control and the banning of selling below cost, for the fixing of production quotas, for the limiting of plant expansion and machinery installation. Once codes were approved by the President they had the sanction of law, and violators were liable to punishment.

* * * * * * *

Naturally the adoption of the N. I. R. A. and its network of codes produced a period of transition beset with great variety of difficulties for Government contractors and the Government as well. However, as industry obtained a better understanding of code requirements and a better grasp of the purpose of the new order tenderness changed to an attitude of vigorous compliance and wholehearted cooperation.

At the present time War Department and Navy Department purchases are made with comparatively little embarrassment and contracts are being executed efficiently and in a manner wholly satisfactory to both parties.

By virtue of the fact that codes are worded so as to permit a maximum of flexibility no drastic changes were necessary in existing contract forms. Schedules or invitations to bid have been modified to include a provision that bidders are complying with the requirements of the applicable code, and contracts to include an affidavit specifying that in the execution of the particular contract, code requirements and the provisions of the N. I. R. A. will be observed.

To some extent, under code control, the element of competition is eliminated, and this throws confusion and additional responsibility on the shoulders of Government contracting officers. Bidders from such industries as steel and lumber bid a uniform price for their products. Under existing law covering tie bids awards are made by lot. There are times when this procedure results in an apparently inequitable distribution of business, and industry seems inclined to the idea that the Government should adopt some system of allocation to obviate such a condition. As Government business must not only be right but must look right, legal procedure and practice are invariably observed in the making of awards. Under the code set-up these grievances are referred to the N. R. A. for adjudication. This affords industry an opportunity to adjust its own problems through the code authorities, and so far the system seems to operate with satisfactory results.

Realizing that the institution of codes was precipitated by an emergency which threatened the very lifeblood of our economic structure and that a few short months of application have demonstrated its efficiency and success, it seems not unreasonable to assume that the system of control as it now operates, or with certain applicable modifications, has come to occupy a permanent place in our economy. This then brings us to the vital phase of our discussion—what effect would emergency codes have upon Government war contracts?

* * * * * * *

Undoubtedly such provisions of the emergency codes as apply to maximum hours of labor and minimum wages would have to be scrapped during war but most other stipulated conditions could be modified to meet the expansion and new economy.

* * * * * * *

Code authorities in their administration of codes in connection with wartime contracts would aid effectively in the distribution and conservation of raw materials essential for war output, so also would they assist in the advance of standardization and the elimination of unnecessary sizes, styles, and shapes, thus conserving raw material, labor, and capital.

As an organized superagency for the direction and control of industry and the coordination of wartime contracts the committee is of the opinion that the N. R. A. and its existing emergency codes, with certain modifications, can be utilized effectively to insure that wartime contracts will be let quickly, administered economically, and terminated with a minimum of confusion and aftermath. Since the adoption of the N. I. R. A. industry has operated under supervised control and with continued education will develop the required temper to assume the added burdens of wartime supply without disruption.

During an emergency the code authorities under the N. R. A. would form the backbone of the superagency structure. Through them, expert information, direct contact with industry and purchasing officers, suggestions, requests, complaints, and the enforcement of regulations and control, would be obtained.

This would constitute unified control from the individual plants and various branches of industry through the code authorities and such other emergency organized units as may be set up, to the N. R. A. Administrator, and the President.

When industry is devoting its maximum effort toward the fulfillment of Government contracts code authorities would be constant sources of information regarding the sentiments of trade, their complaints and their suggestions. Approaching critical situations would be sensed and would meet with the required treatment by conferences of representatives of affected industries or such other means as may be deemed expedient. Above all, the importance of the Government's requirements would be kept constantly in mind. By industry dealing with industry, systems of distribution, priorities, and all other methods of control would be developed and coordinated to the end that Government contracts would be executed with the efficiency needed to meet the emergency.

Attitude of National Chamber of Commerce and Associated General Contractors.—Contact was made with the National Chamber of Commerce and the Associated General Contractors and developed that the proposed wartime contract forms had not as yet been referred to their body.[1] Both organizations are especially interested in the subject and requested that they be given an opportunity to study the proposed forms. They assured the committee that they were not only interested but wanted to give the Government the benefit of their experience and services in this matter.

Conclusions.—The committee is of the opinion that existing emergency codes, modified to meet wartime conditions, will facilitate the proper execution of Government war contracts, in that:

1. They constitute a method by which the Government can quickly present to all factors in an industry its needs in a particular line and receive dependable information as to how they may be met and as to the facilities available for use.
2. They provide figures as to cost of production and can keep the Government informed as to changing conditions which might affect such cost. Cost records will of course be available for inspection by Government representatives.
3. They will aid in the distribution and conservation of raw materials.

---

[1] Contact has been made since this report was written.

4. They provide organized machinery for the collection of information and advise the Government as to the needs of industry to meet future requirements.

5. They can bring to the attention of the Government unemployed facilities which may readily be adapted to the production of needed supplies, thus avoiding the misuse of money, material, and labor for the expansion of existing plants.

6. Distribution of orders so as to prevent railroad congestion and labor disturbances can be effected.

EXHIBIT NO. 1226-A

Form no. ____________
Revised December 1931.

Contract no. ____________
Dated______________19__.

ADJUSTED COMPENSATION CONTRACT

(For use in war or other national emergency)

____
(Department)

____
(Contractor)

Contract for_____________________________________ Amount $____________
Place ____

This contract, entered into this __________ day of ________________, 19__, by the United States of America, hereinafter called "the Government", represented by the contracting officer executing this contract, and_________________
____
____
of the city of ____________________, in the State of _______________________
hereinafter called "the contractor", witnesseth that the parties hereto mutually agree as follows:

ARTICLE I. DEFINITIONS

1. The term "Chief of branch" as used herein shall mean the head of the branch, bureau, service, or agency of the executive department or independent establishment involved, or his assistant.

2. The term "contracting officer" as used herein shall include his duly appointed successor or his duly authorized representative.

3. The term "estimate" as used herein shall mean the estimated cost set forth in "Exhibit A."

ARTICLE II. PERFORMANCE

1. The contractor shall immediately proceed with the performance of this contract and shall deliver the articles, perform the work or render the services set forth in "Exhibit A", which is attached hereto and made a part hereof, in accordance with the terms thereof and of this contract.

2. For the purposes of this contract:

(a) The Government will provide such inspectors, auditors, and other personnel as the contracting officer may deem necessary.

(b) The contractor shall allow such inspectors, auditors, and other personnel free access to its plant, operations, and accounting records and shall furnish such facilities and supplies, including office space, office furniture, heat, light, etc., as the contracting officer may require for their use on the work: *Provided*, That the value of the office and other space so furnished shall be included in the estimated value of the buildings, machinery, and facilities upon which the fee is based, and that the actual cost of such other items so furnished shall be reimbursed the contractor by the Government and shall not be included as part of the estimate.

3. The contractor shall give his personal supervision to the work or have a competent representative on the work at all times during progress with authority to act for the contractor.

ARTICLE III. PAYMENTS

1. The contractor shall submit to the contracting officer for payment summaries of accounts setting forth the expenditures for which reimbursement is sought. The Government will currently reimburse the contractor for all expenditures which may be determined by the contracting officer to have been necessary for the performance of the contract.

2. The Government will not reimburse the contractor for any of the following expenditures:

(a) Federal taxes, except sales taxes imposed directly upon articles manufactured under this contract.

(b) Expenses of experimental research and other departments not engaged on work under the contract.

(c) Interest on outstanding debts owed by the contractor.

(d) Appropriations to reserves for bad debts.

(e) Appropriations to reserves for outstanding debts owed by the contractor, including redemption of stocks, bonds, and mortgages.

(f) Brokerage fees on commercial paper, including issues of stocks and bonds.

(g) Entertainment, except entertainment of employees properly chargeable to welfare expenses and then only when approved by the contracting officer.

(h) Contributions to charity and other gratuities.

(i) Bonus payments to officers and employees, based upon profits earned by the contractor.

(j) Compensation or other payments for services rendered prior to the commencement of work under the contract.

(k) Payments on insurance under which the contractor is the beneficiary carried by the contractor on the lives of any of his executives or employees.

(l) Expenses for patents and royalty payments not incident to the work performed under the contract.

3. Upon the completion of the contract the fee set forth in exhibit A, adjusted if necessary, for authorized changes, will be paid to the contractor.

4. If the cost of performing the work is less than the estimate, adjusted if necessary for authorized changes, the Government will pay to the contractor upon the completion of the work an additional compensation determined as follows:

The percentage which the difference between the cost and the estimate bears to the estimate will be divided by 4 and multiplied by the cost; the resulting product will be the additional compensation allowed.

5. If the cost of the work is greater than the estimate, adjusted if necessary for authorized changes, the fee shall be reduced by one percent (1%) for each one percent (1%) that the costs exceed the estimate, but in no case shall the fee be reduced more than fifty percent (50%).

6. The Government will pay to the contractor the amount set forth in exhibit A as "Rehabilitation costs" upon the completion or termination of the contract.

7. The amount set forth in exhibit A as "Depreciation" will be paid in equal monthly installments during the period of performance. If the contract is completed in less than the estimated time, the difference between the amount previously paid and the estimated amount set forth in exhibit A will be paid to the contractor.

8. If the contractor makes expenditures at prices higher than those set forth in exhibit A, the Government will not reimburse him for the excess amount, except:

(a) When and if such increased prices for labor, personal services, or material are authorized or ratified by a Federal agency set up for the purpose of controlling prices of labor and/or materials or, if no such agency exists, by the contracting officer.

(b) When, with the approval of the contracting officer, the contractor has paid increased compensation for overtime work performed. Overtime work shall be construed as the time worked in excess of eight (8) hours in any one day by employees who come within the provision of the Federal eight-hour law, and the time worked in excess of the normal working day by other employees.

When either of the exceptions (a) and (b) above are made, the estimate will be revised to include the estimated cost of such change.

9. If, upon commencement of work, the contractor has on hand material which he desires to use in the performance of this contract, such material may be taken over and paid for by the Government at prices not in excess of the current market prices, nor of those set forth in exhibit A.

10. Coincident with making final payment, the contractor shall furnish the Government with a final release, if required, in such form and containing such provisions as shall be approved by the chief of branch concerned of claims against the Government arising under and by virtue of this contract.

ARTICLE IV. RECORDS AND ACCOUNTS

1. The method of accounting used by the contractor shall be subject to the approval of the contracting officer. No material change will be made in the contractor's method if it conforms to good accounting practice and the costs are readily ascertainable therefrom. The original documents of all transactions not delivered to the Government in the course of payments shall be retained by the contractor and shall be open to inspection and examination by the contracting officer at all times prior to final settlement.

ARTICLE V. CHANGES

1. The contracting officer may at any time by written order and without notice to the sureties—

(a) Make changes in the drawings and specifications.

(b) Direct temporary suspension of the work.

(c) Direct procurement of additional facilities so as to expedite the work.

(d) Provide material or facilities which the contractor has agreed to furnish but is unable to furnish.

2. When any of the above changes are ordered, the contractor shall submit to the contracting officer an estimate showing the increase or decrease in cost, if any, that will result by reason of such change. If such estimate is approved by the contracting officer, an equitable adjustment shall be made in the original estimate, the schedule of performance, the fee and the depreciation allowance. Any claim for adjustment under this article must be asserted within ten (10) days from the date the change is ordered unless the contracting officer shall extend such time. If the parties cannot agree upon the adjustment, the dispute shall be determined as provided in Article XII hereof, but nothing in this Article shall excuse the contractor from proceeding with the contract as changed. The written order of the change shall be attached to and made a part of the contract.

ARTICLE VI. INSPECTION

1. All material and workmanship shall be subject to inspection and test by the contracting officer at all times and places and, when practicable, during manufacture.

2. The contracting officer shall have the right to reject work which contains defective material or workmanship. The cost of defective work performed by the contractor, whether due to defective workmanship or material shall be reimbursed the contractor by the Government. *Provided*, That if the contracting officer shall determine that the defective work is due to the fault or neglect of the contractor the cost thereof shall be borne by the contractor.

ARTICLE VII. FAILURE TO PERFORM

1. If, in the opinion of the contracting officer, the contractor does not prosecute the work, or any part thereof, in accordance with the conditions of this contract, the contracting officer, with the approval of the chief of branch, may, be written notice to the contractor, either—

(a) Require the contractor to proceed with the performance of this contract under such supervision as the contracting officer may elect to exercise, in which case the contracting officer shall have the right to employ, or require the contractor to employ, on such terms as the contracting officer may direct, such additional personnel, executive or otherwise, as the contracting officer may deem desirable, or

(b) Cancel the contract.

Should the contracting officer elected to proceed under paragraph (a) above, such action shall in no case estop or otherwise proclude him from subsequently proceeding under paragraph (b) above.

2. In case of proceeding under paragraph 1 (a), the increased cost to the Government, if any, occasioned thereby and approved by the contracting officer, shall be included in the cost of the work.

3. In case of proceeding under paragraph 1 (b)—

(a) The Government shall have the right to enter upon the premises of the contractor and take therefrom all Government property, and

(b) The contractor shall not receive any fee, termination fee, or compensation.

ARTICLE VIII. SUBCONTRACTS

1. Each subcontract, purchase order, or other recognized form of commercial commitment, in excess of five thousand dollars ($5,000), hereinafter called "subcontract", shall be reduced to writing and shall contain the following provisions:

"Whereas the United States of America (hereinafter called the Government) has under date of ------------------- entered into a contract with -------- -------------------------------- (hereinafter called the prime contractor) for supplying ------------------------------------- -- and

"Whereas -------------------------------------- (hereinafter called the subcontractor) has accepted this contract (hereinafter called subcontract) to furnish the services or supplies set forth herein and incident to the prime contract:

"It is understood and agreed that—

"(a) The Government may at any time by notice in writing to the parties hereto assume the rights and obligations of the prime contractor. Except when such rights and obligations are so assumed by the Government, this subcontract shall not be construed as creating any obligation between the Government and the subcontractor.

"(b) This subcontract may be terminated at any time upon notice in writing from the prime contractor to the subcontractor: *Provided*, That such termination and any settlement or agreement growing out of or incident thereto shall have the prior approval of the Government officer authorized to administer the prime contract.

"Upon receipt of such notice, the subcontractor shall, unless the notice directs otherwise, immediately discontinue all work and the placing of all orders for materials, facilities and supplies in connection with the performance of this subcontract, and proceed to cancel promptly all his existing orders and terminate work under all outstanding agreements insofar as such orders and/or work are chargeable to this subcontract: *Provided, however*, That the actual cost incurred for the protection, collection, and disposition of the property of the prime contractor shall be paid by the prime contractor.

"Upon the termination of this subcontract as hereinbefore provided, unless the subcontractor is in default, full and complete settlement of all claims or demands of the subcontractor arising out of this subcontract shall, as soon as practicable after such termination, be made as follows:

"(a) The prime contractor shall pay to the subcontractor the contract price not previously paid for articles completely manufactured, or work and/or services completely performed. If this subcontract price includes cost of transportation to destination, and the articles are not shipped, such transportation cost shall be deducted therefrom.

"(b) The prime contractor shall pay to the subcontractor for work and articles in process of completion that percentage of the subcontract price represented by the percentage of completion, less the salvage value thereof.

"(c) The prime contractor shall pay to the subcontractor the cost of material on hand purchased for and necessary for the subcontract, which has not entered into production, less the salvage value thereof.

"(d) The prime contractor reserves the right to take over all or any part of the uncompleted articles or materials by paying the subcontractor the salvage value thereof.

"(e) The prime contractor shall reimburse the subcontractor for the cost of cancelling his subcontracts under this contract in accordance with the principles set forth in subparagraphs (a), (b), (c), and (d) above.

"(f) No allowance will be made for prospective profits; but if it is determined that the sum total of the above payments is not adequate to cover the cost to which the subcontractor has been subjected by reason of the termination of this subcontract, the prime contractor may add thereto a sum sufficient to cover such costs.

"(g) The sum total of the payments so made shall not exceed the total amount of the subcontract less payments previously made."

2. If, during the progress of the work, the contractor performs work which he originally planned to subcontract as per exhibit A, or if he subcontracts work not shown therein, and such change effects an increase or decrease in the use of facilities, an equitable adjustment shall be made in the fee and the depreciation allowance.

ARTICLE IX. TERMINATION

1. This contract may be terminated by the Government at any time upon notice in writing from the contracting officer to the contractor. Such termination shall be effective in the manner and upon the date specified in said notice and shall be without prejudice to any claims which the Government may have against the contractor. Upon receipt of such notice the contractor shall, unless the notice directs otherwise, immediately discontinue all work and the placing of all orders for material, facilities, and supplies in connection with the performance of this contract, and shall proceed to cancel promptly all his existing orders and terminate work under all subcontracts insofar as such orders and/or work are chargeable to this contract: *Provided*, That the expenditures made by the contractor for protection, collection, and disposition of property of the Government and for accounting services for completion and determination of payments and settlements under this contract, as approved by the contracting officer, shall be paid by the Government.

2. Upon the termination of this contract as hereinbefore provided, unless the contractor is in default, full and complete settlement of all claims of the contract tor arising out of this contract shall, as soon as possible after such termination, be made as follows:

(a) The Government shall reimburse the contractor for all expenditures made in accordance with the terms of this contract and not yet reimbursed by the Government; and

(b) Such further expenditures made by the contractor after the date of termination, including the cost of cancelling subcontracts, as may be authorized by this contract or by the notice of termination; and

(c) The charge for depreciation will cease as of the date when termination becomes effective; and

(d) In lieu of fee and compensation set forth in article III, paragraphs 3 and 4, the Government will pay to the contractor that portion of the fee which the actual time of performance bears to the estimated time of performance.

ARTICLE X. PROPERTY

1. All articles, materials, buildings, machinery, facilities, and work for which the contractor has been reimbursed shall immediately become the property of the Government. Upon completion or termination of this contract the Government shall have the right to remove all such property, including buildings, machinery, or facilities, erected or installed upon land not belonging to it.

2. The contractor shall reimburse the Government for all damages to Government property and for the cost of any Government property lost or destroyed through the fault or neglect of the contractor.

3. All scrap from materials furnished or paid for by the Government shall be the property of the Government.

ARTICLE XI. SECURITY

The contractor agrees to furnish a bond in the sum of $------------ in the form and with sureties acceptable to the Government, guaranteeing the faithful performance of this contract. Should the surety on any bond so furnished become unacceptable to the Government, the contractor agrees to furnish such additional security as may be required from time to time to protect the interests of the Government.

ARTICLE XII. DISPUTES

If any doubts or disputes arise as to the meaning of anything in the contract, drawings, plans, or specifications, or if any discrepancy appears between said drawings, plans, or specifications and this contract, the matter shall be referred at once to the contracting officer for determination, and his decision in the premises shall be conclusive and binding upon the parties hereto: *Provided*, That both parties hereto shall have the right of appeal to the chief of branch concerned and his decision upon such appeal shall in all respects be final and conclusive on the parties hereto. In the meantime, the contractor shall diligently proceed with performance.

ARTICLE XIII. CONFIDENTIAL WORK

If the contracting officer designates any work as confidential, the contractor shall not permit access to such work, nor any information in connection therewith, to be given to any person other than employees of the contractor approved by the contracting officer.

ARTICLE XIV. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may arise therefrom, but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

ARTICLE XV. COVENANT AGAINST CONTINGENT FEES

The contractor warrants that he has not employed any person to solicit or secure this contract upon any agreement for a commission, percentage, brokerage, or contingent fee. Breach of this warranty shall give the Government the right to annul this contract or, in its discretion, to deduct from the fee the amount of such commission, percentage, brokerage, or contingent fee. This warranty shall not apply to commissions payable by the contractor upon contracts or sales secured or made through bona fide established commercial or selling agencies maintained by the contractor for the purpose of securing business.

In witness whereof, the parties hereto have executed this contract as of the day and year first above written.

THE UNITED STATES OF AMERICA,

EXHIBIT A. ADJUSTED COMPENSATION CONTRACT

(Place) -------------------------
(Date) -------------------------

To ------------------------

The undersigned hereby proposes to furnish and deliver to the United States of America, under the terms and conditions set forth in United States Government Contract Form No. ---------- the following: ------------------------
----

----

in strict accordance with the specifications, schedules, and drawings herein enumerated: ____________________

Delivery to be made f. o. b. plant as follows: ____________________

Estimated time for performing the work is: ____________________

Except as provided in article III, paragraph 8 of the contract, the rates of pay for the various classes of labor (executive, supervisory, mechanical, and common), which will be employed on the work shall not exceed the following (these rates are based on the scale of wages now being paid in this vicinity for similar supervisory, mechanical, and common labor):

Designation	Rate of pay

Except as provided in article III, paragraph 8 of the contract, the unit prices of the various items of material which will be used in performing the work shall not exceed the following (these prices are based on current market prices):

____

It is proposed to procure the following work or material by subcontract:

Material or work	Proposed subcontractor	Estimated cost

In addition to the buildings, machinery, and facilities owned by the undersigned, the following must be procured by him. The actual cost of these buildings, machinery, and facilities shall be paid for by the United States, and their estimated cost is included in this estimate.

Designation	Quantity	Estimated cost	Total

The United States will furnish and deliver the following materials and/or facilities for use in performing the work: (the cost of such materials and/or facilities has not been included in the estimate):

The amount to be allowed for depreciation on the buildings, machinery, and facilities owned by the undersigned and to be used in connection with the work is ------------------ dollars ($------------).

The amount to be allowed for rehabilitation costs, i.e., for restoring the plant to its original condition, due to changes to be made in the buildings and the arrangement of the machinery for the performance of the work is ------------------- dollars ($------------).

Based on the above, the estimated cost of performing the work is -------------------- dollars ($------------).

For performing the work the undersigned shall be paid a fee of ------------------- dollars ($------------) which is computed as follows:

(a) Estimated value of buildings, machinery, and facilities owned by the undersigned and to be used in connection with the work: $------------.

(b) Estimated percentage of buildings, machinery, and facilities listed in "(a)" and required in performing the work: -------- %.

(c) "(a)" applied to "(b)": ------------ % of $------------ $------------

(d) Estimated amount to be provided by the undersigned to meet current payments prior to reimbursement by the Government-- $------------

(e) Total of "(c)" and "(d)"-------------------------------- $------------

(f) 6% per annum on "(e)" ($------------) for the estimated period of performance is the amount of the fee.

(Signature) ----------------------

PRELIMINARY DATA SHEET—ADJUSTED COMPENSATION CONTRACT

(City) ----------------------
(Date) ----------------------

To: ----------------------

Being desirous of cooperating with the War Department in carrying out its plans for industrial preparedness, the undersigned submits herewith an estimate of the cost of furnishing and delivering to the United States of America, under the terms and conditions set forth in United States Contract Form No. --------, the following:

----

in accordance with the following drawings and specifications -----------------

----

Estimated time for performing the work is: ------------------------------

If the plant is operated on -------- shifts of -------- hours each per day it is estimated that delivery f. o. b. plant can be made as follows:

First month--
Second month --
Third month ---
Fourth month---
Fifth month ---
Sixth month ---
Seventh month ---
Eighth month --
Ninth month ---
Tenth month ---

The designations of various kinds of labor, and the estimated number of hours required by each class to perform this work are as follows:

Designations	Labor hours

To be performed at --
Amount $------------ Date -------------------

CONSTRUCTION CONTRACT

This contract, entered into this -------- day of ----------------, 19----, by the United States of America, hereinafter called the "United States," represented by the contracting officer executing this contract, and --

a corporation organized and existing under the laws of the State of [1]-----------
----
a partnership consisting of [1]--
----
of the city of [1]--
in the State of [1]---
an individual trading as [1]---
of the city of [1]--
in the State of [1]---
hereinafter called the "contractor", witnesseth, that the parties hereto do mutually agree as follows:

ARTICLE I

Extent of the work.—The contractor shall, in the shortest possible time, furnish the labor, materials, tools, machinery, equipment, facilities, supplies, and services and do all things necessary, for the completion of the following work:

----

in accordance with the drawings and specifications to be furnished by the contracting officer, and subject in every detail to his supervision, direction and instruction.

The contracting officer may, from time to time, by written instructions or drawings issued to the contractor, make changes in or additions to said drawings and specifications, issue additional instructions, require additional work, or direct the omission of work previously ordered, and the provisions of this contract shall apply to all such changes, modifications, and additions with the same force and effect as if they were embodied in the original drawings and specifications. The contractor shall comply with all such written instructions, drawings, and specifications immediately upon receipt thereof.

The title to all work, completed or in the course of construction, shall be in the United States, and likewise upon delivery at the site of the work, and upon inspection and acceptance in writing by the contracting officer, all the machinery, equipment, hand tools, supplies, and materials, for which the contractor shall be entitled to be reimbursed under article II, section (a). The provision as to title being vested in the United States shall not operate to relieve the contractor from any duties imposed under the terms of this contract.

---

[1] Delete all lines which do not apply.

ARTICLE II

Cost of the work.—The contractor shall be reimbursed in the manner hereinafter described for such of its actual net expenditures in the performance of said work as may be approved or ratified by the contracting officer and as are included in the following items:

(a) All labor, material, machinery, hand tools not owned by the workmen, supplies, and equipment, necessary for either temporary or permanent use for the benefit of said work; but this shall not be construed to cover the cost of machinery or equipment mentioned in section (c) of this article, or materials, equipment, etc., that may be furnished by the contracting officer.

(b) All subcontracts made in accordance with the provisions of this agreement, including subcontractors' fees computed in the same manner as described in article III hereof.

(c) Rental actually paid by the contractor, at rates not to exceed those mentioned in the schedule of rental rates hereto attached, for construction plant in sound and workable condition, such as pumps, derricks, concrete mixers, boilers, clam-shell or other buckets, electric motors, electric drills, electric hammers, electric hoists, steam shovels, locomotive cranes, power saws, engineers' levels and transits, and such other equipment as may be necessary for the proper and economical prosecution of the work.

Rental to the contractor for such construction plant or parts thereof as it may own and furnish, at not to exceed the rates mentioned in the schedule of rental rates hereto attached, except as hereinafter set forth. When such construction plant or any part thereof shall arrive at the site of the work, the contractor shall file with the contracting officer a schedule setting forth the fair valuation at that time of each part of such construction plant. Such valuation shall be deemed final, unless the contracting officer shall, within five days after the machinery has been set up and is working, modify or change such valuation, in which event the valuation, so made by the contracting officer, shall be deemed final. When and if the total rental paid to the contractor for any such part shall equal the valuation thereof, no further rental therefor shall be paid to the contractor, and title thereto shall vest in the United States. At the completion of the work, the contracting officer may at his option purchase for the United States any part of such construction plant then owned by the Contractor by paying to the contractor the difference between the valuation of such part or parts and the total rentals theretofore paid therefor.

Rates of rental as substitutes for such scheduled rental rates may be agreed upon in writing between the contractor and the contracting officer, such rates to be in conformity with rates of rental charged in the particular territory in which the work covered by this contract is to be performed. If the contracting officer shall furnish or supply any such equipment, the contractor shall not be allowed any rental therefor.

(d) Loading and unloading of construction plant, the transportation thereof to and from the place or places where it is to be used in connection with said work, subject to the provisions hereinafter set forth, the installation and dismantling thereof, and ordinary repairs and replacements during its use on the said work.

(e) Transportation and expenses to and from the work of the necessary field forces for the economical and successful prosecution of the work, procuring labor and expediting the production and transportation of material and equipment. Expenditures under this item must have the written authorization of the contracting officer in advance.

(f) Salaries of resident engineers, superintendents, timekeepers, foremen, and other employees at the field offices of the contractor in connection with said work. In case the full time of any field employee of the contractor is not applied to said work but is divided between said work and other work, his salary shall be included in this item only in proportion to the actual time applied to this work.

(g) Buildings and equipment required for necessary field offices, commissary, and hospital and the cost of maintaining and operating said offices, commissary, and hospital, including such minor expenses as telegrams, telephone service, expressage, postage, etc.

(h) Such premiums on bonds, including performance bonds, fire, public liability, employers' liability, workmen's compensation, and other insurance as the contracting officer may approve or require and such losses and expenses, not compensated by insurance or otherwise, as are found and certified by the contracting officer to have been actually sustained (including settlements made with the written consent and approval of the contracting officer) by the contractor in connection with said work, and to have clearly resulted from causes other than the fault or neglect of the contractor. The cost of reconstructing and replacing any of the work destroyed or damaged shall be included in the cost of the work for the purpose of reimbursement to the contractor, but any expenditures under this item must have the written approval of the contracting officer in advance.

(i) Permit fees, deposits, royalties, and other similar items of expense incidental to the execution of this contract which are necessarily incurred. Expenditures under this item must have the written authorization of the contracting officer in advance.

(j) Such proportion of the transportation, traveling, and hotel expenses of officers, engineers, and other employees of the contractor as is actually incurred in connection with this work.

Expenditures under this item must have the written authorization of the contracting officer in advance.

(k) Such other items as should in the opinion of the contracting officer be included in the cost of the work. When such an item is allowed by the contracting officer, it shall be specifically certified as being allowed under this paragraph.

The United States reserves the right to pay directly to common carriers any or all freight charges on material of all kinds, and machinery, furnished under this contract, and certified by the contracting officer as being for installation or for consumption in the course of the work hereunder; such freight charges shall not be included in the cost of the work on which the contractor receives a fee. The contractor shall be reimbursed for such freight charges of this character as it shall pay and as shall be specifically certified by the contracting officer; provided, that charges for transportation of such construction equipment, construction plant and tools over distances in excess of five hundred miles shall require the special approval of the contracting officer in advance.

No salaries of the contractor's executive officers, no part of the expense incurred in conducting the contractor's main office, or regularly established branch office, and no overhead expenses of any kind, except as specifically listed above, shall be included in the cost of the work; nor shall any interest on capital employed or on borrowed money be included in the cost of the work.

The contractor shall take advantage to the extent of its ability of all discounts available, and when unable to take such advantage shall promptly notify the contracting officer of its inability and its reasons therefor.

All revenue from the operations of the commissary, hospital or other facilities, or from rebates, discounts, refunds, etc., shall be accounted for by the contractor and applied in reduction of the cost of the work.

ARTICLE III

Determination of fee.—As full compensation for the services of the contractor including profit and all general overhead expense, the contractor will be paid by the contracting officer a fee, in addition to the cost of the work as defined in article II above. The contractor will be paid a minimum fee amounting to one percent (1.0%) of the actual cost of the work to be determined as provided in article II of this contract.

The contractor may be paid a maximum fee based on the following table:

Cost of work (as per article II)	Maximum fee (percent of cost of work)
$100,000 or under	6. 0
$500,000	5. 5
$1,500,000	5. 0
$2,500,000	4. 5
$3,500,000	4. 0
$5,000,000	3. 5
$7,000,000	3. 0
$10,000,000	2. 5

If the cost of the work is intermediate between any of the costs stated in the above table the corresponding maximum fee will be determined by arithmatical interpolation between the adjacent costs and the corresponding percentages.

However, if the cost of the work exceeds ten million dollars ($10,000,000.00) the minimum fee will be one hundred thousand dollars ($100,000.00) and the maximum fee shall not exceed two hundred and fifty thousand dollars ($250,000.00).

The actual fee to be paid the contractor hereunder, whether minimum, maximum, or some value in between those limits, will be determined by the chief of branch under whose supervision the work is performed, giving due and equitable weight to the following factors:

(a) Time of contract performance, an important essence of the contract.

(b) Efficiency of the contractor in executing the work: Output of mechanics and laborers in comparison with peace time work and other war time projects.

(c) Quality of workmanship and materials in completed project, in comparison with that specified.

(d) Initiative of contractor's overhead organization.

(e) Willingness shown by contractor to cooperate with United States representatives, and generally be mindful of the interest of the United States.

(f) The extent to which the work originally contemplated is changed by written orders, as provided in articles I, VII, and VIII hereof, and the speed, economy, and success with which such changes are accomplished by the contractor.

(g) Extent to which materials, machinery, and equipment entering into the work are purchased, and freight paid, direct by the United States.

(h) Proper use of machinery to conserve hand labor.

(i) Extent to which the contractor has performed the work without the assistance of subcontractors.

(j) Care in handling United States property.

(k) Final cost of the work: Diligence shown in endeavoring to keep down the cost of the work, consistent with good workmanship and materials.

(l) Honest and accurate accounting: Prompt payment of bills.

(m) Elimination of fraud.

ARTICLE IV

Payments.—On or about the seventh day of each month the contracting officer and the contractor shall prepare a statement showing as completely as possible (1) the cost of the work as defined in article II up to and including the last day of the previous month, (2) an amount equal to 1 percent (1.0%) of (1), on account of the contractor's fee. The contractor at the same time shall deliver to the contracting officer the original signed pay rolls for labor, the original paid invoices for materials purchased, and all other original papers, not theretofore delivered, supporting expenditures claimed by the contractor to be included in the cost of the work. If there be any item or items entering into this statement upon which the contractor and the contracting officer cannot agree, the decision of the contracting officer as to such disputed item or items shall govern. The contracting officer shall then pay to the contractor on or about the ninth day of each month the cost of the work mentioned in (1) and the fee mentioned in (2) of such statement, less all previous payments. The statement so made and all payments made thereon shall be final and binding upon both parties hereto, except as provided in article XIV hereof. Upon presentation of paid invoices the contracting officer may also make payments at more frequent intervals than above provided for the purpose of enabling the contractor to take advantage of discounts at intervals between the dates above mentioned or for other lawful purposes. Upon final completion and acceptance of the work by the contracting officer he shall pay to the contractor the unpaid balance of the cost of the work and of the fee as determined under articles II and III hereof, less any unsettled claims the United States may have against the contractor. The contracting officer will accept the completed work with reasonable promptness.

ARTICLE V

Inspection and audit.—The contracting officer shall at all times be afforded proper facilities for inspection of the work and shall at all times have access to the premises, the work and the materials, and to all books, records, correspondence, instructions, plans, drawings, receipts, vouchers, and memoranda of every description of the contractor pertaining to said work; and the contractor shall preserve for a period of 3 years after completion or cessation of work under this contract, all the books, records, and other papers just mentioned. Any duly authorized representative of the contractor shall be accorded the privilege of examining the books, records, and papers of the contracting officer relating to the cost of said work for the purpose of checking up and verifying such cost. The system of accounting to be employed by the contractor shall be such as is satisfactory to the contracting officer.

If at any time the contracting officer shall find that bills for labor or material, or other bills legitimately incurred by the contractor hereunder, are not promptly paid by the contractor, the contracting officer may, in his discretion, refuse to make further payments to the contractor until all such obligations past due shall have been paid. Should the contractor neglect or refuse to pay such bills within 5 days after notice from the contracting officer so to do, then the contracting officer shall have the right to pay such bills directly, in which event such direct payment shall not be included in the cost of the work.

ARTICLE VI

Special requirements.—The contractor hereby agrees that it will:

(a) Begin the work herein specified at the earliest time practicable, and continue to diligently proceed so that such work may be completed at the earliest possible date.

(b) Promptly pay for all labor, material, or other service rendered.

(c) Procure and thereafter maintain such insurance in such forms and in such amounts and for such periods of time as the contracting officer may approve or require.

(d) Procure all necessary permits and licenses, and obey and abide by all laws, regulations, ordinances, and other rules applying to such work, of the United States of America, of the State or Territory wherein such work is done, of any subdivision thereof, or of any duly constituted public authority.

(e) Unless this provision is waived in writing by the contracting officer, insert in every contract made by it for the furnishing to it of services, materials, supplies, machinery and equipment, or the use thereof, for the purpose of the work hereunder, a provision that such contract is assignable to the United States; will make all such contracts in its own name, and will not bind or purport to bind the United States or the contracting officer thereunder.

(f) In every subcontract made in accordance with the provisions hereof require the subcontractor to agree to comply fully with all the undertakings and obligations of the contractor herein, excepting such as do not apply to such subcontractor's work.

(g) At all times keep at the site of the work a duly appointed and qualified representative who shall receive and execute on the part of the contractor such notices, directions, and instructions as the contracting officer may desire to give. In the event the contractor's representative, or any other employee or agent, is considered by the contracting officer unqualified or for any reason not a proper person to remain on the work embraced herein, then the contractor will, on request of the contracting officer, remove such person from the work.

(h) At all times use its best efforts in all its acts hereunder to protect and subserve the interest of the United States.

ARTICLE VII

Right to terminate contract.—Should the contractor at any time refuse, neglect, or fail in any respect to prosecute the work with promptness and diligence, or default in the performance of any of the agreements herein contained, the contracting officer may, at his option, after five days' written notice to the contractor, terminate this contract, and may enter upon the premises and take possession, for the purpose of completing said work, of all materials, tools, equipment, and appliances, and all options, privileges and rights, and may complete, or employ any other person or persons to complete said work. In case of sucn termination of the contract, the contracting officer shall pay to the contractor such amounts of money on account of the unpaid balance of the cost of the work and of the fee as will result in fully reimbursing the contractor for the cost of the work up to the time of such termination, plus a fee computed thereon at the rate or rates for monthly payments set forth in article IV hereof; and the contracting officer shall also pay to the contractor compensation, either by purchase or rental, at the election of the contracting officer, for any equipment retained; such compensation, in the event of rental, to be in accordance with paragraph (c) of article II, and in the event of purchase to be based upon the valuation determined by the contracting officer as of the time of his taking such possession. The contractor hereby agrees that such payments when made shall constitute full settlement of all claims of the contractor against the contracting officer and the United States or either of them for money claimed to be due to the contractor for any reason whatsoever.

In case of such termination of the contract the contracting officer shall further assume and become liable for all such obligations, commitments, and unliquidated claims as the Contractor may have theretofore in good faith undertaken or incurred in connection with said work and in accordance with the provisions of this contract, and the contractor shall, as a condition of receiving the payments mentioned in this article, execute and deliver all such papers, and take all such steps as the contracting officer may require for the purpose of fully vesting in him the rights and benefits of the contractor under such obligations or commitments. When the contracting officer shall have performed the duties incumbent upon him under the provisions of this article, the contracting officer shall thereafter be entirely released and discharged of and from any and all demands, actions, or claims of any kind on the part of the contractor hereunder or on account hereof.

ARTICLE VIII

Abandonment of work by contracting officer.—If conditions should arise which in the opinion of the contracting officer make it advisable or necessary in the interest of the United States to cease work under this contract, the contracting officer may abandon the work and terminate this contract. In such case the contracting officer shall assume and become liable for all such obligations, commitments, and unliquidated claims as the contractor may have theretofore, in good faith, undertaken or incurred in connection with said work; and in accordance with the provisions of this contract, and the contractor shall, as a condition of receiving the payments mentioned in this article, execute and deliver all such papers, and take all such steps as the contracting officer may require for the purpose of fully vesting in him the rights and benefits of the contractor under such obligations or commitments. The contracting officer shall pay to the contractor such an amount of money on account of the unpaid balance of the cost of the work and of the fee as will result in the contractor receiving full reimbursement for the cost of the work up to the time of such abandonment, plus a fee to be computed in accordance with the provisions of article III hereof. When the contracting officer shall have performed the duties incumbent upon him under the provisions of this article, the contracting officer and the United States shall thereafter be entirely released and discharged of and from any and all demands, actions, or claims of any kind on the part of the contractor hereunder or on account hereof.

ARTICLE IX

Bond.—The contractor shall prior to commencing the said work furnish a bond with sureties satisfactory to the contracting officer, in the sum of____________ dollars, contitioned upon its full and faithful performance of all the terms, conditions and provisions of this contract, and upon its prompt payment of all bills for labor, material, or other service furnished to the contractor.

ARTICLE X

Convict labor.—No person or persons shall be employed in the performance of this contract who are undergoing sentence of imprisonment at hard labor imposed by the courts of any of the several states, territories, or municipalities having criminal jurisdiction.

ARTICLE XI

Hours and conditions of labor.—(a) Hours law: No laborer or mechanic doing any part of the work contemplated by this contract in the employ of the contractor or any subcontarctor contracting for any part of said work contemplated, shall be required or permitted to work more than eight (8) hours in any one calendar day upon such work, such prohibition being in accordance with the act approved June 19, 1912, limiting the hours of daily service of mechanics and laborers on work under contracts to which the United States is a party. For each violation of the requirements of this article a penalty of five dollars ($5.00) shall be imposed upon the contractor for each laborer or mechanic for every calendar day in which said employee is required or permitted to labor more than eight (8) hours upon said work, and all penalties thus imposed shall be withheld for the use and benefit of the United States: *Provided*, That this paragraph shall not be enforced nor shall any penalty be exacted in case such violation shall occur while there is in effect any valid Executive order suspending the provisions of said act approved June 19, 1912, or waiving the provisions and stipulations thereof with respect to either this contract or any class of contracts in which this contract shall be included, or when the violation shall be due to any extraordinary events or conditions of manufacture, or to any emergency caused by fire, famine, or flood, by danger to life or property, or by other extraordinary events or conditions on account of which, by subsequent Executive order, such past violation shall have been excused.

(b) Prevailing rates of wages: The rate of wage for all laborers and mechanics employed by the contractor or any subcontractor on the public buildings covered by this contract shall be not less than the prevailing rate of wages for work of a similar nature in the city, town, village, or other civil division of the State in which the public buildings are located, or in the District of Columbia if the public buildings are located there, and in case any dispute arises as to what are the prevailing rates of wages for work of a similar nature applicable to the contract which cannot be adjusted by the contracting officer, the matter shall be referred to the Secretary of Labor for determination and his decision thereon shall be conclusive on all parties to the contract: *Provided*, That the provisions of this paragraph are not suspended by the President during a national emergency, in accordance with the provisions of the act approved March 3, 1931.

(c) Disputes: In the event of any dispute with reference to wages, hours, or other conditions appertaining to said work, between the contractor or any subcontractor and labor employed by him on said work, the contractor or subcontractor shall immediately notify the contracting officer of the existence of such dispute and the reasons therefor. The contracting officer may, at his option, instruct the contractor or subcontractor involved in such dispute as to the method or steps which the contractor or subcontractor should follow with reference thereto, and the contractor or subcontractor shall thereupon comply with such instructions.

ARTICLE XII

Right to transfer or sublet.—Neither this contract, nor any interest therein, shall be assigned or transferred. The contractor shall not enter into any subcontract for any part of the work herein specified without the consent and approval in writing of the contracting officer. In case of such assignment, transfer, or subletting without the consent and approval, in writing, of the contracting officer, the contracting officer may refuse to carry out this contract either with the transferror or transferee, but all rights of action for any breach of this contract by the contractor are reserved to the United States.

ARTICLE XIII

No participation in profits by Government officials.—No Member of, or Delegate to, Congress, or Resident Commissioner, nor any other person belonging to or employed in the military service of the United States, is or shall be admitted to any share or part of this contract, or to any benefit that may arise therefrom, but this article shall not apply to this contract so far as it may be within the operation or exception of section 116 of the act of Congress approved March 4, 1909 (35 Stats. 1109).

ARTICLE XIV

Settlement of disputes.—This contract shall be interpreted as a whole and the intent of the whole instrument, rather than the interpretation of any special clause, shall govern. If any doubts or disputes arise as to the meaning or interpretation of anything in this contract, or if the contractor shall consider itself prejudiced by any decision of the contracting officer made under the provisions of this contract, the matter shall be referred to the chief of branch concerned for determination. If, however, the contractor shall feel aggrieved by the decision of that officer, it shall have the right to submit the same to the Secretary of the Department concerned, whose decision shall be final and binding upon both parties hereto.

ARTICLE XV

This contract shall bind and inure to the contractor and its successors.

It is understood and agreed that wherever the words "contracting officer" are used herein, the same shall be construed to include his successor in office, and any other person to whom the duties of the contracting officer may be assigned by competent authority.

Witness the hands of the parties hereto the day and year first above written, all in triplicate.

Contract for -- --
To be performed at --
Amount $------------ Date ------------------

CONSTRUCTION SUBCONTRACT

This contract, entered into this -------- day of ------------ 19----- by --
a corporation, organized and existing under the laws of the State of ------------
a partnership consisting of --
an individual trading as --
of the city of -------------------- in the State of ------------------
(hereinafter called the contractor) and -------------------- a corporation,
organized and existing under the laws of the State of ----------------------
a partnership consisting of --
an individual trading as --
of the city of -------------------- in the State of ------------------
(hereinafter called the subcontractor), witnesseth:

Whereas the contractor has heretofore, to wit, on the ------------ day of -------------------- 19----, entered into a contract with the United States of America to construct for the Government of the United States ------------- -- --
at or near --------------------; and

Whereas the parties hereto have agreed that the subcontractor shall for and in the stead of the contractor fullfill and perform such part of said principal contract as is hereinafter set forth; and

Whereas the subcontractor has read and is familiar with each and every part of said contract, and the respective rights, powers, benefits and liabilities of the contractor and the United States of American thereunder;

Now, therefore, this contract witnesseth; That in consideration of the premises and of the payments to be made as hereinafter provided, the subcontractor hereby covenants and agrees to and with the contractor as follows:

I

The subcontractor shall in the shortest possible time furnish the labor, materials tools, machinery, equipment, facilities, services, and supplies and do all things necessary for the construction and completion of the following work: -- --

II

In the performance of this subcontract the subcontractor binds ------ self to the contractor and to the United States of America to comply fully with all the undertakings and obligations of the contractor, excepting such as do not apply to this subcontractor's work, as are set forth in the principal contract made and entered into on the ------------ day of -------------------- 19 ----, by and between the contractor and the United States of America. Said principal contract is hereby adopted and made a part of this contract, and a copy thereof is hereto attached.

III

It is expressly stipulated and agreed that the contractor has and reserves to ------ self, and the subcontractor grants to said contractor, the same rights and powers, in every detail and respect and in the same language and intent, which the United States of America reserves to itself in the said principal contract; it being the intent and purpose of the parties hereto, except as herein otherwise provided, to place the contractor in the same position in regard to this subcontract which the United States of America occupies in the principal contract, and place the subcontractor in the same position in regard to this subcontract which the contractor occupies in said principal contract. The contractor shall in regard to this subcontract have all the rights and powers which the United States of America has in the principal contract, and the subcontractor assumes all the obligations placed upon the contractor by said principal-contract and accepts and binds ------ self faithfully and fully to observe toward the contractor and the United States of America each and every term and provision thereof, so as to enable the contractor to fulfill -------------------- every obligation to the United States of America according to the intent and provisions of said principal contract.

IV

The subcontractor binds ------ self to protect and save harmless the contractor from any and all loss, cost or damage to -------- on account of any damage or injury to third persons or property occasioned by any act, negligent or otherwise, of said subcontractor, ------------ associates, servants, agents or employees, and to promptly pay all bills for labor, material or other service furnished to the subcontractor; and said subcontractor further agrees to keep all property, equipment, materials, tools, and supplies free of all liens or charges, and in the event of suit against the contractor on any account in connection with the work hereby included, the subcontractor upon notice from the contractor will appear and defend same and hold the contractor clear of all loss, costs or expense.

V

Neither this subcontract nor any interest therein shall be assigned or transferred, except that the whole or any part is assignable to the United States of America.

VI

The subcontractor shall be reimbursed by the contractor in the manner and for the items set out in article II of the principal contract hereinabove incorporated (except that no part of this contract may be sublet), for such of ---------- actual expenditures in the performance of the work designated in article I hereof as may be approved or ratified by the contracting officer; and in addition thereto as full compensation for the services of the subcontractor, including profit and all general or overhead expenses, the contractor shall pay to the subcontractor a fee, the amount of which will be determined by the chief of branch under whose supervision the work is performed in accordance with the provisions of article III of the principal contract.

VII

The contractor may retain out of any moneys at any time due to the subcontractor a sum sufficient to pay all persons who have performed labor or furnished materials for the work included in this subcontract, and said sums may be retained until satisfactory evidence is furnished the contractor that all such claims have been fully satisfied.

In testimony of all of which the parties have heretunto set their hands at -------------------- the day and date first above written.

Contract for Construction

This contract, entered into this -------- day of ------------- 19--, by the United States of America, hereinafter called the "Government", represented by the contracting officer executing this contract, and--------------------------
----

----
of the city of -------------------- in the State of-------------------- hereinafter called the contractor, witnesseth that the parties hereto mutually agree as follows:

ARTICLE 1

Statement of work.—The contractor shall furnish all labor and materials, and perform all work required for--
----
----
for the consideration of---

----
in strict accordance with the specifications, schedules, and drawings, all of which are made a part hereof and designated as follows:

The work shall be commenced---
and shall be completed--

ARTICLE 2

Specifications and drawings.—The contractor shall keep on the work a copy of the drawings and specifications and shall at all times give the contracting officer access thereto. Anything mentioned in the specifications and not shown on the drawings, or shown on the drawings and not mentioned in the specifications shall be of like effect as if shown or mentioned in both. In case of conflict between drawings and specifications, the specifications shall govern. In any case of discrepency in the figures or drawings, the matter shall be immediately submitted to the contracting officer, without whose decision said discrepency shall not be adjusted by the contractor, save only at his own risk and expense. The contracting officer shall furnish from time to time such detail drawings and other information as he may consider necessary, unless otherwise provided. Upon completion of the contract the work shall be delivered complete and undamaged.

ARTICLE 3

Changes.—The contracting officer may at any time, by a written order, and without notice to the sureties, make changes in the drawings and (or) specifications of this contract and within the general scope thereof. If such changes cause an increase or decrease in the amount due under this contract, or in the time required for its performance, an equitable adjustment shall be made and the contract shall be modified in writing accordingly. Any demand by either party for adjustment under this article must be asserted within ten days from the date the change is ordered, unless the contracting officer shall for proper cause extend such time, and if the parties cannot agree upon the adjustment the dispute shall be determined as provided in article 12 hereof. But nothing provided in this article shall excuse the contractor from proceeding with the prosecution of the work so changed.

ARTICLE 4

Changed conditions.—Should the contractor encounter, or the Government discover, during the progress of the work, subsurface and (or) latent conditions at the site materially differing from those shown on the drawings or indicated in the specifications, the attention of the contracting officer shall be called immediately to such conditions before they are disturbed. The contracting officer shall thereupon promptly investigate the conditions, and if he finds that they materially differ from those shown on the drawings or indicated in the specifications, he shall at once make such changes in the drawings and (or) specifications as he may find necessary, and any increase or decrease of cost and (or) difference in time resulting from such changes shall be adjusted as provided in Article 3 of this contract.

ARTICLE 5

Inspection.—(a) All material and workmanship (if not otherwise designated by the specifications) shall be subject to inspection, examination, and test by Government inspectors at any and all times during manufacture and (or) construction and at any and all places where such manufacture and (or) construction are carried on. The Government shall have the right to reject defective material and workmanship or require its correction. Rejected workmanship shall be satisfactorily corrected and rejected material shall be satisfactorily replaced with proper material without charge therefor, and the contractor shall promptly segregate and remove the rejected material from the premises.

(b) The contractor shall furnish promptly, without additional charge, all reasonable facilities, labor, and materials necessary for the safe and convenient inspection and test that may be required by the inspector. All inspection and tests by the Government shall be performed in such manner as not to unnecessarily delay the work. Special, full size, and performance tests shall be as described in the specifications. The contractor shall be charged with any additional cost of inspection when material or workmanship is not ready at the time inspection is requested by the contractor.

(c) Should it be considered necessary or advisable by the Government at any time before final acceptance of the entire work to make an examination of work already completed, by removing or tearing out same, the contractor shall on request promptly furnish all necessary facilities, labor, and material. If such work is found not to meet the requirements of the contract due to fault of the contractor or his subcontractors, he shall defray all the expenses of such examination and of satisfactory reconstruction. If, however, such work is found to meet the requirements of the contract, the actual cost of labor and material necessarily involved in the examination and replacement, plus 10 percent, shall be allowed the contractor, and he shall, in addition, if completion of the work has been delayed thereby, be granted a suitable extension of time on account of the additional work involved.

(d) Inspection of material and finished articles to be incorporated in the work shall be made at the place of production, manufacture, or shipment, whenever the quantity justifies it, unless otherwise stated in the specifications, and such inspection and acceptance, unless otherwise stated in the specifications, shall be final, except as regards latent defects, departures from specific requirements of the contract and the specifications and drawings made a part thereof, damage or loss in transit, fraud, or such gross mistakes as amount to fraud. Subject to the requirements contained in the preceding sentence, the inspection of material and workmanship for final acceptance as a whole or in part shall be made at the site.

ARTICLE 6

Superintendence by contractor.—The contractor shall give his personal superintendence to the work or have a competent foreman or superintendent, satisfactory to the contracting officer, on the work at all times during progress, with authority to act for him.

ARTICLE 7

Delays—damages.—If the contractor refuses or fails to prosecute the work, or any separable part thereof, with such diligence as will insure its completion within the time specified in article 1, or any extension thereof, or fails to complete said work within such time, the Government may, by written notice to the contractor, terminate his right to proceed with the work or such part of the work as to which there has been delay. In event the contractor's right to proceed is terminated the Government may take over the work and prosecute the same to completion by contract or otherwise, and the contractor and his sureties shall be liable to the Government for any excess cost occasioned the Government thereby. If the contractor's right to proceed is so terminated, the Government may take possession of and utilize in completing the work such materials, appliances, and plant as may be on the site of the work and necessary therefor. If the Government does not terminate the right of the contractor to proceed, the contractor shall continue the work, in which event the actual damages for the delay will be impossible to determine and in lieu thereof the contractor shall pay to the Government as fixed, agreed, and liquidated damages for each calendar day of delay until the work is completed or accepted the amount as set forth in the specifications or accompanying papers and the contractor and his sureties shall be liable for the amount thereof: *Provided*, That the right of the contractor to proceed shall not be terminated or the contractor charged with liquidated damages because of any delays in the completion of the work due to unforeseeable causes beyond the control and without the fault or negligence of the contractor "as determined by the contracting officer: *Provided further*, That the contractor shall within ten days from the beginning of any such delay give written notice of the causes of delay to the contracting officer, who shall determine the extent of the delay and is determination thereon shall be final and conclusive on the parties hereto, subject to appeal within thirty days by the contractor to the chief of branch concerned, whose decision on such appeal shall in all respects be final and conclusive on the parties hereto."

ARTICLE 8

Permits and care of work.—The contractor shall, without additional expense to the Government, obtain all required licenses and permits and be responsible for all damages to persons or property that occur as a result of his fault or negligence in connection with the prosecution of the work, and shall be responsible for the proper care and protection of all materials delivered and work performed until completion and final acceptance.

ARTICLE 9

Covenant against contingent fees.—The contractor warrants that he has not employed any person to solicit or secure this contract upon any agreement for a commission, percentage, brokerage, or contingent fee. Breach of this warranty shall give the Government the right to terminate the contract, or, in its discretion, to deduct from the contract price or consideration the amount of such commission, percentage, brokerage, or contingent fees. This warranty shall not apply to commissions payable by contractors upon contracts or sales secured or made through bona fide established commercial or selling agencies maintained by the contractor for the purpose of securing business.

ARTICLE 10

Other contracts.—The Government may award other contracts for additional work, and the contractor shall fully cooperate with such other contractors and carefully fit his own work to that provided under other contracts as may be directed by the contracting officer. The contractor shall not commit or permit any act that will interfere with the performance of work by any other contractor.

ARTICLE 11

Officials to not benefit.—No Member of or Delegate to Congress, or Resident Commissioner, shall be admitted to any share or part of this contract or to any benefit that may arise, therefrom but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

ARTICLE 12

Disputes.—If any doubts or disputes arise as to the meaning of anything in the contract, drawings, plans or specifications, or if any discrepancy appears between said drawings, plans, or specifications and this contract, the matter shall be referred at once to the contracting officer for determination; and his decision in the premises shall be conclusive and binding on the parties hereto: *Provided:* That both parties hereto shall have the right of appeal to the chief of branch concerned and his decision upon such appeal shall in all respects be final and conclusive on the parties hereto. In the meantime the contractor shall diligently proceed with performance.

ARTICLE 14[1]

Payments to contractors.—(a) Unless otherwise provided in the specifications, partial payments will be made as the work progresses at the end of each calendar month, or as soon thereafter as practicable, on estimates made and approved by the contracting officer. In preparing estimates the material delivered on the site and preparatory work done may be taken into consideration.

(b) In making such partial payments there shall be retained 10 percent of the estimated amount until final completion and acceptance of all work covered by the contract: *Provided, however,* That the contracting officer, at any time after 50 percent of the work has been completed and after 45 percent of the contract price has been paid if he finds that satisfactory progress is being made, may make any of the remaining partial payments in full: *And provided further,* That on completion and acceptance of each separate building, vessel, public work, or other division of the contract, on which the price is stated separately in the contract, payment on account thereof may be made in full, including retained percentages thereon, less authorized deductions.

(c) All material and work covered by partial payments made shall thereupon become the sole property of the Government and is left in possession of the contractor solely for completing this contract, but this provision shall not be construed as relieving the contractor from the sole responsibility for the care and protection of materials and work upon which payments have been made or the restoration of any damaged work, or as a waiver of the right of the Government to require the fulfillment of all of the terms of the contract.

(d) Upon completion and acceptance of all work required hereunder, the amount then due the contractor under this contract will be paid upon the presentation of a properly executed and duly certified voucher therefor, after the contractor shall have furnished the Government with a final release, if required, in such form and containing such provisions as shall be approved by the chief of branch concerned, of claims against the Government arising under and by virtue of this contract.

ARTICLE 15

Changes in prices of labor or material.—If a Federal agency appointed for the purpose of controlling the prices of labor and/or materials causes or approves of an increase in the prices which the contractor is paying for labor or materials for use in the performance of this contract the excess amount which the contractor pays by reason of such increase will be reimbursed to the contractor by the Government upon the completion or termination of the contract.

ARTICLE 16.

Termination.—This contract may be terminated by the Government at any time upon notice in writing by the contracting officer to the contractor. Such termination shall be effective in the manner and at the time specified in said notice and shall be without prejudice to any claim which the Government may have against the contractor. Upon receipt of such notice, the contractor shall, unless the notice directs otherwise, immediately discontinue all work and the placing of all orders for material, facilities, and supplies in connection with the performance of this contract, and proceed to cancel promplty all his existing orders and terminate work under all subcontracts so far as such orders and/or work are chargeable to this contract, proivded, however, that the actual cost incurred for protection, collection, and disposition of property of the Government as approved by the chief of branch concerned shall be paid to the contractor by the Government.

---

[1] There is no Article 13 in the copy of the Construction Contract submitted to the committee by the War Department. The War Department lays the omission to an error in mimeographing which will be corrected in final form.

Upon the termination of this contract, as hereinbefore provided, unless the contractor is in default, full and complete adjustment and payment of all amounts due the contractor arising out of this contract as determined by the chief of branch concerned, shall as soon as practicable after such termination, be made as follows:

(a) The Government shall reimburse to the contractor all expenditures made in accordance with the terms of this contract less amounts previously paid.

(b) The Government shall reimburse the contractor for all costs to which the contractor has been subjected by reason of the termination of the contract. Reimbursement for the cost of terminating subcontracts under this contract shall be in accordance with the principle set forth in (a) above.

(c) The Government shall pay to the contractor an additional amount equal to -------- percent of the total expenditures referred to in (a) above.

(d) The sum total of the payments made under this article shall not exceed the total amount of the contract less payments previously made.

(e) Title to all property accruing to the Government by reason of the termination of this contract shall immediately vest in the Government upon payment therefor.

(f) Coincident with making final payments, the contractor shall furnish the Government with a final release as provided in paragraph (d), article 14.

ARTICLE 17

Additional security.—Should any surety upon the bond for the performance of this contract become unacceptable to the Government, the contractor must promptly furnish such additional security as may be required from time to time to protect the interest of the Government and of persons supplying labor or materials in the prosecution of the work contemplated by the contract.

ARTICLE 18

Definitions.—(a) The term "chief of branch" as used herein shall mean the head of the branch, bureau, service, or agency of the executive department or the independent establishment involved or his assistant.

(b) The term "contracting officer" as used herein shall include his duly appointed successor or his duly authorized representative.

ARTICLE 19

Alterations.—The following changes were made in this contract before it was signed by the parties hereto:

ARTICLE 2.

Changes.—Where the supplies to be furnished are to be specially manufactured in accordance with Government drawings and specifications, the contracting officer may at any time, by a written order, and without notice to the sureties, make changes in the drawings or specifications. Changes as to shipment and packing of all supplies may also be made as above provided. If such changes cause an increase or decrease in the amount due under this contract, or in the time required for its performance, an equitable adjustment shall be made and the contract shall be modified in writing accordingly. Any claim for adjustment under this article must be asserted within ten days from the date the change is ordered unless the contracting officer shall for proper cause extend such time, and if the parties cannot agree upon the adjustment the dispute shall be determined as provided in Article 10 hereof. But nothing provided in this article shall excuse the contractor from proceeding with the contract as changed. The written order of change shall be attached to and made a part of this contract.

ARTICLE 3.

Extras.—Except as otherwise herein provided, no charge for extras will be allowed unless the same have been ordered in writing by the contracting officer and the price stated in such order.

ARTICLE 4.

Inspection.—(a) All material and workmanship shall be subject to inspection and test at all times and places, and, when practicable, during manufacture. The Government shall have the right to reject articles which contain defective material or workmanship. Rejected articles shall be removed by and at the expense of the contractor promptly after notification of rejection.

(b) If inspection and test, whether preliminary or final, is made on the premises of the contractor or subcontractor, the contractor shall furnish, without additional charge, all reasonable facilities and assistance for the safe and convenient inspections and tests required by the inspectors in the performance of their duty. All inspections and tests by the Government shall be performed in such a manner as not unduly to delay the work. Special and performance tests shall be as described in the specifications. The Government reserves the right to charge to the contractor any additional cost of inspection and test when articles are not ready at the time inspection is requested by the contractor.

(c) Final inspection and acceptance of materials and finished articles will be made after delivery, unless otherwise stated. If final inspection is made at a point other than the premises of the contractor or a subcontractor, it shall be at the expense of the Government except for the value of samples used in case of rejection. Final inspection shall be conclusive except as regards latent defects, fraud, or such gross mistakes as amount to fraud. Final inspection and acceptance or rejection of the materials or supplies shall be made as promptly as practicable, but failure to inspect and accept or reject materials or supplies shall not impose liability on the Government for such materials or supplies as are not in accordance with the specifications. In the event public necessity requires the use of materials or supplies not conforming to the specifications, payment therefor shall be made at a proper reduction in price.

ARTICLE 5

Delays—Damages.—If the contractor refuses or fails to make deliveries of the materials or supplies within the time specified in article 1, or any extension thereof, the Government may terminate the right of the contractor to proceed with deliveries or such parts or part thereof as to which there has been delay. In such event, the Government may purchase similar materials or supplies in the open market or secure the manufacture and delivery of the materials and supplies by contract or otherwise, and the contractor and his sureties shall be liable to the Government for any excess cost occasioned the Government thereby: *Provided,* That the contracting officer shall determine that the delay of the contractor in making deliveries is due to unforseeable causes beyond the control and without the fault or negligence of the contractor, then the contractor shall not be charged with any excess cost occasioned the Government by the purchase of materials or supplies in the open market or under other contracts: *Provided further,* That the contractor shall within ten days from the beginning of any such delay give written notice of the causes of delay to the contracting officer, who shall determine the extent of delay and his determination thereon shall be final and conclusive on the parties hereto, subject to appeal within thirty days by the contractor to the chief of branch concerned, whose decision on such appeal shall in all respects be final and conclusive on the parties hereto.

ARTICLE 6

Responsibility for supplies tendered.—The contractor shall be responsible for the articles or materials covered by this contract until they are delivered at the designated point, and shall bear all risk on rejected articles or materials after notice of rejection. Where final inspection is at point of origin but delivery by contractor is at some other point, the contractor's responsibility shall continue until delivery is accomplished.

ARTICLE 7

Payments.—The contractor shall be paid, upon the submission of properly certified invoices or vouchers, the prices stipulated herein for articles delivered and accepted or services rendered, less deductions, if any, as herein provided.

Unless otherwise specified, payments will be made on partial deliveries accepted by the Government when the amount due on such deliveries so warrants; or, when requested by the contractor, payments for accepted partial deliveries shall be made whenever such payments would equal or exceed either $1,000 or 50 percent of the total amount of the contract.

ARTICLE 8

Officials not to benefit.—No Member of or Delegate to Congress or Resident Commissioner shall be admitted to any share or part of this contract or to any benefit that may raise therefron, but this provision shall not be construed to extend to this contract if made with a corporation for its general benefit.

ARTICLE 9

Covenant against contingent fees.—The contractor warrants that he has not employed any person to solicit or secure this contract upon any agreement for a commission, percentage, brokerage, or contingent fee. Breach of this warranty shall give the Government the right to annul the contract, or, in its discretion, to deduct from the contract price or consideration the amount of such commission, percentage, brokerage, or contingent fees. This warranty shall not apply to commissions payable by contractor upon contracts or sales secured or made through bona fide established commercial or selling agencies maintained by the contractor for the purpose of securing business.

ARTICLE 10

Disputes.—If any doubts or disputes arise as to the meaning of anything in the contract, drawings, plans, or specifications, or if any discrepancy appears between said drawings, plans, or specifications and this contract, the matter shall be referred at once to the contracting officer for determination; and his decision in the premise shall be conclusive and binding on the parties hereto: *Provided*, That both parties hereto shall have the right of appeal to the chief of branch concerned and his decision upon such appeal shall in all respects be final and conclusive on the parties hereto. In the meantime the contractor shall diligently proceed with performance.

ARTICLE 11

Definitions.—(a) The term "chief of branch" as used herein shall mean the head of the branch, bureau, service, or agency of the executive department or the independent establishment involved or his assistant.

(b) The term "contracting officer" as used herein shall include his duly appointed successor or his duly authorized representative.

ARTICLE 12

Changes in prices of labor or material.—If a Federal agency appointed for the purpose of controlling the price of labor and/or material causes or approves an increase in the prices which the contractor is paying for labor or materials for use in the performance of this contract the excess amount which the contractor pays by reason of such increase will be reimbursed to the contractor by the Government upon the completion or termination of the contract.

ARTICLE 13

Termination.—This contract may be terminated by the Government at any time upon notice in writing by the contracting officer to the contractor. Such termination shall be effective in the manner and at the time specified in said notice and shall be without prejudice to any claim which the Government may have against the contractor. Upon receipt of such notice the contractor shall, unless the notice directs otherwise, immediately discontinue all work and the placing of all orders for material, facilities and supplies in connection with the performance of this contract, and proceed to cancel promptly all his existing orders and terminate work under all subcontracts so far as such orders and/or work are chargeable to this contract, provided however, that the actual cost incurred for protection, collection and disposition of property of the Government, as approved by the contracting officer, shall be paid to the contractor by the Government.

Upon the termination of this contract, as hereinbefore provided, unless the contractor is in default, full and complete adjustment and payment of all amounts due the contractor arising out of the contract as determined by the chief of branch concerned shall, as soon as practicable after such termination, be made as follows:

(a) The Government shall pay the contractor the contract price not previously paid for articles completely manufactured, or work and services completely performed. If the contract price includes cost of transportation to destination, and the articles are not shipped, such transportation cost shall be deducted therefrom.

(b) The Government shall pay to the contractor for work and articles in process of completion that percentage of the contract price represented by the percentage of completion, less the salvage value thereof.

(c) The Government shall pay the contractor the cost of material on hand purchased for and necessary for the contract, which has not entered into production, less the salvage value thereof.

(d) The Government reserves the right to take over all or any part of the work or articles in process of completion and/or materials by paying the contractor the salvage value thereof.

(e) The Government shall reimburse the contractor for the cost of cancelling his subcontracts under this contract in accordance with the principles set forth in this article.

(f) If the contractor shall have submitted with his bid a list of new facilities required for the performance of this contract and the cost of such facilities has been included in the contract price the Government will pay the contractor the unamortized portion of the cost of such facilities, e. g.:

Cost of facilities	$10, 000
Fair value on termination	8, 000
Amount to be amortized	2, 000
Assumed that the contract is 30 percent completed, contractor absorbs 30 percent of $2,000, or	600
Government absorbs 70 percent of unamortized cost, or	1, 400

The Government reserves the right to take over such facilities by paying to the contractor the fair value on termination plus the Government's portion of the unamortized cost.

(g) No allowance will be made for prospective profits; but if it is determined that the sum total of the above payments is not adequate to cover the costs to which the contractor has been subjected by reason of the termination of this contract, the chief of branch may add thereto a sum sufficient to cover such costs and the action of the chief of branch shall be final and conclusive.

(h) The sum total of the payments made under this article shall not exceed the total amount of the contract less payments previously made.

ARTICLE 14

Alterations.—The following changes were made in this contract before it was signed by the parties hereto:

In witness whereof, the parties hereto have executed this contract as of the day and year first above written.

EXHIBIT NO. 1227

EXCERPTS FROM THE MIMEOGRAPHED MEMORANDUM DATED FEBRUARY 6, 1934, HEADED "COMMENTS, CRITICISMS AND PROPOSALS ON THE ADJUSTED COMPENSATION CONTRACT FORM, REVISED DECEMBER 1931"

This report was compiled by the board of officers on forms of war contracts, the recorder of which was Captain Fred A. McMahon, Ordnance Dept.

The board of officers for standardizing war contracts, appointed by Par. 20, S. O. 235-O, 1921, as amended, has received numerous replies from Ordnance district offices in answer to a letter sent out from the ordnance office under date of August 21, 1933: subject: "war contract forms—adjusted compensation, Revised December 1931."

Extracts from the various replies are quoted below for the information of all members of the board.

Birmingham Ordnance district.—This district believes that the changes are good and would improve the contract. *The elimination of the necessity for appraisals of machinery* and equipment is particularly recommended. This appraisal of plant never should have been in the contract. It could never be determined, would be subject to violent fluctuations and would be a constant source of argument and disagreement. The public-utility commissions have attempted to appraise the value of plants with a view to establishing fair rates. Nearly every valuation they attempted to determine was fought through the courts for years.

With reference to par. c(2), it is believed that nothing definite should be stated at this time. This involves labor and labor unions. It would be safer to eliminate the word "incentive."

* * * * * * *

Boston Ordnance district.—The adjusted compensation form in avoiding the evils of fixed price contracts and cost plus contracts has also eliminated the advantages to be derived under such contract and the new form has introduced additional evils such as those to which attention is called by the Bridgeport committee. The fixed price contract when circumstances make it safe for a contractor to sign such a contract, offers a gamble under which a man may make a large profit or under which he may make a great loss which spurs the contractor to his most efficient efforts. *The cost plus contract offers the ideal conditions for profiteering. It seems to the writer questionable whether the Government would have received such whole hearted cooperation from manufacturers during the World War had all opportunity for profiteering been eliminated.* In other words, it seems that there are incentives to the best efforts of manufacturers in both the fixed price and the cost plus contracts which are absent from the adjusted compensation contract.

The three difficulties enumerated by the Bridgeport committee will be present in more or less degree in any type of contract which compromises between cost plus and fixed price. It is the writer's opinion that the suggestions offered by the committee do a great deal to mitigate the evils of the adjusted compensation contract. He believes, however, that a fixed price contract with allowances for changes in the price of materials and labor occurring between the signing of the contract and completion should be most satisfactory to both the Government and the contractor.

* * * * * * *

Cincinnati ordnance district.—

* * * * * * *

The American Rolling Mill Company.—

* * * * * * *

Where the manufacture, under the contract, is performed in conjunction with a manufacture of other products, it will be necessary for the contractor to set up a complete cost system. Reimbursement for labor, service, use of machinery and equipment, and manufacturing overhead cannot be made direct in this case. The conversion cost in the various manufacturing departments, where these departments are also processing other materials, will have to be made on the basis of an equitable distribution. In many cases, the labor charge can be coded and made direct against the contract, in other cases—this will not be possible.

* * * * * * *

* * * We do not believe it at all necessary to have an appraisal made of plant to determine the full and true value of depreciable properties at the time of contract. We believe that, without question, the district ordnance office and the manufacturer can arrive at a satisfactory basis for computing depreciation charges.

* * * * * * *

We note from the contract that the War Department does not propose to have included in the cost of producing War Department material any charges for interest on funded and other debts. However this expense of doing business must be covered in some way, so we will assume it is to be taken care of in the profit allowed the contractor.

* * * * * * *

In relation to purchase of special machinery and other equipment we agree that this should be purchased by the War Department, so as not to constitute a drain on the financial resources of the manufacturer. The manufacturer, however, should maintain detail property ledger records (memorandum) covering each item of property purchased for his use by the War Department. These property ledger sheets should include each element of the total cost (vendor's invoice price, freight, service and handling charges, foundations, installation cost, etc.). At the close of the contract then the manufacturer and the Ordnance Department can either agree on a sale of the equipment to the manufacturer, if he chooses to buy it; or, if the Ordnance Department is to retain this equipment, they will have a record of its total cost installed.

* * * * * * *

Philadelphia Ordnance District.—

* * * * * * *

(2) There is nothing in the contract to prevent the contractor from obtaining the market price for such raw materials or component parts as are produced by him.

* * * * * * *

St. Louis Ordnance District.—This office has conducted one general meeting of executives of manufacturing plants in St. Louis and vicinity and numerous reserve officer conferences regarding the adjusted compensation contract. The following summary, as a result of these conferences, is submitted herewith.

It is the general concensus of opinion among owners and executives of industrial plants in this vicinity that the adjusted compensation contract, while getting away apparently from the cost plus contract, still *retains some features highly objectionable and subject to prolonged argument. Some of the firms are frank to state it would be extremely different for them to voluntarily enter into such a contract in either peace or war time.*

* * * * * * *

There is no question but that the proposed contractors in the vicinity think the reward inadequate and unjust.—This is particularly true of companies having a large bond issue and an issue of preference accumulative stock whereby the fee and the uncertain bonus would not be sufficient to protect the company and the investors of the preference stock. The present form of contract specifically precludes the Government from reimbursing the contractors for appropriation to reserves for outstanding debts owed by the contractor including redemption of stocks, bonds, and mortgages. If the Government expects any production from companies with above described investment, it will either have to increase the reward or reimburse the contractor for appropriations to reserves for outstanding debts. It would appear the former would be the more equitable.

Another point raised in this discussion is the fact that a company could not ascertain its actual profits from month to month by this form of contract. In the event a company was in the middle of its contract at the end of the calendar year it would be impossible to properly prepare income-tax reports. This would have the effect of throwing the larger part of profits in the year in which the contract was completed and not spreading them over the years in which partial shipments were made. If there was a war tax as was the case in the World War, the profits being lumped into one year would get into the higher brackets and the fee and probable bonus earned would all be taken away in taxes.

It is the opinion of this office, based on the discussions at the various conferences held on this subject, that the present form of adjusted compensation contract *includes a number of fundamental objectionable features and is not satisfactory to the contractors in general.*—The contractors, of course, realize that the Government can in an emergency commandeer their facilities and it is believed this will be necessary in a number of cases providing the objectionable features of the present form of contract are not removed.

San Francisco Ordnance District.—After careful perusal of the Bridgeport district report on the adjusted compensation contract, it is believed that *the contract is impracticable, and that its use would involve intolerable delay in the initiation of procurement.*

Some thoughts on an alternate form of contract which might be developed are contained in the following:

A FORM OF CONTRACT

1. The form of contract suggested is in part based on a belief that the present practice of making award to the lowest bidder is fallacious, in that it is not conducive to the stability of industry and the general welfare. Perhaps the worst elements are the effect on more reputable bidders and the uneconomic consequences of default. But the buyer seldom receives the quality he desires. It would seem to be better business to make the award to the contractor whose bid was closest to the average of all bids.

2. The objective is a contract which may be let quickly, administered economically, and terminated with little aftermath. The speed of letting is the paramount consideration, and hence the determination of a price seems to be most desirable. *Economy in administration is also important* in keeping down the aggregate cost to the Government. *Termination is* in the *future* but *it can* be *simplified by foresight,* and *contractors relieved from fear of its effects.*

3. It is proposed that procurement of the same article from all contractors be made at a single predetermined unit price exclusive of direct material. The determination of this price will be important, and it should be subject to change annually, for successive or continuing contracts. In determining the price, consideration should be given to importance of the demand, the availability, the risks and sacrifices by the contractors as a whole, and their right to profit. The best method which suggests itself at present is by a Federal estimate considered together with the average of contractors' estimates or unbonded bids received after M day, the estimated cost of material being shown separately. The ultimate price might even be determined in council with contractors represented. Such bids or estimates would have to be made with full knowledge of the terms of the contract. *It should be expected* that *the set price will permit* of a *profit of at least 10% on the* gross price to the average bidders. Experience shows that this is about the minimum average profit on which a business can survive. The net price will not include the cost of direct material, and will be the basis of compensation.

4. Such a net price having been promulgated, the letting of contracts will be relatively simple and expeditious. *They should be given, in order, to the contractors requiring the least expansion of facilities, provided for below.*

5. When adequate facilities do not exist, the Government cannot escape the expense of providing them. Therefore, it should agree to pay for needed equipment in plants to which it awards contracts. This should be limited to grounds, buildings, and installed equipment; title to which would remain with the Government. All purchases or rental of land, construction, and equipment would be approved in advance and paid for by the Government.

6. In the event of cancellation for the convenience of the Government, the contractor should be paid a profit on all or a part of the unexpired portion of the contract. This is very essential to him, but represents only a percentage of the expense the Government expected to incur. The payment should be 10% of the amount expected from the Government for deliveries on the unexpired portion of the contract. Since under normal conditions the Government habitually requires a 20% performance bond from the contractor, it is not unreasonable that, with conditions practically reversed, the Government should give a consummation guarantee of lesser amount. This payment would tend to obviate claims except possibly from contractors who had incurred high tooling-up costs and had made few or no deliveries. The contractor's performance bond would still be required.

* * *

The Navy Department, under date of May 18, 1932, commented on the Adjusted Compensation Contract, as follows:

* * *

Exhibit A, page 7. *Depreciation.—The period of performance will in many cases be indefinite and the amount of depreciation indeterminable.—*

* * *

Page 3, article III–2 (a).—To be stricken out since every large industrial plant has research and experimental work which cannot be allocated directly to any one contract but is a part of the cost of all.

Page 3. Article III–2 (g) and (h), entertainment and contributions. These items of cost are universal to the industrial world and are considered legitimate expense. They should be stricken out.

* * * * * * *

Page 3. Article III–2 (1). As in the case of research and experimental work, legitimate industrial firms have a general patent and royalty expense which is considered part of their general overhead. In most cases the entire product of the plant, no matter what it may be, benefits by such items of expense. The item should be stricken out.

* * * * * * *

Page 5. Article III–6. It is not believed that rehabilitation should be set forth as a specific item of reimbursement (see comment on exhibit A). Where the contractor produces for the Government in his usual line of product, there will be no rehabilitation cost. Where special facilities are ordered, the necessary provisions for all these special facilities will cover the question.

Page 5. Article III–7. (See comment on exhibit A.)

Page 14. Article X. A separate paragraph should be inserted authorizing the sale of Government-owned facilities and property to the contractor upon terms to be agreed upon. This is essential as the sale would be illegal unless so provided for and, *in many instances, sale will be the proper and reasonable disposition.*

Rochester ordnance district.—In July 1925, *the Rochester district* submitted a proposed adjusted price contract form, prepared *by the General Electric Company, which that district still believes to be the correct form of contract,* for the following reasons:

* * * * * * *

1. It makes the manufacturer's contract and all subcontracts part of one transaction with the Government, all subject to the same terms and conditions and to the same governmental supervision.
2. *It enables the contractor to place all subcontracts and work out all difficulties before the emergency arises.*
3. By doing so, it enables the contractor and the Government to figure accurately on contract costs.
4. It makes the price adjustment on the main contract and on all subcontracts automatic as of the date of beginning performance.
5. By eliminating possible suspensions and interferences with production, it enables the contractor and all subcontractors to figure on a definite rate and to fix prices accordingly.
6. It insures deliveries at a predetermined rate at the lowest cost and gives both the Government and the contractor benefits which result from "quantity production."
7. It avoids necessity for special accounting systems or expert accountants to determine how much is due at any time under the contract.
8. It avoids expense and delay (reflected in contract prices) otherwise inevitable in adjusting amounts due on termination.

9. It places all contractors and subcontractors on the same basis in determining costs of labor and material and price of commodities *by making all contracts start automatically on the declaration of war, unless started earlier by governmental order.*

Pittsburgh ordnance district.—Wm. J. Moorhead, chief of the legal staff of the Pittsburgh ordnance district.

* * * * * * *

The reasonableness of a fee of six per centum seems to me to be open to question. In turning his plant and facilities to Government work, the contractor is bound to lose a portion or all of his regular business. In addition, as industry becomes congested with Government emergency contracts, the supply of facilities for ordinary business if decreased and, in accordance with familiar economic laws, prices and profits are enhanced. Based on the assumption that the estimate has been fairly made and that an excessive profit to the contractor is not possible, under the provisions hereinafter mentioned, profit at the rate of six percent per annum would not tempt successful industrial companies. There would be a tendency to let the competitor take the Government business and take a chance on greater profits from private business. I am not unmindful of the fact that the structure of this contract practically guarantees the contractor against loss and I deplore the fact that great wealth has been amassed by profiteers during emergencies; however, it seems to me that, in order to attract the officers and managers of great industrial enterprises with their efficient organizations and capacity for production, it would not be out of line to increase the rate of the fee from six per centum to ten per centum as representing a reasonable profit.

* * * * * * *

On the other hand, it must be recognized that, in estimating the cost of production of articles not currently manufactured and for the production of which costs have not been ascertained, the *contractor will protect himself by increasing* the estimates, especially in view of the penalty in case the costs exceed the estimate. It must also be recognized that certain types of contractors will furnish very high estimates in the hope that, after compromise and adjustment, they will still be above the proper level. In both such instances, the percentage provided for may be too high. It is possible that, in the former case, some special limitation of increased compensation might be provided for, while, in the latter case, the Government would do well to refuse to negotiate with the contractor until he revised his estimates within reasonable limits.

You will recall that I mentioned the provision for a penalty in case the cost exceeds the estimate. The article on "Payments" provides that, in such event, the fee shall be reduced by one percent for each one percent of such excess, with the limitation, however, that in no case shall such reduction exceed fifty percent.

The penalty provided is moderate. The fee, based upon facilities appraised at $100,000, would amount to $6,000. This would be reduced, under the penalty provision, by $60 for each one percent that the cost exceeded the estimate. A penalty of $1,200 is not a heavy assessment for exceeding the estimate by twenty percent of the estimate was fair and accurate when made. Any penalty whatsoever tends to heighten the incentive to economy. On the other hand, were the penalty severe, the contractor would seek protection by boosting the estimate. In my opinion, a moderate penalty is desirable.

* * * * * * *

Remarks submitted by the executive assistant, Pittsburgh ordnance district, on the above suggestions from Mr. Moorhead.

* * * * * * *

This office believes that all three of the above points are worthy of consideration. Without more factual data before us with respect to the method of determining the six percent utilized as a basis for this contract, we hesitate to support the recommendation of a change to ten percent. However, *it must be remembered that interest on funded indebtedness and dividends on money furnished by stockholders for operation of the business, must be paid out of the profits.* Therefore, it is questionable whether the fee calculated on a basis of six percent would be adequate return in every case. Of course, circumstances vary and the correctness of the appraisal of facilities would have considerable bearing on the amount of the fee.

* * * * * * *

The above comments cover our remarks with respect to each point raised by Mr. Moorhead. In addition to the above, we desire to present for consideration certain suggestions which arose during our discussion of the adjusted compensation contract and proposed changes with the director of industrial accounts of the Westinghouse Electric and Manufacturing Company.

(*a*) Under the article on "The Fee", it is stated that "The fee shall be a sum equal to six percent per annum * * * on the appraised replacement value of the facilities owned by the contractor and used in connection with the work * * *."

This office believes that the Manual of Instructions for the adjusted compensation contract should set forth in some detail the method of appraisal to be used and in addition "replacement value" should be defined accurately. It is safe to assume that the working of economic laws in time of emergency will cause considerable increase in the prices of equipment and facilities for manufacturing purposes. Further, the manufacturing equipment in any one plant selected for work under the adjusted compensation contract may be in different degrees of serviceability. Certain amounts of depreciation will have been already written off in the equipment. Therefore, the exact meaning of "replacement value" will be cause for controversy unless it is adequately defined. Since this appraisal of facility and equipment forms the basis for payment of the fee, it is believed that the Manual of Instructions should give considerable space to elucidation on this subject. The accounting manual in our possession may be an old one, but no reference to method of appraisal is contained therein.

* * * * * * *

d. In the contract, it is noted that "The contracting officer may, by written order, direct temporary suspension for any or all work at any time, in which case the expense, if any, occasioned the contractor by reason of such temporary suspension shall * * * be reimbursed by the United States."

This paragraph is considered very desirable by manufacturers and representatives of the Westinghouse Electric & Mfg. Company believe that it should be incorporated in all fixed price contracts for emergency use.

* * * * * * *

CRITICISMS FROM BRIDGEPORT ORDNANCE DISTRICT, SPRINGFIELD, MASS.

Proposal of principles for a changed adjusted compensation contract.—Under date of June 1, 1931, the accounting section reported the results of its study and practical applications of the present adjusted compensation contract. The conclusions of this report were that, as written, the present contract had certain difficulties that tended to make it unsatisfactory.

First. The necessity for appraisals of machinery and equipment would be costly, and a constant basis of dispute, adjustment, or even dishonesty, since they were to be the basis of profit figuring.

Second. The necessity for constant accounting supervision due to changes in machinery, etc.

Third. Inadequate reward to the contractor.

* * * * * * *

PROPOSED CHANGE IN PRINCIPLES

a. (1) *Raw materials.*—Purchased by the contractor, to be reimbursed as fast as checked for proper application, amount, and fair market price including transportation.

(2) Where raw materials, or even component parts, are standard articles of general production such as brass rod, screws, etc., even if produced by the prime contractor, they may be entered into the estimate at market price and so paid for.

* * * * * * *

e. (1) The profit to the contractor shall be fixed at a standard percent on the unit cost, in original estimate of labor and overhead.

* * * * * * *

COMMENTS ON CRITICISMS BY THE BRIDGEPORT ORDNANCE DISTRICT ON THE ADJUSTED COMPENSATION CONTRACT

(APRIL 4, 1932.)

(The above comments submitted by Lt. Col. P. J. O'Shaughnessy, U. S. A., ret'd, member of the Board on War Time Contracts, April 1932.)

* * * * * * *

* * * An examination of the reports of numerous corporations extending over a period of several years indicates that the average return on capital in commercial work is less than 5 percent. In times like the present it is very considerably less. The board concluded that 6 percent was a fair return on the

nvested capital of the contractor, especially in view of the fact that additional compensation is provided for if the contractor is efficient.

* * * * * * *

c. (2) *The contractor shall introduce a proper and agreed-upon incentive plan of paying direct labor, in order to bring about both speed of production and reduced cost per unit.*—I am not clear as to just what is meant by this. If it contemplates paying a bonus to workmen, it would have the effect of enabling the contractor to rob the plants of other contractors doing work for the Government of its workmen by paying these workmen higher wages. This is what happened during the World War, and what brought about a condition which necessitated the appointment of the National War Labor Board. There is, of course, no objection under the adjusted compensation contract to a contractor making any agreement with his workmen to pay them a bonus for producing the articles expeditiously and economically; but this bonus will have to be paid by the contractor from his profits under the contract. The Government cannot be a party to it. Suppose, for example, that we contracted with the Bethlehem Steel Company to manufacture guns and shell forgings, as we did during the World War, and the bonus system then in vogue in that company was agreed upon, extended, however, down to the direct labor engaged in the work. I am afraid that the adjusted compensation contract would be looked upon by the public as very objectionable, and that it would not be long before Congress would legislate against it, as it has against the cost-plus contract. The Bridgeport district, however, may have some other thought in mind than paying direct labor a bonus, and my remarks in that case would not apply.

* * * * * * *

e (1). *The profit to the contractor shall be fixed at a standard percent on the unit cost, in original estimate of labor and overhead.* Originally we attempted to do just this; but there are so many thousands of parts that go to make up the nomenclature list of the Ordnance Department that it was impossible to agree on a standard percent of the unit cost. Suppose, for example, that we say that 10 percent of the unit cost is fair. If the contractor is working wholly on copper, he would make a large profit; if he is working wholly on steel, his profit would be much less. So we would have to fix a percentage for each article. It must be borne in mind that in time of war we are going to turn to people to make things for the Army that they have never made before. One manufacturer's costs may be very reasonable—in fact, they may be very low; while another manufacturer's costs for the same article may be very high. In machining shells the Symington Company, of Tochester, N. Y. used single-purpose machinery which was almost fool proof. They could train an operator to perform work with a particular machine, and in a very short time this operator became an expert. Rejections in that plant were almost nil. Another plant, machining exactly the same kind of a shell on universal lathes, required a much higher degree of skill on the part of its workmen. The costs of the two plants were out of all proportion to each other.

* * * * * * *

e (2). *An additional percent of profit to the contractor for producing at less than estimated unit cost shall be provided in a standard percent of the saving over unit estimated cost. And a reduction of the profit may be made in a similar manner if the unit cost rises above the estimated cost.*—This was the plan in vogue during the World War when we used the bogy-price contract. When this type of contract was adopted we were prohibited by Congress from using the cost-plus contract, and *since it was necessary, in order to get munitions, that we guarantee the contractor his costs,* we provided for the payment of a fixed percent based on the estimated cost, and for an additional percentage as profit in the event that the costs were less than the estimate. Under this type of contract one concern made approximately 30 percent on its completed contracts; another made very nearly 100 percent. Of course, we could reduce the percentage to be paid as profit, but is not that precisely what we have done in the adjusted compensation contract? There we agree, first, to pay the contractor his costs; second, to pay him a fee for the use of his plant and facilities; and, third, to give him an opportunity to make a profit if he produces the articles for less than the estimate. The only objection that can be made to this contract is that the profit may be too small. But bear in mind that the report of the War Policies Commission, if adopted by Congress, would permit manufacturers to earn only about 6 percent.

* * * * * * *

Sixth. The thought and effort of management and labor may be more effectively concentrated on producing by the proposed methods. This is the ideal that we are attempting to attain. We hope that when we save the contractor fear of loss; when we pay him and his officers the salaries which they have been receiving; when we pay his labor, material, and overhead bills currently; when we save him the necessity of having to borrow large sums from the banks at a time when interest rates are high; that the management and labor producing things that are urgently required by the Nation will effectively concentrate on producing these things as rapidly and economically as possible.

* * * * * * *

EXHIBIT No. 1228

	Unit	Average transfer price	Average manufacturing cost price
Ammonia:			
1932	Lb	$0.0455	$0.0550
1933	Lb	.0360	.0291
Nitric acid:			
1932	Cwt	3.83	2.86
1933	Cwt	3.28	2.84
Aniline:			
1932	Cwt	[1] 9.80	8.78
1933	Cwt	[1] 9.95	9.53
Diphenylamine:			
1932	Cwt	27.00	16.42
1933	Cwt	21.45	20.20

[1] Aniline is transferred at cost when used as an ingredient in the manufacture of diphenylamine, which is the only commodity consuming aniline used in manufacturing munition powders. This product is also transfered to other departments to be consumed in our commercial line and in such cases the above transfer prices prevailed for the respective years.

EXHIBIT No. 1229

MEMORANDUM OF AGREEMENT

This agreement, made as of January 1, 1934, by and between Dynamit Actien Gesellschaft, a corporation of Germany, having its executive offices at Troisdorf, Germany, hereinafter referred to as "D. A. G."; and Remington Arms Company, Inc., a corporation of the State of Delaware, U. S. A., having a factory and office at Bridgeport, State of Connecticut, U. S. A., hereinafter referred to as "Remington"; Witnesseth:

Whereas Remington, on or about the 14th day of November 1929 entered into a certain contract with the Rheinisch Westfaelische Sprengstoff A. G., a corporation of Germany, which contract, hereinafter for convenience referred to as the "R. W. S. contract", is attached hereto and made a part hereof; and

Whereas the original and reissue applications for United States patents mentioned in said R. W. S. contract have eventuated as follows: Application serial no. 352893 was abandoned after filing as a continuation application serial no. 430138 which has resulted in Patent No. 1,889,116, November 29, 1932; application serial no. 400738 was abandoned in view of application serial no. 430138; reissue application serial no. 400723 has resulted in reissue Patent No. 17540 of December 31, 1929;

Whereas D. A. G. has succeeded to all the rights and obligations of Rheinisch Westfaelische Sprengstoff A. G. under and by virue of said R. W. S. contract; and

Whereas the parties hereto are desirous of modifying certain of the provisions of said R. W. S. contract as hereinafter provided:

Now, therefore, in consideration of one dollar and other good, valuable, and sufficient considerations, extending from each of said parties to the other, the receipt of which is hereby acknowledged, and in consideration of the covenants and promises herein contained, said parties do hereby mutually covenant and agree as follows:

I. Royalty payments shall be made by Remington on the sales made during each quarter based upon the net selling price after deduction of all discounts and rebates. For convenience and simplicity, the average rate of discount allowed by Remington in its ammunition business for the preceding quarter will be used in reducing Remington's gross billings to their net cash value. When accounts with respect to which royalties have been paid are uncollectible, the proper deduction will be made from the next royalty payment due after such accounts have been found to be uncollectible.

II. "Military ammunition" is defined as ammunition of sizes and types ordinarily used in war and sold directly to or made under a license from Remington by a government actually engaged in war, or storing the ammunition thus made or purchased for the purpose of war. All loose primers sold to the United States Government shall be considered as military ammunition. "Commercial ammunition" (nonmilitary ammunition) includes all ammunition not coming within the above definition of military ammunition.

III. The royalties to be paid to D. A. G. by Remington on commercial ammunition, primers and primed shells, coming within the claims of Reissue Patent No. 17540 based on the net selling price as hereinbefore set forth, shall be as follows:

	Percent
(a) Rimfire ammunition:	
1. Sold and intended for consumption within the United States	¾ of 1
2. Sold in and for export from the United States	1
(b) Centerfire metallic ammunition and shot shells:	
1. Sold and intended for consumption within the United States	.5 of 1
2. Sold in and for export from the United States	.6 of 1
(c) All loose primers and empty primed shells	1

This rate to remain the same regardless of the volume of sales.

IV. When during any calendar year Remington shall have paid to D. A. G. as royalties the sum of $20,000, the rates at which royalties shall be paid for the remainder of such calendar year shall be one-third (⅓) of those specified in paragraph III; provided, however, that should German and United States currencies be stabilized at a ratio of 3.5 or more German marks per United States dollar for two or more quarters in any one calendar year, royalty rates of one-third (⅓) of those specified in paragraph III shall apply when Remington during such calendar year shall have paid to D. A. G. as royalties the sum of $18,500.

V. The maximum royalty to be paid to D. A. G. by Remington in any calendar year with respect to commercial ammunition, primers, and primed shells, shall be $35,000, and when this amount has been paid no further royalties shall accrue to D. A. G. with respect to sales of commercial ammunition during such calendar year.

VI. If and when the total amount paid by Remington with respect to commercial ammunition under this contract and the R. W. S. contract reaches $250,000, no further royalties shall be paid by Remington with respect to commercial ammunition, primers, and primed shells, but it is understood that when the amount paid by Remington in any one year exceeds $30,000 the excess shall not be included in computing the maximum of $250,000.

VII. The royalty paid to D. A. G. by Remington with respect to military ammunition manufactured and sold by Remington shall not be less than 1% without the express consent of D. A. G. D. A. G. agrees that it will not unreasonably withhold its acceptance of royalties reduced to not less than ⅒ of 1% where such a reduction of royalties is found by Remington to be necessary or desirable to facilitate the securing of substantial orders or volume of sales of military ammunition by Remington.

Remington shall not, without the consent of D. A. G., license the Government of the United States or other American manufacturer to manufacture and/or sell military ammunition coming within the terms of this agreement at a royalty less than the following: (a) for cartridges, Fifteen Cents ($0.15) per thousand; (b) for primers and empty primed shells, 1% of Remington's net selling price of similar military primers and primed empty shells. The consent of D. A. G. to licenses at a less royalty, when necessary to the granting of profitable licenses, will not be unreasonably withheld.

One-quarter (¼) of the royalty received by Remington from the Government of the United States or other licensee with respect to military ammunition shall be paid to D. A. G.

VIII. The royalties paid by Remington to D. A. G. with respect to military ammunition manufactured and/or sold by Remington or its licensees shall not be included in the amount of $20,000 (or $18,500) beyond which a reduced royalty is paid, or in the annual total of $35,000, or in the grand total of $250,000.

IX. The royalty provisions of this agreement shall become effective January 1, 1934.

X. Should Remington desire to manufacture and/or sell ammunition, military or commercial, containing a priming mixture coming within the claims of Patent No. 1889116 but not within the claims of Reissue Patent No. 17540; or in the event that upon the expiration of Reissue Patent No. 17540 the total of $250,000 with respect to commercial ammunition has not been paid, then and in either of such events the royalties herein provided shall be reduced to one-half (½) of the amounts herein specified.

XI. Royalties paid to Imperial Chemical Industries with respect to sales of Tetrazene primed ammunition in Great Britain and Northern Ireland shall be deducted from payments to D. A. G., as hitherto.

XII. The provisions of the R. W. S. contract, and particularly paragraphs 11, III, III (a), III (d), IV, V, VI, VII (c), VII (D), VII (F), VIII, IX, XI, XII, XIII, and XIV, except as herein modified shall remain in full force and effect.

XIII. In case any controversy under this agreement shall arise between the parties hereto which they are unable to adjust between themselves, such controversy shall be settled by arbitration in accordance with the provisions of the United States Arbitration Act in the following manner:

Either party may, by notice in writing served on the other, appoint one arbitrator and call upon the other to appoint a second arbitrator with thirty days after the receipt of such notice; and each party agrees that, upon receiving any such notice, it shall so appoint an arbitrator. The two arbitrators thus appointed shall, within thirty days after the appointment of the one last appointed, jointly appoint a third arbitrator. The controversy shall be submitted to the three arbitrators in such manner as they shall direct and their decision, or the decision of a majority of them, rendered in writing shall be final, conclusive and binding upon the parties. In the event that a second arbitrator shall not be appointed as above provided, or the two arbitrators first appointed shall fail to appoint a third, application may be made by either party to the United States District Court of Delaware, or to a judge thereof, to designate and appoint an arbitrator or arbitrators, as the case may require. Each party shall pay its own expenses in connection with the arbitration, but the compensation and expenses of the arbitrators shall be borne in such manner as may be specified in their decision in writing.

XIV. This agreement shall inure to the benefit of and be binding upon the parties hereto, and their respective subsidiaries and assigns.

In witness whereof the parties hereto have executed this agreement by their duly authorized officers.

EXHIBIT NO. 1231

JUNE 10th, 1933.

MR. ELMSLIE E. JONAS,
393 West End Avenue, Apt. 15–E, New York, New York.

DEAR ELMSLIE: Referring to your statement that you had heard confidentially that the Lake Erie Chemical Company were considering manufacturing a machine gun similar to the Thompson submachine gun, I spoke to Mr. Pugsley about this and he was quite interested. I believe he would like an opportunity to figure on the manufacture of such a gun, if contemplated.

He told me that he had received an order from Griffin & Howe for some 300 barrels different from anything that we make, which might be intended for machine guns.

We will be glad to have you see if you can find out anything more about this proposition.

Yours very truly,

WINCHESTER REPEATING ARMS COMPANY,
H. F. BEEBE.

APRIL 12, 1933.

R. F. SEDGLEY, INC.,
2311–17 North 16th Street,
Philadelphia, Pa.

(Att: Mr. R. F. Sedgley.)

DEAR MR. SEDGLEY: Confirming your conversation with Mr. Pugsley and telephone conversation with the signer this afternoon, we are forwarding to you a case containing six (6) Browning light weight machine guns, caliber 30 Govt. 06 on consignment.

We offer you our stock on hand of these guns at $75.00 each net.

We are pleased to quote you on 1,000,000 30 Govt. 06 cartridges for export $26.00 per thousand net to us. Unless we make the shipment, ourselves, the 10% excise tax will have to be added. This we will refund to you upon proof of exportation satisfactory to the Government authorities.

We could deliver approximately 100,000 in one week and 300,000 per week thereafter. If the emergency warrants we might be able to complete the order in three weeks.

Hoping that you will be successful in securing this business, we remain

Yours very truly,

WINCHESTER REPEATING ARMS COMPANY,
H. F. BEEBE,
Mgr. Foreign Department.

Fundamental research, expended by general chemical department	$142,683.51
New industries, expended by ammonia department	2,411.47
New industries, expended by development department	107,279.17
New industries, expended by engineering department	70.77
New industries, expended by explosives department	1.66
New industries, expended by general chemical department	190,376.46
New industries, expended by organic chemicals department	15,047.00
New industries, expended by the R. & H. chemicals department	23,640.12
"B" bonus (consolidated)	696,241.00
Merit bonus (consolidated)	1,216,188.00
Argentine business survey	7,609.78
Argentine consolidation survey	1,640.00
Foreign trade development division	22,096.85
Taxes paid to foreign countries	49,249.13
Federal & New York State stock transfer taxes	11,548.87
Federal tax on checks	11,154.60
Federal tax on safe deposit boxes	26.00
Franchise & State income taxes	154,088.03
Federal taxes:	
Capital stock, year ending June 30, 1933	111,005.00
Capital stock, year ending June 30, 1934	57,668.50
Income, consolidated	3,431,356.00
Total	6,251,381.92

To October 31, 1934

Fundamental research, expended by general chemical department	$165,108.03
New industries, expended by development department	50,197.45
New industries, expended by explosives department	5,116.03
New industries, expended by general chemical department	203,349.37
New industries, expended by organic chemicals department	4,053.76
New industries, expended by the R. & H. chemicals department	32,950.93
"B" bonus (consolidated) (including previous year adjustment)	945,274.00
Merit bonus (consolidated) (including previous year adjustment)	1,733,965.00
Argentine business survey	[1] 7,609.78
Argentine consolidation survey	4,205.89
Foreign trade development division	16,610.38
Taxes paid to foreign countries	184,007.83
Federal tax on checks	11,379.26
Federal tax on safe deposit boxes	21.00
Franchise and State income taxes	128,934.79
Federal taxes:	
Capital stock, year ending June 30, 1934	167,322.50
Capital stock year ending June 30, 1935	78,000.00
Income, consolidated (including previous years adjustment)	2,286,612.0
Total	6,009,498.53

Exhibit No. 1241

[File 30]

June 29, 1918.

Mr. H. M. Barksdale,
White Sulphur Springs, West Virginia.

Dear Barkie: Our cash position will be a matter for careful study from this time forward. Total balances of $28,000,000, of which $10,000,000 is in the du Pont Engineering Company, will leave no cause for immediate concern, but our transactions are on such an enormous scale that John is requesting a close study of the situation, especially with respect to cash outlay for acquiring new properties. It seems that we have already arranged for investment of the funds that we have agreed to employ permanently and should make decision as to further investment.

There seems a little more activity in Washington with regard to the nitrogen question, but nothing definite nor hopeful. We have agreed to lend Edgar and Liljenroth for a portion of their time without cost to the Government, in the belief that their influence will be helpful toward a proper solution of the problem. I have very little hope of a satisfactory outcome in reasonable time.

(Unsigned.)

(Above excerpt has been taken from pages 4 & 5 of letter dated June 29, 1918, to Barksdale.)

Exhibit No. 1242

[Kernan Board]

War Department,
Washington, November 15, 1916.

Special Orders, No. 268.

(EXTRACT)

26. Under the provisions of section 121 of the act of Congress approved June 3, 1916, a board to consist of Col. Francis J. Kernan, Twenty-eighth Infantry; Lieut. Col. Charles P. Summerall, Field Artillery; Maj. Lawson M. Fuller, United States Army, retired; Mr. Benedict Crowell, Cleveland, Ohio; and Mr. R. Goodwyn Rhett, Charleston, S. C., is appointed to meet in this city at the call of the senior member of the board for the purpose of investigating and reporting upon the feasibility, desirability, and practicability of the Government manufacturing arms, munitions, and equipment.

(2488037, A.G.O.)

By order of the Secretary of War:

H. L. Scott,
Major General, Chief of Staff.

Official:
H. P. McCain,
The Adjutant General.

Exhibit No. 1246

Testimony of Col. J. H. Hawkins as Given Before Select Committee on Expenditures in War Department, 1919, vol. 275, Part 1, Pages 288–292

Mr. Graham. As a matter of fact, Colonel, the price fixing that was done on copper, and the prices paid by the Ordnance Department so long as you were connected with it, were set by parties outside of the Ordnance Department, were they not?

Col. Hawkins. Yes, sir.

Mr. GRAHAM. And all you gentlemen did who represented the Army in this matter was to follow Executive orders in that regard?

Col. HAWKINS. Yes, sir.

Mr. GRAHAM. And make your contracts according to prices that were given you by the War Industries Board, or some other price-fixing board?

Col. HAWKINS. I should say, as to the price, that we had absolutely no negotiations or trading at all. As to the terms of the contracts we did have some trading occasionally or negotiations.

Mr. GRAHAM. But as to the prices you had no——

Col. HAWKINS (interposing). As to the prices we had no negotiations at all.

Mr. GRAHAM. I think that is all I care to ask the colonel.

Mr. JEFFERIS. Colonel, in regard to the Lieut. Col. Black, wasn't he somewhat connected with the J. Pierpont Morgan business in New York?

Col. HAWKINS. Col. Black was connected with the British purchasing commission prior to the time that we entered the war, in connection with Mr. Stettinius, and I understand that purchasing commission was organizde by J. P. Morgan & Co., who were the fiscal agents for the British in this country.

Mr. JEFFERIS. And this Lieut. Col. Black that you mentioned in response to some questions by Mr. Graham, is the man you refer to?

Col. HAWKINS. Yes, sir.

Mr. JEFFERIS. Do you know for what length of time he had been helping the Morgans purchasing for the British before he came to Washington?

Col. HAWKINS. No; I do not know for what period of time, but I know he familiarized himself with munitions remarkably well. He knew all about munitions and was about as well qualified as any civilian that came in from the outside.

Mr. JEFFERIS. Do you know what time he appeared on the scene?

Col. HAWKINS. He came in in January of 1918.

Mr. JEFFERIS. Do you know whether he has gone back to the office of J. P. Morgan & Co.?

Col. HAWKINS. He has gone back to his engineering firm.

Mr. JEFFERIS. And he and Col. McRoberts, from the National City Bank, both came about the same time together?

Col. HAWKINS. Yes, sir.

Mr. JEFFERIS. And the first work that each of them were doing here in Washington you do not exactly know?

Col. HAWKINS. I do not know what Col. McRoberts was doing in the first part of December definitely, but Col. Black arrived in Washington with his commission. I do not think he did any work in Washington as a civilian; I am quite sure he did not.

Mr. JEFFERIS. Well, both of them—that is, Col. McRoberts and Col. Black, whatever their titles were—became chief contracting officers for the Ordnance Department, did they?

Col. HAWKINS. Yes, sir.

Mr. JEFFERIS. When they came in?

Col. HAWKINS. Yes, sir; Col. McRoberts and Col. Black, and Col. R. P. Lamont, and Col. C. W. Watson, and Col. Williams.

Mr. JEFFERIS. Were they all civilians?

Col. HAWKINS. Yes, sir; they all came from civil life.

Mr. JEFFERIS. These five or six gentlemen that you have just mentioned, they were the chief men in charge of the purchasing for the Ordnance Department?

Col. HAWKINS. Yes, sir. Col. McRoberts had charge of the Procurement Division, and these other gentlemen were on his staff and they were instructed by him to sign contracts in his name. Col. McRoberts signed a number himself, and these gentlemen, I think, took their turns; they signed about an equal number of them. Some of them specialized on particular lines.

Mr. JEFFERIS. Well, it turned out after a while that those contracts were considered illegal, did it not?

Col. HAWKINS. Yes, sir. The comptroller said a contract signed by Col. McRoberts, by Col. Black, was illegal.

Mr. JEFFERIS. And was that followed up by securing legislation through Congress?

Col. HAWKINS. Yes, sir. The manufacturers of the country presented a bill in December of 1917, which came out as the act of March 9, 1918.

Mr. JEFFERIS. What relief did they get? What relief did they give these people with whom these gentlemen had contracts, if anything?

Col. HAWKINS. The Secretary of War was authorized to settle and discharge the Government's obligations under these improperly executed contracts.

Mr. JEFFERIS. Now, who was the Watson that you mentioned as one of the contracting fellows?

Col. HAWKINS. Clarence W. Watson was United States Senator from West Virginia, succeeding Gassaway Davis, and was here for a short time, and was chairman of the board of directors of the Consolidated Coal Co. of West Virginia. He came from Fairmont, W. Va.

Mr. JEFFERIS. What rank did he get in the Army?

Col. HAWKINS. Lieutenant colonel.

Mr. JEFFERIS. Did he have his commission when he got here?

Col. HAWKINS. Yes, sir.

Mr. JEFFERIS. How long did he stay?

Col. HAWKINS. He went to France in connection with the service of supplies over there, I think, in August or September 1918.

Mr. JEFFERIS. Did he get promoted over there?

Col. HAWKINS. No, sir; he is a man about 55 years of age.

Mr. JEFFERIS. What particular line of purchases, if you know, did Senator Watson have to do with?

Col. HAWKINS. Senator Watson was particularly active in the negotiation of contracts for the byproducts problems, for the production of toluol.

Mr. JEFFERIS. Had he been a manufacturer? Did you know?

Col. HAWKINS. He had been in the coal and coke business all his life.

Mr. JEFFERIS. There was another man, by the name of Williams, you said was one of them?

Col. HAWKINS. Col. Williams came down here with his commission from——

Mr. JEFFERIS (interposing). What commission did he have?

Col. HAWKINS. Lieutenant colonel; and he was discharged as a lieutenant colonel in January 1919. He was continuously on the job here.

Mr. JEFFERIS. Where did he come from?

Col. HAWKINS. He was a lawyer in New York City.

Mr. JEFFERIS. What aged man?

Col. HAWKINS. He was of the class of '81 at Yale, in the university, and '84 at the Harvard Law School.

Mr. JEFFERIS. Was he a writer of something?

Col. HAWKINS. He wrote a book on mountain climbing once.

Mr. JEFFERIS. Do you know what line of law he practiced in New York?

Col. HAWKINS. He was a member of Mayor Mitchel's cabinet in New York City, and he had something to do with the preparation of some of the big contracts for the public utilities in New York City.

Mr. JEFFERIS. Was he a real practicing lawyer, or was he engaged in contracting of some kind in New York? Do you know?

Col. HAWKINS. I do not think he was a trial lawyer for some years past.

Mr. JEFFERIS. Speaking of Mayor Mitchel's cabinet in New York, what do you mean by that, Colonel?

Col. HAWKINS. John Purroy Mitchel was mayor for two terms, I think, in New York City.

Mr. JEFFERIS. Did he have a cabinet?

Col. HAWKINS. Yes, sir; every mayor had, I think.

Mr. JEFFERIS. Kind of a kitchen cabinet?

Col. HAWKINS. In Pittsburgh, where I come from, the mayor has a cabinet, a director of public safety, and a director of public works, and so on.

Mr. JEFFERIS. Do you know what position Col. Williams had in Mayor Mitchel's cabinet before he came down here?

Col. HAWKINS. I am not very familiar with the nomenclature up there, but something akin to the department of public works.

Mr. JEFFERIS. When he came down here with his commission and stepped into the Ordnance Department, what particular line of activity did he follow in the Ordnance Department?

Col. HAWKINS. He was quite active in the drafting and some of the negotiations for certain of the explosives and components for explosives.

Mr. JEFFERIS. Do you know whether he had any knowledge or experience in that line before he came here or not?

Col. HAWKINS. I think he had some knowledge; yes, sir; not very technical knowledge, but he familiarized himself pretty well with the material, such as nitrates; he had studied a good deal, I think, and seemed to know something about the different kinds of nitrates.

Mr. JEFFERIS. He studied a good deal?

Col. HAWKINS. I think he had read a good deal.

Mr. JEFFERIS. What aged man was he?

Col. HAWKINS. He was of the class of '81 at New Haven, Yale University.

Mr. JEFFERIS. Now, you mentioned some other fellow?

Col. HAWKINS. Col. R. P. Lamont.

Mr. JEFFERIS. Where did he come from?

Col. HAWKINS. He came from Chicago, where he had been president of the American Steel Foundries Co.; he came about the 15th of January, as I recollect, 1918.

Mr. JEFFERIS. Did he have his commission when he came?

Col. HAWKINS. Yes, sir.

Mr. JEFFERIS. What commission did he have?

Col. HAWKINS. Lieutenant colonel; he was promoted to full colonel in October 1918, and he was discharged from the service about January 1919. He became chief of the procurement division when Col. McRoberts went to France in the fall of 1918.

Mr. JEFFERIS. So then, as a matter of fact, the Ordnance Department, the obtaining of all ordnance supplies, was in effect in the hands of those civilians, that stepped in there about that time?

Col. HAWKINS. Yes, sir; the buying end of it was practically exclusively in the hands of the civilians.

Mr. JEFFERIS. And the only Army man that had anything to do with that whatever was this man Hoffer?

Col. HAWKINS. Col. Hoffer, for the gun division; Col. Rice, of the Regular Army, for the carriage division; and Col. Babbitt, of the Regular Army, for the equipment division.

Mr. JEFFERIS. And any others?

Col. HAWKINS. And Col. Moody of the Regular Army for some of the motor equipment.

Mr. JEFFERIS. What did they do after these other people entered with their commissions?

Col. HAWKINS. Col. Hoffer, I think I spoke of; he went to the Watertown Arsenal from the Ordnance Department down here. Col. Babbitt went to France and was connected with his old line of infantry, I think. Col. Moody went to France and did some engineering work for the Ordnance Department in France. Col. Rice became chief ordnance officer of the A. E. F. in France. I think that is all of the officers I remember just now.

EXHIBIT No. 1247

EXCERPTS FROM MEETING OF THE COUNCIL OF NATIONAL DEFENSE, MARCH 3, 1917

Secretary Baker requested Director Gifford and Mr. Clarkson to retire during the consideration of the election of a director and secretary. Following upon this Mr. W. S. Gifford was elected as director, and Mr. Grosvenor B. Clarkson as secretary of the council, it being directed by Chairman Baker that such action be spread upon the minutes.

Commissioner Willard stated that Chairman Godfrey of the Advisory Commission had informed the Commission that his private affairs would not permit him longer to serve as chairman. Mr. Willard thereupon announced his election as chairman of the Commission at its meeting earlier in the day.

Secretary Houston, following on the suggestion of Chairman Willard, moved that the regular, stated joint conferences of the council and Advisory Commission be held hereafter on the first Saturday of each month. Carried.

Chairman Willard read the following list of men nominated by the Commission to compose a "munitions standards board":

W. H. Vandervoort, Root & Vandervoort, builders of special machine tools, and president of the Moline Automobile Company.

R. A. Deeds, formerly general manager of the National Cash Register Company, president of the Dayton Engineering Laboratories Company, and interested in many industrial activities.

Frank A. Scott, Warner & Swasey Company, Cleveland, manufacturers of automatic machinery and optical instruments.

Frank Pratt, General Electric Company, Schenectady.

Samuel Vauclain, Baldwin Locomotive Works, Remington and Westinghouse Companies.

John E. Otterson, vice-president, Winchester Arms Company.

The meeting adjourned. 12:15 p. m.

Attest:

(sgd) GROSVENOR CLARKSON, *Secretary of the Council.*

EXCERPTS FROM MEETING OF THE COUNCIL OF NATIONAL DEFENSE AND THE ADVISORY COMMISSION, MARCH 24, 1917

Hon. NEWTON D. BAKER,
Chairman, Council of National Defense,
Washington, D. C.

DEAR SIR: The Advisory Commission, having before it public documents known as the report of the Kernan Board, the report of the Treat Board, and the report of the machine-gun Board, and having had opportunity in joint session with the council, to hear the report submitted by General Cozier, Chief of Ordnance, upon the condition of his department, has given careful consideration to the matters referred to in the several reports mentioned.

For the purpose of assisting us in obtaining a more definite understanding of the situation, the Chief of Staff has also at our request furnished certain information in connection with some of the articles, such as guns, ammunition, etc., that would be needed to equip an army of one million men. That number of men has been taken as a unit, because both the Kernan and Treat reports dealt primarily with an army of that size, and further, the Advisory Commission is unanimously of the opinion that under conditions such as now exist, and may exist, a force of that size is the smallest that ought to be considered in any definite plan of preparedness. The statement which was prepared by the Chief of Staff is attached to this report.

The Advisory Commission unanimously agreed that the arms, ammunition, and other articles of ordnance necessary to equip an army of one million men and to provide for the wastage of four months' active service, as shown on the attached sheet, be obtained as soon as possible. It should be borne in mind that should these supplies fortunately not be needed, they will remain a defensive asset, and would seem to afford only a reasonable insurance against unforeseen contingencies. If, however, events should make necessary the use of a considerable armed force by this country, the carrying out of the present recommendation of this Commission will be only a short step in the direction of full preparedness.

We have given consideration also to the manner in which this question should be handled, and we find our views in that respect in substantial accord with the recommendations contained in the reports above referred to, which may be briefly summarized as follows:

(a) Arrange to put at once all the arsenals that are equipped for the making of rifles and artillery on full capacity basis.

(b) Arrange with private industries for whatever supply of arms, ammunition, and equipment immediately required, above the capacity of the Government arsenals, and, to that end, steps should be taken to provide necessary drawings nd gauges.

(c) Arrange to carry out the recommendations of the machine-gun board concerning the procurement of the additional machine guns necessary for an army of one million men.

(d) Arrange for the early manufacture of such field guns as are necessary for the equipment of any army of the size mentioned, and which cannot be provided promptly by the plants which the Government now has in operation.

(e) Arrange at once for the manufacture of the amount of ammunition recommended by the Treat Board, and provide suitable places for storage.

(f) Arrange for the procurement of such number of range finders and field glasses as shown on the attached statement, to be necessary for an army of 1,000,000 men.

(g) Arrange at once for the procurement of the necessary number of antiaircraft guns.

The Treat Board has recommended the immediate procurement of additional articles complementary to those mentioned above. These articles are, among others, ammunition batteries, harness, tractors, trucks, truck companies, and certain signal equipment, including aeroplanes, for use in directing the artillery fire.

We have given attention above only to ordnance and ordnance supplies, and have not included personal and horse equipment, and quartermaster supplies.

Although horses are not included in any of the foregoing recommendations, the Advisory Commission considers it essential that sufficient draft animals be obtained to properly equip the vehicles procured under the recommendations.

Respectfully submitted.

(Signed) DANIEL WILLARD,
Chairman Advisory Commission.

The meeting thereupon (12:35 p. m.) adjourned.

Attest:

(Signed) GROSVENOR CLARKSON,
Secretary.

REPORT OF COMMISSIONER COFFIN ON FORMATION OF MUNITIONS STANDARDS BOARDS AND PROBLEMS OF MANUFACTURE IN AERONAUTICS

The report of the Advisory Commission's committee on munitions is one of progress. The munitions standards board, created by the Council of National Defense, following recommendation of the Advisory Commission, held its meeting Wednesday, March 21st. In attendance at this meeting were the following gentlemen: Mr. J. E. Otterson; Mr. Samuel Vauclain; Mr. W. H. Van Dervoort; Mr. Francis Pratt; Mr. Frank Scott; Admiral Earle, of the Navy Department; and Colonel Babbitt, of the War Department. The only member of the board unable to attend was Mr. E. A. Deeds, of Dayton, Ohio, because of serious illness in his family, which has since resulted in the death of his youngest child.

After a short meeting, presided over by the Secretary of War, the board organized itself by electing Mr. Frank Scott, of Cleveland, chairman, and authorizing the chairman to provide a Secretary of the Board, which he has since done in the person of Mr. Bolton, of Cleveland.

The board then proceeded with the general discussion of its proposed work, the officers of the War and Navy Departments taking part freely.

By formal action, the board resolved itself into six subcommittees, and by appointment of the chair the members were assigned to the chairmanship of subcommittees as shown in the following list:

J. E. Otterson, small arms, including machine guns and small arms ammunition; Samuel Vauclain, Army artillery and the ammunition therefor; W. H. Van Dervoort, naval artillery and ammunition therefor; Francis Pratt, gauges, specifications, jigs, and fixtures; E. A. Deeds, time fuses and detonators; Frank Scott, scientific instruments, including optical and range finding apparatus.

Each of these gentlemen, as chairman of a subcommittee dealing with his particular subject, is calling to his aid that particular group of quantity manufacturers, or experts of the country, best fitted to advise with him, and through him with the military departments.

As an indication of the method of procedure of all of these subcommittees, we will take that of small arms and ammunition.

Mr. Otterson, having completed his subcommittee, the military departments will supply to him immediately those drawings, specifications, and kinds of information normally supplied to the producers of such goods bidding upon Government contracts. The subcommittee will analyze this information from the standpoint of the quantity producer, and will report the findings through the chairman of the munitions board, whence it will be taken up for discussion with the responsible heads of the military departments. It is believed that through such a course of procedure we may achieve a great increase of cooperation between the Departments and the industries involved in the quantity production of war supplies, and may obviate long periods of delay which could not but prove extremely costly in time of emergency, both in money and men.

A word should be said to post the Advisory Commission, and through it the council, upon recent developments in the aeronautical industry. It will be remembered that the patent situation in this industry has already been the subject of some discussion before the council. Upon a conservative basis of the lessons of the European war, it is now estimated that one aeroplane is required in active service for each 1,000 men in the field. If we assume, therefore, for land operations, a force of one million men, it becomes evident that 1,000 machines will in any active campaign be kept in active service. Two additional machines must be held in reserve for each machine in active service, and this is the ratio which is, as far as possible, being maintained in accordance with the advices of the observers reporting to the Signal Corps.

In bringing each aviator to a point of expert excellence in aviation work requires one machine. As a matter of fact, the European armies have estimated 1½ machines. This means, for a force of one million men, 4,500 to 5,000 machines must be provided, and when we consider that the active life of a machine in war service is but four months, some conception of the problem confronting the American aeronautical industry may be had.

In these estimates are not included the very large numbers of machines necessary for the guarding of cities, for the uses of the coast defense, and for observation purposes in the Navy.

During the eight years previous to 1916, the United States Government had purchased fifty-nine aeroplanes. As a consequence, there had been no development in the art. On August 29, 1916, nearly twenty millions of dollars were voted for aeroplanes and aeronautical development, and since that time provision has been made in the Army bill, which will undoubtedly be passed during the next few days, bringing the total up to something over thirty millions. Many hundreds of machines have been on order for the past few months, but only somewhere in the neighborhood of 150 machines have been delivered, and even among this small number of machines are represented many different makes and styles. The art is so young that there is as yet practically no duplicate manufacture, and there cannot be until a consistent and continuing program of production is determined upon by the governmental Departments. There is but one quantity manufacturer of aeroplanes in this country.

An optimistic estimate at the present moment seems to indicate the possibility of the delivery of about 175 during the balance of this fiscal year. This entire number cannot be counted upon for active service, as some of them will unquestionably be used for replacement and the bulk of them for training purposes only. There is an estimated possible production of 2,000 machines during the next fiscal year and of 4,000 machines during 1919, provided a definite schedule of production covering this three-year period can be laid down and presented to aeroplane manufacturers within the very near future and continuing appropriations made to secure this result. There is a shortage of material for this work, notably in spruce and linen, and beyond these items the controlling factor is and will undoubtedly continue to be the production of aeroplane engines.

STANDARDIZATION

One of the most vital needs of the aeroplane industry and one of the greatest hindrances to the quantity and law-priced production of aeroplanes is to be found in the utter lack of standardization of material, in detail design, and in method encountered in all the factories engaged in this business. Economical quantity production cannot possibly be effected until the closest possible cooperation has been established among the manufacturers and the engineers responsible for the development of this new art. A standardization of the requirements of the various Departments of the Government must also be effected. An analysis must be made of the manufacturing equipments engaged in the business and the different models and designs of machines must be assigned to those makers best fitted to produce the different types. In short, the manufacturing concerns must be concentrated upon one or two types of machines each, and not permitted to attempt within each plant the construction of six or eight different designs for which requests have been made by the governmental Departments. We must ensure that the energies of each manufacturing concern are concentrated upon the type which it can best handle.

PATENT SITUATION

On March 22d, there occurred in this city a meeting of all the manufacturers of aeroplanes and the members of the National Advisory Committee for Aeronautics. The difficulties in the way of a rapid development of the aeroplane business were discussed in detail, and two definite actions were taken, which should go far toward clarifying the situation. Through the first of these actions, there was created a committee representing the American Aircraft Manufacturers' Association, for active cooperation with the National Advisory Committee in the investigation and elimination of the difficulties preventing progress in quantity production.

The second important step had to do with the patent situation. A tentative agreement was reached whereby all manufacturers agreed to create a cross-licensing patent agreement, as of date of March 2d. The agreement further provides that each manufacturing member of the association shall pay into the treasury of the association a certain stipulated sum for each plane made and sold. A quarterly accounting period is provided. Of the sum thus created, a certain percentage per plane is paid to the Wright-Martin Company over the period of six years for which the Wright patents run. Another definite but smaller percentage is to be paid to the Curtis Burgess interests during the fifteen-year period of the life of the Curtis patents, or until such time as the payment to the Curtis Company has equalled the total sum paid to the Wright Company during the six-year period above mentioned. The sum remaining in the treasury of the association shall be used in such part as may be necessary for the conduct of the affairs of the association, and the surplus accruing may be utilized for the purchase of patents which may be developed outside the membership of the association, or may at the end of any fiscal year be repaid to the members of the association, in proportion to the total amounts paid into the association by each manufacturing member. In looking over the purchasing records of the War and Navy Departments during the 8-year period prior to 1916, four names are found responsible for the development of the art during this time when governmental support was almost entirely lacking. These names are Wright, Curtis, Burgess, and Martin. Peculiarly, Wright has joined Martin, and Burgess has joined Curtis, thus setting up two groups of patents representing the early development of the art and combining in these two camps the men to whom we owe most for aeronautical development in this country. In the recognition which it is proposed to accord the patents controlled by these two groups, there is a recognition also of the moral obligation to these four men. Through an arrangement such as outlined above, the total tax upon the industry has been reduced to a figure considered reasonable, and the aeroplane manufacturers of the country have been joined together in a closely knit and cooperative organization, and the danger of patent litigation between manufacturing members has been removed for many years and probably for all time. Moreover, an organization thus firmly knit together insures a definite channel of contact between the industry, the National Advisory Committee for Aeronautics, and the Departments of the Government, which will bring about the greatest possible development within the briefest space of time.

The royalty which has been paid on each plane under one patent has been in the neighborhood of $1,000. The sum which it is now proposed each manufacturer shall pay into the Treasury for a license under all patents held within the Manufacturers' Association, and for the support of the activities of the organization itself, will not exceed one-fifth of this sum. This comparison will convey some conception of the painstaking and effective work which has been carried on under the direction of the National Advisory Committee for Aeronautics.

* * * * * * *

EXCERPTS FROM MINUTES OF JOINT MEETING OF THE COUNCIL OF NATIONAL DEFENSE AND THE ADVISORY COMMISSION, JUNE 2, 1917

Commissioner Willard read the following letter, of date May 31, 1917, from E. H. Gary, chairman of the committee on steel and steel products, of the advisory commission:

"I send you herewith copy of letter just received from one of the manufacturers in reply to our request for detailed information concerning the supply of ferromanganese on hand. I do not add the names. The letter speaks for itself. If there is any question in regard to these matters we should know it now.

"The letter referred to by Mr. Gary reads as follows:

"'Ferromanganese consumption approximately two hundred fifty gross tons per month. Two months' supply on hand May first. Contracts on open market for six to eight months additional. Do not use Spiegel.'

"We are anxious to do everything we can to assist the Government, and have complied with their request for detailed information regarding all of our business, including the steel mill. We are very doubtful, however, as to how far it is safe or proper for us to cooperate with some of the committees that are endeavoring to assist in the matter. I was called to Washington a few weeks ago in connection with some of this committee work, and found that they were operating in flagrant disregard of the Sherman law, the Clayton law, and all the other statutes that are supposed to regulate business, particularly big business.

"The Government officials who were sitting in at this conference admitted that they had no authority for doing so, and upon a little further inquiry we were advised that the Government officials' presence at the conference would not in any way protect us. As a matter of fact, we have recently made a settlement with the Treasury Department of a transaction which took place in 1903, notwithstanding the fact that the Government admitted that we had acted in good faith at the time, and under the explicit instructions of the official representative of the Treasury Department. The present Administration takes the position that the former contracts were wrong, and not in conformity with the law; therefore we must be punished for doing exactly what we were told to do by the authorized representative of the Department at the time.

"It seems to us that if the Government desires cooperation on the part of the business interests in helping them with their problems, the least they could do would be to have Congress pass a resolution suspending operation of these laws during the period of the war. Until such time as such action is taken to protect us against persecution in the future, we should prefer to do our bit by responding to the direct requests of the several branches of the Government for assistance, and this we are doing practically every day."

The director was requested to send the foregoing letters to the Attorney General with the statement that the council and commission, and the various committees acting thereunder, are constantly encountering the difficulty referred to, and if there is any expression on the subject that the Attorney General can make, the council will be glad of his helpful cooperation.

Thereupon at, 6:00 p. m., the meeting adjourned to Monday, June 4, 1917, at 4:30 p. m.

Attest:

(Signed) W. S. GIFFORD, *Director.*

EXCERPTS OF MEETING OF THE COUNCIL OF NATIONAL DEFENSE, JUNE 8, 1917

The director read the following letter, of date June 6, 1917, from the Attorney General in response to inquiry made of the Attorney General as directed by the council on June 2, 1917:

"I have your letter of the 4th instant transmitting a copy of a letter from Mr. E. H. Gary, chairman of the committee on steel and steel products of the advisory commission, council of national defense, together with a copy of a letter from an unnamed manufacturer. You inquire whether the Department of Justice desires to express an opinion on the question raised by these letters.

"As I read the letters, the question raised is whether the operation of certain laws, more especially the Sherman law and the Clayton law, should be suspended by resolution of Congress during the period of the war. This is not a legal question but a question of national policy in respect of which I do not feel that I should express an opinion unless requested to do so by the President."

Thereupon, at 5:45 p. m., the meeting adjourned.

Attest:

(Signed) W. S. GIFFORD, *Director.*

(There was no exhibit marked "No. 1248.")

EXHIBIT No. 1249

EXCERPTS FROM MEETING OF THE WAR INDUSTRIES BOARD HELD TUESDAY, MAY 28, 1918, AT 11 A. M., ROOM 909, IN C. N. D. BUILDING

Present: Mr. B. M. Baruch, chairman; Mr. R. S. Brookings, Brig. Gen. Hugh S. Johnson, Mr. Hugh Frayne, Mr. Alex Legge, Judge E. B. Parker, Mr. G. N. Peek, Mr. J. L. Replogle, Mr. L. L. Summers, Mr. H. P. Ingels, secretary.

Price fixing.—Attention of the board was called to the probable difference in rulings of the price-fixing committee and the board of appraisers of the War Department now operating under the direction of the surveyor general of purchases. If a manufacturer or producer refuses to deliver his product to the Government at prices fixed by the price-fixing committee and the product is commandeered, under the present arrangements, it is the function of the board of appraisers to determine a fair and just compensation. Considering the demoralizing affect that would result from having the board of appraisers fix prices different from those fixed by the price-fixing committee, Mr. Brookings was requested to discuss with General Johnson the advisability of

1. Having the board of appraisers work with the price-fixing committee, or
2. To have the price-fixing committee take over the work now being done by the board of appraisers.

Meeting adjourned at 12:55 p. m.

(Signed) H. P. INGELS,
Secretary.

EXCERPTS FROM MEETING OF THE WAR INDUSTRIES BOARD HELD TUESDAY, JUNE 18TH, 1918, AT 11 A. M., IN ROOM 909, C. N. D. BUILDING

Present: Mr. Baruch, chairman, Mr. Legge, vice Chairman, Admiral Fletcher, General Johnson, Mr. Brookings, Mr. Frayne, Judge Parker, Mr. Peek, Mr. Replogle, Mr. Summers, Judge Ritchie, Mr. Ingels, secretary.

Curtailment of industry (pooling of production).—Judge Ritchie reported that he had considered the question referred to him by the board on June 11th, 1918, namely, when the output of plants in the congested area was cut down, whether it would be legal to require the pooling of the output of all plants of the same character, both within and without the congested area, in order to prevent the plants outside that area, where output was not cut down, from undue profiting at the expense of the plants within the area, where output was cut down.

Mr. Ritchie's opinion was that a pooling agreement of this kind would not violate the Sherman Law, provided the Government was a party to it, because he thought that under the circumstances the pooling agreement could not be construed as unreasonable. The only difficulty he saw was that he knew of no act of Congress authorizing the War Industries Board, or even the President, to enter into such an agreement relating to industries controlled by this board, but Mr. Ritchie felt that, even without such an act of Congress, the President's war powers were sufficient to authorize him to enter into or direct such an agreement with the industries affected. Mr. Ritchie said, however, that the industries were entitled to authoritative advice as to whether such a pooling agreement would protect them from proceedings under the Sherman Law, and he, therefore, suggested that the Attorney General be requested for his opinion upon the subject by the chairman of the board, it being the practice of the Attorney General to require a formal request for his opinion from the head of the board desiring it.

Contracts (contracts displaced by priority orders).—Mr. Ritchie brought up the question whether manufacturers or others whose contracts were displaced by priority orders incurred any legal liability to their contractors. The board was strongly of the opinion that everything possible must be done in order to protect manufacturers and others from liability of this kind. The Secretary was requested to ask the legal section to furnish a full written report to the board upon the liability of manufacturers and others, under contracts displaced by priority orders, or displaced in any other manner under the authority of the board, together with the conclusion and advice of Mr. Bulkley and Mr. Ritchie on the subject.

Organization (special advisory committee on plants and munitions).—Mr. S. M. Vauclain has been appointed chairman of the special advisory committee on plants and munitions.

The meeting adjourned at 12:45 p. m.

(Signed) H. P. INGELS,
Secretary.

EXHIBIT No. 1250

GENERAL MUNITIONS BOARD MINUTES

[Immediate release]

COUNCIL OF NATIONAL DEFENSE,
Washington, April 9, 1917.

A General Munitions Board has been created by the Council of National Defense.

This action constitutes another successive step on the part of the council in the preparations for war. It was taken at a joint meeting of the Council of National Defense and its advisory commission.

The General Munitions Board will be headed by Frank A. Scott, vice president and treasurer of the Warner & Swasey Company, of Cleveland, a well-known manufacturer, who is one of the leading experts of the country in the quantity production of munitions. The full membership of the board is as follows:

From the Army: General Thomas Curse, Colonel F. G. Hodgson, Colonel H. Fisher, Lieutenant Col. J. E. Hoffer, Major P. E. Pierce, Major Charles Wallace, and Captain A. B. Barker.

From the Navy: Admiral H. H. Rousseau, Admiral W. S. Capps, Commander R. H. Leigh, Commander T. A. Kearney, Doctor R. C. Holcomb, Paymaster J. H. Hancock, Lieut. Col. W. B. Lemly, and Mr. L. McH. Howe, and representatives of the following committees of the Advisory Commission of the Council of National Defense:

Raw materials: Bernard M. Baruch, chairman.

Industrial, Howard E. Coffin, chairman.

Supplies, Julius Rosenwald, chairman.

Medicine, Dr. Franklin Martin, chairman.

The secretary of the General Munitions Board will be Chester C. Bolton.

The officers serving on the Board were designated by the chiefs of the several departments and bureaus, under authority of the Secretaries of War and of the Navy.

The purpose of the General Munitions Board is to assume the prompt equipping and arming, with the least possible disadjustment of normal industrial conditions, of whatsoever forces may be called into the service of the country. The immediate efforts of the Board will be directed on lines calculated to coordinate the making of purchases by the Army and Navy: to assist in the acquirement of raw materials and of manufacturing facilities, and to establish the precedence of orders between the Departments of War and of the Navy and between the military and industrial needs of the country.

It is not intended that the new Board shall have authority to issue purchase orders or to bind the Government in contracts for purchases. These things will continue to be done by the respective Federal Departments.

The order of delivery of military and naval material, both domestic and foreign, as provided under existing contracts will not be disturbed, unless absolutely necessary to meet requirements which may develop. The Board will fully recognize the importance of early and prompt delivery of material under contract, or subsequently to be ordered, for shipment abroad to belligerents friendly to the United States.

While the mission of the newly created Board is a broad one, and while its activities necessarily cover a wide field, its general and immediate purpose will be to assure the effective and immediate coordination and use of the resources of the country for the equipping and arming of the forces called into service, with the least possible interference with normal industry throughout the nation.

The following statement was made by Chairman Scott:

"Notwithstanding the great efficiency of the Army and Navy and the tremendous efforts of the officers and personnel of both branches to meet the vast demands of the existing situation, the difficulties that the board will have to encounter are very great. These difficulties are, however, such as are naturally inherent in our position as a nonmilitary nation forced into war. That the difficulties will be overcome is not doubted by any who have witnessed the spontaneous outpouring of patriotic enthusiasm of all classes, or who have observed that in the case of manufacturers and business men generally, this feeling is already making itself evident in practical ways in support of the Government.

MINUTES OF MEETING OF THE EXECUTIVE COMMITTEE OF THE GENERAL MUNITIONS BOARD, HELD ON FRIDAY, JUNE 1, 1917, AT 8:30 A. M., IN THE MUNSEY BUILDING

There were present: General Aleshire, Colonel Hodgson, Colonel Littell, Colonel Blunt, Major Pierce, Paymaster Hancock. Members of the Committee on Special Building: Mr. Coffin, Mr. Summers, Dr. Snow, Mr. Bulkley, Mr. Sager. Mr. F. A. Scott, presiding, and Mr. H. P. Ingels, Acting Secretary.

Publicity campaign.—At the suggestion of Mr. Coffin, the chairman advised that a publicity Campaign to guard against adverse public opinion was to be begun immediately. It was suggested that Major McArthur, Capt. Marshall, and Major Preston Brown be appointed members of this committee. The Chair advised that all information would have to come through Mr. Creel, chairman of the Committee on Public Information, and that he would take this matter up with Mr. Clarkson.

The meeting adjourned at 11:25 a. m.

H. P. INGELS, *Acting Secretary.*

EXHIBIT NO. 1251

EXCERPTS FROM MINUTES OF GENERAL MEETING OF THE GENERAL MUNITIONS BOARD HELD TUESDAY, JUNE 5, 1917, AT 11 A. M., IN THE MUNSEY BLDG.

Present: Admiral Capps, Admiral Mason, Admiral Zane, Admiral Rousseau, General Cruse, General Aleshire, Colonel Hodgson, Colonel Dunn, Colonel Blunt, Colonel Lemly, Colonel Fisher, Major Pierce, Major Kelly, Major Wallace, Major Stimpson, Paymaster Hancock, Commander Kearney, Commander Leigh, Mr. Summers, Mr. Van Dervoort, Mr. Starrett, Mr. Rosenwald, Dr. Holcomb, Mr. Howe, Mr. Rogers, Dr. Simpson, Mr. Scott, Mr. Bolton. Mr. Scott presiding and Mr. H. P. Ingels acting secretary.

Military instruments.—A communication from the Ordnance Department was submitted relative to a proposed arrangement with the Warner & Swasey Company of Cleveland, covering the manufacture of 3,000 panoramic sites for the use of the field artillery.

Chairman Scott retired and Colonel Blunt presided.

Colonel Blunt stated that this company had agreed to undertake this work only after considerable pressure from the Ordnance Department.

It was moved by Mr. Rosenwald and seconded by General Aleshire that the price of $300 being fair and just, the proposition would be approved, and it was recommended that orders be placed.

The meeting adjourned at 12:15 p. m. o'clock.

H. P. INGELS, *Acting secretary.*

EXCERPTS FROM MINUTES OF MEETING OF GENERAL MUNITIONS BOARD HELD TUESDAY, JUNE 19, 1917, AT 11 A. M., IN THE MUNSEY BUILDING

Present: Major Pierce, Colonel Hodgson, Commander Leigh, Major Wallace, Major Kelly, Commander Leigh, Colonel Dunn, Colonel Blunt, Dr. Hale, Dr, Simpson, Admiral Capps, General Cruse, Admiral Rousseau, Admiral Zane. Paymaster Hancock, General Aleshire, Admiral Richie, Mr. Rosenwald, Mr. Howe, Mr. Meyer, Mr. Zimmerscheld, Major Brown, Major Wood, Major Stimpson, Mr. Starrett, Mr. Toulmin, Mr. Bolton. Mr. Scott presiding and Mr. Bingham secretary.

The reading of the minutes of the previous meeting was dispensed with.

Organization—investigation by Major Stimpson.—Mr. Scott stated that now that the emergency in connection with the work of the Board is somewhat lessened, that it seemed right to so organize that the Board and the members of its subcommittees shall be free from reasonable criticism. This is particularly necessary in relation to the membership on a board or subcommittee of a man who is actively interested in a concern which may benefit by the awarding of a contract concerning the recommendation of which the subcommittee or board has some authority. To investigate this condition, Mr. Scott suggested that the Board ask Major Stimpson if he would be willing to give his time to this matter. Major Stimpson stated that he would be glad to do this. He thereupon asked what functions the Board and its subcommittees had and was informed that the final decision regarding the awarding of contracts did in no case rest with the Board or its subcommittees. He asked whether the final decision by the Government officer was simply based on the experience of the Board's recommendation and was informed that this was not always the case, as recommendations of the Board had been reversed on several occasions, the contractor for the cantonment at Chillicothe, Ohio, being mentioned, likewise reversal of the decision by the Secretary of the Navy of the recommendation of the Board regarding the price of gun forgings to be placed with the Bethlehem Steel Corporation.

Major Stimpson asked whether it would help matters if a small body of men, constituted by law, took the place of the heads of the Departments in making final decisions and awards. Mr. Scott stated that the present plan of the Board was to coordinate and supplement the work of the departments and that with the present arrangement the small-board idea is impossible.

Mr. Rosenwald gave his opinion that a central purchasing body was necessary.

Colonel Dunn stated that the order of the Secretary of War removing the necessity of bids for purchases led the Ordnance Department to believe that the prices submitted by the General Munitions Board were correct and thus accepted them.

Colonel Hodgson outlined for the benefit of Major Stimpson the method pursued in recommending purchases by the committee on supplies.

Major Pierce stated that the General Staff had been greatly relieved by the result of the methods used, and complimented the Board on the prices received.

It was moved and carried that Major Stimpson be asked to make the investigation and report to the Secretary of War and to the Secretary of the Navy; likewise to send a copy of his report to the General Munitions Board.

The meeting adjourned at 1 p. m.

(Signed) H. P. BINGHAM, *Secretary.*

EXCERPTS FROM MINUTES OF MEETING OF EXECUTIVE COMMITTEE OF THE GENERAL MUNITIONS BOARD HELD WEDNESDAY, JUNE 20, 1917, AT 8:30 A. M. IN THE MUNSEY BUILDING

Present: Major Pierce, Paymaster Hancock, Major Stimpson, Colonel Blunt, Colonel Hodgson, Mr. Rosenwald, Mr. Meyer, Mr. Bulkley, Mr. Bolton, Mr. Scott. Mr. Scott presiding and Mr. H. P. Bingham secretary.

Cantonments—contract for Yaphank, L. I., cantonment to be considered.—A memorandum from Colonel Littell, approved by the Secretary of War, was presented asking the Board to reconsider their recommendation for contractor to build cantonment at Yaphank, Long Island, because of the interest which Chairman W. A. Starrett had in the Thompson-Starrett Company, which firm had been previously recommended.

The matter was referred to Mr. R. J. Bulkley, to investigate the exact standing of Mr. Starrett relative to the Thompson-Starrett Co., and likewise the George A. Fuller Company.

The meeting adjourned at 11:45 a. m.

H. P. BINGHAM, *Secretary.*

EXCERPTS FROM MINUTES OF MEETING OF THE EXECUTIVE COMMITTEE OF THE GENERAL MUNITIONS BOARD HELD THURSDAY, JUNE 21, 1917, AT 8:30 A. M., MUNSEY BUILDING

Present: Major Pierce, Colonel Hodgson, Colonel Blunt, Paymaster Hancock, Dr. Simpson, Mr. Meyer, Mr. Toulmin, Mr. Bulkley. Mr. Scott presiding and Mr. H. P. Bingham secretary.

Cantonments—request for reconsideration of Yaphank, L. I., recommendation.—In accordance with action of the Board, Mr. Bulkley presented a report showing that Mr. W. A. Starrett has not had any connection with the Thompson-Starrett Company for a period of more than four years.

The first paragraph of this communication was approved without changes. The second paragraph was altered by the addition of a list of contractors to be furnished by the Committee on Emergency Construction, who might have the ability to build the above cantonment.

Mr. Bulkley likewise reported by request, relative to Mr. Starrett's alleged connection with the George A. Fuller Company showing that Mr. W. A. Starrett has no connection with said company; but that one of his brothers is the president of the George A. Fuller Company. This report was accepted and ordered kept in the files of the board.

The meeting adjourned at 10:30 a. m.

H. P. BINGHAM, *Secretary.*

EXCERPTS FROM MINUTES OF MEETING OF THE GENERAL MUNITIONS BOARD HELD TUESDAY, JUNE 26, 1917, AT 11 A. M. IN THE MUNSEY BUILDING

Present: Commander Kearney, Commander Leigh, Major Wallace, Colonel Blunt, Colonel Dunn, Dr. Holcomb, Dr. Millikan, Major Bascom Little, Major Pierce, General Aleshire, Admiral Zane, Admiral Capps, Mr. Allen, General Cruse, Colonel Fisher, Colonel Lemly, Major Woods, Major Brown, Major Kelly, Paymaster Hancock, Admiral Richie, Mr. Meyer, Dr. Simpson, Mr. Howe, Mr. Rosenwald, Admiral Rousseau, Dr. Hale, Mr. Summers, Mr. Rogers, Mr. Bolton. Mr. Scott presiding and H. P. Bingham, secretary.

Prices—steel.—The chairman outlined the conference held with President Farrell of the Steel Corporation originally called to settle the matter of priority, and eventuating into a discussion as to the prices of steel for the Shipping Board, etc.

A memorandum submitted on the price question to the Secretary of War and to the Secretary of the Navy as being the sense of the conference was read, together with an answer by the Secretary of War asking that nothing be done at present, but stating that he had informed the governmental purchasing departments that steel should be bought now at pre-war-time prices and the difference in prices adjusted at a later date. It was thereupon suggested that Mr. Scott find out what was meant by "pre-war-time prices," and that if the prices previous to the war, August 1914, was meant, that the sense of the board was not in accord with the suggestion of the secretary.

The meeting adjourned at 1:15 p. m. o'clock.

H. P. BINGHAM, *Secretary.*

EXCERPTS FROM MINUTES OF MEETING OF THE EXECUTIVE COMMITTEE OF THE GENERAL MUNITIONS BOARD HELD FRIDAY, JULY 13, 1917, 8:30 A.M., IN THE MUNSEY BUILDING

Present: Colonel Blunt, Colonel Hodgson, Dr. Simpson, Major Pierce, Paymaster Hancock, Mr. Meyer, Mr. Rosenwald, Mr. Bolton; also Mr. Cook, Major Starrett, Major Crowell. Mr. Scott, presiding and H. P. Bingham, secretary.

Machine Gun Committee—Resignation of Mr. Hanson.—A communication from Mr. Hanson, chairman of the Machine Gun Committee, was presented stating that due to his having accepted a position with the Colt's Patent Fire Arms Manufacturing Company, who were to receive and had received Government orders for machine guns, he felt it necessary to tender his resignation as chairman of that committee.

Mr. Hanson's resignation was ordered accepted and the secretary was instructed to advise Mr. Hanson of the regret of the Board at his action and to express the Boards' thanks for the valuable assistance he had rendered.

The meeting adjourned at 11:30 a.m.

(sgd.) H. P. BINGHAM, *Secretary.*

MINUTES OF THE THE MEETING OF EXECUTIVE COMMITTEE, GENERAL MUNITIONS BOARD, HELD SATURDAY, JULY 28TH, 1917, AT 8:30 a. m. MUNSEY BUILDING

Present: Colonel Pierce, Colonel Blunt, Colonel Hodgson, Paymaster Hancock, Mr. Meyer, Mr. Rosenwald, Dr. Simpson, Major Starrett. Mr. Scott presiding and Mr. H. P. Bingham Secretary.

Investigation.—A telegram from Mr. Rosenwald to the President bearing on the rider which was to be attached to the food bill relating to the employment of men in an advisory capacity, and regarding such men interested in companies receiving orders, was read and a copy of this telegram together with the President's letter to Senator McKellar on this subject was ordered made a part of the record.

The meeting adjourned at 12:15 p. m.

H. P. BINGHAM, *Secretary.*

Copy of a telegram forwarded July 2nd, 1917, to President Woodrow Wilson at the White House, Washington, D. C., from Mr. Julius Rosenwald:

"DEAR MR. PRESIDENT: It is of the most vital importance that the rider in the food bill referring to the Advisory Commission and its method of securing supplies be stricken out. To cast suspicion on men in many industries who without exception have been eager to serve the Government rather than themselves will destroy a spirit which should be encouraged. The committees representing these industries have succeeded in instilling and securing a loyalty to the Government from many in their own lines that could never have been produced under the old system. Even at this early stage of the war the savings to the Government due to this desire to serve runs into many tens of millions of dollars. Having been intrusted with a responsibility to protect and serve their Government interests, a patriotism has been aroused in these men which is absolutely necessary to secure rapid production. It is probably impossible to devise any plan which is dishonesty proof, but any man of standing in his profession or industry will sacrifice everything rather than be unfaithful to his trust. At any rate, such has been my experience with the men who have served as advisors to the commission which I have had the honor to appoint. The present system should not be destroyed until a better one is found. If changes in method are desirable they can be made after proper investigation. It is vital that the cooperation which has already been established should be maintained and furthermore it is of greatest importance that confidence exist between Government and industry and that suspicion which has existed on the part of both may be eliminated.

(Signed) "JULIUS ROSENWALD."

EXCERPTS FROM MINUTES OF MEETING OF THE EXECUTIVE COMMITTEE OF THE GENERAL MUNITIONS BOARD, CALLED AT 8:30 A. M., MONDAY, AUG. 6TH, 1917

Artillery forgings.—Attention of the Board was called to the question of the distribution of forgings to the Midvale Steel Company and the Bethlehem Steel Company, particular attention being called to the plan of Midvale furnishing the Navy forgings and the Bethlehem Steel Company furnishing the Army forgings. Mr. Scott referred to an understanding with these two companies, that each of them was to furnish Army and Navy forgings at a certain fixed price, this price being based on the Navy forgings being divided equally between them. He stated that he did not believe Bethlehem would agree to accept only Army forgings at the prices agreed upon.

Reference was made to the recent order from the Bureau of Ordnance of the Navy Department placed with the Midvale Steel Company for 16 8″ howitzer units for the Marine Corps. No definite action was taken on this. However, a memorandum from the War Industries Board was sent to the Bureau of Ordnance of the Navy Department requesting information as to when this order was placed and for an explanation as to why they failed to have these howitzers cleared from this Board.

Artillery forging—United Engineering & Foundry Co.—Colonel Blunt called the Board's attention to the fact that the above company had refused to bid on certain forgings, such refusal based on the Government eight-hour law. After some discussion it was decided to drop the matter.

Meeting adjourned at 10:10 a. m.

H. P. INGELS, *Acting Secretary.*

"Exhibit No. 1252" is the Industrial Mobilization Plan, Revised 1933, approved by the Secretary of War February 1933; approved by the Secretary of Navy February 1933, and printed by the Government Printing Office 1933. It was ordered reprinted as a separate document by the chairman. (Reprinted as Committee Print No. 2.)

EXHIBIT NO. 1253

NOTES ON CHARTS [1]

Throughout the World War, the du Pont Company's chief product was smokeless powder. Other manufacturers in the United States were of course also actively engaged in making smokeless powder, but the du Pont Company produced the main bulk of the entire American output, and is believed to have supplied something like half the total requirements of the armies of the Allied Nations. The greater part of this volume, of course, was in cannon powder.

Almost if not quite alone among important products in great demand during the war, smokeless powder not only was not increased in price but was even reduced in price from time to time as the war wore on. Moreover, these price reductions were accomplished in the face of an enormously expanding demand for powder, and in spite of advancing labor rates and sharply increased costs for the necessary raw materials. This was made possible by the manufacturing economies of large-scale production and by improvements in methods which were developed through constant research and striving for economies throughout the war.

In the first two of the accompanying charts, the course of powder prices over the war years is plotted against the general course of values for all commodities, and in comparison also with a curve showing the cost of the raw materials required for smokeless powder manufacture. All price data used in these charts for powder and powder raw materials were taken from the War Industries Board's bulletins on the "History of prices during the war." The prices received by the du Pont Company for its powder were if anything slightly lower than those indicated by these charts, because when the United States entered the war some of the other American manufacturers of smokeless powder were able to show the Government that they could not meet the du Pont Company's costs, and on that account the Government paid them higher prices than the du Pont Company was charging.

The four basic raw materials of chief importance used for smokeless powder manufacture during the war, of which the monthly prices were weighted together proportionally to get the composite curve for "powder raw material costs", are cotton linters, nitrate of soda, sulphur, and alcohol.

The high export prices for smokeless powder at the beginning of the war in Europe were set in order to amortize the cost of the plants which had to be built to take care of the sudden enormous demand, and which would become useless when the war was over. No similar element was included at any time in the prices charged the U. S. Government by the du Pont Company, because the necessary facilities were provided before that country entered the war.

In the remaining charts, the course of prices throughout the war is similarly shown for some of the staple products of agriculture. The prices used in these charts were taken from the published tables of the Bureau of Agricultural Economics of the U. S. Department of Agriculture, and represent prices received at the farm.

---

[1] "Exhibit No. 1253-A to 1253-F" See pp-3855-3857.

At the close of the war, the du Pont Company's military smokeless powder plants were dismantled, only a small nucleus of military powder manufacturing facilities being retained at the request of the U. S. Government. Over the past 10 years, only about 2% of the du Pont Company's total manufacturing profits has come from military products.

SUPERVISION OF INTERNATIONAL TRADE IN ARMS

Hearing before the Committee on Foreign Relations, United States Senate, Sixty-ninth Congress, first session, on supervision of international trade in arms

UNITED STATES SENATE,
COMMITTEE ON FOREIGN RELATIONS,
Washington, D. C., Wednesday, April 28, 1926.

The committee met, pursuant to call, in the committee room, Capitol, at 11 a. m., Senator William E. Borah (chairman) presiding.

The CHAIRMAN. Gentlemen of the committee, I thought we would take up this morning the traffic-in-arms treaty, and I will ask Mr. Burton to favor us with his presence and his knowledge of the making of the treaty and its terms, objects, purposes, and so forth.

Representative BURTON. Mr. Chairman and gentlemen of the committee, it affords me pleasure to meet you in this room where I was a member for 4 years. The two treaties before you are the result of first an invitation conveyed to us through the State Department by the League of Nations in the autumn of 1924 to join in a conference at Geneva; prior to that invitation there had been a meeting of delegates, military and naval for the most part, to prepare the agenda for that conference.

The invitation was accepted, and five delegates were chosen from the United States, including your humble servant, Minister Gibson, our Minister to Switzerland, Admiral Long, Mr. Dulles, who is here today, connected with the State Department, and General Ruggles. The five delegates were aided by a corps of experts and translators, for it was no inconsiderable task to transcribe the messages that were sent back and forth to the State Department. The conference, with the agenda prepared by the experts before it, met at Geneva on the 3d of May 1925, and continued in session until June 17, 1925. Several treaties resulted from these deliberations, in all there were 5; but 3, 1 pertaining to Ifni, a dependency of Spain, we politely declined to ratify, and the other 2 were merely formal final actions, and so forth. So there are 2 proposed treaties, first the convention for the supervision of the international trade in arms and ammunition and the implements of war. Do you desire that I should go into this at some length?

The CHAIRMAN. No; not in any great detail so far as we are concerned. We are only going to give consideration to the traffic-in-arms treaty this morning.

Representative BURTON. And I may say that it would be of very substantial assistance to our delegation who go in response to an invitation to consider the limitation of armaments if that treaty could be ratified here. I may say in general that there were 44 nations represented at the conference, and they gave the utmost deference to the American delegation. We really gained all that we sought. One of our most difficult problems was to keep clear of any committal looking to membership, certain membership, or close association with the League of Nations. In that regard and having in mind the policy of our country in this connection we took a firm stand and the conference acceded to our wishes. The agenda, the original form for the convention, was very materially modified after elaborate discussion.

In brief, this is true: I do not claim for this treaty any very great scope in the prevention of war, but it is a step in that direction. The statistics in regard to the exportation of arms and ammunition from the various countries have shown a very peculiar condition. The volume of exports has been far and away greater than of imports, showing that armaments, ammunition, and arms are shipped from various countries and diverted somewhere and used for some purpose that presumably is not entirely legitimate. The aim of this convention and the central fact in it is that it requires publicity, so that the amount of arms shipped to any country or shipped from any country may be known and shown in the list of arms, implements of war, and kindred material. The convention agreed on five categories. Do you gentlemen have copies of this convention? This is complete; of course, it covers the whole thing.

"Category I. Arms, ammunition, and implements of war exclusively designed and intended for land, sea, or aerial warfare.

"Category II. Arms and ammunition capable of use both for military and other purposes" such as are used for sport or personal defense, and so forth.

"Category III. Vessels of war and their armament."

On that category there was a great deal of discussion. It was proposed in the first instance that warships, all vessels of war, should be included in category I along with arms, ammunition, and implements of war, but there was very substantial objection to that by Great Britain and other countries, and it was stricken from category I; but the result was, as sometimes happens in conferences, that an even stricter provision in regard to warships was adopted, which is set forth on page 39 (of the volume of the Proceedings of the Conference, Geneva), article 7, and which is in line with certain clauses in the treaties made here at Washington in the winter of 1921 and 1922. It provides that—

"The high contracting parties, in all cases covered by category III, undertake to publish within 2 months of the close of each quarter a return for that quarter, giving the information detailed below for each vessel of war constructed, in course of construction or to be constructed within their territorial jurisdiction on behalf of the government of another State:

"(*a*) The date of the signing of the contract for the construction of the vessel, the name of the Government for which the vessel is ordered, together with the following data:

"Standard displacement in tons and metric tons.

"The principal dimensions, namely, length at water line, extreme beam at or below water line, mean draft at standard displacement.

"(*b*) The date of laying the keel, the name of the Government for which the vessel is being constructed, together with the following data:

"Standard displacement in tons and metric tons.

"The principal dimensions, namely, length at water line, extreme beam at or below water line, mean draft at standard displacement.

"(*c*) The date of delivery, the name of the Government to which the vessel is delivered, together with the following data with respect to the vessel at that date:

"Standard displacement in tons and metric tons.

"The principal dimensions, namely, length at water line, extreme beam at or below water line, mean draft at standard displacement.

"As well as the following information regarding the armament installed on board the vessel at the date of delivery and forming part of the vessel's normal armament:

"Number and caliber of guns.

"Number and caliber of torpedo tubes.

"Number of bomb throwers.

"Number of machine guns."

The CHAIRMAN. Do I understand that these items, the date of laying the keel and so forth, all these matters are to be published?

Representative BURTON. They are all to be published within 2 months of the close of each quarter.

Category IV, about that also we had much discussion, some governments favoring a strict report of the manufacture of all aircraft, putting that in something of the same category with arms, and so forth. It was pointed out, and I think clearly established, that it was possible to put aircraft of particular kinds into classes and distinguish between the classes of material, those used for commerical and those to be used for warlike purposes. Some governments insisted, and England, Italy, and Japan opposed. Finally a compromise was reached, which appears on page 39 of the Proceedings of the Conference:

"ARTICLE 9

"The high contracting parties undertake to publish, within 6 months of the close of each quarter, a return for that quarter of the export of aircraft and aircraft engines, giving quantities exported and their allocation according to country of destination."

There is in this, it will be seen, no requirement for publication by the countries receiving the material.

The fifth category, perhaps has special reference to the less civilized countries, in which are included certain provisions given here in a chapter under the head of "Special zones." That includes gunpowder and explosives, except common black gunpowder. Common black gunpowder has a commercial use in firecrackers, and so forth. The articles under category V might be very formidable in a country where they used bows and arrows and spears, but would not be of importance in a country that was of advanced civilization where they had modern methods of destruction, and this category is not apparently of special interest to the United States.

Now there is to be a license or export declaration accompanying each shipment or export of arms from any of the contracting countries, and that shipment cannot be made except on permission of a country itself, or to some authorized agency such as a consulate or a——

Senator Swanson. Does that apply to all the countries ro to one special zone?

Representative Burton. No; it applies to all countries that join in the treaty.

The Chairman. Let me understand that. There must be a license before there can be a shipment?

Representative Burton. Yes, sir.

The Chairman. From whom does the license issue in a case——

Representative Burton. It issues from the Government——

The Chairman. Suppose they wanted to ship arms into Mexico, what would be the procedure under this?

Representative Burton. It would have to be handled so that permission was given by the country to which the shipment is made.

Senator Swanson. That is, from the government that we would recognize——

Representative Burton. From the government to which the shipment comes.

The Chairman. There would have to be permission from Mexico——

Representative Burton. Then that consignment would have to be visaed and license issued and export declaration——

The Chairman. How under those circumstances would a revolutionary coterie be able to get arms at all?

Representative Burton. There was a great deal of discussion about that and——

Senator Shipstead. Before you go into that matter—I want to ask you, in that case you would have to have permission from the government of the country into which the arms are to be shipped, would you also require the permission of the Government of the United States?

Representative Burton. Yes; that permission is practically formal, the object of it being part of the publicity program, but it would be virtually formal. There was a long discussion about that. Mr. Dulles, what is the number of the article that includes the word "belligerent"?

Mr. Dulles. We have it here.

Representative Burton. It is on page 49 of the proceedings, chapter V, General Provisions, article 33: "In time of war, and without prejudice to the rules of neutrality, the provisions of chapter II", as pertaining to license or export declaration "the provisions of chapter II shall be suspended from operation until the restoration of peace so far as concerns any consignment of arms or ammunitions or of implements of war to or on behalf of a belligerent."

That is if the United States recognizes a revolutionary party in any country as a belligerent shipments can be made to that belligerent, and the provisions suspending the requirements in time of war would apply to that belligerent. I am clear in my statement, I trust. That was the interpretation placed upon it in the convention. They displaced with another provision which would have limited shipments to an established, recognized government.

Senator Edge. If I get the intent of the chairman's question, suppose an actual revolution had not started, but they were preparing for it, and the country was not in the position of being a belligerent. Would it be likely to come to the United States and purchase arms for that purpose?

Representative Burton. I do not think so. Frankly speaking, I do not think it would a proper attitude for us to take to stir up trouble in that way, to take the initiative.

Senator Johnson. Is there any other provision relating to the subject concerning which the inquiry was propounded by the chairman, than the one to which you have just adverted?

Representative Burton. I think not. We regard that as sufficient. That was the interpretation placed upon it after very considerable consideration.

Senator Swanson. Lt me see if I get the import of this treaty correctly. In the first place, under this treaty arms cannot be exported except to a recognized government, or an agency which a recognized government designates. For instance, arms could not be exported to Mexico today except to the recognized Government of Mexico, or such agencies as that Government would designate.

Representative Burton. Yes.

Senator Swanson. If you deviated from that at all, you would be compelled to recognize the belligerency of some force contending in that country.

Representative Burton. That also is confined to time of war. All these provisions as to publicity are suspended in time of war.

Senator Swanson. If Greece and France were at war, then we would publish nothing in regard to the exports to those two countries, even if they have a revolution which we recognize as a belligerency. Then the news of the exports would cease to be published by us.

Representative BURTON. Yes. If there were a revolution in Greece and we recognized the belligerency of the revolutionists, we could ship arms.

Mr. DULLES. We would be under no treaty obligation to continue the publication. There would be no divergence from the treaty if we did continue, as we are doing now in time of revolution or war, to publish statistics; but we would be under no treaty obligation in that case.

The CHAIRMAN. This is the proposition in which I am interested right now—and I am looking back to the time when we were trying to get arms from France in 1774; under this treaty we could not have gotten them.

Representative BURTON. I think so. They recognized our belligerency.

The CHAIRMAN. The recognition of the belligerency did not come until after the surrender of Burgoyne.

Senator LENROOT. By France; yes.

The CHAIRMAN. Not until after the surrender of Burgoyne.

Senator SWANSON. They never recognized our belligerency.

Representative BURTON. That was 1777.

Senator SWANSON. As I understand, France never recognized our belligerency. She recognized our independence after the Battle of Saratoga, but there was never any recognition accorded us as belligerents, which would have enabled her to give us any assistance or ship any arms under this treaty. Is not that true?

Representative BURTON. I would like to study that a little. I am inclined to think so.

The CHAIRMAN. Under this treaty, as I read it—and I do not think article 33 changes it—no revolutionary movement could get arms from any one of the 44 nations signing until they reached a point in their movements which would earn for them recognition as belligerents.

Representative BURTON. Yes; that I understand to be the case.

Mr. DULLES. I am not quite sure. The word "recognized" is very carefully explained in article 2 and article 37. If they were a de facto belligerent, or if there were an authority existing, shipments could be made. The word "recognition" was stricken from the first draft, after a great deal of debate, making it clear that prior recognition was not required, either in the case of de facto belligerency or de facto government or of an existing government.

Senator LENROOT. I would like to ask this: If the treaty provisions are not observed, does that very fact necessarily constitute a recognition of belligerency?

Representative BURTON. If a contest assumes the magnitude of a war the treaty obligations are suspended. I wish again to call attention to the very important suggestion Mr. Dulles made in that connection that the word "recognition" was carefully avoided in the drawing of this paragraph, although it had been suggested.

Senator SHIPSTEAD. Under the provisions of this treaty, in case we sign it, could the Riffs buy ammunition here?

Representative BURTON. That very subject was considered. That is covered in chapter 3. In the first place, of course they are shut off from the sea, and it would be impracticable, except by sumggling, to send any arms there, because there is a blockade.

Senator JOHNSON. They are in a prohibited zone, too.

Representative BURTON. Yes; they are in the probibited zone, and that prohibited zone is part of the policy of this Government, under the treaty of Brussels, already in existence. This provision in regard to special zones, which includes chapter 3, while it enters into much more detail as to the operations of the means for excluding arms from less civilized people, is only a statement of the principles we have already adopted.

Senator JOHNSON. The Boers fought a war against Great Britain for a great many years. Could they have bought arms here, under this arrangement?

Senator SWANSON. The Boers were an independent nation, and Great Britain was fighting the rights of a minority there. The Boer Government was an organized government. I doubt whether the minority fighting for Great Britain in the Dominion of Oom Paul could have bought any arms under this treaty.

Representative BURTON. I think they could. They were belligerents, certainly.

Senator SWANSON. Who does the recognizing? Does that mean that the nation that is furnishing arms must in its own conscience and judgment consider that the contenders have the status of belligerents, even if we do not recognize them?

Representative BURTON. I should think so.

Senator Swanson. If other nations recognized them, that would not justify you shipping arms, unless you yourself considered that they had reached the status of belligerents.

Representative Burton. Each nation is free to pursue its own course, based upon its conclusions as to whether there are belligerents worthy, I will not say of recognition, but worthy of permission for the shipment of arms.

Senator Swanson. The only case where we should deviate from furnishing arms to an existing government, or such agencies as it may designate, is the case where a government recognizes belligerency existing within its own jurisdiction.

Representative Burton. They would not have to formally recognize belligerency.

Senator Swanson. Not formally, but recognize that the contest has reached the status of belligerency.

The Chairman. We would have to determine that for ourselves. Taking the world in its present condition, would not the effect of this treaty be to make it practically impossible for any revolutionary movement to get arms?

Representative Burton. I do not think so. Take the part of the world embracing Syria, and that region, Syria, Albania, Palestine, and Transjordania. You have to take into account the practical, actual situation. That is covered in chapter 3, on page 41. Those countries are under mandate. We have expressly recognized that mandate in treaties with France and England, in treaties under which we have certain privileges in return, such as a recognition of the so-called "open door." In addition to that, I do not see how we could ship any arms there, because the French and English control all ports and customs, and it is a part of our recognition of their mandate that they shall control those ports and customhouses.

The Chairman. I know, but take a country like India, for instance.

Representative Burton. That is included in this as well. I do not think we could very well ship any arms into India. I think your judgment would concur with mine, that if there is any change there, it will not be as the result of an armed revolution, but will be by more peaceable means.

Senator Edge. Would not the fundamental object of the treaty rather fail if we had any qualifying article which might, in a way, recognize a just revolution as against an unjust revolution? In other words, if we have a treaty at all, we must have a treaty that prohibits or does not prohibit, before the contestants are recognized as belligerents; so it seems to me that if we have any treaty, it is necessarily going to stop the purchase of arms by a country or people that may be fomenting a revolution. I do not see how you could have a treaty otherwise.

The Chairman. You could have a treaty providing for absolute publicity of what you are going to do, and leave it to your own judgment and discretion to sell to whom you would.

Senator Edge. But suppose they have not started the actual hostilities, but are buying arms for that purpose. It may be an unworthy purpose, the very thing I assume this conference was called to stop. We must be either on one side or on the other. Maybe sometimes it would be unfortunate. It might stop a very proper uprising.

The Chairman. I am only discussing this for the purpose of getting the terms of the treaty. I am not expressing my final views upon the matter. Under the terms of this treaty, it is absolutely under the power of an established government to get arms from other governments. But there is no way by which a revolutionary movement, or a people who are striving to get a position in the world, can get arms, except really by the acquiescence of the established powers.

Representative Burton. Not of the country in which they live. I cannot quite agree with you in that.

Senator Swanson. They can if they attain the status of belligerents.

Representative Burton. I do not think we would have assumed a position worthy of approval if we had taken the ground over there that we want to reserve rights so that we can send arms and ammunition to any agitator who is fomenting a revolution. It was sought to retain all rights by insisting that when a condition of belligerency exists, not necessarily requiring a formal recognition, a belligerency that amounts to a war, it does not matter whether one side is very much stronger than the other or not, if there is what would be normally considered a war, then we could ship to any insurgents or revolutionaries. The whole treaty would be suspended. It seemed to us that that was a proper place at which to draw the line.

Senator Swanson. I think under this treaty we could have gotten ammunition from France during the Revolution, for Great Britain herself recognized us as belligerents. They took prisoners, they had treaties with Washington about troops, so our belligerency was established during the Revolutionary War.

The CHAIRMAN. Not until after the Battle of Saratoga.

Senator SWANSON. At the beginning of the war, Great Britain, by the terms of her letters to Washington, recognized us as belligerents, but did not recognize our independence. Consequently Great Britain herself had accorded belligerency to us, because she took care of our prisoners, and we had truces. They did not consider us as mere outlaws. They did not hang our soldiers. So I think under this treaty possibly we could have gotten supplies.

Senator JOHNSON. If you are correct, I think any revolutionists may be able to obtain their supplies as well, because the moment a shot is fired beginning any revolution, it makes them belligerents.

Senator SWANSON. It depends greatly on whether it is large enough, so that the people who wage the war have a status that would entitle them to be considered as belligerents. For instance, there might be a revolution in Mexico in which the revolution would attain such a status that they would treat them as belligerents. Soldiers surrender and are kept in prison, truces are made, and so forth.

The CHAIRMAN. The South could not have gotten any arms from Great Britain at any time during the Civil War, under this treaty.

Mr. SWANSON. Yes, we could have.

The CHAIRMAN. Why?

Senator SWANSON. Because Lincoln himself recognized us as belligerents.

Senator LENROOT. Great Britain did.

Senator SWANSON. What do you mean by "a belligerent"? That means that one is waging war. You let troops surrender to you, you exchange prisoners, and so forth. Belligerency is a status.

The CHAIRMAN. We had a perfect right to hang Jeff Davis after the war.

Senator SWANSON. Not during the war. When an insurrection gets so large that it is a violation of the laws of humanity to apply the law of treason, they are treated as belligerents.

Senator JOHNSON. Upon that theory, then, today arms could be shipped into Morocco and into Syria.

Senator SWANSON. I do not know much about the status of those countries.

Senator JOHNSON. There is a belligerency there.

Senator SWANSON. I would think under this treaty arms could be shipped to Morocco.

Senator JOHNSON. I would like to see you try it under this treaty.

The CHAIRMAN. Senator Lenroot said that Great Britain recognized the South as a belligerent. When did they do that?

Senator LENROOT. Very early in the war. I have a reference to it here in this book. It does not give the date, but at the close of the war there was a very lengthy correspondence between the two governments upon Great Britain's right to recognize the belligerency of the southern States. This quotes a decision of the Supreme Court of the United States in which, in speaking of England, they refer to "her neutrality between the two belligerents." Evidently they were so recognized in 1861.

The CHAIRMAN. I know she declared her neutrality as between the South and the North, but my recollection is that that was one of the great triumphs of Adams, as our ambassador, that he finally prevented the recognition of the belligerency of the South.

Senator LENROOT. No, that was independence that he prevented the recognition of.

The CHAIRMAN. No, it was not. I am not speaking about independence. Of course, they never suggested for an instant that they were going to recognize their independence.

Senator SWANSON. Oh, yes.

Senator LENROOT. A proclamation of neutrality necessarily recognizes a state of belligerency, does it not?

Senator BORAH. I will bring the history of that and show it to the Senator.

Senator SWANSON. We sent men to have us recognized as independent.

The CHAIRMAN. Russell refused to receive your men.

Senator SWANSON. As citizens of an independent nation, because we had not established our independence.

The CHAIRMAN. I am talking about belligerency. You gentlemen will find that Great Britain did not recognize the belligerency, that that was one of the great triumphs of Adams as ambassador. He finally prevented it.

Representative BURTON. Here is a reference to this in the article in regard to exports in time of war.

"There are two kinds of war, namely, war and civil war. The text applies to both.

"It was unnecessary to state that in speaking of civil war one did not have in view a revolt. * * * One had in view a struggle of a lasting and more serious character, such, for example, as the War of Secession, which broke out in 1861 in the United States of America."

(Thereupon Representative Burton read at length from the proposed treaty.)

Representative Burton. There are a number of points in regard to this, gentlemen. For one thing, we find it necessary to exempt 4 or 5 countries from the provision in regard to publicity—Finland, Lithuania, Estonia, Rumania, and Poland. They maintained they were adjacent to Russia, and that a publication of the importation of arms would enable their possible enemy to know just what their situation was. We argued with them to this effect, "Do not the military attachés from Russia and other countries really find out those facts pretty well?" We rather remonstrated. At one time it really looked as if the conference would break up. Turkey and China and other countries were insisting on a recognition of their exceptional position. There was a committee in which I think the American delegation performed a most excellent service. We told them, "If you go on with this, the conference will fail. We are willing to extend it to a reasonable degree, but if we extend it to all contiguous countries, it means that the convention will amount to nothing." But we did feel that we were compelled to recognize the exceptional position of those five countries.

I do not think chapter 3 has any very special significance as regards the United States. That begins on page 41. Our rights are defined in reference to those special zones by article 27, on page 47. That provides:

"The high contracting parties agree that the provisions of articles 16 to 26 inclusive and of annex II of the present convention establishing a certain regime of supervision in the special zones shall not be interpreted, as regards such high contracting parties as have no territory under their sovereignty, jurisdiction, protection, or tutelage within or immediately adjacent to the said special zones, either as constituting an obligation to apply the regime defined in the abovementioned provisions or as involving their responsibility with respect to the application of this regime."

That is, we are virtually left out of that.

Are there any questions you gentlemen desire to ask?

The Chairman. As I understand, the real thing which was sought by the conference, and which you think you have accomplished by this treaty, is the publicity of the shipments of arms?

Representative Burton. Yes. It became evident that we had to restrict our activities with reference to this treaty to publicity. Indeed, by implication, the invitation was restricted to publicity.

Senator Edge. How many countries have ratified the treaty?

Representative Burton. Aobut 18 ratified it immediately. I cannot state as to the number that have ratified since.

Mr. Dulles. We have no data on that.

Representative Burton. It is open to ratification until the 26th of November next.

Mr. Dulles. Pardon me; open to signatures.

Representative Burton. Of course, there are certain special provisions. There is the right to withdraw after 4 years. The present convention may be denounced by any high contracting party thereto after the expiration of 4 years from the date when it came into force in respect to that party. A denunciation shall take effect 1 year after the receipt of the notification thereof. The signatures and ratifications are all to be reported to the French Republic.

The Chairman. Have France and Great Britain ratified this treaty?

Representative Burton. I do not say that they have ratified; they have signed. Mr. Dulles, you have no official notification that they have ratified, have you?

Mr. Dulles. I understand Great Britain is prepared to deposit its ratification. The treaty only enters into effect when 14 of the powers are simultaneously prepared to deposit ratifications. Whether there are 14 ready, I am not informed.

Representative Burton. In the original draft presented to us in the so-called "agenda", certain countries were specified as having to ratify. We did not think that best, because any one of those might have defeated the whole treaty by holding out. So there was a substitution for that of a provision that the treaty should become operative when 14 countries ratified.

Senator Lenroot. Going back to article 33, before we could ignore this treaty, we would have to find as a fact that a state of war existed, would we not?

Representative BURTON. Of course, there is a good deal of latitude as to what amounts to war. "In time of war, and without prejudice to the rules of neutrality." There must be something we consider to be war. Just what the magnitude of the contest may be is, I think, left to the judgment of each respective country.

Senator LENROOT. Is there not a general rule? It may not be very definite, but is there not a general rule of international law as to what constitutes war?

Representative BURTON. I do not think you can say it is written in the books or is thoroughly established.

Senator LENROOT. What I am getting at is this, suppose we determine as a fact that a condition existed where we were not bound by the treaty, and shipped arms. Might not a claim be made that we had violated the treaty, and consequently might we not have to pay damages for a violation of it?

Representative BURTON. Possibly so. "Without prejudice to the rules of neutrality" is inserted as a provision. But I regard that as highly improbable. Of course, there would have to be more than excuse. There would have to be more than a plausibility for reaching a judgment that war existed. Nevertheless, there is a very wide latitude in regard to that. I do not think we would justify ourselves by insisting we can ship arms into any crowd of agitators or rioters. We want to reserve that right, because that would mean we would be giving our assistance to trouble-makers the world over.

Senator SWANSON. They would have to get arms of some sort from somebody before they could reach a status of belligerency.

Representative BURTON. It is strange how those people get arms. Sometimes they get them from merchants of the very countries with which they are at war.

The CHAIRMAN. There is no trouble in telling how Turkey got her arms.

Senator SWANSON. How would this treaty operate as to China?

Representative BURTON. We have a special agreement in regard to China.

Senator SWANSON. To what extent does this modify the present situation in China?

Representative BURTON. It would be no more severe than it is now. Congress by joint resolution approved January 1, 1922, gave wide authority to the President with regard to the shipment of arms.

Senator SWANSON. That does not exactly tell me how this treaty would affect China.

Representative BURTON. That is not in the special zone.

Mr. DULLES. That is specially provided for in existing agreements, which go beyond the scope of this treaty, so that the provisions of the embargo with regard to China will remain in effect. Where this treaty provides additional details of publicity, they would apply. But this would not mitigate any more severe restrictions which now exist.

Representative BURTON. This is rather to confirm existing law and regulations.

Senator SWANSON. As I understand, there are now three factions in China, the Japanese faction, the Russian faction, and the Southern faction. If the Russian people supply arms to their faction, there is more or less of a contest with Japan. Under this treaty, to what extent could we supply arms to people who were supposed to look after the interests of China, in a general way, and not be dominated either by the Japanese or the Russian faction?

Representative BURTON. The present status with reference to China is determined by that article.

Senator SWANSON. Does that treaty make that proclamation such that it could not be changed?

Representative BURTON. I think not. Under present circumstances anyone can recognize at first blush that there is a condition of war that would suspend the treaty. There is no doubt of that.

Senator SWANSON. The condition in China would be such that this treaty would not apply?

Representative BURTON. It would not apply. We could ship anything there we wanted to.

Senator SWANSON. You are satisfied of that?

Representative BURTON. I think so. There are very large armies there fighting with each other. Perhaps the number of factions is not limited to three.

The CHAIRMAN. We are very much obliged to your for the information you have given the committee.

(Thereupon, at 12 o'clock meridian, the committee proceeded to the consideration of other business.)

Exhibit No. 1255

69th Congress, 1st Session. Confidential. Executive H.

Supervision of International Trade in Arms

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES TRANSMITTING A CONVENTION FOR THE SUPERVISION OF THE INTERNATIONAL TRADE IN ARMS AND AMMUNITION AND IN IMPLEMENTS OF WAR, SIGNED AT GENEVA, SWITZERLAND, ON JUNE 17, 1925

January 12, 1926.—Convention read the first time and referred to the Committee on Foreign Relations, and, together with the message, ordered to be printed in confidence for the use of the Senate.

To the Senate,

To the end that I may receive the advice and consent of the Senate to the ratification, I transmit herewith a certified copy of a convention for the supervision of the international trade in arms and ammunition and in implements of war, signed at Geneva, Switzerland, on June 17, 1925.

I further transmit for the information of the Senate in connection with the consideration of the convention, a communication from the Secretary of State transmitting the report of the American delegation to the Geneva conference.

Calvin Coolidge.

The White House,
January 12, 1926.

The President: The undersigned, the Secretary of State, has the honor to lay before the President, with a view to the transmission to the Senate to receive the advice and consent of that body to ratification, if his judgment approve thereof, a certified copy of a convention for the supervision of the international trade in arms and ammunition and in implements of war, signed at Geneva, Switzerland, on June 17, 1925.

There is also submitted for the information of the Senate the report of the American delegation which took part in the negotiation of the convention.

Respectfully submitted.

Frank B. Kellogg.

Department of State,
Washington, January 11, 1926.

Exhibit No. 1256

[Senate Executive Report No. 4, Seventy-third Congress, second session]

Supervision of International Trade in Arms

Friday, May 18 (legislative day, Thursday, May 10), 1934—Ordered to be printed

Mr. Pittman, from the committee on foreign relations, submitted the following report (to accompany Executive H, 69th Cong., 1st sess., a Convention for the Supervision of the International Trade in Arms and Ammunition and in Implements of War, signed at Geneva, Switzerland, on June 17, 1925):

At a special meeting of the Committee on Foreign Relations held on May 1, 1934, the chairman was instructed to report favorably to the Senate Executive H, Sixty-ninth Congress, first session, being a Convention for the Supervision of the International Trade in Arms and Ammunition and in Implements of War, signed at Geneva, Switzerland, on June 17, 1925, with a reservation as set forth in the resolution of ratification, said resolution and reservation being as follows:

"*Resolved* (*two-thirds of the Senators present concurring therein*), That the Senate advise and consent to the ratification of Executive H, Sixty-ninth Congress, first session, a Convention for the Supervision of the International Trade in Arms and Ammunition and in the Implements of War, signed at Geneva, Switzerland, on June 17, 1925, subject to the reservation that the said convention shall not come into force so far as the United States is concerned until it shall have come into force in respect to Belgium, the British Empire, Czechoslovakia, France, Germany, Italy, Japan, Sweden, and the Union of Soviet Socialist Republics."

This convention was transmitted by President Coolidge to the Senate for its advice and consent to ratification on January 11, 1926, and since then has been pending before the Committee on Foreign Relations. In the meantime, the Department of State has, on several occasions, urged that the convention be given favorable consideration; President Hoover, on January 10, 1933, recommended that the Senate advise and consent to its ratification, and President Roosevelt is entirely in accord with the views of former Presidents Coolidge and Hoover.

These facts, together with the recent history of the convention, and the reasons of the Department of State for early ratification, are fully set forth in a letter under date of April 12, 1934, from the Honorable Cordell Hull, Secretary of State, to the chairman of this committee, which letter is as follows:

Department of State,
Washington, April 12, 1934.

My Dear Senator Pittman: It is my understanding that the Convention for the Supervision of the International Trade in Arms and Ammunition and in Implements of War, signed at Geneva, June 17, 1925, and transmitted by President Coolidge to the Senate for its advice and consent to ratification on January 11, 1926, is still before the Committee on Foreign Relations. I should greatly appreciate it if you could take such steps as you may deem appropriate to secure favorable action on this convention by the committee and by the Senate.

Since this convention was transmitted to the Senate, the Department has, on several occasions, urged that it be given favorable consideration, and President Hoover, in a message of January 10, 1933, recommended that the Senate give its advice and consent to its ratification. The President is entirely in accord with the views of his two immediate predecessors in regard to the advisability of the ratification of this convention by this Government.

Enlightened public opinion throughout the world has, for many years, urged the adoption on the international plane of measures of supervision and control of the international traffic in arms. A convention to this end was signed by the representatives of 28 governments, including our own, at St. Germain en Laye and Paris on September 10, 1919. This convention was in several respects unsatisfactory to this Government, and it was never submitted to the Senate. As long as the United States, which is one of the principal arms-manufacturing powers, refuses to ratify the convention of St. Germain, the other powers naturally refused to subject themselves to limitations which would have resulted, not in the control of the arms traffic, but in its transfer to those countries which were not parties to the convention. Other governments, realizing the necessity for some measure of supervision and control of the international traffic in arms, urged us on several occasions to state our objections to the convention of St. Germain in order that a new convention might be drawn up from which these objections would be eliminated. As a result of this attitude on the part of other governments, meetings, at which this Government was represented, were held in Geneva in 1924, and these meetings resulted in the drafting of a new convention, which contained none of the features of the convention of St. Germain to which this Government had made objection. The Arms Traffic Convention of 1925 is, in all essentials, based upon this draft convention. The whole history of the convention is, therefore, such as to constitute for this Government a moral obligation to ratify it.

The important provisions of the convention are those limiting the export of arms to those intended for the direct supply of the Government of the importing state, or with the consent of such government for the supply of a public authority subordinate to it, and those setting up a machinery of licenses or export declarations for all arms exported or imported and for full publicity in regard to the international traffic in arms. These measures would go far to curb the abuses of the international traffic in arms. The convention has already been ratified by a number of the signatories. Some of these ratifications are, however, conditional upon ratification by other specified powers, including, among those which have not ratified, the United States. We have reason to believe that ratification by this Government would probably result, within a brief interval, in the other ratifications necessary to put the convention into effect. The ratification of this convention is an important contribution which the American Government and people can make at this time to the cause of world peace; its remaining unratified cannot fail to produce, with justification, the impression that we are indifferent to the important problems with which the convention deals.

Sincerely yours,

Cordell Hull.

Hon. Key Pittman,
United States Senate.

To the end that the Senate may be more fully advised in the premises, the committee desire to direct its attention to a letter, under date of January 11, 1926, to the President, from the Honorable Frank B. Kellogg, Secretary of State, transmitting the report of the American delegation which took part in the negotiation of the convention, as well as to the said report of the American delegation, which letter and report are, respectively, as follows:

The PRESIDENT:

The undersigned, the Secretary of State, has the honor to lay before the President, with a view to the transmission to the Senate to receive the advice and consent of that body to ratification, if his judgment approve thereof, a certified copy of a convention for the supervision of the international trade in arms and ammunition and in implements of war, signed at Geneva, Switzerland, on June 17, 1925.

There is also submitted for the information of the Senate the report of the American delegation which took part in the negotiation of the convention.

Respectfully submitted.

FRANK B. KELLOGG.

DEPARTMENT OF STATE,
Washington, January 11, 1926.

[American Delegation to the International Conference on the Traffic in Arms Held at Geneva May 4 to June 17, 1925]

WASHINGTON, *December 16, 1925.*

The Honorable The SECRETARY OF STATE,
Washington.

SIR: The undersigned, appointed by the President as chairman of the American delegation to the International Conference held at Geneva May 4 to June 17, 1925, to consider the conclusion of a convention for the supervision of the international trade in arms and ammunition and in implements of war, has the honor to submit the following report on behalf of the delegation, which was composed as follows:

Honorable Theodore E. Burton, chairman.
Honorable Hugh S. Gibson, vice chairman.
Rear Admiral Andrew T. Long,
Mr. Allen W. Dulles,
Brigadier General Colden L'H Ruggles.

The delegates of the United States of America, after preliminary conferences held in Washington and at Geneva, met at Geneva on May 4, 1925, with representatives of forty-three other States, including: Germany, Austria, Belgium, Brazil, the British Empire, Canada, the Irish Free State and India, Bulgaria, Chile, China, Colombia, Denmark, Egypt, Spain, Esthonia, Abyssinia, Finland, France, Greece, Hungary, Italy, Japan, Latvia, Lithuania, Luxemburg, Nicaragua, Norway, Panama, the Netherlands, Persia, Poland, Portugal, Rumania, Salvador, Siam, Sweden, Switzerland, the Kingdom of the Serbs, Croats, and Slovenes, Czechoslovakia, Turkey, Uruguay, and Venezuela.

In the forty-five days of its sessions, the conference drew up a convention to regulate the international trade in arms and war material, a certified copy of which is appended. This instrument was signed on behalf of the United States by the chairman and the vice chairman, and by the representatives of twenty-one other States, as indicated below:

SIGNATORIES TO THE CONVENTION [1]

Germany (Allemagne)
United States of America
Austria
Brazil
British Empire
India
Chile
Spain (Espagne)
Esthonia
Abyssinia (Ethopie)
Finland
France
Hungary
Italy
Japan
Latvia
Luxemburg
Poland
Roumania
Salvador
Kingdom of the Serbs, Croats, and Slovenes.
Czechoslovakia (Tchécoslovaquie)

---

[1] The order of signature and of the above list is alphabetical according to the French spelling of each State.

In the consideration of the work of the American delegation to the Arms Traffic Conference of Geneva, it is important briefly to indicate the reasons for the holding of this conference and to outline the preparatory work which served as a basis for the deliberations of the various delegates assembled.

During the Paris Peace Conference of 1918–1919 there was elaborated and signed at Saint Germain-en-Laye on September 10, 1919, by representatives of the United States and by those of twenty-two other powers a convention to regulate the trade in arms and war material, known as the Saint Germain Convention. This convention was not submitted to the Senate nor ratified by the United States for the reasons set forth in a communication of September 12, 1923, from the Secretary of State, the Honorable Charles E. Hughes, to the Council of the League of Nations, in replying to a communication from the acting president of the Council of the League, which quoted a resolution of the Assembly of the League to the effect that:

"The Assembly considers it highly desirable that the Government of the United States should express the objections which it has to formulate to the provisions of the convention of Saint Germain as well as any proposals which it may care to make as to the way in which these objections can be overcome."

Secretary Hughes in his communication of September 12 stated that "the Government of the United States is in cordial sympathy with efforts suitably to restrict traffic in arms and munitions of war" and referred to the steps taken by the Executive under legislative authorizations of 1898, 1912, and 1922 for the regulation of the trade in war material with other countries in this hemisphere and with countries where the United States exercised extraterritorial jurisdiction. Secretary Hughes pointed out, however, that the Saint Germain Convention, while not undertaking to restrict the purchase of arms by countries signatory thereto, would prohibit such sale to States not parties to the convention, and that under such provisions this Government might be required to prevent shipments of military supplies to such Latin-American countries as had not signed or adhered to the convention, however desirable it might be to permit such shipments, merely because they were not signatory powers and might not desire to adhere to the convention.

The Secretary of State further pointed out that the provisions of the convention relating to the League of Nations were so intertwined with the whole convention as to make it impracticable for this Government to ratify, in view of the fact that it is not a member of the League of Nations.

In acknowledging Secretary Hughes' communication the acting president of the council of the League of Nations, on December 14, inquired whether the Government of the United States, having indicated that it was "in cordial sympathy with efforts to restrict traffic in arms and munitions of war" was prepared to cooperate with the Temporary Mixed Commission, the organ of the League which then was considering questions of disarmament, in the preparation of a draft convention, or conventions, for the purpose of controlling this trade.

This inquiry having been answered in the affirmative, the American Minister to Switzerland, Mr. Grew, and later Mr. Gibson, met informally with the Temporary Mixed Commission of the League of Nations, which drew up a draft of a convention for the control of the international trade in arms which was intended as a basis for the consideration of this subject by an international conference which it was proposed later to convoke. The documentary material covering these preliminary conversations which were held at Geneva and Paris in February, March, and July 1924, is fully set forth in the appended publication (annex 1).

Subsequently, the Council of the League of Nations on October 7th communicated to the Secretary of State an invitation to attend the International Conference in question. The text of this invitation is quoted herewith:

"Sir: At its meeting held on September 30th, the Council adopted the following Resolution:

"'On the proposal of the Assembly the Council decides to authorise the secretary general to submit to the Governments of the States, Members and nonmembers of the League of Nations, the draft convention relating to the control of the international trade in arms, munitions, and implements of war drawn up by the Temporary Mixed Commission, and to request these Governments to inform him, before the Council meets in December, whether they are prepared to take part in a conference to be convened in April or May 1925, for the purpose of discussing the draft convention.

"'The secretary general will communicate to the various Governments the report of the Temporary Mixed Commission, the minutes of that commission and the minutes of the Permanent Advisory Commission relating to the discussion of article 9, together with the minutes of the present meeting of the Council, in order that the representatives of the Governments on the International Conference may have the requisite information to enable them to come to a decision on the problems raised on this question during the present meeting.'

"In execution of this decision, I have the honour to enclose herewith the draft convention on the control of the international trade in arms, munitions, and implements of war which was drawn up by the Temporary Mixed Commission (Document A 16. 1924 IX, annex IV).

"The next meeting of the Council is to be held on December 8th, 1924, and I should be grateful if you would kindly inform me, if possible before that date, whether the United States Government would be prepared to take part in an International Conference to be held in April or May, 1925, for the purpose of discussing this draft and concluding a convention on the control of the international trade in arms, munitions, and implements of war. The exact date of this conference will be fixed by the Council at its December session.

"In accordance with paragraph 2 of the Council's resolution I am also enclosing herewith the report of the Temporary Mixed Commission for the reduction of armaments and the report of the 3rd committee of the Assembly.

"The report of the Temporary Mixed Commission contains that part of the minutes of the commission which relates to article 9 (document A. 16. 1924 IX. annex V).

"Further information relating to the preparations for the conference will be forwarded to you as soon as possible.

"I have the honour, etc.

(Signed) Eric Drummond,
Secretary General."

To the foregoing communication the following reply was made, on December 7, by the American representative in Switzerland under instructions from the Department of State:

"I beg to inform you that I have been instructed by my Government to acknowledge the receipt of your communication of October 7, 1924 transmitting the text of a resolution adopted by the Council of the League of Nations with respect to the holding of an international conference of the States members and nonmembers of the League of Nations April or May 1925 for the purpose of considering the conclusion of a convention with respect to the international trade in arms, munitions and implements of war. In this communication you inquire whether my Government would be prepared to take part in such a conference.

"In reply I take pleasure in referring to the communication addressed to you on August 29 in which it was stated that my Government would be disposed to give favorable consideration to an invitation to participate in an appropriate international conference of the powers for the aforementioned purpose. My Government still holds this attitude and is agreeable to the suggestion that the time of holding the conference should be in April or May 1925."

THE GENEVA CONFERENCE

The attitude of the American Government toward the control of traffic in arms and the program and policy of the American delegation was clearly set forth in the following statement of the chairman of the American delegation, of May 5, the day after the opening of the conference:

"In accepting the invitation to be represented at this conference, the Government of the United States cordially welcomes the opportunity to collaborate in the present movement. The people of the United States earnestly desire to give substantial evidence of their sincere interest in aiding in any constructive effort directed toward the maintenance of peace, and it is hoped that such efforts will be promoted by the proper control of the international trade in arms through the suppression of illicit trade in war material and by securing the fullest and most accurate publicity as to the extent and character of this trade. It is with this intention and with this spirit that the American delegation will take part in the discussions of the conference, in the hope of contributing towards attaining concrete results.

"As an evidence of our sincere desire to contribute to the inauguration of an era of continuing peace and to aid in preventing the horrors of war, the Government of the United States, in 1921, took steps to convene the Washington Conference, the results of which are known to the world. In addition to the definite achievements of this conference, it is believed that the spirit which actuated the delegates at that meeting was a striking indication of the intent of the powers participating to continue the work initiated there.

"As regards the specific object of the present conference, namely the control of the traffic in arms, our Government has in recent years followed the policy of counselling its nationals against engaging in such trade with the troubled areas of the world where military arms might be particularly used for purposes of disturbing the peace. Further, under the authority of existing legislation, our Presidents have, from time to time, imposed absolute or partial restrictions on the exportation of arms from the United States to certain areas where such measures appeared to be particularly necessary. In addition, the flotation of foreign loans in the United States for the purpose of purchasing armament has been consistently and, it is believed successfully, discouraged.

"Our part in the international trade in arms has not been large during the past few years, and the policy of the Government, already outlined, has helped to keep it within proper channels. But our Government is glad to be able to cooperate with other powers in an effort to secure precision and uniformity in the measure and manner of control.

"In the forthcoming discussions of the draft convention which has been placed before the conference as a basis for its deliberations, we shall offer certain constructive suggestions and modifications which, it is felt, might appropriately be embodied in the proposed convention and which might assist in achieving the objects of the conference. One of the most important of these suggestions, which I shall present in detail on a more appropriate occasion, concerns additional measures to deal with the traffic in poisonous gases with the hope of reducing the barbarity of modern warfare.

"The delegation of the United States realises that it is important to consider the problem of the traffic in arms not only from the point of view of the producing but from that of the nonproducing States. No program has yet been adopted which is effective for general disarmament and it is clear that the trade in arms cannot be eliminated. Nevertheless a solution may be reached which will assure to sovereign States the means of securing what may be necessary to their national defense and the maintenance of internal peace and order and which will, at the same time, properly control the international trade in arms.

"I desire to express my appreciation of the excellent remarks of M. Dupriez * and I also wish to express my thanks to M. Matsuda * for his expression of friendship to the United States. Let that expression be indicative of the mutual confidence and good will which should exist between the two nations on either side of the great Pacific—Japan and the United States of America.

"In conclusion, let me say that it is with optimism that we enter upon the work of this gathering, in the hope that by friendly consultation something may be accomplished worthy of the best efforts of the delegates here assembled and which may substantially promote the cause of peace."

The details respecting the organization of the conference, the questions considered, the positions taken by the various delegates, together with the proceedings of the various committees and subcommittees, are fully set forth in the attached publication (annex 2). While it is therefore unnecessary, and would only result in repetition to review the entire work of the conference in this statement, a brief indication of the scope of the convention, of the special problems met by the conference, and of the American interests involved may not be out of place.

SCOPE OF THE CONVENTION

(1) In articles 1 to 5 of the convention provision is made for the supervision of the international trade in arms, munitions and implements of war with a view to keeping such trade within the proper channels. This control of the trade is to be exercised by each sovereign State within its own territory according to its own laws enacted or to be enacted to make the convention effective.

(2) A system of publicity is provided for the international trade in the implements of war comprised in categories one and two, that is, arms exclusively designed for war and those susceptible of use both in war and for peaceful purposes. Provision is also made for publicity for the trade in aircraft and aircraft engines and for publicity of the most detailed character in connection with the sale or transfer of any vessel of war.

(3) Provision is made for special control with regard to the shipment to, and the disposition of arms within, certain areas of the world where, experience has shown, there is particular need for close supervision of the arms traffic. These areas include Central Africa and the territory formerly a part of the Ottoman Empire but now detached from Turkey as defined in article 12 of the convention.

---

* The heads of the Belgian and Japanese delegations, who had spoken just preceding the statement of Mr. Burton.

SPECIAL PROBLEMS

During the deliberations of the conference, certain special problems arose which merit brief explanations.

(1) The conference recognized that the trade in war vessels could not, from its nature and the place of such vessels in international law, be dealt with on the same basis as trade in rifles or ammunition. With a view to meeting this situation, the American delegation proposed and found ready acceptance for the suggestion that the regime outlined in article XVI of the Washington Treaty of February 6, 1922, limiting naval armament, should be adopted. According to this regime as outlined in article 7 of the convention, the high contracting powers undertake to supply full information with regard to the construction within their territory of a ship of war for delivery to any foreign power.

(2) The problem which the conference had to face with respect to the trade in airplanes was of a slightly different character in view of the recognized commercial uses of airplanes, as well as the practical difficulty of distinguishing between an airplane adapted for war purposes and an airplane adapted for the ends of peace. It was felt, therefore, that a provision (article 9) stipulating that full publicity should be given to the foreign trade in aircraft and aircraft engines would meet the situation, without interfering with legitimate commerce.

(3) At an early stage in the conference it became clear that the States bordering on Russia had a special problem to face in connection with the publicity of their military purchases. The Soviet regime declined to be represented at the Geneva Conference and has indicated no interest whatever in adherence to the Arms Traffic Convention. The States bordering on Russia represented at the conference are for the most part States which are dependent upon imports for the supply of the military equipment which they consider necessary for their national defense. The border States considered that an obligation on their part to publish full statistics of their importations while Russia was under no obligation to give similar publicity to its importation would be detrimental. For this reason, therefore, the conference agreed to incorporate in the treaty a provision (article 29) freeing certain States bordering on Russia from the obligation of publicity pending the adhesion of Russia to the convention.

(4) Throughout the conference the delegates of the so-called "producing States" were constantly reminded that the problem which the nonproducing States had to face was of a different character than that of the producing States and that the former could not properly acquiesce in any treaty provisions which would prejudice their right to secure the arms necessary for their national defense. In considering this situation the American delegation was also impressed by the fact that any regime of control which restricted the right of the nonproducing powers to purchase arms abroad might have the unfortunate result of forcing States at present nonproducers of arms to introduce on a large scale the manufacture of arms and war material. Many a State might thus become more or less of an armed camp and the result would be detrimental to the cause of peace. Therefore, there have been introduced into the convention no provisions which prevent a State from securing arms for its national defense from other countries under certain safeguards and guaranties and with the publicity which should act as a preventive against the undue accumulation of imported arms in any given country.

(5) It was brought to the attention of the conference that in States where extraterritorial rights were exercised there would be obvious difficulties in enforcing the provisions of the convention as against foreigners enjoying such extraterritorial rights. This situation unless corrected might result in opening to foreigners, enjoying extraterritorial privileges in certain countries, the opportunity of engaging uncontrolled in an illicit trade. For these reasons article 30 was included in the convention, according to which the "high contracting parties who possess extraterritorial jurisdiction in the territory of another State party to the present convention undertake in cases where the rules of this convention cannot be enforced by the local courts as regards their nationals in such territory to prohibit all action by such nationals contrary to the provisions of the present convention."

(6) The question of the control of the trade in arms in time of war presented a particularly difficult problem. It is a recognized principle of international law that a neutral State is under no obligation to prevent the shipment of arms from its territory on behalf of a belligerent; provided, of course, as specified in the laws of the United States, that the territory of the neutral State shall not be used as a base for fitting out military expenditions. On the other hand, it is

contrary to the obligations of neutrality, as recognized in the laws of the United States as well as in the law and practice of nations, for a State itself either directly or indirectly, to supply arms to a belligerent. Under the regime outlined in the convention the approval of the government of the exporting country is normally required in the case of the shipment of arms in category one. If such approval were also required in time of war the neutrality of a power formally approving the shipment of arms to a belligerent might be called in question. If therefore the convention were applicable in its entirety in time of war, the result might be that it would be rendered impossible to permit shipments of arms to a belligerent although such shipment might otherwise be unobjectionable, and although the country in question might not desire to intervene to prevent shipments.

In view of these considerations it was the unanimous opinion of the delegates assembled that it would be unwise to endeavor to apply with respect to belligerents the articles of the convention which involved the approval of the exporting government as a necessary prerequisite to a shipment. Consequently the fol. lowing article (article 33) was introduced into the convention:

"In time of war and without prejudice to the rules of neutrality the provisions of chapter 2 shall be suspended from operation until the restoration of peace so far as concerns any consignment of arms or ammunition or implements of war to or on behalf of a belligerant."

AMERICAN INTERESTS INVOLVED

(1) The United States has for some time given full publicity to the statistics of its foreign trade, including publicity of its trade in war material. The American Delegation therefore felt that it would be according to American traditions of publicity and frankness to agree to continue such publicity and that it would be in our interest that other countries should likewise make public their trade in arms.

(2) The method of supervision provided for in the convention for the trade in arms is adapted to meet the special conditions existing in the United States. In particular it should be noted that the forms now used for export declarations are specifically recognized in the convention and it is provided that these forms may, under certain safeguards, be employed to secure the requisite control and publicity. Thus the necessity for the creation of elaborate boards of control for the issuing of licenses in individual cases of shipments of arms is obviated.

(3) The convention does not provide for the control of the international trade in arms by any international body. Each country is to exercise its control within its own jurisdiction and according to its own laws, without dictation, advice, or interference by any international commission.

(4) In connection with the provision for the enforcement of a strict control of the arm trade within certain areas of Africa and Asia, the American delegation, while recognizing the reasons for such a control and agreeing that shipments from the United States to the areas in question should be under strict supervision as far as their clearance from the United States was concerned, proposed and secured the insertion in the convention, in article 27, of a provision that would relieve the United States from any responsibility with respect to the application of this regime in territorial or maritime zones beyond the jurisdiction of the United States.

(5) The present convention, superseding as it would the applicable provisions of the Brussels Act of 1890 and the unratified Saint Germain convention, helps to clarify the situation and defines the conditions under which arms shipments from this country may properly be permitted. Its provisions would in no way conflict with the control which may now be exercised with respect to the export of arms to certain countries under existing provisions of American law.

CONCLUSIONS

The delegates at the conference impressed upon the American delegation their view that any international convention for the control of the trade in arms would be ineffective unless adhered to by the United States, one of the important arms producing powers. With a view to facilitating American adherence, the conference did not press for the inclusion of any provision for the supervision or control of the arms trade by an international commission, recognizing that such control would be inacceptable to this Government. Further, the various proposals advanced from time to time by the American delegation received the full and sympathetic consideration of the conference, and in every case where American principles and interests were involved, solution which the American delegation considered acceptable were adopted. The American delegation desire to record their recognition of this attitude and, in submitting the treaty, to state that in their opinion the success or failure of the present convention will be in no small measure dependent upon the position assumed by the American Government in the matter.

While registering this view, the American delegation would point out that in their opinion the adherence of all the important arms-producing powers, and not only that of the United States, is essential to the realization of the objects of the convention. For the United States to ratify and to make the convention effective prior to the ratification by other arms producing powers would only result in placing a premium upon nonratification by certain producing powers, since they would then be free to sell arms to other powers without control and without publicity. If, therefore, the convention meets with the approval of the Senate, and if the legislation which will be necessary to make it effective in the United States is assured, the delegates of the United States consider that the deposit of ratifications on the part of the United States should be conditioned upon the deposit of ratifications by the other great producing powers of the world. The American delegation would not of course suggest any delay in the submission of the convention to the Senate or its consideration by that body, but considers that in the event of senatorial approval the deposit of ratifications, which would make the convention binding upon the United States if thirteen other powers deposit ratifications, should only take place when among the ratifying powers are included the other principal arms producing States.

The American delegation appreciates that the present convention does not specifically provide for any restriction in the volume of the trade in arms, although the control of this trade should indirectly result in such restriction through the reduction of the illicit traffic in war material. It is felt, however, that pending the realization of a definite disarmament program it would be futile, and possibly harmful, as indicated above, to attempt the arbitrary restriction of the trade in war material, which would place the nonproducing powers at the mercy of the producing power, force production by all powers and, far from accomplishing the purposes of disarmament, might tend toward the increase of the military establishment of certain powers.

In addition to the convention itself, there is also appended (annex 3) a copy of the protocol of signature and a copy of the final act (annex 4) which describes the calling of the conference and includes two declarations of the delegates assembled. Neither of these documents call for ratification. In addition, there was signed at Geneva a declaration relating to the inclusion of the territory of Ifni (in Spanish Morocco) in the special zones. This declaration was not signed on behalf of the United States, and it is not felt that it calls for action at this time on the part of this Government.

In conclusion, the American delegation desire to express their appreciation of the invaluable assistance rendered by the secretary of the American delegation, Mr. Alan F. Winslow, and by the technical advisers, Mr. Charles E. Herring, commercial attaché at the Embassy in Berlin, Major George V. Strong and Major Earl J. Atkisson of the War Department, and Commander Herbert F. Leary, assistant naval attaché at the Embassy in London.

The delegation also take this occasion to record their appreciation of the effective and impartial manner in which the proceedings of the conference were directed by its president, M. Carton de Wiart, former Prime Minister of Belgium, and in the latter's absence, by the vice president of the conference, Mr. Guerrero, of Salvador. The delegation also desire to pay tribute to the efficient services rendered by the secretary-general of the conference, M. Madariaga, and by the other members of the secretariat general of the conference.

Respectfully submitted,

(signed) THEODORE E. BURTON.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, April 27, 1931.

00 No. 47149, 1888. Attention of ——— ———
REMINGTON ARMS CO., INC.,
25 Broadway, New York City.

Att: Mr. Egbert C. Hadley.

GENTLEMEN: This will acknowledge receipt of your letter of April 23, 1931, addressed to Major J. S. Hatcher, inquiring about the use of the accuracy test figures obtained in official tests of forty million rounds of Kleanbore cartridges recently furnished Springfield Armory.

Your letter also expressed a desire to use for advertising purposes Colonel Whelen's letter of February 26th addressed to the Chief of Ordnance on the subject of report of inspection test of Remington ammunition and Colonel Schull's letter addressed to your Bridgeport plant, dated November 30, 1928, a photostat copy of which was inclosed.

In reply, you are informed that there is an Army regulation forbidding the officers or other agencies of the War Department from making statements on the merit of services or supplies furnished for the Army, for use in advertising by commercial firms. This would clearly prevent this office from authorizing you to use either Colonel Whelen's or Colonel Schull's letter in full or in part in any advertising.

It would not, however, in the opinion of this office, prevent you from incorporating in the advertisement a statement as to what accuracy figures were obtained in the official test of the forty million rounds of caliber .22 long rifle Kleanbore ammunition recently furnished to the Government. The statement of the accuracy figures should appear as your own statement and not as the statement of a Government official.

For the Chief of Ordnance.

Very truly yours,

(Signed) O. J. GATCHELL,
Major, Ord. Dept., Executive Assistant.

EXHIBIT No. 1260

NOVEMBER 17, 1933.

Dict. 11/16/33.
Lt. Col. TOWNSEND WHELEN,
Headquarters Seventh Corps Area,
Office of the Corps Area Ordnance Officer,
Omaha, Nebraska.

MY DEAR T. W.: I had a fine letter from Paul Estey with an account of his trip to the Peace River Country. He has given us a splendid testimonial and a couple of good photographs.

He sure is all "het up" over the performance of the .30–.06 Remington in 180 grain bronze pointed. Thanks to you for all this good publicity.

I have the story that you wrote for the export department. It is fine. I have turned it over to them. I don't think I want to accept this without compensating you in some form. Isn't there a rifle or a shotgun that you need? Let me know about this. I would suggest if it is a shotfun that you take the model 31 in 16 or 20 gage, but if you want a model 17 in 20 gage, it is all right with me.

About the small-bore handbook. Jim Byrnes has read this over and is very enthusiastic about it. He agrees with me that it is the best thing that has ever been written and I am going to try and get this out as soon as possible. I want to get that scorebook out too.

There are so many things in the fire I am almost afraid to say anything about anything.

I want you to know that I appreciate the help you are giving me. Also thanks about the Sod Poodle. We will have that ad in the February sporting magazines.

Sincerely,

FRANK J. KAHRS,
Promotion & Advertising Mgr.

EXHIBIT No. 1261

(Pencil Note): *2/14/34* Frank Kahrs. C Me *EEH*

LT. COLONEL TOWNSEND WHELEN, ORDNANCE DEPARTMENT, U. S. ARMY,
HEADQUARTERS, 7TH CORPS AREA

OMAHA, NEBR., *Feb. 9, 1934.*

Mr. FRANK J. KAHRS,
Remington Arms Co.,
Bridgeport, Conn.

DEAR FRANK: I have your letter of Feb. 6th relative to the position in your New York office. It sounds very attractive, and a splendid opening, and I wish so much that I could accept it, but unfortunately I cannot do so.

About ten years ago, when General Harbord retired from the Army to accept the position as president of the Radio Corporation of America, certain soreheads in Congress, peeved because he was bettering himself so much, introduced and passed a law which provides that if a retired officer is employed by any firm which does business with the Government, that officer cannot draw his retired pay. This position which you have in view would prevent my drawing my pay, which in event of retirement would be $375.00 a month, and of course I could not therefore consider it.

Perhaps I had better tell you just how I am situated. I had planned to retire last fall after my daughter's marriage, but the expense of the wedding, and the general financial depression at that time, made me hesitate. Just now I am approaching my promotion to full colonelcy, and should get it within eight months, perhaps a little less. It seems wise to wait until that time, when I will then be entitled to slightly more retired pay, and will also have the satisfaction of retiring with the highest rank which I can normally expect. Mrs. Whelen and I have practically made up our minds that we will then retire, that is, next fall or early winter.

When I do retire I have been planning that I would go back to Washington, where I own a home, and there hang out my shingle as a consulting ordnance engineer, specializing on design, publicity, and selling counsel. In this way, being in business for myself, I shall be free to work for Remington, or for any other individual or company, billing them in the usual manner for the work done.

In the eyes of the law I will not then be employed by any firm doing business with the Government or otherwise. I will simply be selling my own product as any other business man might. In fact, I have already done a little of such work. Recently, you will remember, I did work of this kind, and sold my own product to you for the Remington Arms Company. I have also done a small amount of work for other companies from time to time.

It seems to me that I might do work for the Remington Arms Company from time to time under such conditions in a way that would be very satisfactory to you, and also more economical to you than under the conditions you suggest. I will be a free lance, and I can go anywhere, or do anything that you might wish, merely billing you for the services on completion of the project. I have no idea of charging exorbitantly, as you already know.

I also have the same idea that you have that I should continue my writings and my magazine work, and this I could do under the arrangement I have in view. I think that this writing work gives me a certain amount of prestige; it keeps me before the public, it enables me to undertake publicity work more efficiently, and to arrange for publicity in a way so that it actually goes over better and does not appear like publicity. The correspondence with shooters that is entailed in this writing and magazine work also serves to keep me in touch with shooters, with their desires, and with the arms and ammunition market as I could in no other way. In fact, the whole arrangement seems to me to be quite ideal from my own standpoint, as well as from that of those with whom I may work.

I have also the great advantage of being a retired officer of the Ordnance Department. We have always enjoyed a very unique position with relation to the arms and ammunition companies, who have always appreciated that they could confer on anything under the sun with us without any danger whatever that anything told us would be carried to their competitors.

Under these conditions I do not see why I cannot do any work that the Remington Arms Company desires, and it will be the greatest pleasure to cooperate with them. Indeed, I have always tried to do so in the past, and I think that from time to time I have been of some little help. Of course, until I am actually retired I cannot travel, but my pen is at your service now as always. After retirement I am a free lance.

Will you be kind enough to show this letter to Mr. Davis and Mr. Handy, and tell them how much I appreciate the offer, and that I regret that I am unable to accept it under the particular conditions which exist.

Very sincerely,

(Signed) Townsend Whelen.

("Exhibit No. 1263" appears in text on p. 3686.)

Exhibit No. 1264

Remington Arms Company, Inc.,
Cunard Building, 25 Broadway, New York City.

April 27, 1929.

Mr. Saunders Norvell,
Pres., 25 Broadway.:

Attached is a letter from Col. Townsend Whelen on the subject of legislation, both State and National. It all has to do, of course, with the flood of bills before the State legislatures seeking to regulate the sale, ownership, and use of firearms and ammunition for sporting and other purposes. Of course, the fundamental idea behind this legislation is to prevent the use of firearms by law breakers.

Col. Whelen's letter is the result of one I wrote at the suggestion of Mr. Strugnell, that we try to get the War Department on record as being opposed to legislation of this type, as it affects the War Department's plans for mobilizing industrial and manufacturing concerns in time of peace for war service.

The thought was inspired by a telegram sent by the War Department to the Legislature of Massachusetts early in the present legislative season, requesting that certain stringent firearms bills before the Massachusetts Legislature be not passed. My purpose in bringing this to your attention is to recommend that you write the letter to The Assistant Secretary of War, recommended by Col. Whelen, and, knowing the colonel as I do, I am sure that he has everything prepared in Washington so that favorable action will be taken.

I should like to have you return to me the correspondence attached for our file records, and also that I may follow out the suggestion of Col. Whelen that the matter be brought to the attention of our road force.

(Signed) Frank J. Kahrs,
Assistant Advertising Manager.

FJK: MG
CC: Mr. H. J. Strugnell.

Exhibit No. 1265

April 30, 1929.

Hon. Patrick J. Hurley,
Assistant Secretary of War,
War Department, Washington, D.C.

My Dear Mr. Hurley: We are addressing you on a matter which is of considerable moment to us, partly because you are president of the national board for the promotion of rifle practice and partly because the National Defense Act charges you with supervision of industrial mobilization in the time of war.

The Remington Arms Company has always done all that was in its power to promote rifle practice in the United States, partly from a patriotic point of view and partly from a business point of view. It has also subscribed in every way to the War Department plans for industrial mobilization, likewise partly from a patriotic point of view, and partly from a business point of view.

In these two connections we find that our business throughout the country is being constantly jeopardized and in some cases injured by injudicious legislation which is introduced and sometimes passed in the legislatures of the various States. We refer particularly to legislation to curb the use of firearms in the commission of crimes. Some of this legislation is good, some of it we realize is necessary, but the great mass of bills so introduced will, we believe, not accomplish the results desired and they interfere with the legitimate use of firearms in the promotion of rifle practice and of healthy sport. It is necessary for this company to combat such unwise legislation or matters would soon reach such a state that our company would be obliged to discontinue the manufacture of arms and ammunition, which, in turn, would be very detrimental to national defense, as we believe our own company, together with other manufacturers of arms and ammunition, forms a very considerable asset to the United States Government in the event of war.

We have found that one of the best ways to combat such legislation in the various States is to have it done by our traveling representatives and our salesmen, who bring attention of the legislatures to the unwise character thereof. In this connection our own standing and that of our representatives would be very greatly strengthened if we could have from you, as representative of the War Department, a statement as to the War Department policy regarding such legislation. I hope you will understand that we do not complain about that legislation which is wise and necessary and well thought out to curb the use of firearms in the commission of crimes, but we do consider that our work could be very greatly assisted could we have from you a statement that the War Department is opposed to any legislation which would restrict legitimate use of rifles and shotguns in target practice and in proper sport, or any legislation which would seriously interfere with the properly controlled manufacture of arms and ammunition in this country.

If you can see your way clear to send us such a letter, giving the War Department policy on these matters, we shall be exceedingly obliged to you.

Very sincerely yours,

REMINGTON ARMS COMPANY, INC.,
——— ———, *President.*

EXHIBIT NO. 1269

EXCERPTS FROM MINUTES OF MEETING OF THE COUNCIL OF NATIONAL DEFENSE JULY 28, 1917

The meeting reconvened at 2:00 o'clock p. m. All members of the council nd the director were present.

There ensued a discussion of the reorganization plan, which was finally approved and released for the press in the following form:

"The Council of National Defense today decided, with the approval of the President, to create a small body to be known as the War Industries Board. The War Industries Board, in addition to other duties, will assume those formerly discharged by the General Munitions Board. The new board will be composed of seven members, working under the direction and control of the Council of National Defense and responsible through it to the President. Its members will be direct representatives of the Government and of the public interests. It will be composed of Mr. F. A. Scott, chairman; Lieutenant Colonel Palmer E. Pierce, representing the Army; Rear Admiral Frank F. Fletcher, representing the Navy; Mr. Hugh Frayne, Mr. B. M. Baruch, Mr. Robert S. Brookings, and Mr. Robert S. Lovett.

"The board will act as a clearing house for the war industry needs of the Government, determine the most effective ways of meeting them and the best means and methods of increasing production, including the creation or extension of industries demanded by the emergency, the sequence, and relative urgency of the needs of the different government services, and consider price factors, and in the first instance the industrial and labor aspects of problems involved, and the general questions affecting the purchase of commodities.

"Of this board, Mr. Baruch will give his attention particularly to raw materials; Mr. Brookings, to finished products; and Mr. Lovett, to matters of priority. These three members, in association with Mr. Hoover, so far as foodstuffs are involved, will constitute a commission to arrange purchases in accordance with the general policies formulated and approved.

"The Council of National Defense and the Advisory Commission will continue unchanged and will discharge the duties imposed upon them by law. The committees heretofore created immediately subordinate to the Council of National Defense; namely, Labor, Transportation and Communication, Shipping, Medicine and Surgery, Women's Defense Work, Cooperation with State Councils, Research and Inventions, Engineering and Education, Commercial Economy, Administrations and Statistics, and Inland Transportation, will continue their activities under the direction and control of the council. Those whose work is related to the duties of the War Industries Board will cooperate with it. The subcommittee advising on particular industries and materials, both raw and finished, heretofore created, will also continue in existence and be available to furnish assistance to the War Industries Board.

"The purpose of this action is to expedite the work of the Government, to furnish needed assistance to the Departments engaged in making war purchases, to devolve clearly and definitely the important tasks indicated upon direct representatives of the Government not interested in commercial and industrial activities with which they will be called upon to deal, and to make clear that there is total disassociation of the industrial committees from the actual arrangement of purchases on behalf of the Government. It will lodge responsibility for effective action as definitely as is possible under existing law. It does not minimize or dispense with the splendid service which representatives of industry and labor have so unselfishly placed at the disposal of the Government."

It was voted that the five civilian members (exclusive of the two Army and Navy representatives) of the War Industries Board should receive a salary of $400 per month.

Thereupon, at 4:00 o'clock, p. m., the meeting adjourned.

Attest:

(Signed) W. S. GIFFORD, *Director.*

EXHIBIT NO. 1270

MEETING OF THE PRICE FIXING COMMITTEE OF THE WAR INDUSTRIES BOARD, HELD ON WEDNESDAY AT 2:15 P.M., IN ROOM 52 OF THE C.N.D. BUILDING. (IN PENCIL—3-20-18.)

Present: Mr. Brookings, chairman; Mr. Baruch, Dr. Taussig, Mr. Frayne, Paymaster Hancock, Paymaster Fuller, Mr. Replogle, Mr. Legge, General Pierce, Lieut. Col. Young, Dr. Taylor, Mr. Wooster, Mr. Colver, Dr. Francis Walker, Mr. T. J. Herman, Mr. Blanvelt, Mr. H. P. Ingels, acting secretary.

The same representatives of the steel industry were present as at the meeting held at 10:00 a.m., March 20th, 1918.

Further consideration was given to the question of costs of producing pig iron and steel, special attention being given to the question of price and distribution of scrap. No definite action was taken. Verbatim copy of the discussion attached hereto and made a part of the minutes of this meeting.

The meeting adjourned at 6:15 p.m., to reconvene at 10:00 a.m., on March 21st.

(Signed) H. P. INGELS, *Acting Secretary.*

Meeting of the Price Fixing Committee, March 20, 1918

SUBJECT—STEEL PRICES

(Morning and Afternoon Meetings of March 20)

Present: Mr. R. S. Brookings, Judge E. H. Gary, U.S. Steel Corpn.; Mr. Hugh Frayne, Francis J. Hall, Central Iron & Steel Co.; Mr. John M. Hancock, John B. Guernsey, John B. Guernsey & Co.; Col. F. S. Young, Willis L. King, Jones & Laughlin Steel Co.; Genl. P. E. Pierce, J. A. Farrell, U.S. Steel Corpn.; Mr. J. L. Replogle, John R. Topping, Republic Iron & Steel Co.; Mr. Alex Legge, E. G. Grace, Bethlehem Steel Co.; Mr. B. M. Baruch, A. C. Dinkey, Midvale Steel & Ordnance Co.; Mr. Blauvelt, U.S. Fuel Administration, F. H. Gordon, Lukens Steel Co.; Mr. F. J. Herman, U.S. Fuel Administration, J. B. Bonner, Am. Iron & Steel Institute; Mr. Fuller, Navy Department, A. H. Cordery, Phoenix Iron Co.; Dr. F. W. Taussig, Edmund Blanchard, McCoy Linn Iron Co.; Mr. W. B. Colver, Federal Trade, E. T. Burnside, McCoy Linn Iron Co.; Mr. M. C. Wooster, Federal Trade, David Reeves, Phoenix Iron Co.; Mr. Francis Walker, Federal Trade, E. A. S. Clarke, Lackawanna Steel Co.; H. Laird Curtin, Eagle Iron Co., J. A. Campbell, Youngstown Sheet & Tube Co.; Scott Stewart, N. J. Rainey, L. E. Block, Inland Steel Co.; R. A. Rainey, N. J. Rainey, Clarence H. Howard, Commonwealth Steel Co.; Mr. Hale, Interstate Steel Co., Jos. F. Savage, Am. Tube & Stamping Co.; B. L. Sommer, Keystone Steel Wire Co., J. V. N. Reynders, Chairman, Steel Makers; H. O. Dimick, Keystone Steel Wire Co., Chas. N. LaPorte, Secretary, in Class 3.

Mr. Brookings. Judge, we are ready to hear from you.

Judge Gary. I don't think they are all here yet.

Mr. Brookings. Since we last met there has been some change in our organization here. The President has appointed a price fixing committee, consisting of four members of the board, a representative of the Army and the Navy, and there are three other members, the chairman of the Tariff Commission, the chairman of the Federal Trade Commission, chairman of the Fuel Administration. The President has felt that we have dealt with price fixing in rather too casually a way. A day or two before the meeting we would be presented with figures from the Federal Trade Commission about which we knew little, and we would try to acquaint ourselves with these figures so as to be able to negotiate or discuss with you gentlemen in regard to price fixing. We hope to get for the committee the attention in measure it has in importance. We only received our figures from the Federal Trade Commission yesterday afternoon. My own thought was to ask you to postpone this meeting a couple of days, but it was decided we would meet to get what information and data you had for us. You remember that at our last meeting it broke off with the statement that we did not want you gentlemen to make more money than you could take care of, and keep you from starving the other fellow. We want to stabilize price without making it too difficult for any company to give us the products we need. We know you have had a lot of trouble since we last met; transportation has been impossible, and we know from our figures that you have been laboring under a handicap. We know we have to take the bitter with the sweet, and it is over a period of time we are compelled to exercise our judgment in fixing prices. I think we had no opportunity, no time, to consider steel problems. We have given it no thought since we last met, not until yesterday or the day before. I have gone into the figures from the Federal Trade Commission, and note they are more or less disappointing. With that little preamble, I would be glad to hear from you regarding the situation as you see it.

Judge Gary. There are involved a good many problems, all of which are difficult of solution. So far as I am acquainted with the facts, the feeling of the steel fraternity is the same as the disposition of the members of the board. We are anxious to get at facts and figures, and to arrive at some conclusion that is fair and reasonable to all concerned. If it was a question of bargain only, then the manufacturers would be trying to secure as much as possible for their product, and your board would be endeavoring to secure as low prices for the Government, its Allies, and the general public as possible. But we don't feel like approaching the subject from any such point, and I am sure you don't. Now, there are certain facts that cannot be changed. Some of the manufacturers can realize a reasonable profit on one base of prices, and others would be manufacturing on that basis at a loss. As to just what these figures would be as applied to the above manufacturers, you know better than I do, as I am not familiar with the books or the method of accounting of some of the concerns, and you are. I think we are all agreed that it is highly essential that manufacturers generally be left in a position where their profits are fair. I know that apparently the profits of the manufacturers who are situated the best, whose plants are integrated, seem to be very large for 1917, and I think that idea has been exaggerated in the minds of the general public. I do not say wholly justified, but I do say exaggerated. Take as the worst offender, the United States Steel Corporation. It is the most completely integrated perhaps. Its profits last year from the report just made up and which will be published in two or three days, its net profits before deducting taxes was $478,204,000. Deducting the Federal income and the excess profits tax, as ascertained as far as possible at the present time depending upon the final interpretation of the laws by those in authority, $24,781,000 federal income tax and $208,683,000 excess profits tax, leaves a balance of net profits after paying the Government tax of $244,740,000.

Mr. Brookings. This is from the U. S. Steel Corporation and its subsidiaries?

Mr. Gary. It is. The actual investment of that corporation at this time is not less than two billions and a quarter. I think two billions and a half, but not less than two and a quarter. It is true the report of the Department of Commerce made the values $1,100,000,000. Last year the unusual profits would make about 12% on the total investment, and we figure that to turn over the total investment requires about 2½ years, because of the fact that we are all the time increasing our resources, necessarily so in order to protect our business. It seems to me that even last year the profits were not extraordinary. That is not involved here, and I am not discussing it. I am only trying to make a point. Now you wish to arrive at a basis which will not permit those companies best integrated to receive any more than a reasonable profit and yet permit the smaller, less integrated plant, with high costs, to receive also a reasonable profit. I may say that the larger concerns, including our own, are willing to assist a few of the smaller plants if a practicable basis would be ascertained. This question is being studied. I don't know yet how it can be done. The chairman, and some of his associates at least, are familiar with the views of our general committee as to what ought to be the basis of settling this question, and I must say I have been surprised that the Government representatives generally have not fully considered and adopted this basis. That is by allowing every branch of industry to realize fair and liberal profits and then by taxation, in our case the excess profits tax, leveling these profits. It seems to all of us so simple, so easy, that the Government should adopt that method. Increasing the excess profits tax if it is desired so as to compel such a corporation as ours, for instance, to pay enough taxes to bring down its net results to practically the basis which would be fair and reasonable to the smaller manufacturers and at the same time allowing them to realize a good profit, fair profit. That would be entirely satisfactory to all of us and certainly ought to be satisfactory to the Government, because by adopting that you are maintaining prosperity to the company and it would enable all manufacturers to realize reasonable profits. It would be an easy as well as logical method. It would protect all concerned, especially the Government. There must be reasonable profits in all lines of business. The manufacturers must have reasonable profits in order to do their duty. I have been speaking of the United States Steel Corporation because it is typical. We are expending at the rate of 13 to $14,000,000 a month for extensions to our business largely for the benefit of the Government. I would refer to the different departments here in Washington who have requested us from time to time to extend our capacity in certain lines for the benefit of the Government for the purpose of supplying its military needs. We have immediately gone to work along that line without considering our cost for the last year which has been two or three times normal. We must mark off a large part of the expenditure and charge it to operations. It is true of all of those concerned. We have shown large profits and a larger surplus but no one knows better that our surplus does not mean money; that that surplus has been expended on improvements. It is represented by extensions to our capital which in some way must be protected. I know that what I have said on that subject is not necessary to ascertain the price but it is pertinent to the question. It would be a very great mistake to adopt any base that is calculated to put any fear of the prosperity of our concern into the industry of this country. Now, Mr. Chairman, there is another thing that is more or less troublesome. In considering these questions, what is going to be the future of our business practically? What is going to be the cost of operations? The question of labor is only one of the things to be considered. Now it is well known that many of the manufacturing companies do not have organized labor. They do not deal with the unions as such and the Government has said wisely that that question is going to be left out of the discussions and decisions during the war. We must all set aside these differences for the present. That is only right, but that does not relieve the employers from their obligations to treat labor as they believe fairly and liberally. So far as I am concerned regarding the charges against me and our corporation, I will never intentionally consent to a position I think unfair and unreasonable to labor. Just now there is pending the question of hours of labor. In our corporation we commenced to reduce hours from 10 to 8 about three years ago. We have an 8-hour labor now in our mines in the Northwest, Illinois, Pennsylvania and Birmingham. We have instituted eight-hour labor in some of the works of the National Tube Company, in some of the works, if not all, of the American Sheet & Tin Plate Company. We are considering them again. We are forced by circumstances and largely by the Government, I would say, who has taken a decided position in regard to the eight-hour day as a basis. What is going to be the result of this I do not know. I will say that the steel manufacturers themselves from the standpoint of what are good economics, and what is fair and reasonable, will seriously consider that subject. If it were a question only of determining from the standpoint of production, and the physical condition of employees working eight hours or more, it would be very easy for settlement, but when one establishes eight hours as a basis of pay and allows work to go on the same. it establishes difficulties and particularly in these plants whose costs are now high as compared with the prices they are receiving under the prices which have been fixed. Those questions can be settled. They are going to be decided by employers on the basis of what is right and fair. This railroad problem has been and is still very difficult. You know what trouble we had in January, and somewhat less trouble in February and what trouble we are having now with transportation. The chairman has stated it is hoped at least conditions will be very much better. I wish that could be guaranteed. I feel we are going to have a good deal of difficulty during the present year in regard to transportation. Of course all practical men know when the operations are interfered with cost increases rapidly. I believe with respect to a great many plants, the profits during January and February of this year were very much lower than they were last year. I do not see as large profits this year as last year. It will be a different range in different plants. The profits of our corporation in January would not seem to have been one-half as large as they were last year in January and the chairman has suggested that it is owing largely to interruptions to business at our mills. Now, because of these conditions and others our general committee has been concerned with problems presented by the smaller plants and those whose costs are high. We have had a great many means and spent a great many hours studying conditions and trying to get by their costs and trying to furnish some relief to those companies by those better able. I am very sure that with respect to many of the lines of business they cannot expect to make much at the present basis of cost. Take, for instance, the present basis of ourselves. Iron ore is fixed at $5. The producers of underground ores find it very difficult to mine at that price. Some of the producers have underground mining and open-pit mining, too. Others have all open pit; others have all underground. How shall we take care of them? It is not practical to make a price for underground mining and a price for open-pit mining. If we did that we would have to fix a price for those whose costs are higher and a price for those whose costs are lower, and the whole business structure of the country would not only be interfered with, but it would be disorganized. Because when that is once invoked then you must say to one man that his profit is better than the other, his profit must be reduced. Notwithstanding, it may be by energy, economics, or thrift that he is better situated than his neighbor. He must expect to realize less profits. You then interfere with the natural contact of business affairs of the whole country and preclude this country from keeping up in competition with other countries of the world from an economic standpoint.

It is not practical to have different prices for different mills as I see it. Take the mining industry, you have conditions as above stated. I might say with respect to the mines we have had three meetings with the operators. At the first meeting they showed by the figures they produced, that underground mining could not realize a profit and there would be some loss on a fair basis of the ore in the ground at the present prices. The mining people, on the whole, have agreed that if it is the opinion of the War Industries Board this price ought not to be increased they will get thru some way. With respect to steel porducing pig iron, a large majority of producers of that seem to think that while they must have an increase for pig have been fixed that they can get along with these prices. The foundry iron men believe they ought to have an increase on the basis of a fair and reasonable profit. There are many cases like that. Take the question of plate: I wish I were as familiar with the cost as I believe Dr. Walker is. We have become convinced that some of them ought to have an increase. We think that the manufacturers are going to keep themselves in a position where they can meet the demands or the requests of the Government to make extensions whenever it is necessary to supply military necessities, they should have a good profit to pay their employees and their workmen fair and reasonable wages and also sufficient to enable them to make proper extensions when called upon. Now, Mr. Chairman, I just want to add one word: We have found the members of the War Industries Board very frank. Personally, I am glad to say very reasonable, altho you know by your experience with our committee that we have been disappointed at times. I feel, however, you have been very reasonable. I think you have considered the facts and circumstances and I believe every member of the board knows at the present time that costs are increasing, they are bound to increase. I believe you recognize the disposition of the manufacturers and I am asking your committee now to be just as frank as you have been in the past on your information. With your knowledge of the cost to all of us and the profits realized covering my statement to serve the Government as you are serving the committee, tell us, in your opinion, in what way you think the manufacturers are entitled to an increase. Tell us what you think ought to be done at the present time in order to serve the country and protect the business of the country. I really think it is up to you at this time to tell us what you think we ought to do and why. See if you disagree with us in respect to the general prices, tell us where we are wrong, tell us. Then see if the steel fraternity is not willing to come up and do its share in serving the Government. Excuse me for taking such a length of time.

Mr. Brookings. We appreciate the attitude the steel people have always shown. We are in entire sympathy with practically all of the things you have stated. We have been following you as closely as we can. You started out with the theory that the general publicity might influence our minds. Personally, I do not speak for the balance of the committee. I do not find that the profits of the Steel Corporation are the largest in the trade. I have taken your investment at about $1,500,000,000 and I have found by taking your investment, that there are other concerns which have been making quite as much money as the United States Steel Corporation. Many of the so-called "Class A" concerns, according to the figures I have, would bear this out. I have also found that some of those concerns that are not as highly integrated have made on their capital invested more money than the United States Steel Corporation. I am trying to show you that we undertake to go below the published information and endeavor to get down to the fundamental facts of the industry. We have always been committed to maintain a fair and reasonable price for labor. As we all know, contrary to our understanding, you advanced labor 10%. Following you still further, while it is hardly germane to this discussion because it is beyond your reach and ours, regarding the high prices and excess profits, that is the question which I thought you people, especially, had realized. The question is whether we will alter values and take back excess profits in taxes equalizing the price in that way or whether we should endeavor to keep prices to some suitable basis. I do not think that the theory that it does not make any difference to the Government how high prices go so long as the Government takes sufficient portion of profits and calls it "Excess profits tax", is fundamentally sound. Our problem is to stabilize prices. The general disposition of the market is to run away and it is involving the Nation in a problem which every student of economics will understand. I gather in a summary of what you have said, you make it perfectly clear to us that the cost of mining has probably made the prices, which we thought liberal, too low. I do not recall anyone kicking about the $5 price on ore. I think when we fixed the $6 price on coke, the same general argument prevailed. When we fixed the price on pig iron, it was generally thought high. All of the people realized that when we established the $33 price, it was an emergency price. Many of the operators were loaded up with contracts, many as high as $15. In any event, there was a general feeling that we wanted to stimulate the pig iron situation and help out furnaces which we made a temporary price of $33. I think while there was no decision that the price should be reduced on January 31, it was the general impression at our last meeting there had been some advances in cost and it was agreed that we ought to continue the $33 on pig iron for the time being. None of us are steel people and therefore we have been perfectly willing to be more or less guided by you and I think we have been wisely guided. We have reinforced what business judgment we have with the information that the Federal Trade Commission has been able to give us. Even to you gentlemen who know the steel industry there has in the various operations of steel production grown up so many producing concerns that tried out on the cold logic of economics which do not seem to have any right to exist. I think most of us would have no difficulty in reducing the price of steel to-day. Take the cost of producing ore, assemble it, and follow it around thru the production of the different grades of steel. I find it difficult to justify in my mind the prices that exist today, but we have not that sort of problem. We believe it necessary to stimulate production.

On the other hand, we cannot keep out of our minds the figures. We have taken your ore at $5, your coke at $6, and your freight at $1.50. We followed it thru the process to the pig iron cost of $23. We know that pig iron has been produced during the last three or four months at a much less price than that. We get in these costs practically every furnace in the country. It has been argued by some that it is false business to keep alive some concerns who are consuming coke while more efficient plants have been idle. We have the argument that they should be left to die. I am just mentioning the fact to show you that the problem has been gone into to some extent by us. If we arbitrarily reduce the price of pig iron, some maintain that we can get more pig iron. Some concerns would cease to produce and some would produce more. We feel absolute confidence in the fact that you wish to reach the same men that we do. We want to keep alive all concerns that ought to be kept alive. I do not think you nor the Government should endeavor to keep alive concerns which could not live in normal times. We have had all of these arguments, you understand. As I see the situation, it is this: That you feel while the prices that have been fixed are not as profitable for the different processes as you had hoped they would be, you are recognizing the general situation and the desire to stabilize prices. It has become very vital as to whether we should keep alive things we ought not to keep alive, reducing the production in some other product. I gather your opinion is that if the Government believes the present prices should be maintained the steel industry will do all they can to live up to it. We do not want to be influenced by old figures but there is a skeleton of the steel trade which is in my mind. I think I have in mind now exactly your statement what it costs you through the various processes of the steel business. It is a skeleton. We tried to get a certain line on the steel production as it exists today. Now, frankly, the committee has not gone through these prices and arrived at any decision. I don't see any justification for considering an advance in the prices. I am perfectly willing to take it up with any concern and thrash it out with them. We can see no justification for complaint in regard to these prices. There may be some reason for some of the people upon whom we are most depending to feel that they ought to have a reduction in the price of pig iron. I always felt that we ought to get down to the $30 price. Perhaps a careful analysis might show. It would be better to make a lower price and allow certain furnaces to shut down, increasing other furnaces' production. Assuming it is not wise to do that, we think the price of $33 could be allowed to stand. There are some of you who can produce pig iron at a very low price. We have figures from many companies which are not the largest companies who get very much below $5 on their pig furnaces. I think that presents our side of the situation. I want to be fair. I would not ask concerns to run without giving them a fair profit. We have been trying to arrive at some figure. Whether it is through extras on plates or through sales for the month, the figures show higher prices than our prices on plates. Sales and profits tell the story. We have shipments per month and profits per month. Some will require help from you highly integrated companies. We can help them out. I think your companies are at liberty in making the industry. We have thought of pulling schemes, but there are problems we had which at times seems to me hardly equitable and fair. There seems to be no necessity for discussing problems of that kind so long as the steel industry works to keep prices and values where they are justified. I know of none more pertinent than you, Judge, and the other people of determining which are weak links in the chain and the sort of assistance they ought to have in order to give us the production we ought to have. So we really look back on that first meeting as showing a group of men big enough to grasp a situation and handle it. I think we all appreciate that.

EXHIBIT No. 1271

A STATEMENT OF SOME OF THE PROBLEMS HANDLED IN SOME OF THE MEETINGS OF THE WAR INDUSTRIES BOARD DURING THE MONTHS FROM DECEMBER 10, 1917, TO JANUARY 10, 1918

(Drawn from minutes of the War Industries Board)

NOTE.—These 12 meetings cover only part of the work of the board during this 30 days' period.

Subject: December 10, 1917. 12 o'clock special meeting to consider steel prices with representatives of the steel industries

Special meeting—To consider steel prices with representatives of the steel industries (verbatim report of meeting on file).—Mr. Willard, chairman, explained that while the cost data in course of preparation by the Federal Trade Commission was not yet at hand it had been felt advisable to call the representatives of the steel industry to Washington to discuss the general situation as brought about by the prices fixed and by general conditions in order that the board could approach the subject more intelligently and a decision be arrived at more expeditiously when the Federal Trade Commission data came to hand, it being understood that in the terms of the previous price agreements it had been stipulated that prices would be reconsidered prior to January 1st, 1918.

Present—The War Industries Board: Mr. Willard, chairman, Mr. Baruch Mr. Brookings, Mr. Frayne, Judge Lovett, Col. P. E. Pierce, Mr. Bingham, secretary, also Mr. Legge, Mr. Replogle, and Mr. Davies of the Federal Trade Commission, Mr. Blavalt, representing the fuel administrator, also the following representing the steel industry: F. N. Beegle, president, Union Drawn Steel Co., Pittsburgh, Pa.; James B. Bonner, representative, American Iron and Steel Institute, Washington; James A. Burdon, president, Burdon Iron Co., Troy, N. Y.; E. A. S. Clarke, president, Lackawanna Steel Co., New York, N. Y.; A. C. Dinkey, president, Midvale Steel & Ordnance Corp., Philadelphia, Pa.; James A. Farrell, president, United States Steel Corp., New York, N. Y.; W. J. Filbert, comptroller, United States Steel Corp., New York, N. Y.; Judge E. H. Gary, chairman, United States Steel Corp., New York, N. Y.; F. H. Gordon, gen. mgr. of sales, Lukens Steel Co., Coatesville, Pa.; E. G. Grace, president, Bethlehem Steel Co., South Bethlehem, Pa.; W. S. Horner, president, Nat'l Ass'n of Sheet & T. P. Mfrs., Pittsburgh, Pa.; A. F. Huston, president, Lukens Steel Co., Coatesville, Pa.; Eli Joseph, member of firm, Joseph, Joseph & Bro., New York, N. Y.; Willis L. King, vice president, Jones & Laughlin Steel Co., Pittsburgh, Pa.; W. Vernon Phillips, president, F. R. Phillips & Sons Co., Philadelphia, Pa.; Karl C. Roebling, gen. mgr. of sales, John A. Roebling's Sons Co., Trenton, N. J.; Chas. M. Schwab, chairman, Bethlehem Steel Co., South Bethlehem, Pa.; John A. Topping, president, Republic Iron & Steel Co., New York, N. Y.; Roy A. Rainey, Rainey Coke Co., New York, N. Y.; Scott Stewart, ass't to Roy A. Rainey, Rainey Coke Co., New York, N. Y.

Meeting adjourned 2:15 p. m.

(December 13, 1917. 10 a. m.)

Subjects:

(1) Chemicals—Plan from war minerals committed to increase supply of pyrites.

(2) Machine guns—Arrangements covering royalties for Lewis machine gun patents.

Also present at this meeting: Major Bascom Lihle, chairman of the machine gun section and Mr. Calfee and Mr. Powell, representatives of the owners of the Lewis machine gun patents.

(3) Chemicals—Compact for power for Muscle Shoals nitrate plant.

Adjourned 12:15 p. m.

(December 14, 1917. 2 p. m.)

Subject: Special meeting with Copper Industry to consider conditions in copper industry as bearing on possible revision of prices.

Present: Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Mr. Frayne, Judge Lovett, Col. Pierce, Mr. Bingham, secretary, Prof. Walter M. Adriance, representing the War Trade Board, Mr. Sidney H. Solomon, representing the war trade board, also Mr. Lewis A. Haney, representing the Federal Trade Commission, Mr. Eugene Meyer, Jr., of the raw materials division, Mr. Pope Yeateman, of the raw materials division.

Representatives of the copper interests: C. F. Kelley, Anaconda Copper Co.; Joseph Clendennin, American Smelting & Refining Co.; R. Agassiz, Calumet & Hecla Mining Co.; S. Rosenstamm, Miami Copper Co.; T. Wolfson, United Metal Co.; Jas. Mac Naughten, Calumet & Hecla Co.; P. Todd, Copper Range-Quincy Copper Co.; N. L. Amster, Shannon Copper Co.; Jas. A. Nelson, Cuba Copper Leasing Co., Norfolk Smelting Co.

Adjourned 4 p. m.

(December 20, 1917. 10 a. m.)

Subject: T. N. T.—Royalty agreement with Flurscheim for manufacture of T. N. A.

T. N. T.—Royalty agreement with Flurscheim for manufacture of T. N. A.—Mr. Brookings presented a communication from the gun division, Ordnance Department, dated December 17th, No. G. P. 471.8694/43 submitting copy of proposed royalty agreement between that department and Bernhard Jacques Flurscheim covering royalty payments for the manufacture of T. N. A., and asking the War Industries Board to submit their opinion as to the reasonableness of this agreement and the fairness of the compensation named.

Present: Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Mr. Frayne, Col. Pierce, Mr. Bingham, secretary.

Adjourned 11:45 a. m.

(December 21, 1917. 10 a. m.)

Subject: Chemicals—Order for smokeless powder with Aetna Explosives Co.

Chemicals—Order for smokeless powder with Aetna Explosives Company—Mr. Brookings presented a communication from the purchase section, gun division, dated December 20th, No. GP 471.5/99 asking the approval of the War Industries Board for proposed order for 12,000,000 pounds of smokeless poeder with the Aetna Explosives Company on terms stated.

Present: Mr. Willard, chairman, Mr . Baruch, Mr. Brookings, Mr. Frayne, Judge Lovett, Col. Pierce, Mr. Bingham, secretary.

Adjourned 12 o'clock.

(December 22, 1917. 10 a. m.)

Subject: Steel—Price fixing.

Present: Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Judge Lovett, Col. Pierce, Mr. Bingham, secretary, also Mr. Davies of the Federal Trade Commission, Mr. Blauvelt of the fuel administration, and Mr. Repogle, director of steel supply of the War Industries Board.

Adjourned 12:35 p.m.

(December 24, 1917. 11 a.m.)

Subject: Steel—Price fixing

Steel—Price fixing.—Mr. Willard presented a proposed communication to the president relative to recommendation of the board covering price to be arranged for steel and its components up to April 1st, 1918, together with suggested public statement should the President agree to this arrangement.

The board approved of this communication subject to the agreement by the steel interests of all terms of the arrangement proposed.

Present: Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Col. Pierce, Mr. Bingham, secretary.

Adjourned 12:20 p.m.

(December 28, 1917. 10 a.m.)

Subject: Steel—Price fixing

Present—The War Industries Board: Mr. Willard, chairman, Mr. Brookings, Admiral Fletcher, Mr. Frayne, Judge Lovett, Mr. Bingham, secretary, also Mr. Davies of the Federal Trade Commission, Mr. Blavalt of the fuel administration, Mr. Replogle of the raw materials division, Mr. Legge of the raw materials division, also the following representatives of the steel industry: E. H. Gary, chairman, United States Steel Corp., New York, N.Y.; J. A. Farrell, president, United States Steel Corp., New York, N.Y.; J. A. Topping, chairman, Republic Iron &

Steel Co., New York, N.Y.; E. A. S. Clark, president, Lackawanna Steel Co., New York, N.Y.; J. A. Burdon, president, Burdon Iron Co., Troy, N.Y.; E. C. Grace, president, Bethlehem Steel Co. South Bethlehem, Pa.; A. C. Dinkey, president, Midvale Steel & Ordnance Corp., Philadelphia, Pa.; E. A. Dalton, of Pickands, Mather & Co., Cleveland, Ohio; W. J. Filbert, comptroller, United States Steel Corp., New York, N.Y.; J. B. Bonner, vice chairman, American Iron & Steel Institute, Washington; Willis L. King, vice president, Jones & Laughlin Steel Co., Pittsburgh, Pa.

The meeting reconvened at 2:00 p.m. with the same present except Mr. Alexander Legge.

(January 2, 1918. 10 a.m.)

Subjects:

(1) Intelligence—Attitude of Swiss manufacturers.

(2) Chemicals—Order for 30,000,000 pounds of smokeless powder from the Hercules Powder Co.

Under the advice of Mr. Brookings the board approved of the amended contract with the opinion that while the board considers 70¢ a high price and that as 7¢ per pound charged was for amortization of a new plant, that this should have been so shaped that this plant paid for by the Government in price should have been the property of the Government but that however as Captain Peters reports it was impossible to secure this and that it was either necessary to pay the 70¢ per pound or go without this powder and that having had nothing to do with the negotiations and acting only as Captain Peters' statement of the case and considering its emergency nature, the board can see no reason why the contract should not be made.

(3) Chemicals—Action to secure necessary raw materials for explosive program.

(4) Chemicals—Request for assistance in securing explosives from ordnance department.

(5) Allies, cooperation.

Adjourned 12:30 p.m.

(January 4, 1918. 11 a.m.)

Subjects:

(1) Chemicals—Explosives, crude T.N.T.

(2) Nickel—Price fixing.

Present: Mr. Willard, chairman; Mr. Baruch, Mr. Brookings, Admiral Fletcher, Mr. Frayne, Judge Lovett, Mr. Ingels, acting secretary, also Dr. Haney and Mr. Eckert of the Federal Trade Commission, Mr. W. A. Bostwick, president of the International Nickel Company, Mr. Pope Yeatman, consulting engineer, Mr. Eugene Meyer, Jr.

Adjourned 12:35 p.m.

(January 9, 1918. 10 a.m.)

Subjects:

(1) Copper—Price fixing.

(2) Aluminum—Price fixing.

Adjourned 12:35 p.m.

(January 10, 1918. 10 a.m.)

Subject: Aluminum—Price fixing.

Present: Mr. Willard, chairman, Mr. Baruch, Mr. Brookings, Admiral Fletcher, Mr. Frayne, Judge Lovett, Col. Pierce, Mr. Ingels, acting secretary.

Adjourned 12:55 p.m.

EXHIBIT NO. 1272

MEETING OF THE PRICE-FIXING COMMITTEE OF THE WAR INDUSTRIES BOARD, HELD SATURDAY, JUNE 1ST, AT 9:00 A.M. IN ROOM 810 OF THE C. H. D. BLDG.

Present: Mr. R. S. Brookings, chairman, Dr. F. W. Taussig, Lt. Col. Montgomery, Mr. W. W. Phelps, acting secretary, Mr. Edgar, acting director of lumber, Mr. Channing, legal section.

Organization.—The minutes of the meeting held March 22nd, at 2.00 p.m. were read and approved.

Colonel Montgomery presented his credentials from the Acting Chief of Staff detailing him for duty as the War Department representative on the price-fixing committee of the War Industries Board, and took his seat as a member of the committee.

Lumber.—At this point Mr. Brookings surrendered the chair to Dr. Taussig, as he had an interest in this industry and did not wish to take part in the committee's deliberations.

A general discussion on this subject was held preliminary to the meeting of the West Coast Lumber Association on Wednesday, June 5th. It was deemed advisable that Dr. Taussig and Mr. Edgar should hold a conference with Mr. Baruch and report the substance of this conference to the committee on Tuesday at 3.30 p.m.

Copper.—At this point Mr. Brookings took the chair.

Mr. Brookings read a letter from M. R. L. Agassiz of the Calumet & Hecla Mining Company, taking issue on several points which occurred in the meeting with the representatives of the copper industry on May 22nd.

A discussion pertaining to the form of reply thereto followed, no action being taken.

The meeting adjourned at 10:00 a.m.

Wm. Walter Phelps,
Acting Secretary, Price-Fixing Committee.

Exhibit No. 1273

Meeting of the Price Fixing Committee with Representatives of the Iron Ore, Pig Iron, and Steel Industries. Room 52, June 21, 1918, 10:30 a. m.

Present: Mr. R. S. Brookings, chairman; Mr. B. M. Baruch, Commander J. M. Hancock, Lt. Colonel Montgomery, Dr. F. W. Taussig, Mr. High Frayne, Mr. W. B. Colver, Mr. W. W. Phelps, acting secretary; Mr. Ritchie, attorney for the War Industries Board; Mr. Replogle, director of steel; Mr. Blauvelt, fuel administration; Mr. J. C. McLauchlin, steel section; Mr. Paul Mackall, steel section; Mr. George Armsby, tin section; Mr. Dillon, Mr. Wells, Federal Trade; Mr. Wooster, Federal Trade; Dr. Walker, Federal Trade; Mr. Alexander Legge, requirements division; Capt. W. M. MacCleary, War Department; Paymaster S. R. Fuller, Navy Department; Paymaster Auld, Navy Department; Mr. Herman, fuel administration; Mr. H. P. Ingels, secretary, War Industries Board.

Also the following representatives of the steel industry: Judge Gary, United States Steel Corporation; Mr. Farrell, United States Steel Corporation; Mr. Filbert, United States Steel Corporation; Mr. Dalton, Isabella Mining Co.; Mr. E. A. S. Clarke, Lackawana Steel Co.; Mr. James A. Burden, Burden Iron Co.; Mr. James Bonner, American Iron & Steel Institute; Mr. Willis L. King, vice-president, Jones & Laughlin Steel Co.; Mr. A. F. Huston, president, Lukens Steel Co.; Mr. J. V. W. Reynders, chairman steelmakers in class 3, American Tube & Stamping Co.; Mr. J. A. Campbell, The Youngstown Sheet & Tube Co.; Mr. L. E. Block, Inland Steel Co.; Mr. W. G. Grace, Bethlehem Steel Co.; Mr. A. C. Dinkey, Midvale Steel & Ore Co.; Mr. H. L. Rownd, Republic Iron & Steel Co.; Mr. W. V. Phillips, chairman, subcommittee scrap iron and steel; Mr. W. H. Smith, Tennessee Pig Iron Association; Mr. A. A. Fowler, Rogers Brown & Co.; Mr. Francis J. Hall, Central Iron & Steel Co.; Mr. Clarence H. Howard, Commonwealth Steel Co.; Mr. H. G. Moore, Keystone Steel & Wire Co.; Mr. R. C. Allen, State of Michigan State Geologist; Mr. B. D. Burtler, Michigan Board State tax commissioners (secretary); Mr. W. G. Mather, Cleveland Cliffs Iron Co.; Mr. R. A. Rainey, W. J. Rainey; Mr. Scott Stewart, W. J. Rainey; Mr. Thomas K. Glenn, Atlantic Steel Co.; Mr. C. D. Dyer, W. P. Snyder & Co.; Mr. G. A. Sin-Clair, Vermillion Range of Minnesota Section 30 Mining Co.; Mr. E. W. Mudge, E. W. Mudge & Co.; Mr. W. L. Tinker, Lake Superior Iron Ore Association; Mr. J. D. Ireland, M. A. Hanna & Co.; Mr. John A. Savage, John A. Savage & Co.; Mr. O. B. Warren, Mace Iron Mining Co.; Mr. T. D. Heed, Judson Mining Co.; Mr. M. Andrews, The Newport Mining Co.; etc., Mr. C. N. Turner, The Newport Mining Co.; Mr. H. G. Dalton, Pickands, Mather & Co., Cleveland, Ohio.

Mr. Brookings. Gentlemen, we will come to order, if you please. We apologize for keeping you gentlemen waiting a little while. There was some question raised as to whether or not several gentlemen, who had interests of various kinds, were justified in being here in this meeting, or whether they be heard later. They had no direct interest, except representing the States of Michigan and Minnesota. They had an interest in the ore problem which they wished to submit.

Judge GARY. As far as the steel industry is concerned, I do not think it would object to the gentlemen appearing, briefly stating their point, and then retiring.

Mr. BROOKINGS. We gave them their choice of appearing and stating their case in this meeting, or appearing later. It has been 2 or 3 months since we met. If there is anything you would like to present, Judge, we would be very glad to hear from you.

Judge GARY. We are more interested in the benediction than in the operation.

Mr. BROOKINGS. There is a very close relationship between the two, Judge. You always get the benediction.

Judge GARY. Mr. Chairman, I want to say just a word. At the present time the entire steel industry is thoroughly mobolized and are as patriotic citizens as could be expected, and have in so many words stated they would cheerfully observe any decisions that might be made, and live up to the decisions, notwithstanding there might be some sacrifice. In the mind of the manufacturers generally, there is an opinion that costs have increased and are increasing, and quite a large percentage of the steel people think they ought to have some increase in prices. The question presents itself first, and in the mind of our committee most emphatically, from the standpoint of the Lake Superior iron representatives. About 48 members of the producers are so-called "Independents" and a very large percent of their ore is underground mining. In order to secure the full production of their mines, it is necessary for them to have living prices and prices which will enable them to explore far in advance their properties and open up their mines for future mining. They are in the mines of those operations at the present time. At the beginning of our consideration of the prices, these ore people have believed their prices were low and that they should be higher. There has lately been put in force an increase in freight rates on the ore carriage roads that adds to the Lake Superior iron producers about 34 cents additional cost. That is because their ore is sold and always has been sold deliverable at Lake Erie ports, so that the iron ore people have to absorb the freight charge on land and on lake. Their costs, which they have produced and to which they invite inspection by anyone interested, show that the underground miners at the present time, in view of this increase in freight, are obliged to pay a cost of about 5 percent per ton more than the price they are receiving, and manifestly, on the basis of their realizing a proper profit, or any profit, they must have an increase in their prices. Our committee does not appear here as an advocate, but more as a judge, or as an advisory committee, having in consideration the interests of the Government and the interests of the steel-producing and iron-producing fraternity. The iron ore people have appointed a committee to present their views which we have approved and which we are glad to have them do. If, Mr. Chairman and associates, you will permit Mr. Savage, in behalf of the committee, to present their case, they will be grateful and we will be pleased.

Mr. BROOKINGS. Very glad to hear from Mr. Savage.

Mr. SAVAGE. Mr. Chairman and gentlemen, in this very brief statement that I will read, I desire to have it understood that is a statement of an industry and not of an individual. We have a committee here of six men, each a practical, experienced operator, representing separate districts. There are six "iron ranges", so-called, each of them, however, has interests in the other ranges and is familiar with the subject in a broad way.

Judge GARY. Six ranges in the Northwest?

Mr. SAVAGE. Yes. We come from the iron-mining country. The statement follows: (Reads statement which is filed with the secretary). No. 1 attached. I wanted merely to state that we have summarized costs, which we are ready to present and to which we invite the closest scrutiny by such accountants as you may have available.

Mr. BROOKINGS. May I request that you leave that paper, with such other statements as you wish to make with us. I think I can state that it has always been the purpose of the price-fixing committee to analyze process from ore in the ground to the finished product, with the view of stimulating production at every stage, and every possible consideration will be given to statements that you gentlemen have to make in connection with ore. Of course we will take this up with the steel people, who are more familiar with its details, and we can either see you later, if you wish—unless there are some others who are connected with the ore problem who would like to be heard—it would be perfectly proper, I think, for you to leave this statement with us, or any other figures, and if it is necessary we might plan to see you later, or at least give you the result of the conference we may have with the steel people when we finish. Are there any other ore people who would like to be heard, or does that present your case? How many gentlemen are there here representing ore industries?

Mr. SAVAGE. We have a committee of six men.

Mr. BROOKINGS. Judge, might I inquire as to whether or not these gentlemen have any further interests in the meeting, and whether it would not be better for a committee to be appointed by your people to take up their ore matter with us and investigate it?

Judge GARY. I would like to ask, Mr. Savage, a question of the independents. What proportion of their underground mining is leased?

Mr. SAVAGE. A very large proportion is leased.

Judge GARY. Now I would like to suggest that inasmuch as if there should be an increase in the price of ore, it would have to be absorbed by someone—whether or not the pig-iron people, who are here represented by able and fair-minded men, would be willing to state in this meeting whether or not the pig-iron people, taken as a whole, could absorb any increase in ore if there should be any increase. Mr. Dyer is president of the Pig Iron Association.

Mr. DYER. Mr. Chairman, we have not had an opportunity for a very full meeting of pig-iron people since this question came up. Such conferences as we have had developed very clearly the fact that there are certain districts that could not make pig iron without a loss—I might say such as eastern Pennsylvania and Tennessee. By the way, the Tennessee people are represented here today. The central district, composed of the districts, the valleys and the lake-front furnaces, could get along without a loss, with some individual exceptions. There are some blast furnaces so built of such architecture that they would lose money if these freight increases, coupled with the labor increases as we have had, should be forced upon them. I am speaking for merely the representatives of the pig-iron industry what we have been able to gather in the short time we have had, but those are the facts of the case. The central districts could get along without suffering a loss, but outside of that, I think everybody else would have to be helped, except Chicago.

Mr. BARUCH. Mr. Chairman, may I ask a question. What was the difference in cost between the underground and the shoveling mines? I do not recollect that. The underground is 48% and the shovel is 52% production?

Mr. SAVAGE. 48% and 52%.

Mr. BARUCH. What is the difference in cost?

Mr. SAVAGE. The difference of $1.22 per ton in favor of the open-pit ores.

Mr. BARUCH. I thought he made a statement that at this price the open pits made money and the underground lost money. I did not quite get the difference in the costs.

Mr. SAVAGE. That is just what we do state.

Mr. BARUCH. Yes; but bearing that out, there must be consequently a difference of how many cents a ton? I carried it in my mind something like 50 cents.

Mr. SAVAGE. We have this all thoroughly summarized.

Mr. BROOKINGS. A committee will have to thresh this out in detail anyhow.

Judge GARY. Mr. Clark, what have you got?

Mr. BARUCH. I think the chairman is quite correct that it has to be thrashed out.

Mr. BROOKINGS. As a matter of fact it involved the pig-iron people and the steel people, and a small group will have to get around and summarize this. I do not believe, in an open meeting like this, we can go into the details and get any place. A small committee, who have a knowledge of it, comprised of the pig-iron men, the steel men and yourselves, probably will have to thresh it out and arrive at some sort of conclusion.

Judge GARY. With reference to the general steel loss. It seems to me, Mr. Chairman, that considerable difficulty would be removed if the basing price—Chicago as a basing price was changed so as to return it to its original and long-established custom, viz, making Pittsburgh the basing price—that would furnish some relief to some of the groups who have heretofore been claiming and who were sellers of some of the products which are involved in this point. That, together with the disposition on the part of the director of steel distribution to favor those particular mills to some extent in giving them whenever possible a class of material which they are best adapted to, it seems to me put them in a living position. Pittsburgh was long established as a basic price on iron and steel, and that has done more to stabilize production, to increase production and to bring about extensions in the mills already established, and more particularly in the establishment of new mills, than anything else. At the beginning of our considerations here, it was suggested by Mr. Replogle, for reasons which we found good but which I think now have entirely disappeared, that Chicago be made the basing price for shapes, plates, and bars. That has removed from certain producers, including particularly the Interstate, the Wellins Co., and some others, protection which they had before and which they are entitled to under the long-established rules of business procedure, as applied to the steel industry. Therefore I think our committee is in favor of removing that difficulty and reestablishing Pittsburgh as the basing price, instead of Chicago, as to these three articles.

Mr. Brookings. Is it your opinion that if that were done it would help the pig-iron people to an extent that would enable them to absorb some additional cost in the way of ore?

Judge Gary. I think it would help the whole industry, and I am of the opinion that the pig-iron people, taken as a whole, could absorb some increase in ore prices.

Mr. Brookings. Mr. Replogle, do you see any objection to the proposed change in the base price?

Mr. Replogle. I have changed my opinion. I think that the ruling originally made was right, in view of the enormous tonnage of Government necessities we would have to get in that district, which are produced there and are produced there largely by low-cost manufacturers on account of the fact that they have no freight rate on their ore, but the percentage of the tonnage we now have to distribute to the Pacific coast shipyards, to the car shops in Chicago, and to the St. Louis districts, is entirely out of line with the tonnage of those products, plates, shapes, and bars, which are produced in those districts. That necessitates going to the eastern mills for a very heavy tonnage of material which at this present time we would have to get from the eastern mills, and some of them even east of Pittsburgh.

If we went to the Pittsburgh base, those eastern mills would still have to absorb a portion of the rate to the consuming point, whether it would be Chicago, St. Louis or the Pacific coast. In view of the heavy tonnage, as I say, which is entirely out of line with the tonnage produced there, I feel that a change to the Pittsburgh base would be a proper one.

Mr. Brookings. Anything to be said about that by any other gentlemen in interest present? Of course I do not know what the change means to the purchaser or consumer.

Mr. Baruch. Does that mean one dollar a ton, or what?

Mr. Replogle. The freight in some cases would be up as high as $5.00 a ton. The thing I am getting at—it means an advantage to the mills there, but the disadvantage to the eastern mills is, in my opinion, becoming too great. In the case of Mr. Huston, he has a particularly heavy disadvantage—his rate I should say, is 30 cents now.

Mr. Huston. It is over that; it is over 30 cents now.

Mr. Replogle. That is over $6.00 a ton that Mr. Huston would have to absorb.

Mr. Huston. It runs $8.00 or more.

Mr. Replogle. Of course, Mr. Chairman, in Mr. Huston's case, that is only a small percentage of his output and probably on the larger percentage he has a great advantage to the eastern point.

Mr. Huston. We have always had to depend on that freight differential to live. Pittsburgh has it coal and cheaper iron; we had to depend on the near markets largely, in order to enable us to live—that had been our salvation.

Judge Gary. On the whole, you favor Pittsburgh base, don't you?

Mr. Huston. Yes.

Mr. Brookings. Judge, there is such a lot of deatil—I imagine it reaches everywhere and I suppose we could not determine very much about it—those of us on the committee here. Mr. Replogle, of course, as our expert, probably knows just how the purchasing communities, or consumers, would be affected by it, and whether it would affect the advance of price, or not, to the large part of the consuming country. In any event, as I understand it, the normal basic arrangement has been as it was now proposed, and always was before we changed it and made the basing price Chicago, and if this makes no very radical change in the average of the market price of steel (it means $1.00 or $2.00 a ton in the whole situation) and if it does not effect adversity on the part of the others—of course you steel people cover the whole field, and you will know whether it is practical of not—and if it does not involve very much and if it does open the way to absorb an additioal price in ore, I think we are all agreed that if on examination of the facts, it is found that a large part of the ore that ought to be produced is being produced at a loss and considerable fear, there ought to be an adjustment some way in the price. I think that is the principle upon which we have always acted. It is a matter of investigation, and we never, as a rule, act upon anything but very authentic, or rather governmental information, which we get through the Federal Trade Commission. They will check these figures and whatever action is then I presume will be dependent upon the condition of those figures being found correct. Assuming, however, that they are correct, I presume some arrangement will be made among the steel people, keeping alive that production and absorbing that in some places, and if a proper method is found that may need a slight advance to the consumer, that becomes a matter of price again, Judge, and we ought to take it up more in detail.

Judge Gary. I would like to inquire, Mr. Chairman, if there are any others of the pig-iron people who would like to be heard at this time.

Mr. Smith. I will just read a brief general statement on the condition in Tennessee. [Mr. Smith reads a paper which was filed with the secretary.] Number 2 attached.

Mr. Brookings. You will leave that statement with us I presume? [Tenders statement to Mr. Phelps.]

Judge Gary. Your iron is all foundry iron, isn't it?

Mr. Smith. Some is high-silicon iron. Three furnaces made high silicon.

Mr. Brookings. It is not steel-making iron then?

Mr. Smith. No, sir.

Judge Gary. Mr. Chairman, there in another question which has been raised relating to making the valley a basic point for pig iron that involves a good many questions as to a great many manufacturers of pig iron, and if it is the disposition of the price-fixing committee, I think that question ought to be referred to a special committee for full consideration. Mr. Dalton as chairman of the subcommittee of the general committee of pig iron, believes he ought to give opportunity to all the pig-iron people who attend the meeting to discuss that question among themselves, and I believe that if all sections were represented at that meeting and Mr. Replogle could be present, perhaps that might be thrashed out with the report made and one accepted as satisfactory by our general committee and perhaps by your board. Now if there are others here representing any special lines of steel and wish to be heard on this general proposition at this time, I would be glad for the chairman to give them an opportunity.

Mr. Brookings. We would be glad to hear from anyone here who is interested in any steel product who has anything to say regarding it. We are here, as you know to consider all of the problems involved in the fixing of the price of practically all steel products. We may possibly ask the special committee to consider several problems that we have not already taken up and which we think it is necessary for us to act on in the near future. Rails for instance; there are only five or six manufacturers interested in rails. We will ask those manufacturers to meet us separately to discuss the rail problem. I think that would be better Judge.

Judge Gary. Yes.

Mr. Brookings. Later we want to take up, when we get further information regarding costs, the matter of wire rope and probably steel castings, and I don't know whether Mr. Replogle will want to take up the question of high-speed tool steel now or not.

Mr. Replogle. We are making up a schedule.

Mr. Brookings. Judge, what would you suggest now as next.

Judge Gary. I think Mr. Chairman, in view of the fact that the whole iron and steel industry was represented; after a day's session it was voted and placed in the hands of our committee, all their interests, that our general committee is now ready to meet your board and discuss these questions that have been presented here.

Mr. Brookings. If there are any gentlemen that are not interested in this, they should retire, isn't that right, Judge?

Judge Gary. Yes.

Mr. Frayne. In submitting the extra overhead costs by the ore-producing companies, I didn't hear that they made any statement as to the average amount of cost for labor. I would like them to include what that extra additional cost for labor is in their statement and I would also ask that they present a statement as to wages, what wages are paid to their ore miners at the present time. That ought to be made part of the statement so we would know whether it is the falling down of the men that is producing these rates or whether it is necessary for them to move around somewhere else.

Mr. Savage. If I may take a minute to state our views on that question.

Mr. Frayne. I would like to have it part of your written statement.

Mr. Brookings. Is it so segregated that we can see what the labor costs—what it is per day?

Mr. SAVAGE. The labor cost is thoroughly defined per ton. We have reluctantly desired—that is some of us wanted to state more fully the wage question. We are sure that upon an inspection of it, which we will be very glad to present that it will be very obvious that our wages are generous and probably the highest wages paid any miners in America today.

Judge GARY. What is the average rate?

Mr. SAVAGE. The average underground contract rate for miners, that covers all the underground miners, is over $6.00 for 8 hours.

Mr. FRAYNE. What is the contract rate?

Mr. SAVAGE. The contract rate is defined as the average daily wage of the miners. They work at so much per car, so much per set or as it is defined, underground. They have gone up considerably over 100 percent in the last few years. They are we think, very generous and very fair and there is not the slightest complaint in our district on the subject of wages from any source whatsoever. The reason the miners move around so much is because of the shortage of miners and the readiness with which they can procure work anywhere.

Mr. FRAYNE. Does that $6.00 per day include the payment part of that to the miners' labor or is that clear to the miner, clear of all expense, supplies, etc.?

Mr. SAVAGE. It is net for everything save that the miner buys his own clothes and his own lamp. All tools, all explosives, all lubricants, etc. are furnished at the company's expense. That is outside of this $6.00 a day that I refer to. Common labor is receiving $4.35 per day and most all common laborers, after they have been on the job a few weeks, become classified to a degree and get anywhere from 15¢ to 50¢ a day more than that.

Mr. FRAYNE. I will tell you why I want specifically to get that information. We are trying through the various departments, expecially through the Department of Labor, to induce men to go to localities where there is a shortage of labor and by having that information as to the wages and other conditions, it is a strong argument to advance why they should take up that kind of employment or go to those points.

Mr. SAVAGE. I assure you Mr. Frayne that you will find on investigation that our wages are without any fault, that we can see, and that no trouble can possibly arise in our country on that question.

Mr. BROOKINGS. Are there any other members of the committee who would like to ask any questions before the ore men leave us? (No answer.) You gentlemen that represent the ore interests, I don't suppose you would be interested in the details of other matters that we have to thrash out here. It has been our custom always to hear the different interests separately and while we dislike to dismiss your company, we would probably have to unless you have something to state further in connection with ore, we will have to excuse you and go along with other matters.

Judge GARY. Would there be any objection in having Mr. Savage from the ore people and Mr. Dyer from the pig-iron people to remain with our committee?

Mr. BROOKINGS. We would be very glad to have them. Mr. Savage would remain representing the ore people and Mr. Dyer, the pig iron. That would give them representatiton in the other lines.

(Ore people leave at 11:30 a. m.)

EXHIBIT No. 1274

MEETING OF THE WAR INDUSTRIES BOARD WITH REPRESENTATIVES OF THE AUTOMOBILE INDUSTRY FOR THE DETERMINATION OF WHAT ACTION IS TO BE TAKEN WITH REGARD TO STEEL SITUATION, INSOFAR AS THAT INDUSTRY IS CONCERNED. MAY 7, 1918. 12:00 M.

Present: Mr. B. M. Baruch, chairman; Mr. Alex. Legge; Mr. Geo. N. Peek; Admiral Fletcher; Mr. Brookings; Mr. Hugh Frayne; Judge Parker; Mr. Replogle; Mr. Ingels, secretary.

Also: Mr. Noyes, Fuel Administration; Mr. Whittier, Shipping Board.

Also (representing the industry): Mr. W. C. Durant, General Motors Co., chairman of committee; Mr. W. E. Flanders, Maxwell Motor Co.; Jno. N. Willys, Willys-Overland Co.; Mr. C. C. Hauch, Studebaker Corp.; Jno. F. Dodge, Dodge Bros.; Mr. Hugh Chalmers, Vice Pres., National Automobile Chamber of Commerce; Alfred Reeves, General Manager, National Automobile Chamber of Commerce; D. D. Dort, Dort Motor Company; Geo. N. Graham, Pierce-Arrow Motor Co.; F. W. A. Vesper, Pres., National Automobile Dealers' Assoc.; Mr. R. P. Jones, Ford Motor Company.

Mr. Replogle. To give you the analyses of the principal products: On projectile steel there is thirty-six weeks' work, and much of it is very far behind, as much as nine months; that is, of course, directly United States and Allied Government orders; on standard rails the orders now on the books of the rail mills are enormous, and we cannot see that we can increase that shipment without cutting in on the projectile steel. There is ninety-two weeks, at the rate we have been rolling—over a year and a half—right now on the books, and the Director-General is demanding heavier shipment of rails. On sheets, there is twenty-four weeks' work; on seamless tubes, there is twenty-seven; on structural shapes, despite the falling off of railroad construction, there is thirty-three weeks; on bars, the product in which you gentlemen are largely interested, there is twenty-eight weeks on the books now; on tin-plate, there is twenty-three weeks; on tubular product, pipe, and tubes, which is another item that you use, twenty-eight weeks. Take the total, the average of shipments of all products, there is thirty-one weeks right now on the books of the steel manufacturers; that is over seven months, and the orders are coming in almost every week faster than we are getting them out. Now the direct Government necessities are being delayed in a great many places. It is true that at some shipyards we have a little surplus; but Mr. Schwab feels that we have to have a very greater tonnage than we are counting upon. There is the case we had the other day of the six-inch shells for the British Government, for which they are in very urgent need—three or four months behind. Deliveries to some of our Allies are in frightful shape, and we've got to make that up.

The finishing capacity is greater, but the finishing capacity is limited by the amount of pig iron they can get and that in turn goes back to fuel and transportation.

Mr. Durant. I think the points involved, Mr. Chairman, are these: In preface, I wish to say that we want to be helpful; we want to help. We assume you want to administer this fairly and that you are going to do so. The point with me would be this, Mr. Replogle: Can we do anything to change conditions, improve conditions, by speeding up matters? That is the first point. Then, again, are the orders booked in such a manner that the requirements are spread over to meet everything that you need and still give to the industries of this country what they require to carry on their business, preserve their organizations, and avoid unnecessary distrubances? If you had twice as many tons placed on your books, the situation would be twice as bad. It is a question of whether that situation has been aggravated by putting the orders on the books for immediate deliveries when there is no real immediate need and that you couldn't use the material if you had it. Then, again, getting back to the first proposition, which has to do with the speeding up. Are the mills in operation today up to their capacity, to their fullest efficiency? I don't know whether we are getting the information correctly or not, but we read of some things and we hear of some things in general conversation, and we like to be specific. We like to get at the facts. But we do hear that this mill is running on a 60% capacity, another only running 75%, another only 50% of its capacity, and the question naturally arises, "What are the reasons?"

Mr. Replogle. Pig iron.

Mr. Durant. Can we increase the supply of pig iron and what would it be necessary for us to do to obtain the increase?

Mr. Baruch. Those suggestions are referred to us daily; we have made every move possible to increase pig-iron capacity. It has been a matter of fuel and transportation; all of those things have occurred to us, and, no doubt, have occurred to you, because you have perhaps made a more intensive study of the situation. We don't approach this subject any different from any one of you; I realize this is a mutual problem and we have to look to you to help us, and we don't take from the producer of steel a market of steel. We don't want to take from the consumer of steel his ability to use it; but it wouldn't be well to have this production of steel lie around for no purpose. We want suggestion from you as to how we are going to meet the problem. Here is our problem: We have been trying to get a study along the lines that have occurred to you: "Will this steel be needed at the time it was ordered?" We have taken it up when the matters come up for priority and thrashed out there, and the users of the steel have to appear before Judge Parker to prove that they would be able to use it at that time. We do not want it to lie around the yards and the concerns close down. On the other hand, if there is a surplus, we want the manufacturers other than the essential war-need manufacturers to use it in such a manner that would be most helpful to the Government.

EXHIBIT NO. 1275

MEETING OF THE PRICE-FIXING COMMITTEE OF THE WAR INDUSTRIES BOARD HELD THURSDAY, MAY 9TH, AT 2:00 P.M., ROOM 52, C. N. D. BUILDING

Present: Mr. R. S. Brookings, *chairman;* Mr. Hugh Frayne, Dr. F. W. Taussig, Mr. H. P. Ingels, *acting secretary;* also Mr. Wooster, Federal Trade Commission; Mr. N. G. Chambers, Federal Trade Commission; Mr. J. E. Riddell, U.S. Tariff Commission; Mr. Pope Yeatman, nonferrous division; Also Mr. A. V. Davis, president of the Aluminum Company of America.

Aluminum—Fixing of maximum price.—Mr. Davis, president of the Aluminum Company of America explained to the committee the increased production costs. After considering the information submitted by Mr. Davis and figures submitted by the Federal Trade Commission it was decided to fix a maximum price of thirty-three (33¢) cents per pound for pig aluminum fob the various plants of the Aluminum Company of America. This price to be effective on June 1st and subject to revision on (Mr. Davis stated that he would personally prefer to have the price effective for the following three months but asked that he be given time to discuss this with his sales department. This request was granted).

Verbatim copy of the discussion attached hereto and made a part of these minutes.

Meeting adjourned at 4:00 p. m.

(Signed) H. P. INGELS, *Acting Secretary.*

MEETING OF THE PRICE FIXING COMMITTEE TO FIX THE PRICE OF ALUMINUM FOR THE NEXT FOUR (BEGINNING JUNE 1) MAY 9, 1918. 2:00 P.M.

Present: Mr. R. L. Brookings, *presiding;* Mr. Pope Yeatman; Mr. Frayne; Mr. Taussig; Mr. M. Wooster; Mr. J. C. Riddell, U. S. Tariff Commission; Mr. N. G. Chambers, Federal Trade Commission; also representing the industry, Mr. Davis, president of the Aluminum Company of America.

Mr. BROOKINGS. I want to ask a question. I see figures here for 1918 production. Does that include the new operation, the new development, you have in Tennessee?

Mr. DAVIS. It includes that portion of the new development in Tennessee which is now in operation.

Mr. BROOKINGS. Is the whole thing in operation now?

Mr. DAVIS. No, there is about 40,000 horsepower that will be in operation next year.

Mr. BROOKINGS. That only includes what is in operation now?

Mr. DAVIS. Yes.

Mr. BROOKINGS. I notice you have made some mention of your $20,000,000.00 plant; that takes in the other plant as well?

Mr. DAVIS. A part of the $20,000,000.00 is made up of this Tennessee plant which is coming through now.

Mr. BROOKINGS. It is in your $20,000,000.00 estimate?

Mr. DAVIS. Oh, no, it is the part that is actually working now.

Mr. BROOKINGS. That is what I wanted to know.

Mr. DAVIS. That $20,000,000.00 comprises not only this plant in Tennessee, which is some $2,000,000.00 or $3,000,000.00——

Mr. BROOKINGS. Gentlemen, we might as well get to work on this and I will give you a sketch of our former meeting. I think most of you were not present when we fixed the price some months ago. It was before the price-fixing committee was established. As I understand, the situation is this: We had before us at that time cost sheets furnished by the Federal Trade Commission, and we have had nothing since. You now have further information. These costs were made up on a basis of operation for the first six months of last year.

Mr. WOOSTER. 1916 and 1917. The first six months of 1917 compared with 1916.

Mr. BROOKINGS. The latest were the first six months of last year. According to these cost sheets, without going into the detail of it, this aluminum, of course, is made from bauxite, which is a raw material that comes from Arkansas, and they give every facility of production. A pound would cost at that time 15$^{23}/_{100}$ cents.

Mr. DAVIS. In your communication you call attention to the fact that it did not include resmelting, but looking into the details, it does. It mentions especially the items that go into the resmelting and go into the ingots, something like $21.00 a ton was allowed for that.

Mr. Wooster. The pig ore, you know, resmelted only was fourteen and some odd cents.

Mr. Brookings. This seems to have been a product that drifted along for a period of time, just before the war, 1914–15, from 18 to 20 cents a pound, and then as the demand grew, it ran up very rapidly, as high as 60 cents a pound, or something like that. Then it dropped back again to something like 40 odd cents a pound. The details are here. When we fixed this price, Prcffesor Taussig, we took into consideration a number of things. Mr. Davis raised the question as to what the Allies were now paying; what Great Britain was paying Canada; what France was paying to some other countries—Norway and Sweden, where this was being produced. After arguing the matter for some length, we fixed the price at 32 cents, which seemed to be fair and seemed to offer Mr. Davis and his people an opportunity to make a fair profit, a liberal profit. We recognized the fact, however, that there was more or less a monopoly, and we felt that he met us not in the spirit of a monopolizer at all, but a good American citizen who wanted to be a patriotic citizen; in fact, he had shown that disposition in the price he made the Government, and the supplies he had furnished the Government, and we recognized it when we adopted that price. We felt, after hearing all Mr. Davis had to say about it, and taking into consideration the probable increase as raises were going up, and we fixed the price at 32 cents. You have been increasing your output. Have you received a statement at all from the Government as to their needs this year, or ours and the Allies'?

Mr. Davies. I never received any comprehensive statement. We are supplying practically our entire output for the United States Government and the Allies.

Mr. Brookings. I wonder whether or not there was much, if any, demand outside?

Mr. Davis. There is quite a demand, but we are treating it as diplomatically as possible. Up to date we have kept the industry as——

Mr. Brookings. When you speak of practically all your output going to the Government, does that include much, if any, finished metal stuff?

Mr. Davis. It includes a good many canteens, but the tonnage, after all, does not run up to much.

Mr. Brookings. Includes all that?

Mr. Davis. Yes.

Mr. Brookings. Which isn't stuff that you ohly produce yourself, but stuff your customers produce?

Mr. Davis. Yes.

Mr. Brookings. Now, we have a letter here. I do not know as this ought to be read. It is a communication from Mr. Davis here, addressed to Mr. Yeatman. Mr. Davis calls attention to the fact that the cost of producing this has been growing; and he also calls attention to the fact that the increased capacity has involved them in an investment of considerable increased capital, something like $27,000,000. That was, of course, in process all last year.

Mr. Davis. No; no. What I said, or tried to say, was that we have now still to pay, in order to complete these plants, which are now under process, $20,000,000, which we must pay in order to complete these plants.

Mr. Wooster. Further increase of capital?

Mr. Davis. Yes.

Mr. Brookings. Of course that is not our problem. Our problem is to determine just what, if any, conditions are nivolved in the extension of these.

Mr. Yeatman. How long did we fix the other price for?

Mr. Brookings. Little over three months.

Mr. Yeatman. How long is it proposed to fix it now?

Mr. Davis. I might say we are a monopoly. I suppose it has always been our aim to foster this industry. We started in this industry many years ago, making 30 pounds a day; we have built it up and we consider ourselves, with some pride, the father as well as creator of this industry; it has always been our conception that the stability of price was the basis on which to build the industry—I mean the consuming industry; not the making of the aluminum itself. You made a statement that the price had gradually risen to 60 cents a pound, and that is not a fact inasmuch as the Aluminum Company of America is concerned; we have always held our price down to 38 cents a pound. The customers that would buy it at 38 cents would take advantage of the willingness to pay higher prices, but so far as we are concerned, we stuck to that price in order to stabilize the market. If the price could be put on what seems to us a proper basis—of course the more we could stabilize the market by letting the people know that it was not to be taken up again soon—I think the consumer would like it. If they knew it was to be left in our hands they would know there was not to be a sudden upheaval. To answer your question concretely, of course, from our standpoint if the price was fixed too low, we would not want it fixed for too long.

Mr. Brookings. We will get around very quickly to the question of price. Now, I can just call out the essentials of this letter. Professor Taussig, he cites in here a request that we restore the original base price of 38 cents. [Mr. Brookings continues to point out to Mr. Taussig the essentials of Mr. Davis' letter.]

Mr. Davis. Could I just say a word? You see on this question of costs, we all know there is no such real thing as cost. All we can do in ascertaining costs is to group together a certain number of expenditures and divide them by a given output. As a matter of fact, when the Federal Trade Commission sent a group of intelligent auditors to our plant, they grouped together a set of expenditures and arrived at a price even higher than 15½ cents. Then that did not seem to suit, so they hired an auditor to come to our plant who went over the same set of expenditures. They rejected certain expenditures and arrived at a price of 15¼ cents, and that was the price when these people left our plant, that was the figure. I have never been informed as to what the final figure was. I want to explain that I based my statement on what was the figure when they left our plant, all of which goes to show that the matter of ascertaining the cost is largely a matter of personal opinion after all, for now we have had three costs.

Mr. Wooster. I do not agree with you at all. The question of certain people getting certain figures—those people collected costs and collected figures, as to how they should be accumulated; they brought them back and the Federal Trade Commission made one report only, and that report showed a definite figure which was a definite cost.

Mr. Davis. I perhaps expressed myself rather badly. I did not mean to say at all that the Federal Trade Commission had put up several costs, I meant to say there is a sort of expenditure that is difficult to say whether usual or unusual—after all, you have to get back to your expenditures of whatsoever nature they may be.

Mr. Wooster. Those are the items of costs. You were saying that you could not tell what the cost is because you can only base it upon expenditures that are costs.

Mr. Brookings. They are spending money for property which, of course, has nothing to do with the cost of the goods. Mr. Davis has also fixed, however, if they were very enterprising and wanted to double their products, somebody ought to be equally enterprising and get ahead and double it. You have been functionally successful; of course you have not paid any dividends because it is more profitable to put your dividends into developing the business. I will take your letter and analyze it as we go. [Goes through letter and analyzes the costs.]

Mr. Taussig. Bauxite is selling to how many at that price?

Mr. Davis. The principal buyers of bauxite, aside from ourselves, are the manufacturers of artificial abrasives and different chemical companies making aluminum sulphate.

Dr. Taussig. What is the proportion of your consumption of bauxite as compared with the others?

Mr. Davis. I suppose we use perhaps 66⅔ per cent of the total consumption of the country; we produce practically all there is produced in this country.

Mr. Wooster. You fixed the price on it? Do you say it is selling at $10.00 a pound, that is your price, and you practically make the price on bauxite throughout the United States?

Mr. Davis. That never has been the case, because the French people have always fixed the price on bauxite.

Mr. Wooster. What is the duty?

Mr. Taussig. It is free.

Mr. Brookings. That same question came up before and we simply sidetracked it and said, we are treating your investment and capital as one, and your return on your capital, and to be consistent, inasmuch as you had fixed the price under which bauxite is sold, we must take the cost to you, and the cost to you is what we have given you credit for.

Mr. Davis. Our contention in that is a little different, I think, from what you put it. As a matter of fact 25 or 30 years ago—we having practically invented the use of bauxite for aluminum—bauxite was nothing but dust with no value, but we went to our concern, and of course we did not realize how large this industry was going to grow, and we bought for two or three hundred thousand dollars some bauxite land. We have spent nearly $2,000,000 for bauxite, within the last two years, in cash. My point is, Mr. Brookings, that because we were fortunate enough to buy this bauxite 30 years ago at a cheap price that anybody should say that aluminum can be made with bauxite at 25 cents a ton, for it could not, unless somebody should take our place.

Mr. Wooster. The fact is that it is made for that. It costs you $.50c I think.

Mr. Davis. We are not denying that we were fortunate in getting this bauxite thirty years ago at this price.

Mr. Brookings. We admit that. While we discuss it, we are always open to any arguments, although we go very slow on valuing large deposits of raw material because a market condition might shove this up. Now there may be a large war demand, but if the war shut off and it would drop down again, your bauxite price would be gone.

Mr. Davis. If these gentlemen were going to take bauxite, they ought to take our bauxite from the time we began up-to-date. But they said, "now what you have bought recently at these high figures, that is a reserve, the only thing that fixes your costs is what you bought thirty years ago." I don't think that is fair. I am sorry that I wrote this letter; I prepared just a few notes which I intended to talk about, I didn't put this up as a bookkeeping argument. I showed it to Mr. Yeatman and it was suggested that I throw it into the form of a letter. I don't want to be responsible only to this extent.

Mr. Brookings. We won't hold you responsible.

Mr. Davis. Now, what I object to more than anything else is the failure to recognize the difference between a fair price for water power and the operating cost of water-power plants. It is just as I say in that letter. If we spend $5,000,000.00 to build a canal, we admit that the water runs down that canal without any operating cost, but in some way or other, that $5,000,000.00 ought to appear in the cost, because you can't say that water runs down hill without cost.

Mr. Wooster. It does appear in the cost. There is depreciation allowed on that. Eventually you get your money back that you spent.

Mr. Brookings. It is part of your investment that profits should be paid on.

Mr. Davis. You take the depreciation on a canal at two percent, it hardly makes a profitable investment.

Mr. Brookings. You might put $5,000,000 in the canal or you might put $1,000,000 in the canal and if there was an uplift of water, that would have some operating expense connected with it. In other words, if you got a fair investment for your return, in the final fixing of the price, it would absorb the use of the canal whether there is any operating expense or not. All of these things we recognize as being perfectly proper as an argument on one side.

Mr. Davis. If you will look at my first paragraph, I think you will say that I approach it with some reluctance. [Mr. Brookings continues to read letter.]

Mr. Brookings. I might say that I agree with you there. The only difference is that I would not add that to your cost, I would say to take the cost and we will allow you the six percent on this large investment and we will fix the price on aluminum based upon that. You would get a lower price than you do today.

Mr. Davis. If we only had the operating expenses plus our interest, we would.

Mr. Brookings. I think if I were you, I would leave that clause out.

Mr. Davis. I think that my argument was perhaps not very well expressed, but what I attempted to do was to express my inherent idea. My idea is that a man that has a million dollars and puts it into the bank or into a mortgage at six percent, he is getting six percent. If he puts in into a business that is subject to hazards and to which he has to devote his personal time, he does not get anything on his money.

Mr. Brookings. It was intended as an expression of what was a fair profit on your investment, it would make a reduction on the price of aluminum.

Mr. Davis. If we were satisfied with six percent, we would get mortgages.

Mr. Chambers. I was wondering how much of this recent construction and investment was due to the competition that may or may not come up after the expiration of the Hall patents. Is it a fact, Mr. Davis, that when the Hall patents expire, are other companies starting up in the South and Middle West?

Mr. Davis. The Hall patents expired in 1886 plus 17 years, 1903. They have expired a long while ago and during the time since these patents have expired, there has only been one company that ever attempted to make aluminum in this country. It was our French friends.

Mr. Wooster. Didn't you have other basis patents issued you in 1900?

Mr. Davis. No, we have had no patent protection now for several years.

Mr. Brookings. Well, that seems to be all there is here. There is reference made again to the foreign markets to the fact that Great Britain is still buying in Canada at the price that we had fixed, $.32c and that France still pays a very much higher price to concerns that they have made some arrangements with in the early part of the war, and you remember Mr. Davis, that in the opinion we expressed at that time was simply this, that so far as our Allies are concerned, they are our partners in the War and we know of no way in discriminating between them and ourselves. If their needs in the early part of the war were such as to force them to the development of expensive and artificial means and had to pay a high price for it, that added to their misfortunes. They are fighting our war and they have paid a much higher price than we can pay. It has been our attitude always that anything that we had, we insisted that they have it at the price that it cost us.

Mr. Davis. I really feel that that subject ought not really to be dismissed quite so simply. As a matter of fact, European nations have not been driven to the acquisition of aluminum in any expensive manner. They are making aluminum today in the same manner and cheaper than we are making it, and the position in France is that the French Government pays our competitor $.60c a pound. We are compelled, under that arrangement, to sell to our competitor at $.32c a pound. The French Government does not get it at $.32c. Our French competitor gets it at $.32c and then he turns around and sells it at $.60c pound, it is a joke. They think we are asleep over here. I don't think that it is either fair or patriotic.

Mr. Brookings. We have assumed that the French Government was getting the advantage of this. You say you sell to a competitor, is it because we cannot sell direct to the French Government? They are represented here, why is it the French Government isn't buying this direct as it is everything else?

Mr. Davis. I cannot answer the question as to why, but I can explain the procedure which will perhaps answer the question. This concern, which is an incorporated pool, it originally started as a pool, they naturally are the dominating factor in France, they are the only aluminum producers in France and the French Government has made an arrangement whereby this company gathers together and acquires all of the aluminum in France even though the French Government does the actual negotiating themselves.

Mr. Brookings. Who do you bill it to?

Mr. Davis. I don't know, but not to that company.

Mr. Brookings. To the French Government?

Mr. Davis. To the French Government. They book it through. There is no doubt as to this.

Mr. Brookings. We are not going to follow it. I got the impression from Mr. Yeatman that you were billing it direct to a dealer and the dealer in turn was billing it to the French Government. We ought to stop it in that case. Having placed the French Government on that measure of obligation, having shown good faith with them, we told them they could have anything they wanted in this country—if they were buying it from a dealer and we were compelling the dealer to pay that price and the dealers are charging a profit, that would be an entirely different proposition. We would say, "Now if we are giving this to the Government, the Government must buy it from you people and must pay this price for it." If they choose to give it away afterwards, if they have some sort of an arrangement, that is their funeral.

Mr. Davis. I agree, it is not your funeral. It is the Aluminum Company of America's funeral. These are the very people who started in to hurt our business. They have been the most aggressive competitors that we have had. We have to look forward to conditions after the war—we are looking at that. Our competitors are going to take this same money and come back to us.

Mr. Brookings. We will find out about that. Mr. Yeatman, let us take it up with the French people here. They are spending our money for this and they are spending it under our supervision here. Every dollar the French Government spends in this country is spent by consultation with us daily here and under supervision of ourselves, and is distinctly stated only for the French Government, and as a rule for war needs. Now we don't propose that that should redound to the disadvantage of our manufacturers. We never have expected that, and if they were agreeing to take their stuff at $.60¢ from a French concern and you were sellng to that concern at $.32¢, we think it would require an investigation.

Mr. Yeatman. You think that the distribution is made by that French concern?

Mr. Davis. Yes.

Mr. Yeatman. It is distributed by them?

Mr. Davis. They are the aluminum agents.

Mr. Brookings. Do you know that they make the difference between this $.32¢ price and the distributing price?

Mr. Davis. I know they think they do. I have always had an idea that this thing would not stand the light of day and that they would be flipped out of it before they got through. But there is no question but that they think today they are making it.

Mr. BROOKINGS. That is a matter of investigation.

Mr. YEATMAN. We will take that up and find out about it.

Mr. DAVIS. So long as we feel that we get a fair price, the other men can do as they please.

Mr. BROOKINGS. We object to it because it throws some responsibility on our own people. What else is to be said about this? Mr. Yeatman, have you given much, if any, thought to this? We look to you to analyze these things for us and to give us the benefit of your judgment about this. Just dealing in rough figures, I should say if these people make 125 or 133 million pounds of this stuff this year, and they had approximately 130 million dollars, we will say, invested, and they make 12 cents a pound, it would be something like fifteen or sixteen million dollars, and that, of course, would be something like 12½ or 13% on their increased capital of $120,000,000 or $130,000,000—whatever it is. According to their original cost, they would make something like 17 cents. If there has been some little advance in labor on actual items of production so that their costs would aggregate two or three or four cents a pound more, there would still be at this price what would seem to be a large margin of profit, 12 to 13 or 14 cents a pound. Now Mr. Davis makes the statement in a general way, only he makes certain suggestions here. I have a distinct recollection that Mr. Davis thought 32 cents was too low before, while you thought it was entirely too high and we ought to have a lower price. We want always to do the fair thing, and we know Mr. Davis would not want us to do anything more. I have no doubt whatever that whatever we determine is fair he will submit to it just as gracefully as before.

Mr. DAVIS. I not only said it, but I wrote it.

Mr. BROOKINGS. Having proved by your actions that you would be that way, what do you think under the circumstances that we ought to do?

Mr. TAUSSIG. May I ask a question? Mr. Davis, you speak of your total investments of March 1918, as one-hundred-six-odd-million dollars, does it remain at that figure on your books stationary for some time?

Mr. DAVIS. No, no; that grows as we keep putting the money back.

Mr. TAUSSIG. How do your present profits during the war, and your presumable profits at the price stated, compare with your pre-war profits?

Mr. DAVIS. I would say they are substantially the same per pound, they are a little more.

Mr. BROOKINGS. We have those figures here.

Mr. TAUSSIG. Not so much per pound.

Mr. DAVIS. We have averaged about 17% on our capital invested, that is about what averaged last year.

Mr. TAUSSIG. As earnings, what you return for income-tax purposes?

Mr. DAVIS. Yes. I realize that everybody who comes in here tells you that this business is peculiar and Mr. Riddell queried whether we were not building up ourselves against possible competition. We have never taken that attitude; we have always assumed that we are the aluminum people. We have occupied it so long that we have rather grown into it. We have felt it our duty to provide this country with aluminum that it requires. Many a time we would have preferred to pay regular dividends and to handle it in that way more profitably and agreeably. This industry is growing very rapidly. I believe next year the war will require a great deal more aluminum.

Mr. YEATMAN. Many will tell you that every indication is to that effect. It is just in that kind of business you have got to make money, if you are going to keep pace with its growth; that is all there is to it. The only thing we have ever learned is to make money, save it and put it back into the business.

Mr. BROOKINGS. Make more; all the men that I know who have made a large amount of money have done it that way.

Mr. TAUSSIG. We won't criticize that.

Col. YOUNG. You say you have made 17% on your capital this past year and 17% prior to the war. This 17% that you made during the war, is that net after deducting the income tax?

Mr. DAVIS. Yes, last year.

Col. YOUNG. So that perhaps you might be making 25%.

Mr. TAUSSIG. I would ask you whether 25% was the earnings that you returned?

Mr. DAVIS. I beg your pardon, I thought you said "retained."

Mr. TAUSSIG. No; on which you made a return. No, to go back, I take it, with wastes added to surplus of profit, that 21% is your net figure for purpose of income tax.

Mr. Davis. We have averaged right through our career about 17%, and we paid last year 2% on capital invested, 2% on dividends on the capital invested.

Mr. Brookings. You are incorporated for $20,000,000, and you pay——

Mr. Davis. If we make 17% and put back 15%, that has been our history, and if you take and build that right up, you will land just where we landed. If you make 17% a year, keep out 2%, and turn in 15%, that is a replica. That is not a normal profit.

Mr. Wooster. Seventeen per cent is on capital and surplus, accumulated capital and surplus?

Mr. Davis. Yes. If you cannot earn on what you put back, you better take it out.

Mr. Brookings. Mr. Yeatman, in order to enable these gentlemen to maintain a monopoly, I think it would be a very healthy thing to keep the price down. Don't you? Keep these other fellows from getting in; that is the best way to promote a monopoly. What do you think about a 25-cent price? That was your old price.

Mr. Yeatman. I think, due to the fact that costs are going up somewhat; due also to the fact that they are increasing their plants, to meet the increased needs of the Government, that we ought to leave the price as it is. I would, however, recommend a little change in what we call the differentials; that is, the price for the different kinds of sheet. The reason I suggest that is because I believe that a good many of the competitors of this company, who are in the rolling business, find considerable difficulty in making what might be called a reasonable profit.

Mr. Brookings. They buy the ingot of these people and put it into sheet metal?

Mr. Yeatman. Yes. We have to treat them all the same way. If we have one differential for the Aluminum Company of America, or its subsidiaries, we must naturally have the same differential for the others, and I would suggest, for your consideration the continuance of this price, but a slight raise in the price of the sheet, more for the other companies than for the interests of the Aluminum Company of America, so that it will help him also.

Mr. Brookings. How much of a raise?

Mr. Yeatman. A cent a pound.

Mr. Davis. Practically 90 percent of the material is sold on an 8¢ differential, so that the suggestion—you see that always strikes me as a rather big thing. Here comes the Aluminum Company of America and we tell you what it costs. As soon as somebody else tries it they have to have more money. I don't think you ought to give us 32¢; you ought to give us 35¢. Why not show us the same consideration you are giving the others? Of course, I will take 32¢—I will take anything. I am not going to get the reputation of being a profiteer. While I am here I am working for my company and my salary, and I am going to do what is consistent and right and fair. But the Aluminum Company is, we hope, the most patriotic company in the country—that is the position we aim to occupy. When we brought this matter up before, you will recognize Mr. Yeatman, Mr. Baruch wanted us to go into this nitrate business and he rather intimated that if we would there would be some consideration given to that. We have gone into it. Now that we are in it we are committed to it, you see, and our costs have gone up 3¢ a pound. It really seems to me that the minimum that you could do would be to give us the increase in the cost of manufacturing, especially as the cost of manufacturing is going up right straight along. We have 50,000 men. They get about $3.00 a day; that is $45,000,000 a year. Ten percent increase is $4,500,000. If anybody would guarantee us against a ten percent increase for three months we would snap them up. There is no doubt that wages are going up.

Mr. Brookings. They can't go very far in 90 days.

Mr. Davis. I would if it were possible, like to be able to get this settled for longer than 90 days, but I am quite content with 90 days.

Mr. Yeatman. It would stabilize it if you could make it six months.

Mr. Brookings. As far as I am concerned personally I would just as soon make it six months as 90 days. There is not likely to be any condition that would lower the price.

Mr. Davis. The job I expect to do tomorrow is to meet a man from your city—I have forgotten his name. We have ordered from him 30,000 tons of sulphuric acid. He wrote me a letter the other day that it cost him $12.30. We could not let that man lose. We have to pay him at least $10 a ton. There is $300,000. You haven't any idea how fast these amounts run up. So in looking forward to the future I think if we could only ask for the increase that has already been suggested, 3¢ a pound, we certainly are not asking very much, but we take all the risk of the future out of it.

Mr. Brookings. When will you commence to produce nitrate? Are you producing any now?

Mr. Davis. No; we are not. If we have good luck as to labor, transportation, etc., we ought to get going in October or November. We are very unfortunate that we are located there in Tennessee right between two points; that makes it pretty busy, I mean. We have a process that we interested ourselves in many years ago, five or six years ago. We have spent a lot of money, a lot of time trying to perfect it. Dr. Taussig no doubt knows about it. It is a very ingenious process and it works out fine in the laboratory. It is a question whether we can get this to working on a large scale and if we can it will give us a nice profit. This is quite a different process from any, and it is very ingenious, and I hope for our sake, as well as that of the Government, it is going to be done. It is costing us a lot of money to do it. We really did not want to do it. I think Mr. Yeatman will carry me out on that. We feel that we ought to do it, from a patriotic standpoint.

Dr. Taussig. In figuring out increases in current operating expenses you have not made any endeavor to cut it down to fractions of cents, but you say it is perfectly obvious that expenses are going up.

Mr. Davis. I would say this: That they have gone up 3¢ in twelve months. Perhaps you might assume that we will keep on at that rate.

Mr. Brookings. That is in twelve months?

Mr. Davis. Yes. Despite any difference in opinion between the Federal Trade Commission and ourselves, we are at least quite capable of following in their footsteps, and although they took this cost in a different manner altogether from what we do, yet we do arrive at substantially the same results. We took it just as they did.

Mr. Wooster. Your first contention about the price was based upon a wrong understanding. I wonder if your contention of this 3¢ is made upon the same basis.

Mr. Davis. The radical departure of what you might call your method and ours——

Mr. Brookings. Your costs as shown for 1915, 1916, 1917 show a gain of these Federal Trade Commission costs. You say you think it has been a progressive——

Mr. Davis. There is no question about the 3¢ in the last twelve months.

Mr. Brookings. Mr. Davis, suppose you let us discuss this a few minutes.

Mr. Yeatman. What do you think about the necessity of fixing a maximum price on scrap?

Mr. Davis. I don't know that that is a very essential matter. Scrap varies—you mean now if ingot made from scrap——

Mr. Yeatman. The scrap men are very anxious to have the price fixed on scrap.

Mr. Davis. I would say that—you want to allow for profit to the scrap dealers? I should like to give that a little thought. But I think 3¢ a pound——

Mr. Yeatman. Would it be an advantage to the business to fix a maximum price for scrap rather than let it go wild?

Mr. Davis. It would be an advantage to the business not to let it go wild, but what I would call going wild would be to go above the ingot price. No one can sell, melted or unmelted, at a fixed price, so that if you compel the dealers to sell at 36¢ or 38¢, I think it is rather immaterial.

Mr. Brookings. If the scrap is not disturbing the general trade under the present conditions, we would not want to bother with it, would we?

Mr. Yeatman. They seem to think it is disturbing it, and it is hard to keep it in limits. What percent of the ingot aluminum is in the form of remelted scraps?

Mr. Davis. You can answer it this way, that no aluminum disappears. It comes back one time or another.

Dr. Taussig. It comes back at a different rate like copper, doesn't it?

Mr. Davis. Speaking generally, Professor Taussig, it all depends upon the market? Just as soon as money begins to tighten up the amount of scrap that is poured upon the market is increased. For instance, after a panic like 1908, I haven't any doubt but that after six months there were five pounds of scrap sold to one pound of virgin. That is very abnormal.

Mr. Brookings. When the price is very high they gather it up and bring it in.

Mr. Davis. No; that is not the idea. When a man needs money, that is what puts scrap on the market.

Mr. Yeatman. What did you say it was now, 25 percent?

Mr. DAVIS. More than that. I would say, perhaps there is offered right along 50%.

Mr. BROOKINGS. 50% of the total ingot is made of scrap?

Mr. DAVIS. No. If we made 100 million pounds of virgin aluminum and offered it on the market in the year 1918, the scrap dealer would gather up 50 million pounds of scrap and offer it in competition with the virgin.

Mr. BROOKINGS. It is a very serious part of the whole problem. It is in the hands of a few people? The major of control of those things depends upon how scattered it is—how many people are remelting it.

Mr. DAVIS. I suppose there are ten or twelve people who engage in it in a large way, and four or five hundred perhaps who deal in it in a small way.

Mr. YEATMAN. Ten or twelve principal ones.

Mr. BROOKINGS. We won't keep you waiting but a few minutes, Mr. Davis.

(Mr. Davis leaves room and returns at 3:45 p. m.)

Mr. BROOKINGS. I will tell you exactly what we have done after going over this. Not wishing to take advantage of your more than fair position, but still wanting to justify everything that we do—justify to ourselves, as well as to you—we have made up our minds to leave the price of ingots remain as it is; to leave it optional with you to fix it for 90 days or six months, and if for 90 days we will have the Federal Trade Commission get the increased cost fixed and all the additional information we can. We figure that in advancing this 12½ percent, advancing this other stuff, that that ought to take care of a good deal of advance in labor. Labor we find after going over the figures is not such a vitally important matter. If 90 percent is covered by this advance you will get $1,000,000 or more out of this.

Mr. DAVIS. I don't understand what you mean by 90 percent of our stuff.

Mr. BROOKINGS. I thought you said 90 percent.

Mr. DAVIS. Oh, no. I don't think twenty percent.

Mr. YEATMAN. I thought you said 90 percent.

Dr. TAUSSIG. How much of your ingot production do you sell outside?

Mr. DAVIS. We sell, I should say—I am guessing—about 80 percent to outsiders and 20 percent we work up into the sheets on which this differential would apply.

Dr. TAUSSIG. I got an entirely different impression. I assumed that a much larger part of your ingot production was made over by yourselves into sheets.

Mr. DAVIS. Oh, no.

Mr. BROOKINGS. That is what we thought you said. Then it is the people who manufacture this, who buy ingots from you, who make this stuff, who would be the largest beneficiaries in the change?

Mr. DAVIS. Yes; a very large portion of aluminum after it is sold by us never goes through the sheet form. A large portion of it is used in the form of castings where these differentials don't apply at all, or in other such ways. I honestly don't think that is called a fair proposition to us, Mr. Brookings.

Dr. TAUSSIG. Let me make sure that I understand. How much of the total proportion of ingots goes into the sheets manufactured by you or anybody else?

Mr. DAVIS. What other people do we cannot say, but let me just look it up. I think I can get a pretty fair idea.

Mr. YEATMAN. There is no fixed price on castings.

Dr. TAUSSIG. The castings vary so much we could not fix any differential on castings. Am I correct in that?

Mr. YEATMAN. We don't control that.

Mr. WOOSTER. They do not cast aluminum in light shapes, do they?

Mr. YEATMAN. In most all shapes.

Mr. WOOSTER. I thought they were only cast in heavy forms.

Mr. DAVIS. Twenty percent. I did'nt think I could come so close.

Mr. BROOKINGS. Frankly, Mr. Davis, we don't understand that. We wanted to give you something to take care of some of this advance in labor since March. We won't send you out again. We have reconsidered this and we have made up our minds to advance the price of ingots a pound, so that you will get something, making it 33¢ instead of 32¢, and still leave these differentials as they are, which you apparently get very little of; and to give you in addition to that—we want to be fair. While I told them at the time we fixed the 32¢ price—it was a battle royal—Judge Lovett and some of us thought that 30¢ was an awfully big price and we stood and worked on 30¢ for a long time. I don't know but I had that too much in my mind at that time. Whether you got too much then or not, it is perfectly evident that there has been or will be certainly some advanced costs in labor. While labor is a small part of your costs, as compared with some other things we deal with—we thought in giving you the differential we were giving you nine-tenths of a cent a pound, or 1¢ a pound on your product. We want to make it good and we will fix it at 33¢, and we hope you will be perfectly satisfied.

Mr. Davis. I told you before I would be satisfied. I am quite satisfied.

Mr. Brookings. We are glad to do it, because we feel that it is right.

Mr. Davis. How long to you want to make that for, three months or six months?

Mr. Brookings. What would you like?

Mr. Davis. Will you let me take my choice after talking with my sales department? As far as I am concerned, I would rather say three months, but I would rather talk with my sales department.

Mr. Brookings. How long was this previous price fixed for?

Mr. Yeatman. Until the first of June.

Mr. Brookings. That gives you time to consider it.

Mr. Davis. Yes.

(Adjourned at 4 o'clock.)

Exhibit No. 1276

Meeting of the Price-Fixing Committee with Representatives of the Nickel Men for the Purpose of Determining What Action is to be Taken in Regard to Nickel Used by the Government

May 20, 1918—11:20 a. m.

Present: Mr. Robert S. Brookings, presiding. Commander Hancock, U. S. N.; Dr. Taussig; Mr. Yeatman; Mr. W. W. Phelps, acting secretary; Dr. Haney of the Federal Trade Commission.

Also the following representing the nickel industry: Robert L. Hoguet, E. V. Goodwin, United States Nickel Co.; W. A. Bostwick, W. B. Lawson, International Nickel Co.

Mr. Brookings. I guess all of our people are here. Gentlemen, we have asked you to meet with us because, in the first place, I think you understand that the Price Fixing Committee, which was appointed some months ago by the President, is an administrative branch of the Government for the purpose of determining prices under certain conditions. Where it is so large as to create a scarcity of that product if there is any outside, or whether we take it practically all, it is placed in the category of Government control of prices. In other words, we have been told by the President that when conditions assume that shape in any commodity, we should take up the whole question of the history of the industry, costs and prices and determine whether or not the prices that the Government and our Allies are paying, or if the public is using any portion, are fair prices. The Government feels that when the necessity of the war compels the absorbing of a very large proportion of any commodity, and therefore creates a scarcity for the industries consuming outside of war needs a small portion, that the problem of price becomes a governmental problem and this Board is expected to consult with the industries, call them in and tell them what we are thinking about, consulting and advising with them as to what is fair and right. The Government never places itself in a position—and wishes to do everything that is fair and right. Because our Government is directly or indirectly using a large proportion—80 or 90 percent—of the nickel that is sold in this country, we called you here for the purpose of discussing the wisdom or practicability of legislating as to the fixing of a price.

All morning we have kept you waiting because the history of the industry's costs at different periods of time have not been available until this morning and we had to look them over and discuss them before we saw you. We have not had time to do them justice really, but some of the Committee felt that so long as we brought you here we ought to explain to you why we brought you here, and ask you whether you have given any thought to the question of price and whether you have any figures of your own as to any additional cost of producing nickel during the past six months or a year. Of coure we know that our war needs have enormously increased the consumption of nickel. The Navy program and the Army program have repuired nickel for alloying certain steel and have doubled your production and have, of course, enormously increased your profits. We are not in an attitude of envying you your profits; we are more in the attitude of justifying them if we can. That is the way we approach these things.

We thought if you had anything to say—we are not to consider it further and we do not wish you to feel that we will bring you back again if there is nothing to bring you for—but while you are here if you have any information you can give us regarding the nature of your business and its growth, or any apology you wish to make for the large amount of money you have been making, we would be very glad to have you give it to us and we will take the matter up a little later and notify you of any conclusions that we come to if we feel that action of any kind ought to be taken. I would like to ask one question in connection with some figures that are given here, the profits that have been given. Of course, we do not discuss the profits as to individual concerns, but the International Nickel Company's figures show the profits from 1910 to 1917; in one column the new profit and in the other column it says "common dividends." Now as to whether that means common stock dividends that cover the profits, practically all the profits except 196 which is differentiated and shows a cash dividend, a stock dividend—I want to ask whether the dividend shown in 1914 and 1917, are those cash dividends or stock dividends?

EXHIBIT NO. 1277

MEETING OF THE PRICE-FIXING COMMITTEE OF THE WAR INDUSTRIES BOARD, APR. 3 AT 10:50 A.M., IN ROOM 52, C.N.D. BUILDING

Present: Mr. Brookings, chairman; Mr. Baruch; Mr. Taussig; Dr. Garfield; Mr. Frayne; Paymaster Hancock; Colonel Young; Mr. Harris; Mr. H. P. Ingels, acting secretary; also Dr. Walker, of the Federal Trade Commission; also the following representatives of the smelting and refining industry; Mr. Daniel Guggenheim, president of American Smelting & Refining Co.; Senator Simon Guggenheim, chairman of American Smelting & Refining Co.; Mr. Edward Brush, vice president of American Smelting & Refining Co.; Mr. E. L. Newhouse, vice president of American Smelting & Refining Co.; Mr. Joseph Clendenin, vice president of American Smelting & Refining Co.; Mr. C. J. Keely, vice president, Anaconda Copper Mining Company; Mr. C. W. Nichols, president, Nichols Copper Company; Mr. J. A. Church, Jr., secretary Nichols Copper Company; Mr. F. W. Robertson, vice president, U.S. Smelting, Refining & Mining Co.

Copper—Smelting and refining.—This meeting was called at the request of the representatives of the copper smelting industry to consider certain representations which they wished to make to the committee regarding the inability of the smelters to make a fair and reasonable profit under the existing conditions, viz: Due to the large increase in operating costs they find themselves in a position where they are unable to continue operating under certain long-time contracts without losing money. After considering the information submitted by the various representatives the following conclusion was reached:

First. That it was evident that the Government in fixing prices of copper had dealt only with the producing and refining interests as a whole and not separately, and had no knowledge of the nature of the contracts existing between the producer and the smelting and refining interests and were, therefore, in no way responsible for the profitable or unprofitable nature of contracts existing between them.

Second. That growing out of the nature of these long-time contracts, a condition exists today which seems to place upon the smelting and refining interests a burden which should be relieved by a readjustment of said contracts.

Third. The Government recognizes that, in the interests of production, it should use its good offices in bringing about a conference between the producing and the smelting and refining interests, hoping that, with such information as it expects to get regarding costs of smelting and refining, to be able to submit to the said interested parties recommendations that will be fair and equitable to both. To this end a meeting will be called for a joint hearing of all producers, smelters, and refiners of copper to be held Wednesday, May 1st, at the War Industries Board room at 10:30 o'clock a.m.

Verbatim copy of the discussion is filed herewith and made a part of the minutes of this meeting.

The meeting adjourned at 1:30 p.m.

(Signed) H. P. INGELS, *Acting Secretary.*

MEETING OF THE PRICE-FIXING COMMITTEE, APRIL 3RD, 1918, 10:50 A.M.,—SUBJECT: REFINING COSTS

Present: Mr. Brookings, chairman; Dr. Taussig; Mr. Harris; Col. Young; Mr. Hancock; Mr. Frayne; Mr. Baruch; Mr. Haney; Mr. Walker; also Daniel Guggenheim, pres., Senator Simon Guggenheim, Edward Brush, vice pres.; E. L. Newhouse, vice pres.; Joseph Clendenin, vice pres., of American Smelting & Refining Co.; C. J. Kelley, vice pres., Anaconda Copper Mfg. Co.; C. W. Nichols, pres., J. A. Church, secy., Nichols Copper Co.; F. W. Robertson, vice pres., U.S. Smelting, Refining & Mining Co.

Mr. BROOKINGS. Mr. Clendenin, we were asked to meet you gentlemen.

Mr. CLENDENIN. Mr. Kelley will speak first.

Mr. KELLEY. Mr. Chairman, I have been asked by the copper refiners present, who represent, I think, practically the entire idnustry or at least represent out of the total refining capacity of 2¾ billion pounds per annum, all except possibly 100,000,000 pounds, to make a general statement in regard to the position in which we find ourselves at the present time, and then I will devote myself to a brief survey of the position in which the particular industry with which I am connected finds itself at the present time. In the first place, we wish to relieve from your minds the idea that we have come here for the purpose of profiteering. We have come here for a good purpose. It is the urgent necessity of our country and its Allies for a very large production of copper. I ask you to consider the situation in which the copper refiners are placed. We ask you to help us work out some plan, whereby relief may be obtained from a condition which manifestly cannot continue. We wish to disassociate ourselves as refiners completely from the production end of the business. Perhaps all of you are not familiar with the industry as far as copper refining is concerned. Experience has taught that refining can be more economically, more scientifically and better done, when the aggregate production of a great many mines is brought together for the purpose of handling the output. It has, therefore, become quite correct for the miner, the producer, whether or not he controls his smeltering facilities, to turn the product of a smelter, what we call blister copper, to the refiner for the last stage in the operation from whence comes the electrolytic or refined copper. The blister is not suited physically for the requirements of the Government. Now, gentlemen, with that general statement, I wish to impress upon you the fact that the copper refining is not as a rule a producing industry. In most instances the refiner is completely separated from the producer and in some instances, so far as refining is concerned, that connection does not control his refining business. The second thing, to which I wish to call your attention is the enormous demand that has been put upon the copper refiners during the last few years. The growth of the copper business, the aggregation of the amount of money it has been necessary to invest and the amount of consideration that has been put forth in the copper business is scarcely realizable by those, who have not a familiarity with the business. The refining capacity in 1914 was 1,700,000,000 pounds. In 1917 it had been increased to 2,774,000,000 pounds; actual copper refined according to the figures of the geological survey for last year was 2,352,000,000 lbs. Notwithstanding the very serious labor disturbances in the copper business last year, 1917 witnessed the greatest production of copper that has ever been made in the history of the business. Refiners have increased their capacity something like 1,000,000,000 pounds. Now, we have been obliged to keep increasing our capacity to meet the enormous increase in production. Copper produce is valueless as a commodity entering into our necessities unless it is refined. On account of the conditions, to which I called your attention in the beginning, the necessity for a very large investment and the necessity for getting large amounts of copper for treatment, it had become the course of the trade because competition in this business was very keen, to insist upon long-term contracts in order that the investment made be adequately predicative. Therefore, we are operating for the most part under contracts entered into during the pre-war period with the producers and which still have in a great many cases a very considerable term to run.

Dr. GARFIELD. About what proportions are these long-term contracts to the whole?

Mr. KELLEY. Speaking for ourselves, about 200,000,000 out of 300,000,000 lbs. are long-term contracts now.

Dr. GARFIELD. Are these formally executed contracts?

Mr. KELLEY. They are.

Mr. BROOKINGS. How do they run from now?

Mr. Kelley. Up to 10 years from now. It was usual to take not less than 5-year contracts. The enormous production came since 1909. It was during 1909 and 1915 that a great many producers came into the field and provision was made for their refining. They are straight-toll contracts. Another thing that grew up in the trade was the price per ton of copper refined. It is now $14 or $15 per ton. I think $15 is the maximum price paid now for refining.

Mr. Baruch. By, now, you mean higher over 1915?

Mr. Kelley. I mean they are now in effect and were made along in 1911, 1912, and 1913.

Mr. Baruch. Any contracts being made now?

Mr. Kelley. I know of only one made in the last six months.

Mr. Baruch. What was the price of that?

Mr. Kelley. Cost plus $5 per ton. It is our contract with the Greene-

Dr. Taussig. How is cost ascertained?

Mr. Kelley. Actual production costs. So much for a summary as to the conditions under which we are operating.

Now, gentlemen, we have been in the position of not being able to increase our price $1 to the copper producer, and the copper miner will, we think, have been affronted with the same situation that has come into our industry of an unparalleled increase in all items of cost entering into our business. The result has been that we have been placed in the position, particularly during the last six months where the actual loss per day sustained by the requirements could not be maintained.

Now, gentlemen, that is a very brief statement of the situation. As indicative of the actual situation so far as costs are concerned, I have brought over here and am willing to submit to the committee our actual operating costs covering the period of the last six months and some costs prior to that, and we are perfectly willing that you should have the most complete information regarding our costs. This is the cost of refining only.

Mr. Brookings. Do you treat smelting and refining as one or are separate contracts made?

Mr. Kelley. They are kept separate.

Mr. Brookings. Practically the same interests render both services?

Mr. Kelley. No; that is not true. Mr. Nichols is not connected with any smelterer. I was about to call your attention to the actual increase that has taken place. Starting with the price in 1913, the increase in November amounted to 140 percent; in December, 158 percent; for the year 1917 which included the entire year and we had six months favorable operation, 74 percent; in January 1918 the cost was increased 221 percent; it came down in February to 165 percent. In 1913 to 1916 the total cost was $9.26. In February 1918 it was $24.00. Of course, gentlemen, I want to be perfectly frank with you about these costs. During October, November, December, January, and February we were laboring under very difficult conditions due to shortage in production. Now, the time production got back to normal, we had a very serious time with transportation. The copper refiners have established themselves with a spirit of patriotism and coordination. Due to the necessity for copper, we did not close our plants, although they were down to 30% of our normal capacity, but we refined every pound of copper that came to the refinery as rapidly as we could. That is the situation. We come to you and very frankly ask you to help us out. We do not come urging an increased price for copper to the producer. We have in our contracts sustained clauses that would either technically or economically justify us in closing our plants. Such a thought has never for a moment been considered. If there is no relief, we will continue to produce copper in so far as our operations are concerned to the limit of our financial ability to carry the business, we will do it at a loss. We do not think it is the attitude you desire to take towards so important and necessary a business as the refining of copper under existing conditions. What is the way out? We take it that the United States Government and its Allies have through their agreement with the copper producers taken charge practically of the copper production. 75% of our production is going to the Government or its Allies direct. More than 15% of the balance is going on Government work. We estimate that more than 90% of our production is going into war work. You fix the price of copper to the producer. That does nothing for the refiner. In submitting production costs to the War Industries Board, the refining costs were taken as the cost shown by the contract, which the producer had with the refiner. Now, we are in a position of coming to you as an absolutely separate business asking that inasmuch as you are taking charge of the industry, you go a step further and assist that particular branch of the business, which it is absolutely necessary to maintain, in order to insure the production of copper. When you fixed the price of copper, you demanded an agreement that wages would not be reduced. That agreement did not bind refiners, but it has been lived up to by refiners as a part of the spirit of the entire transaction. I do not say we are entitled to any credit for that. As indicative of the condition we are confronted with and for which the Government is responsible, right in the Raritan district there is centered the largest copper refiners except the one at Baltimore. The Government has established there the embarkation port and the extension of the Gillespie plant calling for over 20,000 laborers. The increase in labor is 125.8%. Since the 1st of February we have been obliged to grant additional increases, which increased costs at our plant $165,000 a year. The Government has adopted a plan of working 8 hours with time and a half for 2 hours overtime, the same thing for Saturday afternoon and Sunday. Now, gentelmen, that is the situation. We have conferred more or less among ourselves about this matter and we come to you with this proposition which we think is fair. We don't know what our costs are going to be for any period of time. We believe that there should be added to the price paid by the producers of copper more than sufficient to pay the actual cost of refining and give us ¼¢ or $5 per ton profit. That represents a profit of less than 1% on the amount invested. The refiner has to carry the copper while it is being treated. We believe that this should be a satisfactory basis, a profit of ¼¢ a lb. would get $5.00 per ton. Surely you will see that is not unreasonable. It is not a profit in excess of what was made in normal times under normal business conditions.

Mr. Baruch. What was that?

Mr. Kelley. Between $4.00 and $6.00 per ton, depending on whether you were getting $14, $15, or $16 for refining. On the average between 1913–16 it would be between $4.00 and $6.00. There would be no difficulty, gentlemen, in providing the machinery for doing this. It would be a mere matter of detail of collecting from the purchasers an additional charge and allocating it. The money that would be collected would be, of course, the purchaser's money, and only so much of it as was absolutely necessary to reimburse us our cost and a profit of $5.00 per ton, and the balance, if any, could be contributed back to the purchasers. Now, gentlemen, we don't come here in any sense presenting a demand. We come here representing a very important business. We feel we have gone to the limit in sustaining the loss and feel we would be negligent if we did not come here and present the matter to you.

Mr. Baruch. You are familiar with the agreement the President made with the copper producers which is to run to June 1st?

Mr. Kelley. That agreement has nothing to do with this end of the business.

Mr. Baruch. Would you change the price of copper?

Mr. Kelley. Only as it is necessary to give us our cost and $5.00 profit. Your agreement is with the producers of copper. I don't think it ought to disturb at all the 23½¢ price with producers, but I think it would be all right to collect from the purchaser an amount to pay the refiner.

Mr. Baruch. The President has entered into an agreement with the producers fixing the price they are to charge the consumer. Are we to say to the consumer that between now and June 1st we shall make a rearrangement and have the consumer pay 23¾¢ or 24¢ or whatever it is?

Mr. Kelley. Your agreement is with the producers and the consumers. You can say it has come to your attention that the refining situation must be taken care of and this amount should be added on the basis of cost as established by the Federal Trade Commission. I think of the basis of current cost it add ¾¢.

Mr. Baruch. What proportion now do you speak for when you speak of separate smelting and refining plants, about a quarter or a half?

Mr. Kelley. Nothing like that. Now, Mr. Chairman, here's Nichols, 500,000,000, Raritan, 460,000,000. I think it is less than a third.

Mr. Brookings. If ¾¢ is added to one-third, it would advance the market ¼¢.

Mr. Kelley. Less than one-third would be interested or represented by those interested in refining and smelting and producing.

Mr. Brookings. I thought it was the other way about. That would increase the market ½¢. Are there any other of your people who would like to make a statement?

Mr. Frayne. Would not the same condition you complain of now exist if the price had not been fixed by the Government at all?

Mr. Kelley. No. If there had been no price fixed by the Government I have not the slightest doubt in the first pace that copper would be selling 10¢ higher than it is. I think then the producer would have been in a very much better position to have voluntarily increased the refining charge because he would have been making more money. We have taken the matter up with a number of producers, and a great many of them are complaining that the margin is not sufficient to justify them in making an additional contribution. That 23½¢ represents what is a naked price to them. The value of the indirect charge would have been greater. The difference between the actual metal recovered and the metal returned would have been greater. If it was not for the Government metal situation and the necessity, we would not have increased wages. That would have resulted in a strike and a suspension of operations, and we would be in a position to say to the producers that they would have to help us.

Mr. Frayne. Then you say that the only way the situation could be changed would be by the producers voluntarily making a contribution to the refiners.

Mr. Guggenheim. Gentlemen, I won't take up much of your time. No more than I have to. Our position is this. We are smelters and refiners. The smelting business is in a very abnormal condition at the present time. In 1916 our profits were very satisfactory. It is true we put back into the business $25,000,000 of those profits in construction. A large percentage of this will be lost when the war is over. That is as far as our judgment goes. We can produce, but the country won't need it. We also made a great deal of money in 1917, but the last half of the year was unsatisfactory. Our annual report will be fairly satisfactory. As for 1918, it is very bad. The smelting company has not during this war period increased its dividends beyond 6%, nor have we issued any stock as advances. In 1918 we anticipate a very poor year. We are losing at the refining plants several million dollars per year. If these conditions, that are being reflected during January and February are maintained for the balance of the year I doubt if we will be justified in paying 6%. We get absolutely no advantage from the mining. We are not miners of copper. We believe that out shareholders ought to be protected. Therefore we come to you for relief. We went into the agreement at the beginning. We really had no right to go into it. We had a business of 4 or 500,000,000 dollars. It is highly technical business. I will also say we are earning less money than we made before the war. That can be verified by your experts. I have worked out a proposition as to how you can take care of the business. I want to leave this letter with you. [Mr. Guggenheim read the letter and presented it.] Our position is somewhat desperate. I can only try to operate it at a profit. I would rather resign as president of the company than shut down the copper refineries. We are short in our deliveries, and it is impossible to increase deliveries at the present time. No matter how arbitrary the action is in fixing the price of copper we want to keep the refineries going.

Mr. Frayne. Are you interested in the Hayden plant?

Mr. Guggenheim. Yes; we own it.

Mr. Frayne. You know they are on the verge of striking today. The men struck on February 5 and returned to work on February 11 on the condition that the question of wages be considered. As a matter of fact the men have remained at work at my request. I sent them a telegram yesterday asking them to remain pending what would come out of this conference today. Is it true that you are paying 50 cents per day less than plants in the vicinity? How much of your loss do you charge to labor?

Mr. Guggenheim. I don't know. We are losing at the rate of $80,000 a month at the Hayden plant. It is not our policy to close down any plant under reasonable conditions.

Mr. Frayne. My information is that many of your best men have left and gone to other plants or gone out of that section entirely to places where wages are higher.

Mr. Guggenheim. The reason is not due to labor entirely. The price of copper has been fixed at 23½ cents. The copper we save from the amount that is given us would be worth 35 or 40 cents a pound. The price has been reduced to 23½ cents.

Mr. Frayne. When the price on copper was agreed to, it was agreed that wages would not be reduced and while it did not exactly apply to the smelters and refiners, it carried with it that one smelter in the same locality as another might at least pay the same rate of pay and not 50 cents less.

Mr. Baruch. Is it true that there are other smelters getting more money?

Mr. Frayne. Yes. The Ray Consolidated are paying 50 cents more.

Mr. Brookings. I do not believe any of you gentlemen will question that in dealing with the copper producers we dealt with two propositions, one, who merely produced ore and one who smelted and refined his own copper. Did you not meet together and agree as to that? We were dealing with you as a group just as much as we were dealing with the Anaconda. If you met together and agreed as a group upon this, it simplifies the problem.

Mr. GUGGENHEIM. We unfortunately occupied a very peculiar situation. We represent the American Smelting & Refining Co. They have no interest in the mining business. As individuals we have interests in the mining business. When we met with you we thought 23½ cents was a fair price for copper. These things we have pointed out are things we could not anticipate.

Mr. BROOKINGS. These two groups handle their business in a different way; one believes it better to refine and smelter their own copper while the other believes it better to form a combination of a group of mines and have their ore smeltered. We dealt with you as a group of smelterers and refiners.

Mr. GUGGENHEIM. In actuality that was true. As it worked out, we have done an injustice to the smelting and refining business. We have put them in a bad way by putting them in the group.

Mr. BROOKINGS. I merely wanted to establish the fact, that so far as the labor situation was concerned, we had a right to understand the smelterers, refiners, and producers were practically one organization.

Mr. FRAYNE. Yes; I want to make this explanation. I raise the question that the smelting and refining company paid a higher rate, namely, that existing in Salt Lake and there was such a difference in the price, that it was agreed that the rate existing in any city was the rate to apply to the men in the smelting and refining plants. Your men have been paid 50 cents a day less. There had been a strike. There will be another one tomorrow or the next day. I have assured these men that this thing could be adjusted. This is the situation. These men must receive more money. I would oppose your getting an increase on a fixed price while your men are being paid less than those men, who are doing like work in competing plants, and unless that condition changed these men are going to strike and we are not going to get the copper. I have promised to wire Mr. Myer today some information.

Mr. BROOKINGS. Mr. Fayne, please do not involve matters. These gentlemen have two problems. We made an agreement with these gentlemen. I think it is all right for you to explain the situation as regards the labor down there. I think there is just ground for complaint if any one man does not pay a fair wage. Now, gentlemen, it will hardly be necessary for me to say that what this committee wants to do is to be absolutely fair. I try to get your point of view. I have distributed a copy of your letter to every member of the committee. I have given considerable thought and study to the problem myself. I think I can say in a general way that while the Government understands and feels it can fix a price on copper as it has done on steel and other commodities I don't think it has ever taken a position of abrogating contracts. We can't accept the theory that we can step in, representing the Government and its allies and the industries purchasing copper and practically abrogate contracts made with the smelters and the ore producers. Whether we have any authority to do it is a question in my mind.

You complain that you are unfortunate for having made contracts for a long period of time. We would have to take into consideration two things. One, the fixing of the price of copper, and two, the fact that contracts made by you which you have expected to be profitable contracts have become unprofitable contracts. Have we not all been in that position in our lives? On the best judgment we have, feeling that the average over a period of time is going to be a profitable one, have we not all made contracts. As a matter of fact I made some contracts with your father 40 years ago.

Going back to remark I made a few moments ago as to what the cost of mining, smelting, and refining should be we have never undertaken to analyze. We were not interested in that. We felt we were dealing with two groups—one the high cost mines and one the cheaper mines. The latter were largely lined up with a group of smelters and refiners, largely yourselves. Dealing with you as we supposed we were, the Utah people, who can mine at a low price, are profiting at your expense by securing this very low price of refining, as compared with Anaconda, who do their own refining. Now, it seems to me in trying to be fair, or in trying to ascertain just what rights the Government has to intervene, we have many complications. As to what way we could bring relief, it does seem to me that your interest is so interdependent where they are vital to Utah, that in equity of the thing and doing business with those people over a period of time that they are the people who ought to recognize the fact that you are entitled to relief and they ought to give it to you. Between manufacturers and miners, associated as you are, it seems to me to be a fair way of adjusting that. If we deal with you as miners and smelters as we do with the Anaconda Co.—if we said to Anaconda "Well, gentlemen, we are going to pay these gentlemen ¾ cent more than we are you because while we thought we were [dealing with a group and we were not," I don't know what the relief is but we find that they have a little interfamily arrangement and it is unfortunate for a certain group of stockholders that this contract should have been made. It does seem to me if I was Anaconda I would say "All right, I suppose we will have to segregate our company so as to get this increased price too." Then if they show a loss in any way they will expect the Government to step in and recoup them. We must conserve the industries. Is it not cheaper to mine and smelt the Utah ores than it is to do the Anaconda ores?

EXHIBIT No. 1278

EXCERPT FROM MEETING OF PRICE FIXING COMMITTEE WITH REPRESENTATIVES OF COPPER PRODUCING INDUSTRY FOR PURPOSE OF FIXING A REASONABLE PRICE ON THEIR PRODUCT. JULY 2, 1918.—2:30 P. M. ROOM 52.

Mr. BROOKINGS. We cannot get this announcement and get it out before tomorrow night's press; probably the notice would not be out before the 4th or 5th of July, so I should think on the date of publication, the date of the announcment, would probably be the fair thing. [Mr. Brookings receives a note from three of the members of the committee.]

The question as to whether it could be given out tonight, we have never given out anything to the press before the President's approval. There are reasons why we should not. The President does take an interest in these things and I feel, at least, he ought to approve it. We can discuss this with the committee afterwards. We will get it out just as soon as we can, either by a statement which simply calls attention to the fact that orders that have been placed before this announcement, and based upon the good faith of the price (we might not use that language) but to be shipped, as Mr. Yeatman says; however we never have placed any restrictions as to price-fixing and the date of shipment before on copper; we have on steel and other things.

We have made the statement that any shipments, any deliveries, made after the date at which the price was fixed, was subject to the revision of price by the Government. Just as soon as this information commenced to come in on increased cost, we did try to protect the producer in asking the Government not to place any large orders of copper with the producer, because we would be responsible for that, and having it in mind, we feel that we ought to at least spare you all that.

EXHIBIT No. 1279

NOVEMBER 11, 1918.

Mr. E. A. S. CLARKE,
Secretary American Iron & Steel Institute,
Room 1826, No. 2 Rector Street, New York City, N. Y.

DEAR MR. CLARKE: Replying to yours of November 9:

The fixing of a price on rails of course mainly involved the interests of the Railroad Administration, and, as you probably know, they have felt that as the rails they buy are, by the nature of their leases a matter of interest to each of the railroads, they could not justify themselves in paying the price which the price-fixing committee recommended. As we had never fixed the price of rails, and as the Railroad Administration was so overwhelmingly the largest interest involved, we submitted the question to the President for his determination.

While I saw the President in person regarding the matter, and have had some little correspondence with him since, he has been so occupied with weighty matters of State recently that I hated to bother him further about it for the present. However, I realize its importance to the rail manufacturers, and while I presume you are collecting for rails furnished at the prices you mention, i. e., $55 and $57 per thousand, as long as it is simply a tentative price, subject to our final ruling, you naturally feel that the matter should be settled without any unnecessary delay. I am called to St. Louis for 2 or 3 days, and on my return, the middle of next week, I will take the matter up with the President again.

Please consider this for the information of those only who are interested, as we are in no way responsible for the newspaper articles you mention, and will trust to your seeing that nothing of this kind gets into the press.

If you are likely to be in Washington any time soon, after Thursday of next week, I wish you would let me know, as I think the problem which we discussed at our meeting a few days ago has been anything but exhausted, and it seems to me that, without reducing labor, there might be some adjustments on two or three articles that would satisfy the Navy and the Railroad Administration, and yet leave the steel industry a fair profit.

You have probably noted in this morning's press that McAdoo recommends the wiping out of all excess-profit taxes on next year's business. I think we will all agree that this is wise.

With best wishes,

Sincerely yours,

AMERICAN IRON AND STEEL INSTITUTE,
COMMITTEE ON STEEL AND STEEL PRODUCTS,
New York, November 9, 1918.

HON. ROBERT S. BROOKINGS,
Chairman Price Fixing Committee,
War Industries Board, Washington, D. C.

DEAR MR. BROOKINGS: Articles appear from time to time in the newspapers in regard to the fixing of price on rails, but naturally we do not know whether they are authoritative. The price of rails ought, in justice to rail manufacturers, to be determined very shortly.

You undoubtedly know that large tonnages are being shipped on a so-called "sustaining price" of $55 and $57, but if that price is not finally approved, it will work a very great hardship.

May I ask you to give me whatever information you consistently can on this situation.

Yours very truly,

(Signed) E. A. S. CLARKE, *Secretary.*

EXHIBIT No. 1280

MEETING OF THE PRICE-FIXING COMMITTEE OF THE WAR INDUSTRIES BOARD WITH THE REPRESENTATIVES OF THE STEEL INDUSTRY FOR THE PURPOSE OF CONSIDERING THE ADVISABILITY OF DISCONTINUING THE EXISTING MAXIMUM PRICES ON STEEL, DECEMBER 11, 1918, AT 10:30 A. M., ROOM No. 52

Mr. R. S. Brookings, presiding.

Present: Mr. Norris; Mr. Colver, Lt. Col. Montgomery, Gov. Stuart, Com. Hancock, Dr. Taussig, Mr. Baruch, Mr. Frayne, Mr. Phelps, sec.; Mr. Walker, Mr. Wells, Mr. Wooster, Federal Trade Commission; Mr. Replogle, Director of steel; Mr. Grimes, Emergency Fleet Corporation; Mr. Herman, Fuel Administration; Maj. McCleary, War Department; Mr. Ingels, steel section; Mr. Coffin, Mr. Peek, Emergency Fleet Corporation; Mr. A. L. Pugh, War Trade Board; Mr. L. Williams, Pig Iron Section; Mr. M. C. Dizer, Conservation Division; Maj. Ralph V. Magoffin, Q. M. C. History Branch, War College; also the following representatives of the steel industry: Mr. A. F. Huston, Lukens Steel Co.; Mr. Jno. B. Newton, Va. I. C. & C. Co.; Mr. J. A. Binden, The Binden Iron Co.; Mr. J. A. Topping, Republic Iron & Steel Co.; Mr. E. G. Graer, Bethlehem Iron & Steel Co.; Mr. L. E. Block, Inland Steel Co.; Mr. Willis L. King, Jones & Laughlin Steel Co.; Mr. Clark, American Iron & Steel Institute; Mr. Francis Hall, Central Iron & Steel Co.; Mr. J. V. W. Reynders, Chairman, Group 3; Mr. H. G. Dalton, Pickands Mather & Co.; Mr. R. A. Rainey, Mr. Scott Stewart, W. J. Rainey, Mr. Friend, Clinton Iron & Steel Co.; Mr. J. A. O. Preus, State of Minnesota; Mr. F. A. Wildes, Supt. Minn. State Mines; Mr. E. H. Gary, Chairman of Board, U. S. Steel Corp.; Mr. James A. Farrell, pres., U. S. Steel Corp.; Mr. James A. Campbell, pres., Youngstown Sheet & Tube Co.; Mr. A. H. Woodward, Woodward Iron Co.; Mr. James Bonner, Iron & Steel Institute.

Reported by Mr. R. V. Winquist.

Mr. BROOKINGS. Gentlemen, I guess we might as well proceed with the business. This is the regular meeting of the steel industry with the price-fixing committee before the expiration of our price-fixing period and we assume that you have all read that which has been so widely circulated by the press, that the purposes for which the War Industries Board was created have been fulfilled, and Mr. Baruch, as chairman of the board in his widely published letter of resignation, explained that the functions of the Board, including the price-fixing committee, would be expected to terminate the first of January; and the President in his reply, you doubtless have noticed, has accepted his resignation and has expressed it as his opinion that we have accomplished all that was expected of us, and after throwing us a few flowers, has dismissed us as of date, January first.

Now I think that you all probably realize from that that it has been the policy, and it is the policy today, of the price-fixing committee to permit all prices to expire by limitation; practically all of our prices of any importance expire at the end of this month—the steel prices as well as a number of others. One or two small matters go over for a month or two, which however are of no importance. Now it simply leaves us nothing to do at this meeting but to express (in words that I should like to have the privilege to compile more at leisure for our records) the earnest appreciation which the price-fixing committee have of the manner in which the steel industry has met us more than half way in doing practically everything that we have asked them to do in the way of not only allocating their production but in increasing their production and investing their funds in additional capacity at a time when costs were probably double normal—(and I wouldn't care to have what I say informally here now to fully express our appreciation of that; I can do it very much better by taking a little time and formulating it for our records and we may have something which we would be glad to send you a copy of)—but I think, for our initial meeting, where the steel industry one afternoon—meeting without practically any previous warning or preparation and simply on the finest sort of impulse—agreed with us to reduce values; such values as from nine, ten, or eleven cents on plates, to three and one-quarter cents per pound, and other important values down to what we recognized was still a profitable price, but a no more profitable price than was necessary to insure the protection which we felt we had to have. From that date to this, in our various meetings, we have seen your steel costs in advance. We have had them before us all the while. We still realize that there was a liberal profit in steel which was fading away gradually, but which was needed to maintain the production which we felt we ought to have; and we recognized, especially under the proposed revenue act that only a small proportion of any such liberal profits will be retained by you. I haven't flowers enough, Judge, to throw to you people for what we feel to have been the hearty cooperation that you have given us, and I don't know of anything that I can add, except to give you the opportunity of sending some of these flowers back to us, if you choose, by expressing your views as to our relation.

Judge GARY. We have no disposition to return to this Board the beautiful bouquet of flowers that has been bestowed upon us by the chairman in his words of praise and appreciation, for we cherish their possession. We would, if capable, fully reciprocate, though we have no disposition to resort to fulsome praise. A mere statement of the facts uppermost in our thoughts concerning the Board in its treatment of us would be praise enough for anyone.

On another occasion in New York two days since, when the steel industry of this country was represented by the presence of 140 or 150 men, and we were speaking in the absence of any members of this Board, expression was given to our real thought and conclusions in regard to the War Industries Board and all its departments, as to what they are and what they have done. Those expressions were reduced to writing and sometime when we are not present, if you would be sufficiently interested to ascertain what we think of the members of this Board, you may have that privilege. I am justified in saying at this time there is no lack of appreciation on the part of the members of the American Iron and Steel Industry concerning the problems which have confronted your Board and the heavy burdens which you have been obliged to carry. You occupied a disinterested position, except as you were concerned in the welfare of the people of this country generally, including the particular interests of a large industry whose representatives were compelled to come before you for discussion and decision in regard to propositions of great moment. The chairman has referred to the decisions which were made by the Board and therefore I may advert to the fact that the agreements which culminated between the Board and the steel industry apparently resulted in large profits to some of the concerns, yet, as a matter of fact, those results were largely nominal, not only because profits were in a substantial measure turned over to the Government in excess-profit taxes, but because the steel manufacturers were compelled to increase their production in lines applicable to the military necessities of this Government and its associates in the war, at costs which were abnormal and in many cases, two or three times greater than usual prices, and a material part of these excess costs will never be restored in any way, but will be lost. We realized clearly what the principal problems presented to your Board involved. Your purpose throughout all the deliberations was to keep those things off the United States [pointing to a Liberty loan poster hanging on the wall, bearing the inscription: "Keep these off the U. S. A." and portraying a pair of German military boots, blood covered]. I think I am entitled to say that the motive which prompted the steel industry in their considerations and actions has been to do that very thing.

In order to secure the largest production of steel—to permit the operation of all the facilities of all the companies, and firms—it was necessary to arrive at a bais of prices which, as applied to many of the corporations, yielded large profits, yet at the same time did not permit an unreasonable profit to many of the high-cost mills. Therefore we need not be especially grateful because you permitted profits which seemed to be large in many instances, but rather because we know that your motives were right, that you recognized your obligation to your country, and still at the same time in the performance of your duties you were always considerate, friendly and fair, and were as liberal in your conclusions as your duty to the Government you represented permitted. We have reason to be grateful that the Board has consisted of men who had not only the dispostiion but the intelligence to rise to a plane of action where exact justice could be done to all concerned.

The labors of the general committee and subsidiary committees have been arduous. Sometimes we have been perplexed, and at other times somewhat discouraged, but I speak the sentiment of the members of our general committee when I say that in all the work of a lifetime the labor performed in connection with the consultations and discussions before this board has been the most pleasant of their entire experience. To come into contact with Government officials, dealing at arm's length, and to get through with all our work with the belief that our intercourse has been satisfactory, agreeable, and pleas ant, is a most remarkable thing. This meeting, perhaps, does not finish the making of comment in regard to the association between this Board and the members of our committee, for when the record is finally written greater credit will properly be given to the members of the Board for what they have done and in a measure that will be extended to the members of the American iron and steel industry insofar as we have been of service to the country. We are grateful that a spirit of loyalty has actuated our conduct, and we are greateful to all the members of the Board because of their assistance to us in the performance of the duty.

We came here this morning on the invitation of the Price Fixing Committee extended some weeks since, to further consider the question of fixing maximum prices to apply on and after January first, and we are prepared to discuss that question. We have recently learned that perhpas we have devoted some unnecessary work in making preparation, and yet I do not think it has been unwisely performed. If permitted, I will give you later the benefit of our considerations so that you may be able to criticise, to object to or approve of what we have done. We see, as you have seen, that the general industry of this country and I may say the welfare of this country, depends upon careful thought and wise action by such men as those who are assembled in this room; for the economic, commercial, financial, and social conditions of the future we have great responsibility. It is quite likely no single line of industry has greater responsibility than the iron and steel trade. In matters relating to the read justment reorganization, and reestablishment of economic conditions throughout this country, so as to maintain a proper position in competition with other countries for the protection of the economic interests of this country, including especially the workmen, and to prevent a demoralization or great depression and to bring about, if possible, a basis for operations which shall be constructive protective, and just, we are giving serious thought. We recognize that to get from a war basis to a peace basis, possibly within a shorr time, is difficult and involves danger unless we exercise prudence and skill, with a disposition to be homest and fair and reasonable. The sudden and extreme change from war-base prices to competitive, uncontrolled, and uninfluenced prices is not easy if we are to maintain sound and stable conditions and avoid demoralization and panic.

While I could not state in a few words the many questions which are presented to us, yet I can say we are not neglecting them, and I believe the iron and steel industry is disposed to act unselfishly and with the intention of doing the best thing in the best manner. In this spirit we have attempted by conferences amongst ourselves to determine for presentation the to Price Fixing Committee a scale of prices for the next quarter which we were willing to recommend. We have had some opposition, particularly by the high-cost producers who will be more seriously affected, but after a pretty full discussion at a late meeting in New York, participated in by a large number of people, it was finally unanimously voted to submit the whole matter, with power, to the general committee of the American Iron and Steel Institute for careful consideration and for presentation of their conclusions to this Board today.

As these questions seriously affect the entire industry of the country I think it is only fair on our part to present these matters, because I think it should be generally known that the iron and steel industry, even at considerable sacrifice, more especially by the high-cost producers, by unanimous consent is willing to assume its obligations to take a position which is calculated to aid in bringing about an orderly reduction of prices and intended to be fair and reasonable to all who are interested. If the iron and steel industry from day to day shall measure up to the ideas which have been expressed as being fair and reasonable and of preventing a disorderly readjustment or reorganization of business, it will have performed a high duty, and in the long run will have secured for itself results which will be beneficial to the iron and steel industry and to the whole business world.

Mr. Brookings. Judge, may I interrupt a moment?

The Price-Fixing Committee have discussed their position today and they feel, and I think you will say very properly, that inasmuch as they have no authority of any kind over values after January first (such authority as has been given us by the President is practically withdrawn as of that date), it would seem improper for us to exert any public influence that we had by attempting to assume authority in connection with any prices that go into effect after January first. I am sure from the exhibit that we have already had of the patriotic and broad business view of the steel industry, it is such that they will handle the reconstruction problem just as widely and sanely as they have handled the war problem; that what they can do collectively within the law, they will do. What they cannot do collectively they will have to do as individuals; but, whether acting in the one capacity or the other, our experience with the steel industry is such that we feel absolutely sure that whatever you will do will be wisely done, but that you recognize yourselves that it would be improper for us to pretend to exert an influence and to pass judgment on anything that might be submitted to us in the way of prices to take effect after the President has announced that our authority has ceased.

Judge Gary. What you have stated meets with the approval of the committee I represent. We understand now exactly the position; we have been reaching an understanding for several days because of the publications which have been made, and I assure you we are now seeking no assistance whatever from the War Industries Board. I am referring to this matter, and I am going to refer to this list briefly if you will permit me simply to show what is our disposition and what would have been our recommendation to this Board except for the changes which have been brought about.

Mr. Brookings. Can't you give us that unofficially, Judge? These are our official records, of course, and we never have undertaken to influence anything that the steel industry wishes to present, and if the Board wishes, I personally would have no objection to your making any statement you wish to make, but they simply wish to avoid it being made even nominally, to assume a responsibility which we feel out of courtesy to the President (if nothing else) that we ought not to assume.

Judge Gary. I am very willing to adopt that suggestion.

Mr. Brookings. The information, I think, whatever information you have, will be useful to our files, the Government's files, because, before the meeting adjourns, I wish to make acknowledgement of the most wonderful service the Federal Trade Commission has rendered, I am sure, in giving the industry, as well as ourselves, a very thorough and fundamental knowledge of the underlying problems upon which we have based our findings, and I shall ask Mr. Colver later to say a word to two to you because I think such information that you are giving us and lots of other information that he would be glad to have as an agency of the Government, which will continue to function and which may be very helpful to you and serve the purpose better than we can.

Judge Gary. I want to say exactly the right thing now, Mr. Chairman. The public, interested in everything which affects the industrial situation, has not been informed of our action. Individuals connected with the trade have not been informed; and perhaps some think we have been more or less negligent in not giving full information as to the percentage of reduction or the amount per ton which had been agreed upon. We hesitated to do that because we felt if this question of price fixing were to come before the price-fixing committee, they should first have the opportunity to criticize. We have no disposition, and I am not going to try to secure any expression from this Board. I might know I couldn't secure it if I desired; but I wouldn't be unreasonable enough to try to get any expression from this Board at this time which might in any way be of benefit or injury to anybody else. And in view of what has been suggested by the chairman, it is better for us to take the entire responsibility and to give the public, if it is interested, or to the members of the trade, so far as desired, the result of our conclusion.

Mr. Brookings. I think that is best, Judge.

Judge Gary. It only remains for me to say that while the iron and steel industry, or some of its representatives, have at times been somewhat dissatisfied with the agreements which the general committee has made with the price-fixing committee of the Government, yet so far as I know, there is no one connected with this business who does not believe that the members of the price-fixing committee and the War Industries Board have acted impartially, justly, and with due consideration of the rights and interests of all, and have reached decisions which have proved to have been fair. And I want to say for the Federal Trade Commission that while at times they have bothered us in our offices—I say that in no invidious sense—because we are very busy and have been more or less interrupted, yet the representatives of the Commission, though persistent, have been gentlemanly and consistent; and, on the whole, we have no reason to complain, although they have at times exposed some of the claims made by accountants which were unjustified. So far as that applies to the corporation I have the honor to represent, I wish to say that we have not criticism to make and we are grateful to the Commission. I think we have the intelligence and the disposition to recognize that the interests of the country should be first considered. The members of this Board and of the Federal Trade Commission, and I think I may say those connected with the iron and steel industry have acted on the basis of being more or less responsible for the promotion of the welfare of the country. I thank you. [Applause.]

Mr. Brookings. Mr. Colver—as that agency of the Government which is supposed to keep the Government informed as to all of those industrial or business facts that have been collected for us during the price-fixing period—I have no doubt that you will continue to function along the same lines to some extent; and I can simply repeat what I said a few moments ago that I don't see how—of course we couldn't possibly have accomplished the results that we have, had it not been for the competent and earnest way in which every department of the Federal Trade Commission has sought to secure us the difficult information which they have had to present to us, to enable us to intelligently act in these problems. Looking to your future problems, I thought you might possibly wish to say a word.

Mr. Colver. Mr. Chairman and gentlemen, first of all I want to express for the Commission and the staff of the Commission our very sincere and heartfelt appreciation of the patience with which you gentlemen have borne with us. It has seemed at times that we were ashamed to have to bother you as we did, but we were only for the service. We were only doing as we were told and we did annoy you dreadfully. But you were game and you were good and you are mighty forgiving today. We appreciate it.

It has been the thought—and I want to suggest it this morning—that a certain part, although I am not very clear and shall not make any concrete suggestions, but a certain part of the work that we have been doing might be continued if it will be useful to the industry. It would appear that for a time at least there will be inquiry from Government agencies and Government departments; it would be too bad to dissipate this fine organization that Dr. Walker, Mr. Wooster, and Mr. Wells put together, only to have to recreate it or patch it up again if we were required to do some more work.

On the other hand, speaking for myself, I never want to see a questionnaire again. I am sick and tired of them and I know these gentlemen to whom all credit must go, absolutely—the Commission and the commissioners aren't entitled to a particle of it; these men have worked days, nights, Sundays, and holidays, and nothing but the spirit of real public service could have ever inspired men to go through the hot summer nights and hot summer days as they have gone through. I think they have tried, and I think in their work is reflected a spirit of absolute fairness. I think they have felt they were serving you to their utmost and at the same time they were serving the Government. If any plans—and we don't want to do anything in the world that isn't useful, and goodness knows we are not looking for work; we have had plenty of that; we have a lot left over to do yet. But if we can be useful, we want to be; and if it is possible to continue any part of our work, such part as would be useful to you, valuable to the Government, and valuable to the public at large, that part of the work we want to carry on. If there is no such work, we want to stop. To that end, it would be, I think, useful if as a preliminary perhaps you would have some of your skilled men meet with Dr. Walker and Mr. Wooster and Mr. Wells. Perhaps we could have done a little this afternoon, if that is agreeable, and some plan could be worked out. Certainly, we can work out a plan either to do nothing or to do something. That is the question now before the commissioners. We don't want the machine to go to pieces if it can be made useful to anybody. The public has paid for it and the public is entitled to the last drop of blood in it. And once more, and last of all, I want to thank you from the bottom of my heart for being such good fellows during all of this trouble. [Applause.]

Mr. Brookings. Gentlemen, while the price-fixing committee was appointed by the President and given certain and specific authority with which to solve certain responsibilities that have been placed upon it, we have always functioned, as you know, through the War Industries Board of which we are a part. When we have made prices and referred the problem back to the commodity section or the director in charge, we have recognized that we have only solved a small portion of the problem; that in stimulating production and allocating orders there was probably the greatest service to be rendered in the industrial importance of winning the war. I think Mr. Replogle ought to say a word to us before the meeting is dissolved.

Mr. Replogle. This seems to be a convention for bouquets. We have been told so many things will win the war—you see it in every billboard. I can only repeat what I have said a number of times—I think steel has played one of the very most important parts in winning the war—the weight of metals of recent months, particularly, six months. And you gentlemen here have supplied that metal. There has not been anything left undone in my opinion that could have been done and there are very few places in the Government program where, I might way, there is practically none—where steel has delayed the war program. And the gentlemen in this room and those associated with you are entitled to all the credit that is possible for anybody to get. As director of steel supply, I want to express my appreciation for the 100% cooperation which we have gotten on all occasions. It has been perfectly wonderful and one of the delights of my life has been to work with you. And I thank you from the bottom of my heart—all of you. [Applause.]

* * * * * * *

Exhibit No. 1281

Meeting of the Price-Fixing Committee with Representatives of the Copper Industry in Regard to the Expiration of the Price, December 20, 1918, at 10:30 a.m. in Room 52

Present: Mr. Richard S. Brookings presiding; Mr. Hugh Franye, price-fixing committee, W. I. B.; Colonel Montgomery, price-fixing committee, W. I. B.; Governor Stuart, price-fixing committee, W. I. B.; Mr. Thurston, nonferrous metals section, W. I. B.; representative of the Emergency Fleet Corporation.

Also present representing the industry: Mr. H. B. Paull, Calumet & Arizona Mining Co. and New Cornelia Copper Company; Mr. Robert Linton, N. Butte Mining Co. and Cons. Copper Mines Company; Mr. F. W. Paine, Copper Range Company; Mr. J. H. Susmann, Mr. S. S. Rosenstamm, Miami Shattuck and Tennessee Copper Companies; Mr. F. S. Gourley, Calumet & Hecla Mining Company; Mr. Samuel Herrick, Engels Copper Mining Company; Mr. Chas. A. Kettle, Consl. Arizona Smelting Co. and Ohio Copper Company of Utah.

(Reported by R. B. Winquist.)

Mr. Brookings. This is the copper industry, I believe. We have rather a small meeting this morning. Is Mr. Gratton here?

Mr. Rosenstamm. He is not here.

Mr. Brookings. I have a letter from Mr. Clendennin saying that the American Smelting and Refining Company cannot be represented. I might read this. [Mr. Brookings reads letter from Mr. Clendennin.] That opens the meeting, gentlemen, about as well as anything I can say. You all know from various publications that the War Industries Board will cease to function after January 1st. This was announced before the President left the country on his acceptance of the resignation as chairman of the board. As the Price-Fixing Committee has always functioned through the commodity section of the War Industries Board it goes without saying that the necessity for fixing future prices has ceased and that we are allowing all prices fixed heretofore to expire by limitation and as the copper prices expire by limitation at the end of this month, about the only business that justifies our holding this meeting today was the desire of meeting the copper people again and to express to them the Government's appreciation of the splendid spirit with which they have assisted us in solving next to the most important problem we have had to solve in connection with our war needs. Steel and copper of course have been fundamentally the few industries that were most directly concerned in our war needs in everything pertaining to stimulating production and in agreeing with us upon what was a fair price for the Government and our Allies and the public, we feel that while we have endeavored to agree with you upon a price, that was fair and profitable and sufficiently profitable to maintain a maximum production, it was not very profitable to some concerns and rather more than normally profitable to others; but we recognize through efforts made to stimulate production and through excess profit prices none of the industries have profited beyond what seems to be perfectly fair and reasonable. I don't know that there is anything more we can say except to feel the satisfaction of having this appear upon our records and we hope the industry has been stabilized and that by getting you together as we have and inaugurating probably a larger community of interest than the industry has ever experienced before, that we have indirectly assisted you in getting probably a broader and more comprehensive view of your own industry than you have heretofore had. We hope that that will be of value and fruitful in facing this reconstruction period which we are perfectly conscious of being something of a problem. I think that is all that the committee has to say unless some of the members of the committee wish to express themselves and if there is any one who wishes to speak for the copper industry, we would be very glad to hear any expressions.

Mr. ROSENSTAMM. It is permissible for me to ask what the Government proposes to do with the surplus of copper in the hands of the consuming interest?

Mr. BROOKINGS. We have never had anything to do with the Government's orders, the commodity sections representing contracting departments of the Government have submitted price-fixing problems to us and we fixed the prices and passed them back for administration of the Department and we have absolutely no knowledge or connection with them.

Mr. SUSMANN. The thought Mr. Rosenstamm wished to ask you was if you could enlighten us as to the copper that the Government has on hand. You did express yourself as to that last week, as to whether they were going to throw that on the market or whether it is going to further assist the trade by withholding it for a while until it is stabilized. I don't ask this as an authoritative matter but as general information.

Mr. BROOKINGS. I don't remember having expressed an opinion on that. I am perfectly willing to express a personal opinion growing out of the knowledge that we all have in the War Industries Board. The general policy of the Government seems to be that as far as it can it is going to protect the industry against competing with anything which they have on hand or accumulated in large quantities and by advice and cooperation with the industry would endeavor to prevent the sale of their stuff, demoralizing the market. That has been given out publicly and I believe had been pretty widely published as the policy of the Government.

* * * * * * *

EXHIBIT NO. 1282

MEETING OF THE WAR INDUSTRIES BOARD, HELD TUESDAY, DECEMBER 10, 1918, AT 10:30 A.M. ROOM 909, C.N.D. BUILDING

Present: Mr. Baruch, chairman; Mr. Brookings; Mr. Peck; Judge Parker; Mr. Replogle; Mr. Ingels, secretary; also Mr. Ritchie; Mr. Clark.

Contracts—Status of informal contracts.—It is the unanimous opinion of the Board that in formal contracts given either verbally or by letter should be legalized and that the payment of money for the same be legalized, and that the fact that a manufacturer accepted such orders and proceeded to produce materials without waiting for the formal contracts to be drafted and signed should certainly entitle him to enjoy the same privileges and protection as the manufacturer who may have delayed production by waiting for the formal contracts to come through. This matter was referred to Judge Parker and Mr. Ritchie for their review and recommendation.

Organization—Resignation of Mr. Baruch.—Mr. Baruch sent in his resignation as per the following letter, dated November 29th, 1918, addressed to the President. It was accepted effective January 1st, 1919, as per the following letter, dated November 30th, from the President addressed to Mr. Baruch.

Organization—Liquidation of the War Industries Board.—Mr. Peek and Judge Ritchie were requested to work out a plan for liquidating the Board and present the same at the next meeting.

Wool—Disposition of Government-owned wool.—Mr. Baruch called the Board's attention to a letter signed by General Goethals, dated December 6th, 1918, regarding the best method to be followed in disposing of the Government-owned wool. After some discussion the following letter signed by Mr. Baruch was addressed to General Goethals, outlining the Board's position in the matter.

The meeting adjourned at 12:45 p.m.

H. P. Ingels, *Secretary.*

Legislation.—Mr. Peek and Mr. Ritchie submitted draft of a bill which, after several conferences with the War Department, they had prepared to legalize war agreements and orders which had not been executed or drawn in compliance with legal requirements, and which draft they thought should be submitted to the War Department, and then to the Military Committees of the Senate and House, with the recommendation that it be substituted in place of the bill on the same subject now pending before them. The draft was approved, and the chairman was requested to send the same to the said committees, and also to the United States Chamber of Commerce, which was interested in the subject.

The meeting adjourned at 11:30 a.m.

Albert C. Ritchie, *Counsel.*

The following information regarding bonds covering Government advances to the du Pont Engineering Co. was requested of the du Pont Co. by the committee. (See text p. 3579).

E. I. du Pont de Nemours & Co., Inc.,
Wilmington, Del., April 24, 1935.

Alger Hiss, Esq.,
Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.

Dear Mr. Hiss: At the December hearings (pp. 5389–90 of the typewritten record), I introduced copies of two bonds (exhibits 1216–1217) given to the Government by Du Pont Engineering Co. as principal and E. I. du Pont de Nemours & Co. as surety, covering advances under the Old Hickory contract, for $20,000,000 and $6,318,000, respectively. At the same time I stated that I had been unable to locate our copy of the corresponding bond covering a further advance of $12,000,000, but that I was satisfied that such a bond had been issued and that I was having a search made for the copy.

This search has been continued, but we are still unable to locate the desired copy, or rather copies. However, our records plainly indicate that bonds were issued in the same form with the two already printed among your exhibits, to cover all the advances made by the Government. The final advance to which I referred roundly as $12,000,000 was, to be exact, a total of $12,636,000, which was received in three installments. The complete sequence of advance payments received and bonds executed to cover them was, according to our records, as follows:

Advances received		Bonds executed		Copies of bonds
Date	Amount	Date	Amount	
Apr. 1, 1918	$18,750,000	Mar. 29, 1918	$20,000,000	Exhibit 1216.
May 24, 1918	6,318,000	May 13, 1918	6,318,000	Exhibit 1217.
Sept. 17, 1918	6,318,000	Sept. 12, 1918	6,318,000	
Dec. 23, 1918	2,000,000	Dec. 15, 1918	6,318,000	
Dec. 26, 1918	4,318,000			

The original bonds can still no doubt be located, if desired, in the records of the Government.

Very truly yours,

W. S. Gregg, *of Counsel.*

The following information re Judge Laffey's memorandum was submitted by the du Pont Co. in response to a request by the committee. (See text, p. 3585.)

E. I. du Pont de Nemours & Co., Inc.,
Wilmington, Del., January 10, 1935.

Alger Hiss, Esq.,
Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.

Dear Mr. Hiss: In volume 24, part 1, pages 5404–5406, you made reference to a memorandum dated October 21, 1917, signed by E. A. Hamilton, captain, Ordnance Department, in which Captain Hamilton made reference to a memorandum of Judge Laffey, counsel for Du Pont Co., in which Judge Laffey stated that "the Du Pont Co. desires to assume no risk of financial loss to itself", having reference to the construction and operation of Government smokeless powder plants. I stated, on page 5406, that I would be glad to furnish to the committee a copy of Judge Laffey's memorandum.

I have caused diligent search to be made of the files of the Du Pont Co., and the only memorandum I have been able to find is an undated memorandum, apparently prepared by Judge Laffey, which has the following notation on it, as you will observe: "Copy handed Col. Hoffer in Washington 10/18/17." I think this must be the memorandum that Captain Hamilton had reference to, in view of the fact that the second and third sentences of paragraph 1 of the memorandum I enclose contain language identical with that read by you and which appears on page 5406, volume 24, part 1, of the transcript of the hearings.

You will note that in the second paragraph of the memorandum Judge Laffey points out one of the principal reasons why he does not deem it advisable for E. I. du Pont de Nemours & Co. to directly act as agent in the construction and operation of Government smokeless powder plants.

I respectfully request that the enclosed memorandum, and this letter, be included in and made a part of the record of the hearings before the committee.

Very truly yours,

W. S. Gregg, *of Counsel.*

Du Pont's Reasons for Using a Subsidiary Company to Carry Out the Agency Contract Covering Construction and Operation for the Government of Certain Smokeless Powder Plants

1. Limitation of liability as to parties other than the Government. This liability lies in the possibility of its being hereafter held that the Ordnance Department exceeded its lawful powers in making this contract, in which event the agent might be held liable on its implied warranty of authority on all contracts signed by it as agent of the Government. The du Pont Company desires to assume no risk of financial loss to itself.

2. There are many causes of action, such as torts, which can be brought against both principal and agent. If a subsidiary company is used, it would be legally installed and doing business only in the States where plants are built and all actions will be confined to these states. If the du Pont Company proper, acts as agent, these actions being transitory in their nature, can be brought in any State where the du Pont Company is installed, which is practically every State in the Union.

3. To date the du Pont Company has not engaged in the business of acting as agent. While its charter is sufficiently broad to include this power, it is more logical to create a corporation the charter of which will specifically cover authority to act as agent for the Government.

4. The agency business is foreign to the du Pont Company proper, and for accounting reasons it is desirable to have a separate company.

While a subsidiary company is not only a convenience and safeguard to the du Pont Company proper, there is no disadvantage to the Government in the use of a subsidary company to carry out this agency for the following reasons:

(a) The new company, although of limited capital, will, if desired, have the same directors and officers as the main company, the control of which, through stock ownership, would be and remain in the main company.

(b) The main company would enter into a contract with the new company wherein for an agreed consideration, the main company will agree to furnish the new company in and about the carrying out of the agency contract, the use of all its departments, thereby securing to the Government precisely the same services that it would receive if the contract were made with the main company.

(c) The main company will at the time of the signing of the contract between the Government and the new company, obligate itself to the Government to furnish to the new company the services of its various departments and facilities as set forth in paragraph (b).

The following letter is included in the record at the request of the du Pont Co. (See text p. 3590.)

E. I. du Pont de Nemours & Co., Inc.,
Wilmington, Del., April 29, 1935.

Alger Hiss, Esq.,
Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.

Dear Mr. Hiss: At the December hearings (typewritten record, pp. 5416–5417) you inquired of me whether any reply had been made to Major MacCleary's letter of October 19, 1918 (your exhibit no. 1221), criticising the prices paid for benzol and alcohol for use at Old Hickory and requesting that the company's purchasing department check with the Procurement Division of the Ordnance Department before closing further purchases on raw materials with which the division was concerned.

Prompt compliance, we find, was made with Major MacCleary's request for consultations on prices, in connection with contemplated purchases of soda aoq and caustic soda; and a review was at once undertaken of the facts attending the past purchases that had been criticised. So far as we can now discovers however, the intended final reply to Major MacCleary in that regard was not made. The intracompany correspondence in our files indicates that this subject was having active attention up to within a few days of the armistice.

The men who would have most intimate knowledge of this matter are now dead or no longer available for questioning. What apparently happened, however, was that in the general letting down that attended the ending of hostilities, and with the sudden shift of emphasis from procurement and production to demobilization and liquidation, this question of prices under past purchase contracts escaped the necessary final attention, and the letter that should have been sent to close the matter was not written.

Major MacCleary's principal criticism, it appears from the correspondence, was with respect to the prices paid for benzol. The answer in that regard will be found given rather fully in the reply I am submitting to the various charges in the "Storck report" (your exhibit no. 1190). We desire to add, however, that the figure of 18 cents quoted by Major MacCleary as the maximum which his division had paid "on any bookings for benzol which have been made since May" is entirely out of line with the actual market values generally prevailing over the period in question on the grade of benzol which our company bought for nitrating in its own plants and at Old Hickory. This we believe is beyond any question, according to sources of information which are indisputable.

Just how Major MacCleary's 18-cent figure can be reconciled with the known facts, we are at a loss to state, unless possibly it related to small distress lots of this byproduct derivative picked up under exceptional circumstances, or unless the purchases Major MacCleary had in mind were of one of the less expensive commercial grades than the chemically pure benzol which it was necessary to buy for nitrating as the first stage in the manufacture of diphenylamine for smokeless powder. We do not know for what purpose the Government purchases of benzol were made, but assume it was not for diphenylamine, since the diphenylamine unit at Old Hickory was built of sufficient size to take care of the Government's entire requirements of that material, not only at Old Hickory, but also at Nitro and elsewhere.

Very truly yours,

W. S. Gregg, *Of Counsel.*

The following statement is included in the record at the request of the du Pont Co. (See text, p. 3599.)

Cost of Construction of Old Hickory Smokeless Powder Plant Compared with Cost of Construction of Nitro Smokeless Powder Plant

OLD HICKORY—DATA AS TO COST OF OLD HICKORY PLANT TAKEN FROM RECORDS OF DU PONT ENGINEERING CO.	NITRO—DATA AS TO COST OF NITRO PLANT TAKEN FROM NITRO PLANT HISTORY PREPARED BY GOVERNMENT REPRESENTATIVE IN CHARGE OF CONSTRUCTION, AND FROM OFFICIAL RECORDS OF CONGRESSIONAL INVESTIGATION COMMITTEE—GRAHAM COMMITTEE
1. Built on site selected by du Pont Co. and classed as site no. 2 on account of its not having as great natural advantages as site no. 1, Nitro.	1. Built on site selected by du Pont Co. and classed as site no. 1 on account of its natural advantages.
2. Approximately 7 miles of double-track railroad had to be built for connection with nearest railroad.	2. Plant built almost directly on existing main-line railroad.
3. Plant designed and equipped to manufacture water-dried cannon powder, air-dried cannon powder (a larger amount of air drying capacity than Nitro), small-arms powder, and diphenylamine for both Old Hickory and Nitro plants.	3. Plant designed and equipped to manufacture water-dried cannon powder and a small amount of air-dried cannon powder. No diphenylamine plant.
4. Estimated capacity per day, 900,000 pounds.	4. Estimated capacity per day, 625,000 pounds.
5. Capacity per 24-hour day, based on actual practice, 1,000,000 pounds.	5. Capacity per 24-hour day, estimate by Government, 700,000 pounds.
6. When work was stopped following armistice, plant was approximately 92 percent completed and practically all material to complete plant was on hand, shipped, or manufactured.	6. When work was stopped following armistice, we estimate from Government records plant was approximately 75 percent completed. We cannot estimate from available records quantity of construction material on hand and manufactured for use in completion of plant.
7. Total expenditure, excluding land, \$85,267,766.35. This amount includes the cost of certain materials furnished directly by the United States Government. (The total actual expenditures made by Du Pont Engineering Co. was \$83,827,534.26, of which amount, \$101,719.21 was disallowed in final settlement with the Government.)	7. Total expenditure, excluding land, \$60,100,000.
8. Estimated cost of complete plant, \$90,000,000. Increase over \$85,267,766.35 is largely labor, as most of the material needed to complete was paid for and included in the \$85,267,766.35.	8. Estimated cost of complete plant, \$75,000,000.
9. Estimated construction cost of completed plant (*including* diphenylamine and small arms powder capacity and long railroad track to main line) per pound of powder per 24-hour day,[1] \$90.	9. Estimated construction cost of completed plant (*excluding* diphenylamine and small arms powder capacity and long railroad track to main line not buit at Nitro), per pound of powder per 24-hour day, \$107.14.

---

[1] The reference in this comparative memo to "per pound of powder per 24-hour day", was explained by the du Pont Co. under date of May 1, 1935, as follows: "Under the extreme pressure prevailing throughout the war, it was the practice to operate powder plants 'around the clock', working generally 24 hours daily with three shifts of 8 hours each. In Mr. Gregg's letter, the expression 'per pound of powder per day' was expanded to read 'per pound of powder per 24-hour day', in order that there might be no misunderstanding about the exact amount of plant capacity corresponding with the cost figures given."

10. On basis of the estimated unit cost of construction per pound of powder caapcity at Nitro, the Old Hickory plant, *excluding* the diphenylamine and small arms podwer capacity and the double-track railroad to the main line, would have cost, when completed, approximately $107,142,867.14. On the same basis, *including* the diphenylamine and small arms powder capacity and the railroad track to main line, the Old Hickory plant when completed would have cost approximately $109,320,000.

11. Estimated *saving* to United States by reason of lower unit cost of construction at Old Hickory as compared with unit construction cost at Nitro approximately $19,320,000.

9a. We estimate construction cost of completed plant, if Nitro had been equipped as was Old Hickory to make its diphenylamine and the same relative quantity of small arms powder, and if the same amount of railroad track had been required as at Old Hickory, at $76,525,000.

9b. We estimate construction cost of completed plant (*including* diphenylamine and small arms powder capacity and railroad track of same length as at Old Hickory), per pound of powder per 24-hour day, $109.32.

10. On basis of the estimated unit cost of construction per pound of powder capacity at Old Hickory, the Nitro plant, *excluding* the diphenylamine and small arms powder capacity and railroad track to main line, would have cost when completed approximately $61,932,500. On the same basis, *including* the diphenylamine and small arms powder capacity and the railroad track to main line, the Nitro plant when completed would have cost approximately $63,000,000.

11. Estimated *loss* to United States by reason of higher unit cost of construction at Nitro as compared with unit construction cost at Old Hickory, approximately $13,067,500.

The following statement was requested of the du Pont Co. by the committee. (See text, p. 3599.)

DECEMBER 21, 1934.

CAPITAL COST PER POUND OF SMOKELESS POWDER PRODUCTION

In arriving at the capital cost per pound of smokeless powder produced at Carneys Point, it is necessary to take into consideration a proportion of the investment at the Hopewell plant for the production of nitrocotton and at Repauno for the production of diphenylamine.

To make the costs comparable with Old Hickory, it is necessary to correct the expenditures made at Carneys Point, Hopewell, and Repauno in the years preceding 1918 to correspond with the prevailing unit costs of construction at the time Old Hickory was built. The factors applied to these expenditures were obtained from the "Construction cost index" prepared by the Engineering News-Record, which is the generally accepted source of this type of information.

The total capital cost of Carneys Point on a 1918 cost basis is	$39, 618, 213
The total cost of the Hopewell guncotton plant on the same basis is $64, 543,487; of this amount, 56.35 percent was for the production of cotton consumed by the Carneys Point plant; this makes the investment at Hopewell for Carneys Point production	36, 370, 255
The total cost of the Repauno diphenylamine plant on the same basis is $1,264,815; of this amount, 49.32 percent was for the production of diphenylamine consumed by the Carneys Point plant; this makes the investment at Repauno for Carneys Point production	623, 958
The total investment at Carney's Point and the investments at Repauno and Hopewell for Carney's Point production are	76, 612, 426

There were 208,647,770 pounds of powder produced at Carneys Point during the first 10 months of the year 1918. On the basis of 27 working days per month, the daily production was, therefore, 772,769 pounds.

The capital cost per pound of powder per day is, therefore, $76,612,426÷772,769 pounds, or $99.14.

We are attaching hereto detailed figures showing the method of arriving at the cost shown above, and are also attaching photostatic copy of the "Construction cost index" from which the factors used were obtained.

W. B. BANKER,
Assistant Chief Engineer.

	Actual construction expenditures	Factor	Adjusted to 1918 average construction cost level
Hopewell (cotton):			
Dec. 31, 1913 (book value)	$699, 519. 86	1. 892	$1, 323, 491
1914	574, 036. 40	1.892/0.8856	1, 226, 371
1915	21, 631, 303. 12	1.892/0.9258	44, 205, 730
1916	6, 723, 927. 19	1.892/1.2958	9, 816, 934
1917	2, 575, 252. 48	1.892/1.8124	2, 689, 593
1918	5, 281, 368. 41	1. 000	5, 281, 368
Total	37, 485, 407. 46		64, 543, 487
Repauno (diphenylamine):			
1914	31, 268. 36	1.892/0.8856	66, 801
1915	314, 599. 19	1.892/0.9258	642, 914
1916	134, 040. 71	1.892/1.2958	195, 699
1917	47, 340. 95	1.892/1.8124	49, 442
1918	18, 078. 57	1. 000	18, 078
Total	545, 327. 78		972, 934
Add 30 percent acid, power, service lines, offices, and other general facilities			291, 881
Total			1, 264, 815
Carney's Point (powder):			
Dec. 31, 1913 (book value)	1, 548, 632. 60	1.892/1.00	2, 930, 011
1914	342, 294. 39	1.892/0.8856	731, 277
1915	10, 271, 224. 49	1.892/0.9258	21, 000, 273
1916	3, 112, 850. 59	1.892/1.2958	4, 545, 762
1917	3, 493, 573. 79	1.892/1.8124	3, 648, 688
1918	6, 762, 202. 06	1.892/1.892	6, 762, 202
Total	25, 530, 777. 92		39, 618, 213

Cotton consumption at Carney's Point during 10 months of 1918 pounds	205, 071, 736
Carney's Point produced during same period do	10, 152, 729
Hopewell cotton used at Carney's Point do	194, 919, 007
Hopewell total production over same period do	345, 734, 562
Percent of Hopewell production used at Carney's Point (194,919,007 ÷345,734,562)	56. 35
Repauno produced an average, per month, of 220,000 pounds of diphenylamine during 10 months of 1918.	
Carney's Point used during same period 1,085,326 pounds, equal to 108,532 pounds per month.	
Percent of Repauno production used in Carney's Point powder (108,532÷220,000)	49. 332
Above expenditures adjusted to 1918 cost levels:	
Hopewell (cotton) (64,543,487×56.35 percent)	$36, 370, 255
Repauno (diphenylamine) (1,264,815×49.332 percent)	623, 958
Carney's Point (powder) (39,618,213×100 percent)	39, 618, 213
Total	76, 612, 426
Powder produced at Carney's Point during 10 months (each 27 working days) of 1918 pounds	208, 647, 770
Daily production 208,647,770÷270 days do	772, 679
$76,612,426÷772,769=Construction cost per day/pounds	$99. 14

[1] See p. 3927 for additional data.

Engineering News-Record's Construction Cost Index Number is a national index of general construction cost in the United States. It has 4 components, of which 3 are prices of materials and 1 is wages. The materials are structural steel at Pittsburgh, cement at Chicago, and lumber at New York. The labor element is the average wage for common in 20 cities. These four factors are weighted according to their relative importance, resulting in the following quantities: structural steel, 2,500 pounds; cement, 6 barrels; lumber, 600 feet board measure; common labor, 200 man-hours. These are repriced each month.

The relation of these four components in the 1933 average index is: Labor, 53.6 percent; structural steel, 23.8 percent; lumber, 16.5 percent; cement, 6.1 percent.

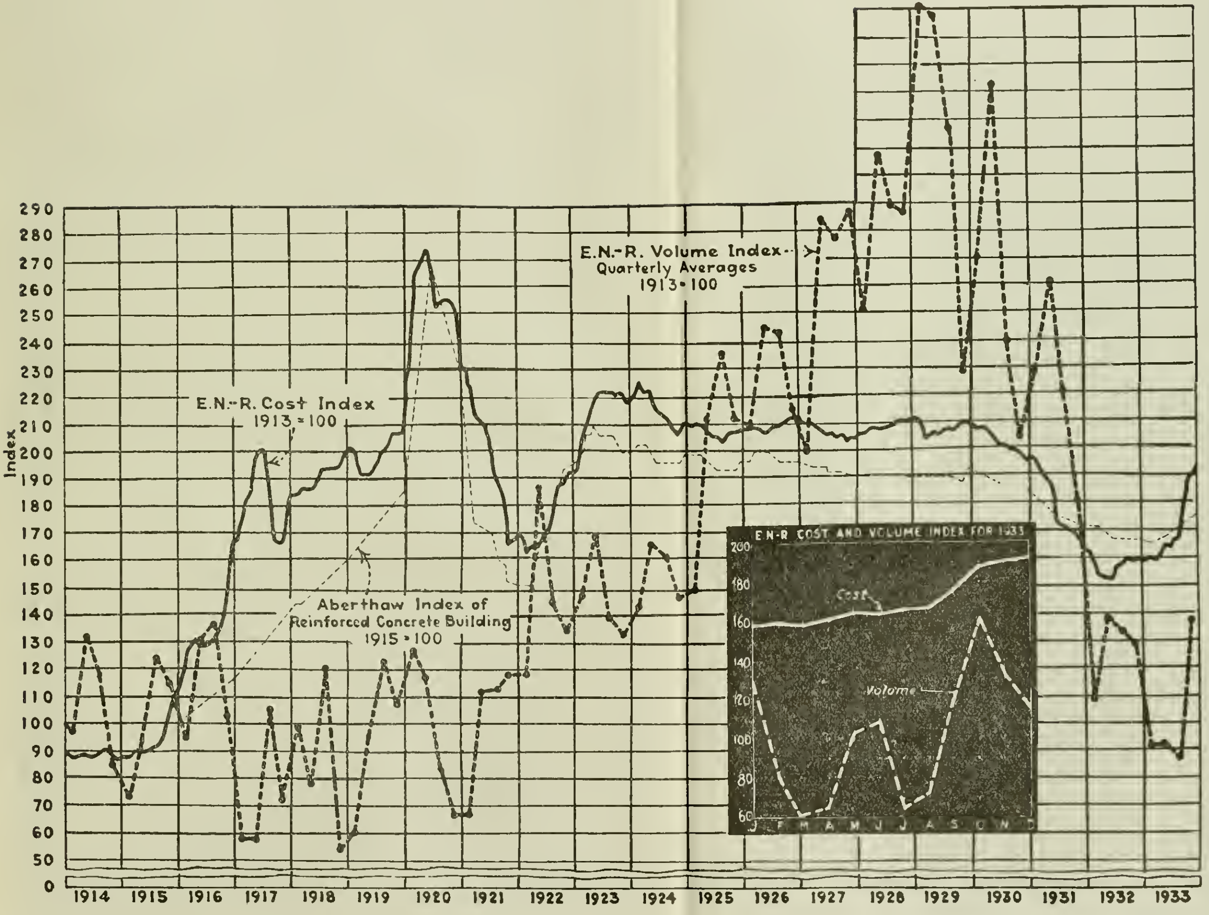
Table I gives the annual values of the News-Record Cost Index for the years 1903 to 1913. From January 1914 first-of-month values are given as well as yearly averages.

The purpose of the Cost Index, as stated in the first paragraph, is to show the movement of general construction costs. It was not intended to apply to a apecific type of structure, nor to a class of construction, nor to a particular locality. It is used in financing operations, in estimating and in valuation. Its possible application in a special problem must be determined by the individual user.

In response to the committee's inquiry as to the proportion of the total construction costs of the Old Hickory, Carney's Point, and Hopewell plants, represented by labor, steel, lumber, and cement respectively, in order to determine whether the construction index was comparable to the actual costs of constructing these plants, the du Pont Co. submitted the following two letters:

RISING materials prices—and labor rates pushed up the construction cost index to early 1931 levels during the final quarter of 1933. The volume index curve shows there is little relation between construction costs and volume. The Aberthaw index represents the cost of a typical reinforced-concrete factory building in New England.

(For Volume Index table see p. 4)



E. I. du Pont de Nemours & Co.,
May 7, 1935.

Mr. T. R. Hanley,
Legal Department:

With reference to Mr. Raushenbush's inquiry of May 3 regarding the summary of "Capital cost per pound of smokeless powder production", wish to advise in the first place that the Engineering News-Record Cost Index, which was used in preparing the summary, is the one generally used by the construction industry in the comparison of costs. It is true that the relation of the four components, i. e., labor, structural steel, lumber, and cement, may vary from time to time but it is generally considered that the resultant index fairly represents the cost of work in any given period.

Inasmuch as all three plants under consideration were built according to the same general designs—e. g., corresponding buildings on the three plants were constructed of the same material, lumber, brick, or corrugated iron, corresponding process equipment in the various buildings was identical in size and design—it can be safely assumed that there was little or no variation in the proportions of labor, lumber, steel, and cement in the construction of these plants.

E. G. Ackart, *Chief Engineer.*

E. I. du Pont de Nemours & Co., Inc.,
Wilmington, Del., May 14, 1935.

Mr. T. R. Hanley,
Legal Department:

With reference to Mr. Raushenbush's letter of May 10, it is impossible to give the cost of labor, steel, lumber, and brick as a proportion of the total cost of the various plants under consideration. No cost system that we know of would make this information available.

As we tried to point out in our letter of May 7 to you, the Engineering News-Record Index is used by the industry to make comparisons of costs. It is relative only, and from many years, experience, we have found it to be quite accurate in showing the movement of construction costs.

E. G. Ackart, *Chief Engineer.*

The following statement of charges paid by Government to E. I. du Pont de Nemours & Co. for administrative and engineering service in connection with the construction of Old Hickory, was requested of the du Pont Co. by the committee. (See text, p. 3603.)

E. I. du Pont de Nemours & Co., Inc.,
Wilmington, Del., April 18, 1935.

Alger Hiss, Esq.,
Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.

Dear Mr. Hiss: In your examination of December 17, you requested me (pp. 5450–1 of the typewritten record) to supply a statement of the amount of charges paid by the Government to E. I. du Pont de Nemours & Co. for "administrative and engineering service" in connection with the construction of the Old Hickory plant.

I am writing to supply the desired figures. Before doing so, however, I would like to clear up a natural misconception which I believe attended your question on this point, and if not, is still apt to lead to a misunderstanding of these figures if submitted without explanation.

Apparently the thought was that there was some element of profit for the du Pont Co. in these charges. On the contrary, the fact is that the charges paid by the Government represented only the amounts actually expended by the du Pont Co. for engineering work done by members of its own engineering department in connection with the construction of the Old Hickory plant. The principle followed was to keep an exact record, by individual projects, of the time expended by the company's engineers, draftsmen, etc., and to bill these charges according to the various projects which were in process, including Old Hickory.

No percentage was added to these charges for profit. However, the charges did, of course, include a proper apportionment of the necessary cost for supervision of the engineering work which was in progress. That part of the charges is shown below as "Indirect" and represents just as real and necessary a part of the actual cost to the du Pont Co. of doing this work as the salary which was paid to the draftsman at his board. The out-of-pocket cost for necessary traveling expenses in connection with the Old Hickory project was also billed to the du Pont Engineering Co. and paid by the Government.

As a further item of cost, an apportionment of the various office expenses of the parent company's engineering department (for rent, light, and similar items), amounting to about $64,000, was also billed against the du Pont Engineering Co., as we believe was entirely proper; but this part of the actual expenses was subsequently disapproved by the Government's representatives and its exclusion was agreed to by us in the interest of a final settlement. Thus, the charges actually paid by the Government were confined to reimbursement of the Du Pont Co.'s expenditures for salaries and traveling expenses. The amounts paid were as follows:

Direct	$481, 166. 59
Indirect	54, 692. 45
Total	535, 859. 04

It may be added that the "Indirect" item which is shown was about one-ninth of the total indirect expense of the engineering department of the du Pont Co. for the period in question.

Very truly yours,

W. F. GREGG, *Of Counsel.*

E. I. DU PONT DE NEMOURS & CO., INC.,
Wilmington, Del., April 22, 1935.

ALGER HISS, ESQ.,
Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.

DEAR MR. HISS: This is to supplement my letter of April 18 in answer to your question (pp. 5450–1 of the typewritten record of the December hearings) as to the amount of charges paid by the Government to E. I. du Pont de Nemours & Co. for "administrative and engineering service" in connection with the construction of the Old Hickory plant.

The $54,692.45 item of "indirect" expense reported in my letter of the 18th, as explained in the fourth paragraph of that letter, represented the costs of E. I. de Pont de Nemours & Co. for salaries and traveling expenses of members of its engineering department while engaged in supervision of the large amount of engineering work handled by that department for the du Pont Engineering Co. in the construction of the Old Hickory plant. In addition, there was a further and entirely analagous cost of $14,960.45 for salaries and traveling expenses of members of the staff of the traffic department of E. I. du Pont de Nemours & Co. while similarly engaged in supervising the large volume of traffic activities handled by the parent company in connection with the Old Hickory construction. To make my answer to your question assuredly complete, this item of administrative cost for traffic work should perhaps be included, though that was not in mind when my letter of the 19th was written.

No similar charges were collected in connection with the work of any other department of E. I. du Pont de Nemours & Co. in furtherance of the construction undertaking at Old Hickory. Also, as I pointed out in my previous letter, these charges represented bare costs, without the addition of any element of profit, and after a substantial volume of additional costs for items other than salary and traveling expenses had been challenged by the Government's auditors and its exclusion agreed to by us in the interest of a final settlement.

Very truly yours,

W. F. GREGG, *Of Counsel.*

The following information regarding machine gun sales was requested of the Winchester Co. by the committee. (See text, p. 3647.)

WINCHESTER REPEATING ARMS CO.,
New Haven, Conn., January 7, 1935.

Hon. GERALD P. NYE,
Chairman Special Committee Investigating the Munitions Industry,
Senate Office Building, Washington, D. C.,

DEAR SENATOR NYE: You will remember that during my testimony before your committee I was asked to furnish a list of all sales to other than Government agencies and stocks on hand of machine guns and machine-gun parts at the Winchester Repeating Arms Co.

While the Winchester Repeating Arms Co. has had many chances to enter the machine-gun field, they have consistently turned these down with the exception of the manufacture of the Browning machine rifle, model 1918, for the United States Government during the war.

It may interest your committee to know that the late Mr. John M. Browning brought his first model machine gun to Winchester in the very early days of machine-gun development. This gun was tested here quite extensively but the management of the company decided at that time, which was about 30 years ago, that inasmuch as our reputation and success had been built almost exclusively on sporting arms we would not be interested in entering the field; consequently the opportunity to get into the machine-gun business was turned down.

Shortly after the war, I would say in 1919, General Thompson and his son Colonel Thompson brought the model and drawings of their new sumachine gun to us and asked if we would bid on the manufacture of the gun. We went over the gun carefully in our engineering department and again decided that we were not interested in entering the machine-gun field.

During the war there was a great shortage of automatic rifles for the American troops and we were asked by the Government to help supply the demand for this type of arm. In 1917 the Government furnished us drawings, specifications, and a sample of the Browning machine rifle, model 1918, and gave us orders to proceed as rapidly as possible, with the result that at the signing of the armistice we had produced 47,123 of these rifles. Immediately on the signing of the armistice we closed the plant and sold the equipment to the United States Government, who had it boxed up and moved out of our plant. Since that time we have made no machine rifles or machine guns of any kind.

The present Winchester Repeating Arms Co. took over the assets of the former company from receivership on December 22, 1931. In cleaning up one of the vaults in 1933 we ran across 26 Browning machine rifles, model 1918, which were the property of the former company and were made by them as engineering samples. As these rifles were of no interest to the present company, we sold them to R. F. Sedgley.

We have no machine guns or machine-gun parts in stock. We have in our ballistic laboratory several machine guns which are used from time to time for testing ammunition but these are not for sale and are all registered under the National Firearms Act. Due to the fact that we are not manufacturing machine guns, we have not applied for a license under this law.

In 1933, as testified, we furnished a total of 92 short barrels, presumably for submachine guns, to Griffin & Howe. Later in the same year we made another order of 106 for the Hyde Arms Co. We have made no other machine-gun parts of any kind.

Very truly yours,

WINCHESTER REPEATING ARMS CO.,
EDWIN PUGSLEY, *Vice President.*

Hadley, Egbert C., technical director, Remington Arms Co 3937, 3946, 3948, 3950, 3954, 3957, 3961, 3964, 3972
Harris, Lt. Col. C. T., in the planning branch, office of The Assistant Secretary of War 3932, 3934, 3935, 3944, 3963, 3984, 3991, 4002, 4008, 4010, 4016, 4022, 4024, 4026, 4030
Pugsley, Edwin, vice president, Winchester Repeating Arms Co 3943, 3947, 3958, 3969, 3972, 3976, 3983, 3987
Reisinger, W. U., secretary and treasurer Remington Arms Co 3939, 3954, 3956, 3962, 3972, 3979, 3989
Educational orders from United States Government for ammunition from private manufacturers 3937
Comparative costs in manufacture of cartridges between Government and private plants 3948
Request of Howard E. Coffin to Pierre du Pont to appear before the Kernan Board 3973
Data concerning Winchester, Remington, and Western Cartridge Cos 3976
Recent profits of du Pont, Winchester, and Remington Cos. on sales of powder to United States Government 3985
Industrial connections of certain War Department and other officials involved in procurement and related activities during World War 3991, 4002
Personnel under industrial-mobilization plan 3994, 4016
Problems involved in price fixing 4022

---

[1] In cases of exhibits comprised of excerpts from the minutes of certain war-time civilian boards only such parts as were actually entered into in the hearings have been published in the appendix. At a later date the committee ordered to be printed separately as committee prints the minutes of the following agencies: War Industries Board, Price Fixing Committee of the War Industries Board, Council of National Defense, Advisory Commission of the Council of National Defense, Munitions Standards Board, General Munitions Board.

INVESTIGATION OF MUNITIONS INDUSTRY

WEDNESDAY, DECEMBER 19, 1934

United States Senate,
Special Committee to
Investigate the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m. in room 357, Senate Office Building, pursuant to the taking of recess, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Vandenberg, Barbour, and Pope.

Present also: Alger Hiss, legal assistant to the committee and Robert Wholforth, assistant to the secretary.

At this point the committee concluded that part of the testimony which is incorporated in Part XV of these hearings, "Old Hickory Contract and Industrial Organization in War."

The Chairman. The committee will be in order.

FURTHER TESTIMONY OF LT. COL. C. T. HARRIS, LT. E. M. BRANNON, LAMMOT DU PONT, AND IRÉNÉE DU PONT

(The witnesses were previously duly sworn by the chairman.)

The Chairman. Senator Clark, you have a matter to be developed.

Senator Clark. Mr. Chairman, the first thing I would like to do is to read into the record an excerpt from a broker's customers' letter which was sent out a few months ago by the Jensen brokerage firm from Boston, and sent to me by the recipient of the actual letter in due course.

It says [reading]:

"WAR BABIES" AGAIN!

> There are many who believe that the shadow of war over Europe and that over the Far East are more real than theoretical, which is responsible for a renewal of interest in some of the companies that produce war material.
>
> Recent buying of du Pont, Hercules powder, some of the steel stocks, and others that have a "war" flavor, is said to have been based on the possibility of a big "war material market" developing in this country.
>
> While one may regret the social side of warfare, the business possibilities are so tremendous that they may not be overlooked. Many of the great corporations that paid dividends of astounding proportions during the decade following the World War laid their foundations on the production of war material, long before America entered the conflict.
>
> The immense industrial machine of this country, now on a peace basis, could rapidly be converted back to a war basis, with the United States as purveyor to the world in arms—a consideration that may not be dismissed from the present viewpoint of the securities of certain companies that have the means of this quick conversion.

Colonel Harris, I want to raise a point which I raised yesterday of the possibility of the establishment of the censorship of the press under the legislation which has been prepared in the War Department to be sent to Congress immediately after the declaration of war.

I desire to invite your attention to the bill contained in the Industrial Mobilization Plan, offered in evidence heretofore.[1] Beginning on page 84, headed:

> 3. A bill making available to the President the material resources of the Nation.

Underneath that it says:

> (*a*) Consideration of like legislation in the World War: No comparable enactment in the World War

which I believe is unique among the bills which are prepared and sent in to Congress.

The first paragraph of the bill reads:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That during the present emergency and until such time as Congress shall declare the emergency at an end, the President is hereby authorized to determine and proclaim and to exercise control over the material resources, industrial organizations, services, and all business relations over which Government control is necessary to the successful termination of such emergency.

That clearly contemplates that the President is to determine what commodities and business relations in the country it is necessary for him to exercise control over, does it not, Colonel?

Lieutenant Colonel **Harris**. Yes, sir

Senator **Clark**. Now I direct your attention to section 7 of this bill, which is as follows:

> That from time to time whenever the President shall find it essential to license the production, manufacture, sale, storage, distribution, or transportation of any product, foodstuff, material, or commodity, in order to carry into effect any of the purposes of this act, and shall publicly so announce, it shall be unlawful for any person, after a date fixed in the announcement, to engage in or carry on any such business enumerated in this section, unless he shall secure and hold a license issued pursuant to this section.

Colonel, without any suggestion that the present President of the United States, or any particular President of the United States, would desire to use that bill in time of war, it is perfectly practicable and perfectly feasible under that section for absolute control of the press of the United States to be established, is it not?

Lieutenant Colonel **Harris**. If the press is a material resource of the Nation.

Senator **Clark**. The President is to determine that, according to the first section. All that would be necessary is for the President to declare printers' ink, or white print paper, or Mergenthaler type, as essential in the publication of newspapers, an essential commodity, and, therefore, it would be unlawful to use any of them without a license, would it not?

Lieutenant Colonel **Harris**. He could deprive them of going into the newspaper.

---

[1] Committee Print No. 2.

Senator CLARK. That is, any ingenious man, familiar with the newspaper business, could in 2 hours work out 40 different ways to establish a press censorship?

Lieutenant Colonel HARRIS. With the President's approval, I think he could.

Senator CLARK. I am assuming that the President approved it. I am not suggesting that any particular President would do it.

So that you might have a situation, such as I can remember when I was quite a young man, when American troops during the Spanish War were being "fed" what was called "embalmed beef" and a great national scandal arose, and the newspapers spoke in such critical terms and brought the matter so forcefully to the attention of the country that it created a great national scandal, and the situation was speedily corrected.

It would be entirely possible, under such a section as this, for the newspapers to be absolutely precluded from exposing any such situation as that, would it not?

I am not asking you to criticize your superiors, Colonel; you understand.

Mr. PIERRE DU PONT. Mr. Senator——

Senator CLARK. Yes, sir.

Mr. PIERRE DU PONT. I am not a lawyer, or trained in law in any respect, but does not the freedom of the press depend on the Constitution and not on law?

Senator CLARK. That is perfectly true. It would be a very close legal question, Mr. du Pont, in my opinion. I have just returned from trying a case on the freedom of the press. I do not know that such a section as that would conflict with the freedom of the press. It must be left for court determination, but when it is approached from the independent control of the commodities essential to the publication of a newspaper, it is quite possible that the court might hold that that was not a violation of the constitutional provision of the freedom of the press.

Mr. PIERRE DU PONT. That is possible.

Senator CLARK. We will return again to page 74 of this document, at which are set forth the purposes of the War Department in connection with this legislation.

By the way, Colonel, this legislation was prepared by the planning division of the War Department, was it, or by whom was the legislation drafted?

Lieutenant Colonel HARRIS. It has been a gradual growth over a number of years, put together and presented to the War Policies Commission and finally was assembled in the planning branch in collaboration with the Navy.

Senator CLARK. I read from page 74 of that document [reading]:

> The formulation, in time of peace, of plans for the mobilization and utilization of the industrial resources of the Nation in time of war is a duty imposed by Congress. In the performance of that duty consideration must be given to the content and scope of legislative enactments which will facilitate and make possible the working out of such plans. In consequence, drafts of bills which can be presented to Congress when war is imminent are prepared and revised from time to time. Naturally such drafts are not written in all detail, since many details can be supplied only when possible contingencies can be forecast with reasonable accuracy. It is the policy to prepare such drafts in

time of peace so that they may be ready for submission when the time comes. Their enactment at a time when war is not imminent is not desirable because such action would probably result in enactment into law of measures so detailed in their provisions and accompanied by so many restrictive clauses as to be a hindrance rather than an assistance in war. Also, it is impossible now to foresee what conditions will exist in a future war.

When this document says that enactment in time of peace or "when war is not imminent is not desirable because such action would probably result in enactment into law of measures so detailed in their provisions and accompanied by so many restrictive clauses as to be a hindrance rather than an assistance in war" is that to be taken to mean that if Congress had time to consider the matters in detail, they would not be so inclined to write a blank check to the War Department and the Navy Department, or to the President, for that matter, as they would be after war is declared, when the measures are sent up in a bunch and put through, as I said the other day, "under whip and spur", under the plan that any detailed consideration of them would be a hindrance of national defense. Is not that correct?

Lieutenant Colonel Harris. My opinion is, Mr. Senator, in time of war you should write a blank check to the President.

Senator Clark. Do you not think that, considering these matters in skeleton, it might be well for Congress to consider their outlines in time of peace so that they could have an opportunity for exercising their function under the Constitution, as a law-making body, rather than swallowing something whole after war is declared, when they are sent up by the War Department or the Navy Department?

Lieutenant Colonel Harris. It is not appropriate for me to say.

Senator Clark. I will not ask you to. I will express that as my opinion. It is my intention to introduce the bills contained in this document on the first day of the next session, so that Congress may have an opportunity to consider them: not that I intend to sponsor them or support them, but so that they can be appropriately referred to committees and be before the Congress for proper consideration in time for Congress to study them.

Lieutenant Colonel Harris. May I say one thing?

Senator Clark. Yes, you may.

Lieutenant Colonel Harris. There is no disrespect or lack of confidence in the Congress there, because Congress is the boss of this country.

Senator Clark. I understand.

The Chairman. We do not all agree to that.

Lieutenant Colonel Harris. I still think so, Mr. Senator. You asked about the consideration of the bills in time of peace, or you questioned a statement that they might call for restrictive measures. I think that the objection to Congress on censorship of the press, under this kind of legislation, is the kind of thing which would happen and slow up the legislation being passed.

Senator Clark. Exactly. That is the precise point. That is why I bring the two things up; if you brought up these matters in times of peace, when Congress had an opportunity to sit down and scrutinize them, some Senator, when reading section 7, to which I referred, in the bill to put the control of the resources of the United

States at the disposal of the President, somebody would almost certainly get up and offer an amendment to it:

> *Provided, however,* That no portion of this act shall be construed as to authorize a censorship of the press

and that amendment would probably be passed.

But, on the other hand, if you sent it up during time of war it would likely pass without anybody realizing what was in the bill.

FURTHER TESTIMONY OF K. K. V. CASEY, EDWIN PUGSLEY, C. K. DAVIS, E. C. HADLEY, J. H. CHASMAR, E. E. HANDY, AND W. U. REISINGER

(The witnesses were previously duly sworn by the Chairman.)

Mr. CASEY. Mr. Senator.

Senator CLARK. Yes, sir.

Mr. CASEY. In connection with your broker's letter, there have been in the last couple of years several on war scares, when the old question of " war babies " has come up. Usually when a broker gets out a letter advising somebody, he has something for them to buy, it indicates he has something to sell. But I was told on three different occasions, by three different brokers, that the people " in the know " were not going to buy the " war babies ", but they were going to buy wheat.

Senator CLARK. Major, I am not reading that as being binding on the du Pont Co., or any other company, but I was reading it reflecting the view of a man who should be more or less an expert in his line.

Mr. IRÉNÉE DU PONT. Mr. Senator, I would like to correct the major's statement. The proper word is not " war babies " but " war brides."

Mr. CASEY. I accept the correction.

Senator CLARK. The record may stand corrected.

Senator VANDENBERG. Have you the information on Lieutenant Chadwick?

Lieutenant Colonel HARRIS. B. F. Chadwick, first lieutenant, Engineer Corps, 410 Old Customs House, Detroit, Mich.

Senator VANDENBERG. Was he in active service at that time?

Lieutenant Colonel HARRIS. He was on active service.

The CHAIRMAN. Colonel, what would be the relationship between the Army and Navy Journal and Lieutenant Chadwick?

Lieutenant Colonel HARRIS. I cannot conceive what possible relationship there could be.

Senator VANDENBERG. Colonel, would there be anything in the regulations which would prohibit the employment of a soldier in active service on a commission basis by an outside publication, to solicit advertising?

Lieutenant Colonel HARRIS. In reply to that, I would like to read Army Regulations 600–10, dated November 15, 1930, changes no. 1, paragraph 2e, miscellaneous, (1) (a):

> Officers of the Army will not use or permit to be used their military titles in connection with commercial enterprises of any kind. Military titles are conferred upon individuals for military purposes, and their use as a commercial asset may subject both the individual officer concerned and the service itself to unfavorable criticism which, even if unmerited, is unnecessary and inadvisable. Such use of military titles is disapproved of by the War Department.

(*b*) Officers of the Army will not engage in or permit their names to be connected with any activity, participation in which is incompatible with the status of an officer of the Army.

Paragraph 5(b) of the Army Regulations 600–700, September 5, 1928, reads as follows:

Statements on the merits of services or supplies furnished to the Army will not be made for use in advertisements by commercial firms or individuals.

Senator Clark. It does not contain any provision about writing or soliciting advertising on official stationery, does it?

Lieutenant Colonel Harris. There is a law which provides or states that any magazine that has military personnel associated with the editorship, and which receives advertising, the pay of the officer becomes embarrassed. I do not know whether it is nullified or not.

Senator Clark. What I was talking about, Colonel, is this: We have had two instances here, one in the Marine Corps and one in the Army, where officers in active service were writing letters and soliciting advertisements. One of those, Lieutenant Chadwick, was soliciting advertising, and writing on the official stationery of the Department. Lieutenant Cutts was writing on the stationery of the office of the commandant, Marine Corps, in Washington, and Lieutenant Chadwick was writing on the stationery of the Chief of Engineers, and had a heading on it, "Reply to the Chief of Engineers."

Senator Barbour. Colonel, does the term "disapproved" used in the regulations which you read constitute being forbidden?

Lieutenant Colonel Harris. Yes, sir.

The Chairman. The committee will want to hear Mr. Pugsley, Mr. Hadley, and any other representatives of the Remington organization.

Lieutenant Colonel Harris. Mr. Chairman, before starting that line, could I introduce into the record some data which I spoke of the other day [1] with reference to the proportion that the cost-plus contract had to the total ordnance expenditures, with certain firms named, for which the percentage was given, the amount of cost-plus contracts, and the amount of straight contracts which they had?

The Chairman. Yes; surely.

Lieutenant Colonel Harris. The total expenditures of the Ordnance Department during the World War approximate four billions of dollars. Of this amount $1,098,635,443.24 represents the total obligations on account of cost-plus contracts.

The total of cost-plus and definite-price contracts placed with the firms listed below is indicated opposite each:

Firms	Cost plus	Straight
Bethlehem Loading Co	$25, 680, 737. 20	$184, 200. 00
Colt's Patent Fire Arms	341, 039. 67	32, 901, 841. 43
Remington Arms Co	100, 483, 747. 96	65, 727, 418. 24
Savage Arms Corporation	2, 701, 416. 84	50, 676, 993. 44
Western Cartridge Co	1, 470, 384. 06	13, 577, 147. 00
Winchester Repeating Arms	44, 604, 822. 13	41, 099, 523. 65

---

[1] Hearings, Part XIII, p. 2922, Part XV, p. 3628.

EDUCATIONAL ORDERS FROM UNITED STATES GOVERNMENT FOR AMMUNITION FROM PRIVATE MANUFACTURERS

Mr. Wohlforth. Among other things, this committee is interested in the subject of educational orders for private manufacturers, the methods followed in bidding on different proposals, the methods used in negotiating the contracts for munitions of war, and also the treatment accorded the successful bidder in munitions contracts by the various agencies of Government.

Furthermore, the committee is interested especially in the attitude of private business toward the Government in supplying munitions of war.

For this morning we would like to confine our studies to just one product, that is, .30-caliber ammunition, which the committee believes will probably be purchased in large quantities in the event of an emergency. I would like to direct this examination to Mr. Hadley, of the Remington Arms, and Mr. Pugsley, of the Winchester Co.

We understand that educational orders, that is, orders designed to be given not on a straight-production basis but for the education of the various manufacturers in the " know how " of various production methods have not been permitted in any degree for a great many years.

Mr. Hadley, could you tell us about the last time that Remington received an educational order from the Government, or fulfilled any contract that might be termed one of these " educational orders "? Do you recall any of those?

Mr. Hadley. You are limiting your question to .30 Springfield?

Mr. Wohlforth. Yes, sir.

Mr. Hadley. I should say that there were two orders that we have had of that nature that I recall.

Mr. Wohlforth. I have here a letter dated July 12, 1926, which I want to offer as an exhibit. It is from Mr. Strugnell, general sales manager of Remington, to Mr. Hadley.

(The letter referred to was marked " Exhibit No. 1283 " and is included in the appendix on p. 4033.)

Mr. Wohlforth. It reads in part as follows:

> Confirming our conversation I quote from the proposal on the .30 Springfield contract as follows:
>
> (*a*) That, owing to the fact that this will be in the nature of an educational order designed to give the manufacturers experience in making the service type of ammunition, which has never yet been manufactured commercially in the United States, ammunition which fails to meet the requirements of paragraph 14 of the specifications in regard to accuracy, may be accepted if, in the opinion of the Chief of Ordnance, the accuracy is sufficiently good to make the ammunition serviceable.

I want to put that in the record to show that educational orders are sometimes given.

Do you recall whether that order was subject to competitive bidding? If you do not have any information now, perhaps you can look it up and supply it later.

Mr. Hadley. I presume that it is.

Mr. Wohlforth. That letter referred to was dated July 12, 1926.

I now offer a letter dated November 10, 1926, from Mr. C. L. Reierson, who was president of the Remington Arms at that time, addressed to Mr. J. B. Smiley, who was chairman of the executive committee of Remington Arms.

(The letter referred to was marked "Exhibit No. 1284" and is included in the appendix on p. 4033.)

Mr. Wohlforth. This letter mentions many things, but I want to call your attention, first of all, to the fifth paragraph on page 1, which reads as follows:

> He—

that is General Ruggles—

> told me that after the failure of the recent bids, none of which could be accepted because of much higher costs of cartridges, he had been compelled to instruct Frankford Arsenal to immediately begin to increase manufacturing capacity. Up to that time Frankford had been making about 70 M cartridges per day. Their intention had been to gradually increase that capacity up to a point where the annual production would be somewhere between 20 to 30 million of these cartridges. He said that was an ample volume to keep Frankford comfortably busy.

That refers to the proposal in the first letter, July 19, 1926, and evidently those bids referred to were all too high. The point I want to make here is that the bids of the commercial manufacturers were all rejected because the prices were too high. Is that your understanding?

Mr. Hadley. I understand that bids were made, that Remington Arms Co. made a bid, that it was rejected, and that the reason for this, as learned from Frankford Arsenal, was that their policy was that no ammunition should be purchased which cost more than it cost them to make it. The matter was of a good deal of interest and importance to the Ordnance Department, because the production of Frankford Arsenal was perhaps one thing in one event and in another, a different capacity. Therefore, the next step that was taken was an agreement that a study should be made of the costs. In other words, Frankford Arsenal said in effect, "We cannot accept any bids that are higher than our costs." And nobody knew what that cost was in terms that the manufacturers could understand. There were differences in the kinds of things that had to be charged at Frankford Arsenal as compared with what the private manufacturer has to put into his accounting.

Mr. Wohlforth. I think that is very clearly brought out in paragraph three on page 2 of the same letter.

> He—

that is referring to General Ruggles again—

> He stated very frankly that he appreciates the fact that private manufacturers must take into consideration the element of profit which Frankford does not have to consider but that under the law as it exists today he simply cannot pay the cartridge companies any higher price than Frankford's manufacturing costs.

Was that a policy that he could not pay any higher, or was that a law that he could not pay any higher than the arsenal's manufacturing costs? I do not think that is clear.

Mr. Hadley. That question I cannot answer.

Mr. Wohlforth. Does anybody here know about it?

Lieutenant Colonel Harris. I can. It is a law.

Mr. WOHLFORTH. The next paragraph of "Exhibit No. 1284" states: That the law is unsatisfactory to the Ordnance Department and that they are making strong efforts to have it changed. I will read that paragraph:

> He—

that is General Ruggles—

> stated that this law is unsatisfactory to the Ordnance Department and that they are making strong efforts to have it changed so that some discretion may be used and so that there may be some just and fair differential that can in an emergency be used to justify the Ordnance Department in placing orders outside even at a little higher price which will afford private manufacturers a small profit.

The Ordnance Department wanted to get that law changed. Did it enlist the help of the manufacturers in attempting to get that law changed, as far as you know?

Mr. HADLEY. I am not aware of it, sir.

Mr. WOHLFORTH. The next paragraph talks of increased production of Frankford Arsenal, and the paragraphs following state that the more the arsenal's production is increased the more their costs go down. Does that hold for the commercial manufacturers as well?

Mr. HADLEY. I should say that there is a relation there. Certainly at Frankford Arsenal, which is a specialty shop in that the major part of their manufacture, as I understand it, is .30 Springfield cartridges, if they make a material increase in the amount to be produced one would naturally expect that the cost per unit would be somewhat lower. Particularly I think it was expected that at that time it would be true because, as I recall it, Frankford Arsenal had been making an intensive effort to improve their manufacture.

Mr. WOHLFORTH. I want to know whether that holds in general for the commercial manufacturer? Does increased production give you lower costs on .30 caliber Springfield ammunition? Can you give the committee any statement on that?

Mr. REISINGER. Capacity is a great factor in the cost, it is recognized.

Mr. WOHLFORTH. Of what part of the cost is it a great factor?

Mr. REISINGER. Factory cost and also in total overhead.

Mr. WOHLFORTH. And material?

Mr. REISINGER. No; not material; in your indirect costs.

Mr. WOHLFORTH. The rest of the letter pertains to a proposed visit in connection with this study to which Mr. Hadley has just referred. One of Remington's accountants, I understand, visited Frankford Arsenal in an effort to ascertain whether the commercial manufacturers might not get their costs more in line with the arsenal costs. That point I want to develop in just a few minutes.

In the next year on September 3, 1927, Remington was successful in securing an order for 10,000,000 rounds of .30 caliber ammunition from the Government. That is correct? That is the 10,000,000 order?

Mr. HADLEY. Yes. That was a second educational order.

Mr. WOHLFORTH. That was an educational order with the new-type ammunition?

Mr. Hadley. Yes. You will recall that the ammunition differed from any that we had made theretofore, in that it had the boat-tail type of bullet, the M–1, they call it.

Mr. Wohlforth. I think the price bid by you was $30 a thousand, and you were successful in getting the 10,000,000-round order.

(The letter referred to was marked "Exhibit No. 1285" and is included in the appendix on p. 4035.)

Mr. Wohlforth. The next letter we come to is one dated September 2, 1927, from R. C. Swan, sales manager of the ammunition division, to Mr. Smiley, president of Remington.

(The letter referred to was marked "Exhibit No. 1286", and is included in the appendix on p. 4035.)

Mr. Wohlforth. This was one day before your bid was sent in. I do not want to read the letter, but in one part the letter says:

> The costs, as computed from actual data relative to burden secured in running the half-million lot earlier in the year, shows a commercial figure of $25.52 per thousand.

That figure was your factory cost, which would give you on that contract about 15 percent profit if those figures hold for that time. Is that correct?

Mr. Reisinger. I think we furnished you a cost on this, that does not correspond with your figure.

Mr. Wohlforth. I just want to know about this letter. Evidently your men were figuring on it. A day before the bid went in you thought it would be around $25, $26, or $27 a thousand. I mean, you stood to make a certain profit on that order.

Mr. Reisinger. This letter says the commercial cost is $29.67 per thousand.

Mr. Wohlforth. Yes; but read the next sentence:

> Costs computed from actual data relative to burden items secured in running the half-million lot earlier in the year shows a commercial figure of $25.52 per thousand.

That point is not important here. I just want to put the letter in the record.

We understand you get considerable help and cooperation from the War Department in the course of your execution of these orders, and that is a very fair attitude on the part of the War Department. What I want to know is if this help and cooperation from the War Department is spread evenly among the various commercial manufacturers. You receive help and cooperation, do you not, Mr. Pugsley, in the Winchester Co.?

Mr. Pugsley. We do.

Mr. Wohlforth. We next come to a letter dated April 24, 1928, from General Ruggles to Colonel Hermann, who was works manager of Remington Arms at that time.

(The letter referred to was marked "Exhibit No. 1287", and is included in the appendix on p. 4036.)

Mr. Wohlforth. This letter speaks of trouble developed over 1,000,000 rounds of ammunition of that $10,000,000 order. Because of various defects, 1,000,000 rounds were rejected.

Mr. Hadley. Excuse me. That was a 10,000,000-round order, not $10,000,000.

Mr. WOHLFORTH. At the bottom of the page, in commenting upon the rejection of these million rounds, he says:

> The Department realizes that you have limited, if any, outlet for this ammunition and it has been considering how it might help reduce the loss to your company by buying from you from time to time such amounts of this ammunition as might be used in its own tests at a price which would relieve you of some of the loss and still not increase the cost to the Department of the tests to be made.

As I understand it, the Government would take this rejected ammunition from you to prevent you from taking a loss, and use it in certain tests, gun barrels, and so forth, in its own work.

The last paragraph says:

> In closing, the Department wishes to express its extreme regret that this defect has occurred in lot 1614 and the loss that has accrued to your company, and it is desirous of reducing this loss to you as much as possible under the circumstances.
>
> Very truly yours,
>
> C. L'H. RUGGLES,
> *Brigadier General,*
> *Assistant Chief of Ordnance.*

That seems to me a very solicitous attitude on the part of the War Department, and perhaps very fair from your point of view. Is that not correct?

Mr. HADLEY. I should say that that was very fair from the point of view of both the Ordnance Department and our company. These were educational orders. The Ordnance Department was very desirous that we should be able to make this ammunition, as doubtless they desired that other companies should also benefit from it. They certainly were willing to help us in the design of the ammunition. And as Mr. Pugsley said, they doubtless helped the Winchester Co.

At that point it is appropriate to say, I think, that not only has the Ordnance Department helped us in connection with various designs and developments in which they were interested, but our company has also been of assistance to the Ordnance Department, we believe, in a great many instances. I could cite nearly a score of them at the moment wherein we have been of assistance to them. So that it is natural for us to consider that they are interested in a development such as this and are willing to consider ways and means whereby this ammunition might be used without loss to them, as in the barrel test that you cited, erosion tests, and one thing and another.

As a matter of fact, it was not necessary for such consideration to be given, because this particular lot of ammunition which was rejected at that time we were able to recondition, that is to say, we pulled down that lot of ammunition and loaded it again after putting the shell cases through appropriate operations. I think that was the first time perhaps that we had succeeded, because perhaps we had not been up against it in some way in pulling out bullets of this nature without damaging the bullets.

Mr. WOHLFORTH. The point there is that there was no loss on the part of the Ordnance Department. They wanted to save you from a loss. They did not care whether they got the final million rounds or not. They could make you deliver the other million and do it all over again. The point I want to make is that they exercised extreme care to prevent you from having any substantial loss. What I want to know is, is that the custom of the Ordnance Department?

Mr. Hadley. I should say that certainly the Ordnance Department is imbued with a common-sense view in cases of this sort. If they could be of assistance without any injury to themselves, I believe that they would be glad to do so.

Mr. Wohlforth. That is just the point I want to make. As I understand it, in looking over this case up at your plant, these cartridges, as you have said, were reworked, and I think the company stood an expense of around $2,000. That year was 1928. As I recall it, there was a considerable Government order, and your figures give a percentage of profit on total Government business of 11 percent. That will be in the figures we will submit later, that you have supplied to us.

Mr. Hadley. I do not know those figures.

Mr. Wohlforth. The point just there is that under this policy commercial manufacturers do not stand to lose heavily in their dealings with the War Department.

Mr. Hadley. Excuse me. I do not think that conclusion is justified.

Mr. Wohlforth. What was your conclusion? They take the rejected cartridges and let you work them over. You had to buy the new powder, and it cost you a little over $2,000. On the whole Government business that year you made 11 percent. I think the conclusion might be justified that in following that policy you really do not stand to lose very heavily.

Mr. Hadley. If at the same time the Ordnance Department does not stand to lose. If they stood to lose, that would be a very different proposition. If a defect came up which meant that they could not use the ammunition without serious loss to themselves, naturally they would not do it. If we could not repair it, there would be a serious loss that could not be overcome.

Mr. Wohlforth. It would be a loss to you, not the Ordnance Department, because they could make you deliver another million rounds of perfect ammunition.

Mr. Hadley. Yes, without a doubt.

Mr. Reisinger. What was delivered against the order?

Mr. Wohlforth. Ten million rounds, and 1,000,000 rounds were rejected and reworked, and then accepted by the War Department for certain tests.

Mr. Reisinger. Yes, but it was all accepted as good ammunition. It was not taken as defective ammunition.

Mr. Wohlforth. Finally, no. They permitted you to do that.

Mr. Reisinger. All right.

Mr. Wohlforth. The next letter is dated May 18, 1934, from Mr. Chasmar to Mr. Strugnell.

(The letter referred to was marked "Exhibit No. 1288", and is included in the appendix on p. 4037.)

Mr. Wohlforth. This refers to the cartridges we have just been discussing. That is part of the 10,000,000-round order made for the Government in 1928. Apparently there were about 5,000 cartridges left over, and this statement appears in the letter:

> These cartridges are left over from a run made for the United States Government in 1928, and they do not have Kleanbore primers.

I do not want to get into a technical discussion. We understand that this is a noncorrosive, nonmercuric primer. Many manufacturers have this type or a similar type. This is the sort of primer that, when used in ammunition, is not supposed to corrode the gun barrel, and apparently claims are made that the gun does not have to be cleaned when this primer is used.

Then the letter says:

> These cartridges are left over from a run made for the United States Government in 1928 and they do not have Kleanbore primers. This makes them unsalable commercially.

That is, they are unsalable commercially because they do not have your type of primer.

Are we correct in understanding that the commercial manufacturers have developed a primer that had superior advantages to the primer in use at that time by the Government?

Mr. **Hadley**. We consider that the Kleanbore type of primer has certain advantages. It is obvious that these particular cartridges could not be sold by us commercially, because of our advertising in which we say that our cartridges of that nature are made up with Kleanbore primers. So that we could not dispose of them in that way, because they were not of that sort. That is no reflection on the quality of the cartridges, however, as long as it is not tied up with that particular type of advertising and as long as you bear in mind the difference between the noncorrosive quality of Kleanbore ammunition and the lack of that particular quality in these rounds that were made in 1928.

Mr. **Wohlforth**. I do not want to leave Winchester out of this. I want it to go in the record that Winchester has also some similar type of noncorrosive primer, has it not, Mr. Pugsley?

Mr. **Pugsley**. I think it might be interesting to enlarge a little on this .30 caliber cartridge, in view of what has been said.

The primer used in Frankford Arsenal standard specifications is the Winchester patented primer. That was adopted by the United States Government when the ammunition forwarded to the other side on the first shipments went bad, and they had to get some primer to replace the Frankford Arsenal primer. This was in the beginning of our entrance into the war.

They came to Winchester Repeating Arms Co. and took our primer and adopted it as standard. We gave it to them without royalty. It was adopted as standard throughout the entire war, and is continued as the Government standard. The matter of the powder that is used in the case was developed by the du Pont Powder Co. The jacket that is used on the bullet was pioneered by the commercial companies. The Government started out using a cupronickel jacket, and the commercial companies, primarily Winchester and Western, went to the gilding metal jacket, advertised it heavily, and as a result shortly after the war the Government adopted that.

So far as I know, Winchester pioneered the metallurgy, making the shell readily usable in both machine guns and in shoulder rifles. At the beginning of the war it was not well understood how to make a cartridge that would function perfectly in a shoulder rifle and in a machine gun. Cartridges that would function in one would not function in others. We developed that.

I bring this out to emphasize what Mr. Hadley has said, that the commercial companies have had a very large hand in helping the Ordnance Department. You take the .30 caliber cartridge, the primer, the metallurgy of the case, the powder, and the bullet jacket have all been developed by the commercial manufacturers. The commercial companies have developed noncorrosive primers so that I believe practically all the companies are now equipped to furnish noncorrosive primers suitable for the .30 caliber cartridge. Winchester has submitted such samples repeatedly to Frankford Arsenal for their tests, but they have not desired to change over from our standard prewar primer.

Mr. WOHLFORTH. The point I want to make here is this: I do not think it is necessary to enter into an extended technical discussion on these primers. The point to be made here is this: That as far as the commercial value goes, the private manufacturers seem to have come upon a new primer which has certain advantages over the primer which the Government is now using. I will grant that it may have some disadvantages as well, but those are points to be settled between technicians. As I see it at this time, the commercial manufacturers had developed something that was new and had certain advantages. That is simply the point I want to make.

About 1929, we understand that Remington offered this development to Frankford Arsenal, and we understand that at this time Frankford Arsenal, the Government arsenal, rejected the offer.

The CHAIRMAN. What was the occasion for the rejection?

Mr. WOHLFORTH. I think we will come to that in just a minute, Mr. Chairman.

I want to find out why it was rejected. Here is a letter dated August 23, 1929, from Mr. A. A. Dicke, who was vice president of Remington Arms at that time, to Col. L. J. Hermann, works manager, Bridgeport, Conn.

(The letter referred to was marked "Exhibit No. 1289", and is included in the appendix on p. 4037.)

Mr. WOHLFORTH. In the second paragraph, commenting upon the rejection of the primer by Frankford Arsenal——

The CHAIRMAN. Who was Mr. Dicke?

Mr. WOHLFORTH. Mr. Dicke was the vice president of the Remington Arms Co. at that time.

The CHAIRMAN. He is writing to whom?

Mr. WOHLFORTH. Mr. Hermann, works manager at Bridgeport, Conn. Mr. Dicke was then in the New York office of Remington. He says [reading]:

> It strikes me as very presumptuous for anyone at Frankford to try to tell us anything about styphnate. They have never manufactured it as far as we know and we are manufacturing it every day and in commercial quantities. It might be pertinent, although not politic, to ask them where they have acquired this great fund of information. They have apparently swallowed the du Pont propaganda and have paid more attention to that than the long experience of R. W. S.—

that is a German firm—

> Nobels, and ourselves.

Lieutenant Colonel HARRIS. May I interpolate there, Mr. Chairman? It would seem that the Government and these concerns are not such good friends after all.

Mr. Wohlforth. I want to know if there is any reason why the du Pont interests should want to keep the Government from having this primer powder. It had advantages, and I want to find out why they——

Lieutenant Colonel Harris. I shall be glad to put at your disposal technicians from the Ordnance Department to develop the question of the excellance or disadvantage of all these primers, if you wish.

Mr. Wohlforth. Suppose we ask the du Ponts that question, if they had any reason why they should want to keep the Government from having this primer development adopted by the Government. It says here:

> They have apparently swallowed the du Pont propaganda.

I want to know if there was any du Pont propaganda against this primer development, and why.

Lieutenant Colonel Harris. I would like to say a word. It is notorious that inventors are jealous of each other, that none has confidence in anything anybody else does. They use sarcastic and exaggerated phrases, some of which you have just been reading.

Mr. Wohlforth. I wonder if the du Ponts would care to answer that question, if they indulged in any propaganda that kept the Government from accepting this primer which was already accepted and used by the commercial manufacturers, and, as has been testified had certain advantages. Could you say anything about that, Major Casey?

Mr. Casey. That sounds to me like a letter written to try to excuse the Remington Co. for failure to convince Frankford Arsenal. They wanted to blame it on somebody, so they blamed it on us.

Mr. Wohlforth. I will read another paragraph from "Exhibit No. 1289" [reading]:

> I agree with you that nothing could be gained by further correspondence at this time—

that is, correspondence with Frankford Arsenal—

> but I believe that at the first opportunity after Dr. Hutchinson's return—

Dr. Hutchinson of the Remington Arms—

> it would be a good plan to take up with Colonel Munroe—

commander of Frankford Arsenal—

> or his superiors at Washington the exact situation on styphnate in an effort to break down the effect of this propaganda.

Evidently there was some feeling that there was propaganda against this primer at that time.

Mr. Casey. Remington may have had that feeling.

Mr. Wohlforth. We will put that in the record.

Mr. Lammot du Pont. Mr. Chairman, I wanted to speak to that same point a moment.

Mr. Wohlforth. Yes.

Mr. Lammot du Pont. The gentleman who was just speaking asked the du Pont Co. a question which has not been satisfactorily answered. I would like to answer that question, but we have not before us the complete information. If the committee wishes that question answered, they should give us the full information.

The CHAIRMAN. The question seems to be, Do you have in mind, Mr. du Pont, this particular time and case, and do you have a recollection of any controversy over the matter?

Mr. LAMMOT DU PONT. I have no recollection or knowledge of it at all. That is why I make the point that we are not informed on the question. That is the reason we do not answer.

Mr. WOHLFORTH. Evidently from this letter Mr. Dicke was pretty sure the du Ponts were using propaganda in an effort to prevent the War Department from adopting this new type of primer. It certainly must have had some value if R.W.S., Nobels, and Remington had accepted it. I just wanted to make that point.

Mr. LAMMOT DU PONT. Mr. Chairman, without knowing anything of the case, I think I can say that I am perfectly sure that du Pont used no such propaganda.

Mr. HADLEY. Mr. Chairman, at this point I wonder if I may mention some of the background which is pertinent to this particular thing, and which may cover some of the question that was directed by Mr. Wohlforth toward the du Pont Co. a moment ago. The situation was briefly as follows:

Lead styphnate was covered by a patent by a German—Von Herz. The R. W. S. Co. was mentioned—he was associated with that company. This material, lead styphnate, he believed was of value in priming mixtures.

Our company experimented with it. We believed it was of value in priming mixtures. We purchased certain patent rights from Von Herz in order to make use of this material in priming mixtures.

The rights for use in detonators were something in which the du Pont Co. might have been interested. I believe Mr. Von Herz desired to interest them in that. That is quite different from the use in primers.

The next step was that we actually made primers with that material. We considered it a vary valuable ingredient in priming mixtures. We wished to advise Frankford Arsenal of the fact that we were using it, because we thought they might be interested in also using it.

The material is one which at that time in particular was dangerous to manufacture. It was then being made in Germany for use in detonators and also in primers. It was being manufactured in South Africa and it was being manufactured in England. At that time it was certainly considered quite a dangerous material to work with.

I believe that Mr. Dicke's reference to the du Pont feeling on it was that they also considered that it was dangerous to work with and, if they used it, their requirement would be much greater in pounds than our requirement for use in primers. It may be that that affected their feeling. We, however, went ahead and used it.

This letter is dated 1929. Subsequently we have had satisfactory manufacture over a period of years to date.

This material is also used by the Dominion Cartridge Co. in its primers. It is also used more extensively in England than it was. The Germans are now putting out commercial ammunition which contains this same material. So I think that may be an explanation of what may be now a different feeling from that that existed in

1929, because of continued manufacture successfully and in more places than those in which it was formerly manufactured.

I do not know what Frankford Arsenal's feeling is at the present time, but I cannot help but believe that the outlook on the situation would be affected by the fact that this continued manufacture has gone on. We offered primers to Frankford Arsenal. They were much interested in testing them. Some of these primers contained lead styphnate. They have made tests since that time, I believe. What their conclusion is at the present time, I do not know.

Mr. Wohlforth. Here is another letter that will perhaps throw a little light on the feeling of the du Pont people. It is dated May 20, 1931. I offer it for appropriate marking as an exhibit.

(The letter referred to was marked "Exhibit No. 1290" and is included in the appendix on p. 4038.)

Mr. Wohlforth. This letter is from Mr. Monaghan to Mr. Strugnell, 2 years after this first letter was written, and I turn to page 2, the paragraph next to the bottom, where in discussing this primer development, Mr. Monaghan says [reading]:

> It would not be surprising to have confirmed the impression that du Pont does not like to see our nonmercuric primer developments as it means the loss of business to them on mercury fulminate. If the United States Government were to take up a nonmercuric primer, du Pont's loss in this respect would be increased, which may account for Mr. Henning's talk against our nonmercuric primer in .50 caliber.

Mr. Hadley. I believe, Mr. Wohlforth, that letter does not give the facts. If I understand it correctly, the Frankford Arsenal is not using a mercuric primer.

Mr. Wohlforth. Mr. Henning talked against it—Mr. Henning of the du Pont Co. apparently talked against it—according to Mr. Monaghan's letter.

Mr. Hadley. I should say Mr. Monaghan was picturing to himself the reason why Mr. Henning should talk that way, but I think the basis of it is erroneous. The primer that is being used by the Frankford Arsenal is a nonmercuric primer. Mr. Pugsley can perhaps answer that.

Mr. Pugsley. That is correct.

Mr. Wohlforth. Were they using it in 1931?

Mr. Pugsley. They were. Aren't you confused between the .50 caliber and the .30 caliber primer?

Mr. Wohlforth. The point I want to make is that in the Remington Co. they though propaganda was being put out to prevent the Government from taking this development, and I want to find out whether it was or was not, as far as this .30 caliber ammunition is concerned. Of course, he mentions .50 caliber here.

Mr. Pugsley. .50 caliber is a different subject than the .30 caliber. The .30 caliber is a nonfulminate mixture. It has been since 1917.

Mr. Wohlforth. I want to go over to the last paragraph of this letter on page 3, where Mr. Monaghan delivers himself as follows:

> All in all we have never found any cooperation from du Pont unless it meant at least 90 percent of the advantage to them.

I will put that in the record.

The next letter——

The Chairman. I wish you would identify Mr. Monaghan.

Mr. Handy. He is not here.

The CHAIRMAN. No; but identify him as to what his capacity was when that letter was written.

Mr. HADLEY. He was in charge of export sales at that time and is not a technical person, which I believe is the reason why this discrepancy has crept in.

The CHAIRMAN. What is his position now?

Mr. HADLEY. The same. I should also like to read into the record, if I may, the fact that Mr. Monaghan's expression of opinion in respect of the du Pont Co. was not that of the Remington Co.

Mr. LAMMOT DU PONT. Mr. Chairman, I would like to object to the testimony of Mr. Monaghan as to the policy of the du Pont Co. at that time. He knew nothing about it.

Mr. WOHLFORTH. That is granted. I just wanted to put into the record the impression he had as to the 90–10 relationship of cooperation between du Pont and the other people.

Mr. LAMMOT DU PONT. He had no knowledge of the du Pont Co.'s policy in such matters.

Mr. WOHLFORTH. I appreciate that.

Mr. DAVIS. Mr. Chairman, that letter, of course, was written prior to the acquisition of Remington by du Pont.

The CHAIRMAN. Yes; that is understood.

COMPARATIVE COSTS IN MANUFACTURE OF CARTRIDGES BETWEEN GOVERNMENT AND PRIVATE PLANTS

Mr. WOHLFORTH. I now want to change for just a moment to another subject which follows along in this general discussion.

Several exhibits back we mentioned the fact that Remington in 1926 was attempting to have a study at Frankford Arsenal made, upon Frankford Arsenal's invitation, in an attempt to determine some basis of cost, so that the commercial manufacturers of cartridges might get their costs more in line. We are not concerned with this 1926 study by the Remington accountant, other than to know that his work was not complete and that only partial figures were secured.

We now go ahead 2 years to 1928, and we understand at that time there was a meeting of a special committee of the Sporting Arms and Ammunition Manufacturers Institute in New York, and all of you gentlemen, I understand, are members of that institute.

At that meeting in 1928 Mr. Hadley was appointed chairman of a special committee of the institute. The function of this committee was to attempt to work up arsenal cost figures that might be comparable with those of commercial manufacturers.

As we understand it—and this is subject to correction—the Chief of Ordnance of the War Department about this time informed the commercial manufacturers that their prices were too high and that no more bids would be accepted on the present price schedule. In fact, as I understand it, the Chief of Ordnance, or his assistants, informed the commercial manufacturers that unless the cost of private manufacture could be reduced, Frankford Arsenal would install sufficient automatic ammunition-making machinery and not give private manufacturers any more orders, and I understand to some extent, or to a large extent, that has been done.

Is that correct, Colonel Harris?

The CHAIRMAN. Colonel Harris, will you answer that, please?

Lieutenant Colonel HARRIS. At the present time Frankford is making the entire small arms .30 caliber ammunition for this country.

Mr. WOHLFORTH. The point I want to make is that they went into that because the commercial manufacturers did not bring their prices down.

We now go ahead from this point and we want to show that in this 1928 examination every effort was made by the private manufacturers, that is, a technical committee under Mr. Hadley, to secure comparable cost data as between the four largest ammunition manufacturers and the Government plant at Frankford. These four largest manufacturers are the Peters Cartridge Co., which is now owned by Remington; the Winchester Co., now owned by Western; Remington; and Western.

We understand, Mr. Hadley, that you cooperated with the commanding officer of the Arms Arsenal at Frankford, Pa., in working up certain schedules to apply various costs and overhead charges; these were to apply as equitably as possible to the Government arsenal and to the commercial manufacturers. The committee understands that you received every cooperation from the Government arsenal. They turned over their books to you. They spent much time conferring with you and permitted the accountants selected by you, as chairman of the technical committee, to have access to all of the data.

For instance, here is a letter dated June 30, 1928, from Mr. Hadley to Colonel Wall, commanding officer of the arsenal. I will enter that for appropriate number, but I do not desire to read it at this time.

(The letter referred to was marked "Exhibit No. 1291," and is included in the appendix on p. 4039.)

Mr. WOHLFORTH. This letter mentions a schedule of depreciation agreed on between yourself and Frankford Arsenal, which was to be sent to all commercial manufacturers, so that a uniform system of these costs will have been followed by all concerned.

Next is a letter dated July 2, 1928, signed by Mr. Hadley, and addressed to Peters, Remington, Western, and Winchester. The subject matter of this letter has to do with an 8-page schedule showing the various operations, so that each company and Frankford Arsenal might work up costs which you say could be averaged or compared with those of other companies.

I will enter that for appropriate number.

(The letter referred to was marked "Exhibit No. 1292" and is included in the appendix on p. 4040.)

Mr. WOHLFORTH. The committee understands that a great deal of correspondence by Mr. Hadley with Frankford Arsenal in working up these figures was had, and all we wish to show here is that a serious effort was made to obtain the comparable figures.

We understand a method was devised for determining the interest on fixed investment and the interest on working capital, as well as a schedule of depreciation and other items entering into administrative expense, and also schedules for other cost factors.

A great deal of correspondence was had between you and the Government Arsenal, and I don't think it is necessary to put it in the record. All we want to show is that a sincere effort was made to secure comparable costs. In fact, you went so far as to write your district sales manager at Philadelphia on July 5, 1928, in order to get the tax rate in the locality where Frankford Arsenal operated.

I will enter that for appropriate number.

(The letter referred to was marked "Exhibit No. 1293" and is included in the appendix on p. 4041.)

Mr. WOHLFORTH. The idea is that you made every effort, played your own game, and made your own rules, and tried to get costs which might be considered comparable.

The CHAIRMAN. Mr. Hadley, I wish you would state for the information of the committee just what the general purpose of this effort was.

Mr. HADLEY. Yes, sir.

In the first place, I would like to say that this special committee, which is spoken of, was not a committee of the institute. It had no relation to the institute, but for the purpose of discussing the subject of .30 Springfield the time and place where the institute was meeting was a convenient one for ordnance officers to talk with the ammunition manufacturers.

The CHAIRMAN. What ammunition manufacturers were interested in this?

Mr. HADLEY. All of those who were manufacturing .30 Springfield type of ammunition were interested. Therefore, this committee was not a committee of the institute.

It should further be stated that the reason why I was appointed was probably that I happened to be the chairman of the technical committee of the institute, which was, if you choose to define it that way, a fact-finding committee, and the purpose of this cost business was to find what the facts were.

My qualifications were neither those of one who was to be concerned in any way with any bids that were to be made at a later time on the one hand, nor on the other hand was I qualified as a cost accountant, so that my activity was that of coordination and calling upon others who were better qualified, in order to try to arrive at what the facts were in connection with the cost of this ammunition.

Now, Mr. Wohlforth gave some indication that the purpose was to make the Frankford figures more closely related to those of the manufacturers. It was natural that the manufacturers should have to think in terms of the different elements of cost which they have to deal with, and that Frankford Arsenal's method of accounting is quite different, for certain obvious reasons.

There are certain items of expense that they do not have, in the way of taxes, and so forth and so forth, and there are some items of expense that they do have that the manufacturers do not have, such as leave time, which is not customary among the manufacturers. So there were quite a number of things which it was the purpose of this committee to bring to a common ground, so we could talk the same language, so we could see with the same eyes, as it were.

The first thing that was done, since both the ordnance officers and the manufacturers were aware of a cost study that was made in 1926, was to familiarize myself with those figures and to get in touch with our cost accountant who had worked those figures up and to enlist his services in connection with the new study.

The next point I would like to make is as to the basic primary reason for having this study. The matter was of a great deal of interest to the manufacturers, in that there might be an important volume of business for them. It was of great interest to the Ordnance Department, because they had certain requirements for ammunition. I do not know the opinions of individual ordnance officers, but I have no doubt that there were many who said, " For industrial preparedness it would be better for us to make a certain quantity at Frankford Arsenal and for us to procure from the manufacturers the remainder of our supply, if that is possible."

I have no doubt there are many who believed that that would be an industrial preparedness program which would be valuable.

I have no doubt, on the other hand, there are others who felt differently, and who said to themselves, " Frankford Arsenal should be built up to whatever capacity we require. In that event there will be nothing for the manufacturers to make."

There is a possible point there which would be of interest; and that is, if Frankford Arsenal, as a contracting plant for the purchase of such ammunition, cannot pay more than their own costs, there was the possibility, of course, that it would be impossible for them to obtain anything from private manufacturers if private manufacturers' costs were higher than those of Frankford Arsenal.

So that was the basis of the study. In the first place, it should be remarked when it comes to the place of trying to get these costs on a comparable basis that the process of manufacture differs in different places, either due to the technical personnel in one place believing that their certain method is better than that of the other places, or due to differences in equipment.

For instance, in our case we have no such equipment as Frankford Arsenal has for making the boat-tail bullet, which is characteristic of this new design and was produced on these educational orders I have spoken of. We have to take several machines of a smaller type in order to produce the boat-tail bullet satisfactorily.

That is just an instance of where there is a difference in process, a difference in machinery, because of different equipment that we have. Doubtless the same differences existed elsewhere.

So what we were trying to do then was to establish a common method, and these eight sheets that have been referred to by Mr. Wohlforth were intended to show the detail of each operation of each of the components that goes into the making of a .30 Springfield cartridge.

So we worked out that method of showing all of the details, and I would like to come later to the reason why we wished to show so much detail.

We worked out that method and asked Frankford Arsenal and each of the manufacturers to adhere as closely as possible to that formula, in order to arrive at a common ground, so that manufacturers would understand each of the others.

The CHAIRMAN. The Government is anxious to patronize private industry, if it can.

Mr. HADLEY. I had no doubt certain individual officers felt that way, and I have no doubt that some others felt otherwise.

The CHAIRMAN. And as between you as private manufacturers and the Government operating at Frankford, there arose a desire to see if there could not be an arrival at a basis of cost finding that would give the private industry full advantage—not unfair advantage but full advantage—of costs. In other words, if the private industry could show that the cost basis being used at Frankford was not inclusive of all actual costs, you were anxious that those additional costs should be written in, so that there would not be as large a margin between your costs and the costs that were being shown by the Government. Is not that the fact?

Mr. HADLEY. I should say that it was for the purpose of bringing out what the facts are.

The CHAIRMAN. That is right.

Mr. HADLEY. Rather than that.

The CHAIRMAN. And you won the cooperation of the Government in ascertaining those facts, did you not?

Mr. HADLEY. I should not say we had won it. I should say it was freely offered.

The CHAIRMAN. It was freely offered?

Mr. HADLEY. It was an important problem and a mutual one.

The CHAIRMAN. That is right.

Mr. HADLEY. And we tried to meet on common ground.

The CHAIRMAN. That is right. I am quite ready to concede that was the case. Now, you ascribed as costs at Frankford costs that do not actually exist, namely, taxes, did you not?

Mr. HADLEY. I should say the taxes is a legitimate element of cost. It is true that Frankford does not actually pay those taxes, but it is a legitimate element of cost.

The CHAIRMAN. And I am ready to agree with you on that.

Mr. HADLEY. Yes.

The CHAIRMAN. That ought to be included.

Mr. HADLEY. Yes.

The CHAIRMAN. For the purpose of ascertaining a fair basis of cost in comparison with the costs of private industry.

Mr. HADLEY. Yes.

The CHAIRMAN. Your industry made a sweeping study and brought into Frankford costs everything that might be considered a cost, did you not?

Mr. HADLEY. That certainly should have been done, because we were trying to find what the costs were and to compare them on a comparable basis.

Mr. WOHLFORTH. You did bring in everything that might be considered a cost, as far as you were able, in order to get the figures on a comparable basis. That is the only point we want to make.

Mr. HADLEY. Well, yes.

Mr. WOHLFORTH. As far as you were able.

Mr. HADLEY. Yes.

Mr. WOHLFORTH. You cannot do the impossible.

Mr. HADLEY. Of course.

Mr. WOHLFORTH. You made every effort and made your own rules——

Mr. Hadley. To make the costs comparable. I do not think it adequately expresses the thing to say we brought in as much as we were able. What we were trying to do was to find facts.

Mr. Wohlforth. I see. I want to make the point here that these costs were worked up on 11 sheets, that is, the costs at Frankford, the costs of Peters, the costs of Remington, the costs of Western Cartridge, and the costs of Winchester, and you assembled them in this form here on sheets numbered 1 to 7, 7–A, 8, 8–A, and 8–B, and I will submit that for appropriate number.

(The cost formula referred to was marked "Exhibit No. 1294", and is included in the appendix on p. 4041.)[1]

Mr. Wohlforth. Now, if we turn to sheet 8, for instance, or 8–A, it seems fairly clear that the——

Senator Barbour. May I interrupt just a moment there, Mr. Wohlforth?

Mr. Wohlforth. Certainly.

Senator Barbour. Colonel Harris, do you happen to recall whether there was any deficiency appropriation asked for or received by the Ordnance Department for Frankford Arsenal at this time?[2]

Lieutenant Colonel Harris. I do not know, Senator.

Senator Barbour. Will you look that up?

Lieutenant Colonel Harris. I will.

Senator Barbour. Of course, if you have recourse to a deficiency appropriation, that should be taken into consideration in the way of costs.

Lieutenant Colonel Harris. I am very sure there was no deficiency appropriation asked for ammunition. There might have been for equipment.

Senator Barbour. Will you look into that and see what did happen?

Lieutenant Colonel Harris. Yes; I will.

The Chairman. Mr. Hadley, is it fair now, with that sheet 8–A before you, to assume that the cost prices that are found there as relate to Frankford, Remington, Western, and Winchester, were the result of as thorough a study as you knew how to make at that time?

Mr. Hadley. All I can say is that we worked out these sheets showing different operations with a view to putting the costs on a comparable basis, and that this is a tabulation of the results obtained.

The Chairman. Do you know the costs that might be added as affects production at Frankford at this time which you were not aware of then?

Mr. Reisinger. Mr. Chairman, in examining these costs—

Mr. Wohlforth. Just a minute. We have not begun to examine them yet. We want to get this point cleared up first.

Mr. Reisinger. It seems to me the chairman is examining the costs.

The Chairman. Let us lay the foundation for it first. Then you can bring out the points you want to bring out after the foundation is laid.

Mr. Wohlforth. Excuse me, Mr. Reisinger.

---

[1] For additional data on "Exhibit No. 1294", see appendix, p. 4152.

[2] Colonel Harris later informed the committee that there is no record of a deficiency appropriation for Frankford Arsenal during the years 1927, 1928, and 1929. See Hearings, Part XVII, p. 4269.

Mr. REISINGER. I will wait.

Mr. WOHLFORTH. In submitting these we look at sheet 8–A and we find Frankford Arsenal, Peters, Remington, Western and Winchester, in vertical columns, and on the left we find the various costs:

Materials furnished by manufacturer, materials furnished by Government, labor, factory overhead, general and administrative expense, interest on plant investment and working capital.

And so on down the line, and at the bottom the figures are all totaled as between Frankford Arsenal and the four commercial manufacturers.

Now, Mr. Reisinger.

Mr. REISINGER. Although an attempt was made to get comparable costs, the only way we could get comparable costs was by a questionnaire, and if you know how easy it is to get accounts incorrectly applied so that all cost systems are on the same basis, you would understand how difficult such a problem is.

Now you come down to the costs and you examine the factory overhead and shrinkage. The Government has $4.39, whereas the other manufacturers all run above $9. It is quite evident that these figures are not comparable. It is inconceivable that the Government can operate any cheaper on an overhead if every item of cost were comparable than a private manufacturer.

Senator CLARK. It is perfectly true that in a Government activity they would not set up depreciation and other items that a prudent business man does in operating a business.

Mr. REISINGER. That is true.

Senator CLARK. That applies not only to manufacturers of munitions but a great many other Government activities.

Mr. REISINGER. That is true.

Mr. WOHLFORTH. Mr. Reisinger, you had nothing to do with working up these figures at this time; you were not with Remington at that time, were you?

Mr. REISINGER. That is true.

Mr. WOHLFORTH. Suppose Mr. Hadley answers the next question. Here we have a Frankford Arsenal being able to manufacture a thousand rounds of .30 caliber ammunition for $22 and so many cents, Peters, $31, Remington $28 and so many cents, Western $35 and Winchester $34 per thousand. Do I understand that you deny these figures are not comparable? You do not want to accept them as comparable, is that the idea?

Mr. REISINGER. I do not.

The CHAIRMAN. Mr. Wohlforth, where in the exhibit which has just been offered is the item of taxes taken into consideration?

Mr. WOHLFORTH. Can you tell us that, Mr. Hadley? Was that put in general and administrative expense? You wrote and got the tax rate, and I imagine it was included in the item of general and administrative expense. You wanted that figure and I assume you used it.

Mr. HADLEY. I should say that it appears somewhere.

Mr. WOHLFORTH. Do you want the letter?

Mr. HADLEY. No; I recall the letter. I was just wondering where it may have been put in.

Mr. Wohlforth. Do you remember that you did put it in or that you did not put it in?

Mr. Hadley. I should say that we had put it in.

Mr. Wohlforth. That is the point I want to make. You got the tax rate; you got these schedules of depreciation and everything else and made the best effort to have these figures as comparable as possible, and the results clearly indicate, as on sheet 8-A, that the Government on this basis can manufacture much more cheaply than the commercial manufacturers. Is that a correct assumption from these figures? Mr. Reisinger denies that. I am interested in it.

Mr. Hadley. I think his denial is correct, in that there are certain elements which do not appear here and which cannot probably be included. It would probably be impossible to do so.

The Chairman. What such items might there be?

Mr. Hadley. What I have reference to is this, specifically: That Frankford is in effect a specialty plant. They were making at that time perhaps 60 million a year of one item, whereas the commercial manufacturers on center fire ammunition, none of them makes any quantity that is comparable to that, of any single cartridge, very far from it. So I should say that one important element in that difference in cost is the fact that there is a specialty shop there, whereas the ammunition manufacturers, as set up for commercial business, which is of course what we are doing, are making many different items, many different kinds. That would be one important reason why the figures are not comparable.

It was clearly pointed out at that time and realized by everyone that if Frankford Arsenal at that time decided to increase their capacity to 100 million a year instead of 60 million, their costs would go down still lower and that the manufacturers might be able to produce something that would be acceptable at that time, that probably thereafter it would be impossible on such a basis.

Mr. Wohlforth. You say Frankford is a specialty shop, but in making up these costs and in getting up these schedules, you allocated costs only of the .30 caliber products, didn't you, in order to get this so-called " comparable " basis?

Mr. Hadley. That was our attempt, sir.

Mr. Wohlforth. And these are the results. I simply want to offer these figures for what they are worth. Mr. Reisinger does not believe in them and I don't think there ought to be any argument, perhaps, on that point, unless you care to discuss it further.

The Chairman. Let us establish here who is responsible for those items of cost.

Mr. Wohlforth. Mr. Hadley.

The Chairman. Mr. Hadley and his colleagues?

Mr. Wohlforth. Yes.

Senator Clark. I would like to know where the tax item is.

Mr. Hadley. I will look further for it.

Senator Vandenberg. You put in uniform selling expense, so there can be no discrepancy at that point whatever.

Senator Pope. Under the item of depreciation, Mr. Hadley, will you also call our attention to that? Was depreciation considered as far as private manufacture is concerned, and Government, or just how did you consider depreciation?

Mr. HADLEY. We made an attempt to do that by taking the different elements, that is, buildings depreciated at such a rate, expressed at such a rate, and we tried in this formula, in one of the particular formulae, to set down what was perhaps a reasonable method for the commercial manufacturer to use. Probably it was—although I cannot say so definitely—probably it was that used by Remington, and we asked others to cast their figures into that form in order to try to include such an item.

Senator POPE. Did you consider depreciation on the part of Government buildings and plants?

Mr. HADLEY. Yes, sir; our attempt was to put that on a comparable basis.

Mr. WOHLFORTH. May I say, Mr. Senator, that they had 8 mimeographed sheets, I think it was, which scheduled depreciation for everything, and there was another schedule of about 32 mimeographed sheets, which took in all the various operations, so that they tried to make them comparable all the way through.

Senator VANDENBERG. That can be identified later. Let us not interrupt the proceedings.

The CHAIRMAN: Mr. Hadley, do you have any reference to the consideration which was given to the tax item? Is it probably covered in the administrative expense?

Mr. HADLEY. I believe so, but I am still looking for that particular item in those original sheets.

Mr. REISINGER. I think that is incorrect. The item of taxes should appear in factory overhead and shrinkage, and I cannot help reiterating what I said before:

The fact that the Frankford Arsenal overhead and shrinkage is lower than the other companies, there must be some items not included, to put them on a strictly comparable basis, and it is on that fact——

The CHAIRMAN. What do the two stars after the $4.39 charged to Frankford Arsenal for factory overhead and shrinkage mean?

Mr. REISINGER. It refers to a note on the preceding page, page 8, being reference to the scrap allowance, which reads:

> Tool and machine expense on shell and bullet have been transferred to administrative expense on sheet no. 8–a.

Mr. WOHLFORTH. They have charged in that account what the private industry charged to other accounts.

Mr. REISINGER. I do not think it is fair to assume that. I take the opposite view, that they have not charged them in on account of the variance in the figures.

The CHAIRMAN. Mr. Hadley, these figures constitute the result of the best efforts which you were able to put forth at that time to accomplish comparable costs? Is that not the case?

Mr. HADLEY. That was our attempt. We did what we could.

The CHAIRMAN. It was the best effort of the private manufacturers to arrive at a comparable basis of cost, taking into consideration everything that presented itself at that time?

Mr. HADLEY. That was the purpose. I should say it was the best effort, let us say, of the committee.

The Chairman. They include labor, overhead, profit, administrative expense, materials, insurance, taxes, workmen's compensation, all such items, did they not?

Mr. Hadley. I cannot speak from memory on that. I would have to go through the records in order to see.

The Chairman. Now, were you not struck by the discrepancy there in that item of factory overhead and shrinkage which is charged up to Frankford Arsenal?

Mr. Hadley. Yes, there is a big difference there.

The Chairman. What is the difference?

Mr. Hadley. I cannot say what it is. The only thing that I can think of—of course, there are various elements—is that it might be that in the overhead are higher salaries paid in private manufacture than in the Government. And that is one item which would go into overhead. The fact that it was specially shopped so that they could produce 1,000 cartridges with less overhead than one which is producing a multiplicity of different kinds of cartridges, involving changes of set-up continuously, changes of tools and so forth and so forth.

The Chairman. That discrepancy there does not strike me as being out of order especially, because the difference in factory overhead and shrinkage, as between the Frankford Arsenal and Peters, was about $5, whereas the difference between Peters and Winchester is about $5, too.

Mr. Hadley. I am not sufficiently familiar with accounting to be able to look at those figures and say that they are reasonable or unreasonable in their difference.

The Chairman. Tell me this: Why should not the committee accept this demonstration as being an exhibit to the point that the Government can manufacture more cheaply its .30-caliber ammunition than private industry can, much more cheaply?

Mr. Lammot du Pont. Mr. Chairman——

The Chairman. Let Mr. Hadley answer that question. Why should not the committee be free to draw that conclusion, in the light of your own study?

Mr. Hadley. As I say, I cannot speak as to the accounting. What I was doing was assembling all the figures given. Certainly, on the face of them, it looks as if Frankford could manufacture more cheaply.

Mr. Lammot du Pont. Mr. Chairman, I do not want to contradict Mr. Hadley's testimony, but I have glanced at this sheet, and it is apparent to me there is one discrepancy which I do not see how he could pass over. It is stated in the footnote that the factory shrinkage at Frankford Arsenal was taken at zero. I do not know anything about cartridge manufacture, but it seems to me on the face of it that must be incorrect. You cannot run a plant without any overhead or factory shrinkage.

The Chairman. Is this on 8–a, Mr. du Pont?

Mr. Irénée du Pont. The star on page 8.

The Chairman. Remington is at only 1 percent.

Mr. Lammot du Pont. That is quite a lot different from zero, Mr. Chairman. You have asked a theoretical question of Mr. Hadley, as to whether that is the best that could be done.

I do not see how he can state it is the best, when it cannot be so.

The CHAIRMAN. What investment is involved at Frankford Arsenal?[1] Do you know, Colonel?

Lieuenant Colonel HARRIS. I would have to verify the figures. I imagine the investment at Frankford Arsenal is around $20,000,000, but that is subject to correction.

Mr. CASEY. Mr. Senator, I think if you really want to get a true comparison of manufacturing costs against private manufacture, give each one of the loading companies the same quantity of munitions in .30/06 they produce at Frankford Arsenal and then see the picture change.

Mr. PUGSLEY. Speaking individually or for my company, we could not accept those figures as being representative. I think I was on the committee which prepared these sheets so far as our company was concerned, and, as a result of this, we were so discouraged in our inability to get our costs and the Government costs on a comparable basis that we decided to forget the whole business.

We had an educational order about that time, for which we had bought a special press to do the operations which Mr. Hadley referred to in connection with this boat-tail bullet, which cost us in the neighborhood of $11,000, and sold that press to the Government, thereby practically putting ourselves out of the business, because we were so discouraged with the possibility of getting on a comparable basis. It just seemed impossible.

The CHAIRMAN. Now, if you people have as much trouble determining in peace time, when there is no emergency pressing, if you have as much difficulty determining what costs are, where in the world are we going to get in the event of an emergency, when, under existing plans, we undertake to determine what costs are?

Mr. PUGSLEY. I do not know, sir.

The CHAIRMAN. No.

Mr. PUGSLEY. I do not think that the point has been stressed sufficiently on the special-purpose shop that Frankford Arsenal has now developed. Frankford Arsenal has done an excellent job mechanically and has equipped all the machines with automatic feeds on carriers between machines and the product from one machine is carried automatically to the next machine and there is a continual flow. No commercial manufacturer can afford to set up machinery on the hope of a sporadic order from the Government to such an extent.

Our cartridge factory is responsible for in the neighborhood of 750 variations of metallic cartridges, under three brands, so that our runs are necessarily short, and we are a job shop.

Frankford Arsenal, I think, makes something like three calibers. They are not even making the .30 Krag cartridge, because they are tooled up specifically for the .30/06 Government cartridge, and it is not readily possible to change their machinery to take care of the small difference between the Krag cartridge .30 caliber and the Government .30/06. They have in the past put those out for bid.

I do not think Frankford Arsenal made any of those for a number of years, because they were a special shop. Major Casey is absolutely right. If you will give the commercial manufacturer the same things and allow them to make the same investment in automatic machinery and automatic conveyors between machines, that we can then get our direct costs somewhere near Frankford's.

---

[1] Colonel Harris later submitted figures on the plant investment at Frankford Arsenal. Hearings, Part XVII, p. 4269.

Senator VANDENBERG. Major Casey, I am reading from a letter from C. I. B. Henning, of November 17, 1925, on conferences in Washington, report no. 88–H in 1925, from the second paragraph [reading]:

> The discussion of the preceding led to a general discussion of the relations of the du Pont Co. with the Ordnance Department. Little that was new developed, as a result of this. General Ruggles emphasized the desire of the Ordnance Department to assist the du Pont Co. in maintaining their ability to manufacture military propellants, and showed a very broad, liberal attitude in meeting the details of our incidental problems. * * * An order for 200,000 pounds 75 mm FNH will be open to bids in a very short time. The specifications are intended to insure procurement from the du Pont Co. I mentioned the possibility of the naval powder factory as a competitor, possibly repeating our experiences relative to bids for 14″ powder, 2 years ago. General Ruggles does not anticipate a recurrence of that situation.

What is indicated by the writing of the specifications to insure procurement from the du Ponts, and the inference, as I read it, that if there were specific competition with the naval powder factory, the naval powder factory might be the lower bidder? Is that what it means?

Mr. CASEY. No, sir.

Senator VANDENBERG. What does it mean?

Mr. CASEY. It means the 75-millimeter powder referred to was a post-war development of du Pont. That was based on the agreement we made with General Williams in 1919. That powder was being made both by du Pont and Picatinny Arsenal. Picatinny Arsenal knew what it cost. So did du Pont. It was made under du Pont patents, under which Picatinny Arsenal or Indian Head would have to pay no royalty. They were free to manufacture it.

Therefore the specifications did not refer to FNH powder, but it referred to the fact that FNH powder was designed to have flashlessness and nonhygroscopic properties. Those were recommendations of the Westervelt board.

The incident referred to as a Navy bid was not a bid at all. We were requested to put in a bid. The Government was going to furnish nitrocellulose and those ingredients which they had in hand. We put in a bid which was, I think, one-fourth of a cent over cost, actual cost, simply to keep our plant going, when we had no business whatsoever.

We were informed by Major Burns that our bid was rejected because it was too high in comparison with the Government estimate.

A few years before we had made a direct comparison with Admiral Earl of du Pont costs against Navy costs, and our costs were low. I simply asked General Williams, "If the Navy puts in a bid and you award them this business on the basis of that estimate, what do you eventually pay them?"

He said, "We pay them what the powder costs."

I advised them that I felt du Pont knew costs as well as the Navy. We did not believe that the Navy could make the powder for the estimate, which indicated it was probably 25 percent less than ours, although we were absolutely unable to find out what that estimate was. It was a blind bid, where the contractor had to pay whatever the cost was, no matter what it might be.

That was drawn to the attention of the Navy and they were advised: If this is a firm bid and the Navy will absorb any additional cost, that is all right. But the Army only have a certain sum of money, and the Navy would not accept it on that basis. They put in an estimate which they were not willing to back up.

Senator VANDENBERG. And that estimate was 25 percent under yours?

Mr. CASEY. I assumed that it was that much lower at that time. It gave them the option of placing business outside, providing it did not exceed that of the Government estimate by more than 25 percent, so that I assume that our bid must have been at least 25 percent higher than the Navy's estimate, but that was not a bid, and the Ordnance Department of the Army would have had to have paid for that powder whatever the Navy said it cost them.

Senator VANDENBERG. How were the specifications changed to eliminate the Navy as a competitor?

Mr. CASEY. They were not changed.

Senator VANDENBERG. The letter says the specifications are intended to insure procurement from the du Pont Co.

Mr. CASEY. You want to realize, Senator, that the specifications which they had at the time were the specifications that they used during the war, the new specifications to meet the requirements that the Army demanded having not yet been prepared. They did not want to put out a bid and get powder of the same type they got during the war. Therefore, the specifications were really performance specifications.

Senator VANDENBERG. Were they specifications that the naval powder factory could not meet?

Mr. CASEY. They could have met them if they had come up and asked us, "How do you make this powder?" and we would have given it to them, but they could not have bid on the work.

Senator VANDENBERG. Because their estimates were unreliable?

Mr. CASEY. That is the idea exactly, as any estimate is. It is the best you know at the time. It would be fine if we could put in a flat estimate and then say, "However, if we find the costs are more, you will pay us that much more."

I would like to have a contract of that type.

Senator VANDENBERG. That is the situation which General Ruggles did not anticipate?

Mr. CASEY. I imagine so.

Lieutenant Colonel HARRIS. Mr. Chairman, may I make a statement?

The CHAIRMAN. Yes, Colonel.

Lieutenant Colonel HARRIS. There is one thing which these hearings have certainly brought out, and that is the inappropriateness of representatives of corporations going back to the company and saying that a Government official stated that and a Government official stated this, and that being accepted as being true. I do not know whether General Ruggles said that or intimated it, and there has been no proof that he did.

Senator VANDENBERG. I am inclined to agree with you respecting the process. Nevertheless, here we are.

The CHAIRMAN. Proceed, Mr. Wohlforth.

Mr. WOHLFORTH. I think the chairman has brought out that the interest of the committee in these figures is just this:

That in the next war we are going to have some sort of cost-plus contract, or some basis of determining upon where cost is an important factor. And the situation, to me, seems to be this:

Here we have in peace times, without the hurrying and chaotic conditions which war brings, an effort by a technical, qualified committee to determine the cost of one single munition of war. Now, if we cannot agree on that, on determining the cost of .30-caliber ammunition, how are we going to determine the true cost of any munition of war?

I will leave that open.

It would seem, from the previous exhibits, that you can pretty well determine your own costs, so as to know what to add to give you a profit on a Government contract. That is fairly clear.

Mr. HADLEY. Mr. Wohlforth, I would like to say, in reply to this particular report, so far as I am aware, there was no attempt made to agree or to iron out these differences or even the discussion of them, so far as I am aware. The purpose was to send out this formula to get the reports which are tabulated here, and they were sent out as they stand.

Mr. Pugsley points out that they did not feel that they were to be relied upon in certain particulars. I have not been aware of that, because, after I made out that report, I do not know that anything happened to it.

The CHAIRMAN. Is not this the case, Mr. Hadley?

You were also nonplussed by what you found?

Mr. HADLEY. I beg your pardon.

The CHAIRMAN. You were also nonplussed by what you found, so that you did not want to carry it on any further?

Mr. HADLEY. I cannot answer on that.

Senator VANDENBERG. Mr. Hadley, this committee would hate very much to be misled by those figures, if they are misleading figures, because the clear conclusion from those figures gives the Government operation a very substantial cost advantage. If that is not true, I would like to know why it is not true.

As the compilers of the figures, I should like to ask you at your convenience to scrutinize them again and see whether on not there is anything erroneous in them.[1] I would like to know the answer.

Mr. CASEY. Mr. Senator, Mr. Wohlforth early in the proceeding this morning asked the question whether the volume of production does not have a direct influence on cost. It was admitted.

Senator VANDENBERG. That is obvious.

Mr. CASEY. I come back to my proposition:

Give the private loading company the same volume of business, each one of them, that you give Frankford Arsenal, and they will sell, including a profit, to Frankford Arsenal at less than Frankford Arsenal can.

---

[1] The Remington Co. later submitted additional figures to the committee in connection with "Exhibit No. 1294." See appendix, p. 4152.

The CHAIRMAN. What guaranty is there to that?

Mr. CASEY. Give them the proof of it.

The CHAIRMAN. What proof is there that that would be true?

Mr. CASEY. Place the orders with them.

Mr. WOHLFORTH. General Ruggles gave the manufacturers their chance in 1926.

As Mr. Pugsley brought out, as I understand it, there was this meeting in New York, and he told the commercial manufacturers, "Either you get your costs down or I am going to put automatic machinery in Frankford Arsenal." He put in the automatic machinery, to the credit of General Ruggles and the Ordnance Department.

Obviously, the conclusion is drawn that commercial manufacturers could not get their costs down.

Mr. CASEY. That is a misstatement.

Mr. WOHLFORTH. I would be glad to have it corrected.

Mr. CASEY. The Ordnance Department wanted to keep the American loading companies familiar with improvements and developments in the .30/06 cartridges. They only had a certain volume of business which they could allocate, if they wanted to, to the different companies. That would have been the idea. All they could have given them, at most, was an average of somewhere between 5 and 10 million rounds a year.

Every company was trying to put in a price which would enable the Government to allocate to them. That was based on a peace-time production with their existing equipment, with such additions as they would need for the special bullets. That is not a fair comparison, and not a strict statement of facts. Absolutely a misstatement.

Senator VANDENBERG. Major Casey, you understand these figures were not prepared by the committee but by the industry.

Mr. CASEY. They were prepared by the companies considering their equipment, having in mind a small ammunition production.

Senator VANDENBERG. And they were prepared and left to speak for themselves without any challenge at the time. The exhibit is complete.

There was no challenge to the poll and no challenge to the comparison, and it is an exhibit from the industries themselves.

Mr. CASEY. Senator, does it not show this low volume of business which the loading companies could expect? That is, does it not show that that was the set-up which they would expect on that stuff?

Senator VANDENBERG. I do not know what it shows.

Mr. CASEY. That is what it shows.

Senator VANDENBERG. It seems to me that the committee, having made such a very careful analysis—it was a very complete analysis—it should either support the conclusion that they left standing in 1928, or show why it is necessary for them to change their conclusion.

Mr. REISINGER. Senator Vandenberg, there is not any reason to show why the figures were not comparable. In fact, it was not a very careful analysis. I described that the figures were accumulated by means of questionnaires. If you were familiar with accounting, you would understand how it was not possible to get comparable figures on such a basis.

Senator VANDENBERG. I am familiar with accounting, and I am familiar with general Government costs, and I have always generally understood that the Government could not operate as cheaply as private industry does, so I find myself challenged by this exhibit, and I want to know if there is anything wrong with it.

Senator BARBOUR. To put it differently, do you believe that the various private corporations could furnish different cost figures, if the figures were based on a comparable quantity to the Frankford figures?

Mr. HADLEY. I think that is a matter for our accounting division to answer, rather than me.

Mr. REISINGER. There is no question about that. I understand that at Frankford .30/06 ammunition is about 90 percent of their capacity. Give us 90 percent of our capacity on .30/06 ammunition and we will show you a cost also.

Senator BARBOUR. For instance, if your company, in setting this up, based it on 5 million rounds a year, and then compared that with costs set up by Frankford Arsenal based on 60 million rounds a year, there would be this difference of cost to which Senator Vandenberg referred?

Mr. REISINGER. Very likely so.

Senator BARBOUR. There is no doubt about that?

Mr. REISINGER. There is no doubt about that.

Senator VANDENBERG. There is nothing in the exhibit which indicates that the costs are not now on a comparable basis.

The CHAIRMAN. That is very evidently what the industry was striving to accomplish.

Senator VANDENBERG. It seems so to me.

Lieutenant Colonel HARRIS. I would like to raise a thought there, Senator Vandenberg. These figures are very flattering to Government operation, but it so happens that .30 caliber production is the one ordnance production since the war which is going along on a uniform, moderate scale, and this moderate and uniform production has resulted in reduced costs.

The CHAIRMAN. For the interest of clarifying the record at this point, I think we ought to review these figures which show the costs paid at Frankford Arsenal at 23.18, Peters at 29.21, Remington at 28.88, Western at 33.87, and Winchester at 31.67.

Senator Pope has computed the average cost shown for the four private industrials concerned here, that average cost being $30.90, as compared with $23.18 for the Government arsenal at Frankford, making a difference of $7.72, which figures almost exactly 33⅓ percent less cost for the Government than for private industry.

Senator VANDENBERG. And all these figures, presumably, include 10-percent profit and presumably include a tax item in the public operation to offset the tax item in the private operation.

The CHAIRMAN. Precisely.

Senator VANDENBERG. I would like to know the answer.

Mr. WOHLFORTH. Mr. Hadley, I just want to bring up one other point. We understand that you received these arsenal figures from the Government officials and held them in confidence, and you received the figures from the commercial manufacturers and held them in confidence also.

And we further have the information that it was the undersanding of the officials at the arsenal that the commercial manufacturers' would be exchanged for those figures.

In other words, they would cooperate with you to the fullest extent, if you would cooperate with them.

Now, just to refresh your memory of that, I will read from a letter dated June 29, 1928, from yourself to Mr. Norvell, who was then the president of Remington Arms.

(The letter referred to was marked "Exhibit No. 1295" and is included in the appendix on p. 4047.)

Mr. WOHLFORTH (reading):

> Subject: .30 Springfield M1.
>
> Acknowledgement only of communications: Your letter of June 27 on the above subject has been received, together with copy of letter to you dated June 21 by Mr. J. M. Olin, copy of letter to you dated June 21 by Mr. F. W. Olin, copy of your letter to Mr. F. W. Olin dated June 27, and copy of your letter of June 27 to Messrs Olin, King, and Tobler.
>
> *Progress report only.*—Mr. Bowers, Mr. Craig, and the writer visited Frankford Arsenal on June 28, inasmuch as Frankford Arsenal accountants had then completed their figures worked up on the inventory of June 15. These figures were discussed. Comparison was also made of the kind of items which we are obliged to consider in our overhead and those which they consider. We left with them the 8-page cost formula which we forwarded to the different manufacturers on June 25. They are going to adjust their operation-cost figures to conform to this formula. They sent us on June 20 information which they had available on the capital value of their buildings, land, etc. These figures were discussed at some length. We agreed to send to them a formula showing the method used by us in dealing with these items. They agreed to recast their figures on the basis of our formula so that a direct comparison would be possible. We said that we would also send that same formula to the other manufacturers, supplementing our letter of June 25, which we discussed with them. Our hope is that we will be satisfied with figures which Frankford also can approve so that when these figures go to General Ruggles, they will represent agreement in principle between us and Frankford and form the basis for a real comparison. We found that Frankford readily admitted the item of interest on working capital. They were unwilling to consider any profit on material supplied by the Government, but they were willing to have included necessary handling charges.
>
> *Change in policy proposed.*—Decision desired: Captain Chavin expressed himself as being opposed to a comparison of Frankford Arsenal figures with an average of the costs of other manufacturers. He felt that the averaging of these costs would obscure some of the very items upon which it was desired to fix attention. Two alternatives were suggested: One was the general exchange of complete figures, competitiors' tabulations being designated not by name but by symbol as A.B.C.D. The other one was that the detailed figures should be submitted to Frankford Arsenal and/or Washington in confidence, in the event that certain manufacturers did not wish to disclose their own cost figures to other manufacturers but were willing to do so to the Government.

On page 2 of that letter it says:

> Captain Chavin seemed very decided in his expression of opinion that Frankford's figures should not be given to the other manufacturers unless they, in turn, gave their figures to Frankford.

As I understand it, that was the agreement of fair trade either way. You do not have any doubt in your mind that Frankford expected to get these figures, do you?

Mr. HADLEY. I have.

Mr. WOHLFORTH. With that understanding you wrote General Ruggles, Assistant Chief of Ordnance, with that in view, and he gave you permission to give the figures of the arsenal to the commercial manufacturers.

Mr. HADLEY. Excuse me. I do not know whether you understood my reply clearly. When this was started there was no undertaking on the part of the manufacturers that they would pass their costs over to Frankford Arsenal. Frankford Arsenal was willing to have theirs stated, but they were not willing to have them passed out to the others, anyone other than the chairman of the committee, unless that permission was actually obtained for that.

Mr. WOHLFORTH. I appreciate that. but I want to make the point that Frankford Arsenal fully expected to get these figures in return, is not that correct?

Mr. HADLEY. I do not believe there is any evidence of that.

Mr. WOHLFORTH. Let us look at that exhibit again. [Reading:]

> Captain Chavin seemed very decided in his expression of opinion that Frankford's figures should not be given to the other manufacturers, unless they, in turn, gave their figures to Frankford.
>
> Since it is very distinctly understood that we will not make any move which would be offensive to the Ordnance Department, and because, on the other hand, our desire is to work with them in very friendly fashion, we believe that before showing Frankford's figures to the different manufacturers, we should have corresponding figures from them and authority from them to transmit these figures to Frankford Arsenal and to the Ordnance Department.

On July 30, Maj. W. L. Clay, of the Ordnance Department of the Army, visited you at Remington Arms Co. in Bridgeport, and you informed him that there was some reluctance from certain quarters to exchange all the figures on commercial manufacturers with Frankford Arsenal.

In order that there will be no question about that point, we will offer here for the record for appropriate number a memorandum signed by you, dated July 30, 1928.

(The memorandum referred to was marked "Exhibit No. 1297", and is included in the appendix on p. 4048.)[1]

Mr. WOHLFORTH. This reads in part as follows——

Senator VANDENBERG. Is the questionnaire available from which this information was assembled?

Mr. WOHLFORTH. Yes; it is available, the mimeographed schedule of depreciation, costs, various operations, and so on. We have that as a committee record.

Senator VANDENBERG. I would like to see the questionnaire at your convenience.

Mr. WOHLFORTH. This seems to me to show that there was no doubt in the minds of the people at Frankford Arsenal that they would receive the commercial figures.

On August 14, 1928, you were writing again to the Peters Cartridge Co., to your own company, Western Cartridge Co., and the Winchester Repeating Arms Co., saying that these figures had been received and were already tabulated.

That is offered for appropriate number.

(The letter referred to was marked "Exhibit No. 1298", and is included in the appendix on p. 4049.)

Mr. HADLEY. Mr. Wohlforth, I would like to say that I do not agree with your statement that the Frankford Arsenal or the Ordnance Department expected to get the figures of others, because there were various discussions as to what might be an appropriate thing, whether the committee should average the figures of different manufacturers and submit those to Frankford Arsenal, or whether some other method should be pursued. In other words, there was not any definite plan when the investigation started as to just what use would be made of the figures. The Frankford figures were only given out after specific permission was obtained, and as pointed out in the correspondence, there was some reluctance in some quarters on the part of the manufacturers in giving their figures. The net results, as far as I am personally aware, was that the detailed figures were not given to Frankford. If they were given to them, that must have been done by some of the other people concerned.

---

[1] There was no exhibit marked "No. 1296."

The CHAIRMAN. Frankford was cooperating with you fully in assembling these facts and these details. Had not they indicated that they would appreciate having access to them?

Mr. HADLEY. Yes.

The CHAIRMAN. And having knowledge of the result of the study?

Mr. HADLEY. They expressed a desire to have the figures.

Mr. WOHLFORTH. That was the understanding. It says here:

> Major Clay of Frankford Arsenal seemed disappointed at not obtaining those figures from the different manufacturers.

Mr. HADLEY. Yes. He hoped to get them.

Mr. WOHLFORTH. My understanding is that you got the figures because they understood that you were giving them your figures in return. They were not simply going to open all their accounts and data and let you put men in there without getting something in return. Colonel Wall, Major Clay, and Captain Chavin, as these exhibits seem to show, all had the understanding that they would get something in return for that cooperation.

Mr. HADLEY. If you will change the word "expect" to "hope" I will agree with you.

Mr. WOHLFORTH. Why should not they have an expectation?

Mr. HADLEY. Because Frankford Arsenal is a quasi-public institution, paid for by taxpayers, I should say.

Mr. WOHLFORTH. But that does not give anybody authority to go in there and get all the figures.

Mr. HADLEY. Not unless they are willing that should be done.

Mr. WOHLFORTH. Exactly; and because they expected to get something in return.

Mr. HADLEY. I think their attitude is a somewhat different one from the private manufacturers on that score.

Mr. WOHLFORTH. I have offered a letter of August 14th, 1928, entered as "Exhibit No. 1298", from you to the four manufacturers. In part it reads:

> Tabulation of these figures together with those of the other manufacturers, has now been completed as planned, except that General Ruggles' authority for sending our Frankford figures has enabled us to add theirs to the tabulation.

At the bottom of the page it says:

> Messrs, King and Tobler have since written expressing their unwillingness that any of their figures should be shown to Frankfort Arsenal. Mr. Norvell has written saying that, if possible, he thinks the ammunition manufacturers should act as a unit in regard to this.

Just 10 days later, on August 24, 1928, you wrote to Major Clay, and I will offer that for appropriate number.

(The letter referred to was marked "Exhibit No. 1299", and is included in the appendix on p. 4049.)

Mr. WOHLFORTH (reading):

> Maj. W. L. Clay, Office of the Chief of Ordnance, War Department, Washington, D. C.

In part it says:

> I had hoped to have these figures for you, but so far I have not been able to accomplish this.

The CHAIRMAN. Those were the figures that had already been supplied to the four private industrials?

Mr. HADLEY. Yes, sir.

Mr. WOHLFORTH. You had the figures at that time, did you not?

Mr. HADLEY. I had them.

Mr. WOHLFORTH. You yielded to the private manufacturers in not giving those figures to the officers at the Government arsenal, is that correct?

Mr. HADLEY. I should not say that I yielded to them. I was acting under their instructions.

The CHAIRMAN. It strikes me that this is another evidence of some of that 90–10 percent cooperation that we heard something about this morning. I would like to get that a little clearer.

You had the full cooperation of Frankford Arsenal?

Mr. HADLEY. Yes, sir.

The CHAIRMAN. In compiling this study?

Mr. HADLEY. Yes, sir; I believe so.

The CHAIRMAN. Yet you withheld from them your findings as a result of that study, and they never have had access to them, have they?

Mr. HADLEY. I am not aware that they have.

Mr. WOHLFORTH. You know very well that they have not had these figures. You did not give them to them, did you?

Mr. HADLEY. I did not myself. The entire thing passed out of my hands. I was a tool for gathering and compiling the figures. It passed out of my hands with that last letter, I should say.

Mr. WOHLFORTH. When we began here this morning we found the Government giving Remington every cooperation. Mr. Pugsley said that he gets a lot of cooperation from the Government for Winchester also. We brought out the point that the 10-million-round order included a million rounds of ammunition that were rejected. The War Department cooperated with you and allowed you to rework the ammunition, and finally bought it for certain tests, so that you would not lose a lot of money. That was the attitude of the officials of the Ordnance Department, and it seemed a very fair attitude.

Here we find you writing an officer refusing these figures, and giving no cooperation at all. As you have testified, you never did give these figures of the private manufacturers to the Government. You kept them in the dark. There is no question on that point.

Mr. HADLEY. Mr. Wohlforth, at that point I would like to make one comment in respect to giving these figures. It is true these figures were not given to Frankford Arsenal, but I would like to call attention to the fact that in 1926 when the first study was made of Frankford Arsenal's figures by the Remington accountant, the comparison which was made at that time was completed and the figures of Remington were given to Frankford Arsenal or to the Ordnance Office, I do not know which.

Mr. Wohlforth. I am talking about the 1928 figures that we have been discussing now, and I simply want to make the point that you got their figures and you did not give them yours; and there was, shall we say, some " hope " in the minds of the Government officials that they might get them, but evidently that hope was not realized.

Mr. Hadley. Certainly some of the individuals at Frankford Arsenal who were close to their costs of manufacture, such as Captain Chavin, mentioned—certainly he hoped that he would have the other figures for comparison.

Senator Vandenberg. Mr. Hadley, if the figures had shown a different conclusion, there would have been no disinclination to let Frankford have them, would there?

Mr. Hadley. I cannot say as to that, sir.

Mr. Wohlforth. I would like to ask Colonel Harris a question.

Colonel Harris, you were in the Ordnance Department. As far as you know, you never received these figures from this technical committee, did you?

Lieutenant Colonel Harris. I do not know that they were received.

Mr. Wohlforth. Mr. Hadley, you got these figures together—I want to get this clear—as a member of the committee of the Sporting Arms and Ammunition Manufacturers Institute. Is that correct?

Mr. Hadley. No, sir.

Mr. Wohlforth. You did not do that? You just acted independently, under the auspices of the Institute?

Mr. Hadley. Not under the auspices of the Institute. The ammunition manufacturers asked me simply as an individual to carry out the work of coordinating a formula from cost accountants who were qualified, and compile the results obtained from the different companies.

Mr. Wohlforth. In doing this, did you follow out the purposes and general idea for which the Sporting Arms and Ammunition Manufacturers Institute was created?

Mr. Hadley. I should say it had no relation to that.

Mr. Wohlforth. It had no relation to that at all?

Mr. Hadley. It was simply a convenient place for the Ordnance officers to meet the ammunition manufacturers, because they happened to be gathered together.

Mr. Wohlforth. Before we leave this matter of the Institute and these figures which were prepared in 1928, I want to ask Mr. Pugsley a few questions.

We will go forward 4 years, to 1932. At that time, Mr. Pugsley had prepared with the secretary of the Sporting Arms and Ammunition Manufacturers Institute a certain brief. That brief was prepared for submission to the Shannon committee of the House of Representatives, which was a special committee of the House to investigate Government competition with private business.

We understand, Mr. Pugsley, that you were appointed to cooperate with an official of the Remington Arms Co. in the preparation of this brief, based upon data that would be supplied to you. Is that correct?

Mr. PUGSLEY. That is correct.

Mr. WOHLFORTH. This committee further understands that the data produced by the official of Remington Arms with whom you cooperated was all dated not in 1928 but in 1926. Is that correct?

Mr. PUGSLEY. I think that is true.

Mr. WOHLFORTH. In other words, you were not given the benefit of these figures devised by Mr. Hadley and his committee, but you were given an incomplete set of figures which were the result of a preliminary survey of Frankford Arsenal in 1926. They gave you the 1926 data and did not give you the 1928 data which we have been discussing.

Mr. PUGSLEY. That is correct.

Mr. WOHLFORTH. All right.

Mr. PUGSLEY. You will remember that when you were in New Haven you asked me that same question.

Mr. WOHLFORTH. I did. I wanted to be clear on it.

Mr. PUGSLEY. You asked me whether I had the 1926 or 1928 figures. I told you I did not remember. I had forgotten at the time that we had these 1928 figures. I looked up the file in the Shannon committee, and I did not find these figures available. I think possibly we had a copy of them, but I do not remember.

Mr. WOHLFORTH. On the basis of these 1926 figures that were supplied to you, which were admittedly incomplete, you drew up your conclusions. I would like to put them in the record. I will submit them in the form of a letter dated August 17, 1932, from Mr. Comeaux, the secretary of the Sporting Arms and Ammunition Manufacturers Institute, to the National Association of Manufacturers.

(The letter referred to was marked "Exhibit No. 1300", and is included in the appendix on p. 4050.)

Mr. WOHLFORTH. We want to submit that report for this reason, that the results you drew out based on the incomplete 1926 data are open to question. I will give you one instance by reading from page 3 of this letter, the third paragraph from the top.

It reads as follows:

> There is, of course, no provision in Government costs for interest on investment, or profit, both of which are essential in the case of commercial manufacturers.

If you refer to the 1928 figures, you will see that provision was made for both of those factors.

It is of interest to us to see what happened as a result of the study made by Mr. Pugsley in connection with an associate from Remington.

I have here a pamphlet entitled, "Statement Filed with the National Association of Manufacturers' Committee on Government Competition with Private Industry, by the Sporting Arms and Ammunition Manufacturers' Institute, in Behalf of Its Members Making Arms and Ammunition.

(The pamphlet referred to was marked "Exhibit No. 1301", and is included in the appendix on p. 4053.)

Mr. WOHLFORTH. This pamphlet recommends among other things that the Government should be prohibited by law from entering into competition with commercial manufacturers. Another recommendation was that—

> It is the feeling of the ammunition industry that mass production at Frankford Arsenal should not continue.

The CHAIRMAN. Mr. du Pont, you have raised the point concerning the percentage of shrinkage shown.

The final sheet in the exhibit which was prepared in 1928 shows a compilation giving a figure that compares them all on shrinkage. There is this note at the foot of that page:

> The differences in percentage allowed for shrinkage were so great that it has seemed possibly worthwhile to make another sheet no. 8–B, made up with a uniform shrinkage of 1 percent for each manufacturer. This sheet differs from 8–A only in this particular.

Their totals are, for Frankford Arsenal 23.18; for Peters, 29.21; for Remington, 28.88; for Western, 33.87; and for Winchester, 31.67. They get a difference of 21 cents in the total cost as shown by the Frankford Arsenal.

Mr. LAMMOT DU PONT. Mr. Chairman, I did not intend to convey the impression that I thought that zero percent shrinkage was the explanation of the apparent difference. I simply pointed out that a novice at this game could point out an error in 30 seconds. I think an expert could find some other error.

Senator VANDENBERG. In other words, the thing you have now read, then, indicates that they did scrutinize this exhibit for the purpose of neutralizing any discrepancies they could locate.

The CHAIRMAN. That is right, and the only one they could find was the one concerning shrinkage; and they drew up another sheet charging a shrinkage of 1 percent in each case.

Mr. LAMMOT DU PONT. They left the error in sheet A, however.

Senator VANDENBERG. I think this is a very fundamental thing, gentlemen, and it rather violates a good many of my predilections. If there is any further explanation of it, I would certainly like to have it, when you can get at it.

Mr. PIERRE DU PONT. Might I say a word on this, Senator?

Senator VANDENBERG. Yes.

TESTIMONY OF PIERRE S. DU PONT—Recalled

Mr. PIERRE DU PONT. It is an interesting question. I know nothing of this ammunition question. I do not propose to take it up. But can you name me a single industry in which the Government is interested, the power plants, the improvement of the Mississippi River, the Post Office, or anything else, in which there is an intelligent accounting of any period of years in order to determine whether a profit is made or a loss is made?

There are absolutely, as far as I know, no figures whatsoever in the shape of a balance sheet concerning a Government activity, in which there is any certainty of reliability. If the Government makes a mistake, the taxpayer pays for it. If the Government buys ammunition and there is a mistake made, the ammunition company pays for it.

As a citizen, I have much more faith in the ammunition company's figures and their accuracy over a period of years, or any other industry, than I have in the Government's figures, for I know no Government figures on which I could rely at all, in the form of a balance sheet or a statement of profit and loss. The Post Office is the oldest industry in the United States, and I see it frequently agitated in the papers and by the political parties as to whether the predecessors made the profits they claimed or not.

Senator VANDENBERG. I agree; and we had an example of Mr. Farley's arithmetic a few months ago.

I have heretofore agreed with the general statement that you now make. That is why I am so challenged by the presentation of a formal survey by the best minds in a given industry, which leads to a directly contrary conclusion.

Mr. PIERRE DU PONT. Has Frankford Arsenal a series of balance sheets and cost sheets over a period of years that will support these figures, or was that the spasm of a moment, which may not be produced again in 10 years? If they can do it this year and are going to operate at a loss for the next 10 years, it does not profit much the taxpayers of this country.

The CHAIRMAN. The committee assumes that the figures relating to the Frankford Arsenal were not very loosely accepted by the representatives of private industry; they had pretty much of a choice themselves of determining what Frankford Arsenal costs were.

Mr. PIERRE DU PONT. I would like to challenge their figures as well as those of Frankford Arsenal.

The CHAIRMAN. But it occurs to me that there is one advantage to which no reference at all has been made this morning, in addition to the saving of money. The Frankford Arsenal does not sell its powder to those countries that might some time decide to use what we sell to them against us.

Mr. PIERRE DU PONT. Is it to the advantage of the ammunition companies, if it were not considered to the advantage of the Nation?

Mr. IRÉNÉE DU PONT. Can we get at the question of a balance sheet in the case of Frankford Arsenal in this way? You appropriate so much money every year for the operation of Frankford Arsenal. I got the impression that something like 90 percent of its output is .30 caliber ammunition. Is that your figure?

Lieutenant Colonel HARRIS. Ninety percent in small-arms ammunition output. They have other manufactures also, but the small-arms ammunition.

Mr. IRÉNÉE DU PONT. Then it might not work. I was going to say, divide the output into the total appropriation, and you might get some approximation of what the real cost has been over a series of years.

Senator VANDENBERG. If this exhibit had been prepared by our committee or our investigators, I would take it rather lightly in the face of my predilections, but it comes to us as the conclusion of the industry itself, which is what amazes me.

Mr. IRÉNÉE DU PONT. They did not scrutinize or audit the Frankford Arsenal's cost sheets.

Senator VANDENBERG. Nor did they challenge them.

Mr. Irénée du Pont. That does not make any difference, whether they challenged or not. It seems to me we are trying to get facts, not whether they did the right thing to develop a fact.

Mr. Casey. Senator Vandenberg, I can readily see what is going through your mind. I believe you would like to get comparable figures.

Senator Vandenberg. I certainly would.

Mr. Casey. Why does not this committee put this proposition up to the commercial companies: Say, "We will give you 60,000,000 rounds of ammunition for each company per year. We want you to set up the necessary equipment on a comparable basis with Frankford Arsenal, which you will have to amortize, with the assurance that you will then keep those facilities going indefinitely, 60,000,000 rounds a year, year after year."

Put that proposition to them and ask them to submit to this committee their figures.

Mr. Reisinger. Mr. Chairman, you read into the record, I think, costs from 8–A. If you will refer to that sheet, you will see the "total cost exclusive of profit." The net cost is $31.69 for Frankford, $39.24 for Peters, $36.86 for Remington, $42.40 for Western, and $41.97 for Winchester.

Senator Vandenberg. Still Frankford is lower.

Mr. Reisinger. Absolutely.

Mr. Hadley. Mr. Chairman, you were discussing a moment ago the question of giving this information to the Frankford Arsenal. I have been going over some of the papers that I have. If I may, I would like to read a letter that was addressed to me on August 6 by Mr. Norvell, who was then president of our company. In response to my letter of the 31st in which I said to each of the manufacturers, "May we give these figures as far as your company is concerned to Frankford Arsenal?" Mr. Norvell said, "Yours of the 31st I have read with interest, and will say that as far as the Remington Arms Co. is concerned you are authorized to exchange with the Government any information that they give us. But I think in this matter, if possible, the ammunition manufacturers should act as a unit."

Mr. Wohlforth. It is already in the record.

Senator Clark. They always have acted more or less as a unit on these matters, have they not?

Mr. Hadley. I cannot say as to that, sir.

Mr. Pugsley. Mr. Chairman, I would like to call your attention to this point:

You made a statement a minute ago that there was no danger of Frankford Arsenal ammunition being sold to a Government to be used against us. I would like to call your attention to a telegram, a copy of which your committee has, signed by Secretary of War Good, dated March 15, 1929, as a result of the sale of Government ammunition to Mexico.

The Chairman. The Government did sell ammunition to Mexico?

Mr. Pugsley. Yes, sir. The Government did sell ammunition and guns to Mexico.

The Chairman. We would like to know that.

Mr. Pugsley. Your investigator has a copy of that correspondence.

Mr. Wohlforth. We are coming to that point at another time, Mr. Chairman.

Senator CLARK. It is a rather interesting point. I would like to go into that in detail.

Mr. WOHLFORTH. The point I would like to make is this, that the Government did not get the figures, first, and second, that when Mr. Pugsley prepared his brief for submission to the Shannon Committee of the House, he did not have the benefit of these figures, either.

That is all.

Senator POPE. I feel that Mr. Hadley, however, acted reasonably and right in his action, acting under the instructions of his superior.

The CHAIRMAN. Oh, yes.

Mr. CASEY. Just one point before recess:

Mr. Wohlforth read a letter from Mr. Henning, and also a paragraph from a letter of Monaghan in which he stated that they were opposing the du Ponts because it might affect the sale of fulminate of mercury if the Government would adopt the noncorrosive primer.

I would like to remind Mr. Wohlforth that the Government primer contained no fulminate of mercury. The noncorrosive primer referred to contained fulminate of mercury. So therefore instead of our losing a sale of fulminate of mercury, we would have gained a sale. So that shows how accurate Mr. Monaghan is in his statement.

Senator CLARK. If Mr. Monaghan were here, Mr. Chairman, he would probably say that this is a sales letter.

The CHAIRMAN. Mr. Hiss, you have a letter you wish to introduce before we recess?

REQUEST OF HOWARD E. COFFIN TO PIERRE DU PONT TO APPEAR BEFORE THE KERNAN BOARD

Mr. HISS. Lieutenant Brannon, are you familiar with the creation of the board known as the "Kernan Board", in 1916?

Lieutenant BRANNON. I am familiar with the record of it as contained in the report of the Board.

Mr. HISS. It was formed pursuant to section 121 of the National Defense Act, was it not?

Lieutenant BRANNON. I believe that is the correct section.

Mr. HISS. That directed the Secretary of War to appoint a board of five citizens, "two of whom shall be civilians and three of whom shall be officers of the Army, to investigate and report to him the feasibility, desirability, and practicability of the Government manufacturing arms, munitions, and equipment."

Is that your recollection?

Lieutenant BRANNON. That is right.

Mr. HISS. Do you know whether at that time there was any intention back of the legislation for the committee to consider the exclusive manufacture of arms, ammunition, and equipment by the Government?

Lieutenant BRANNON. I think that question is taken up by the Board in their report, the question of how far they should go in considering exclusive manufacture.

Mr. HISS. The first point of their conclusion was,

> It is not desirable that the Government manufacture its arms, munitions, and equipment exclusively.

My question is—perhaps you can find it in the report—do you know whether there was an idea in anyone's mind at the time that the committee should consider whether or not the Government should manufacture arms, ammunition, and equipment exclusively?

Lieutenant BRANNON. I think so, because the table which I will show here—the Kernan Board submitted figures on three different bases. One was exclusive Government manufacture in peace time. One was exclusive Government manufacture in war based on an army of 2,000,000 men in the first year, supplying 2,000,000 men thereafter, and a third on an army of 4,000,000 men in the first year. As I understand it, as I read these figures, they were exclusive Government manufacturers of arms, ammunition, and individual equipment for soldiers, infantry, and Cavalry equipment.

Mr. HISS. Their recommendation was opposed to exclusive Government manufacture in time of peace, as well as in time of war; is that correct?

Lieutenant BRANNON. That is the way I read the record.

Mr. HISS. I would like to offer for the record a letter written December 4, 1916, to Mr. Pierre du Pont, from Mr. Howard E. Coffin, on the stationery of the Naval Consulting Board.

(The letter referred to was marked "Exhibit No. 1302", and is included in the appendix on p. 4056.)

Senator CLARK. Who was Mr. Coffin prior to becoming a member of this board? What was his line of business?

Mr. PIERRE DU PONT. I am afraid I cannot answer that question, sir.

Mr. CASEY. He was connected with automobiles, I believe.

Senator CLARK. He was connected with the gyroscope business in connection with airplane manufacture, was he not?

Mr. PIERRE DU PONT. Not that I know of.

Mr. HISS. Mr. du Pont, in the second sentence of the third paragraph of this letter, the statement is made:

> The foreign war has shown us the utter futility of dependence upon Government-owned plants alone for fitting this Nation to defend itself in the event of future aggression.

Did you understand that to mean the utter futility of dependence upon Government-owned plants in time of peace, or only in time of war, Mr. du Pont?

Mr. PIERRE DU PONT. At all times, I should say; at all times.

Mr. HISS. In time of peace as well as in time of war; is that correct, sir?

Mr. PIERRE DU PONT. Yes. The reason for that is that if they were all Government-owned plants in time of peace, there could be nothing but Government-owned plants in time of war. There would be nobody fitted to do the business.

Mr. HISS. What was your then opinion on the subject before the Kernan Board, namely, that part of the subject that Lieutenant Brannon has referred to, whether or not in time of peace the Government should manufacture arms exclusively?

Mr. PIERRE DU PONT. Arms or powder?

Mr. HISS. Arms, ammunition, and equipment.

Mr. Pierre du Pont. I could only answer as to the question of powder, because that is the subject I knew and had experience in. I cannot answer for the rest of it. I doubt if I had any opinion excepting general principles, and that was in favor of the private manufacture of everything.

Mr. Hiss. This letter was a personal invitation from Mr. Coffin to you to attend the hearings of the Kernan Board, was it not? Look at page 2.

Mr. Pierre du Pont. Just a moment. Have we passed over that first question? The answer is in the next sentence:

> Private industry in all the varied lines of governmental supply must be encouraged and not discouraged.

That is my opinion.

Mr. Hiss. That was also Mr. Coffin's opinion, apparently.

Mr. Pierre du Pont. Yes.

Mr. Hiss. On page 2, second paragraph:

> May we ask your active aid, in accordance with the more formal request over the signature of Col. Francis J. Kernan, president of the board? The report of this body, if based upon facts and statements of business attitude such as you can supply, should go far toward settling, once for all, the question of Governmental munition manufacture.
>
> It is the desire to record in the report of this board a concise and convincing statement of the attitude of the average patriotic American manufacturer toward Government business. Constructive criticism and suggestion as to present Governmental methods of business dealing will be strictly in order. I have myself, during the past week, spent a day before this board, and desire to strongly second its request for your assistance.

So far as you know, were the then advisers of the Government in the field of industrial mobilization all of Mr. Coffin's opinion?

Mr. Pierre du Pont. I am not advised as to that. As far as I know, this letter did not receive my attention. I have no recollection of meeting Mr. Coffin or being at a conference.

If you have something to refresh my memory, I might tell you about it, but I have no recollection of the affair at all.

Mr. Hiss. Lieutenant Brannon, can you supply the committee with a list of the witnesses who appeared before the Kernan Board?[1]

Lieutenant Brannon. Let me see if there is a list in the report of the board. I am not sure.

Mr. Pierre du Pont. I should like to identify the officer of our company who attended to this matter.[2] I think that I did not.

The Chairman. You say you would like to identify the officer?

Mr. Pierre du Pont. If it is of importance. I think I did not attend to it. I have no recollection of it.

The Chairman. The committee will be in recess until 2 o'clock.

(Thereupon, at 12:35 p. m. a recess was taken until 2 p. m. of the same day.)

---

[1] Under date of April 4, 1935, the War Department advised the committee as follows: "With respect to list of witnesses before the Kernan Board, you are advised that a thorough search of the records of the War Department has been made but the minutes of the hearings by the Kernan Board cannot be located. The only list of witnesses available is that included in the Board's official report, a copy of which is in the possession of the committee."

[2] Under date of April 19, 1935, the du Pont Company informed the committee that "Mr. H. M. Barksdale, vice president (now deceased), was appointed to carry out this important mission."

AFTERNOON SESSION

The committee resumed pursuant to the recess, at 2 p.m., Hon. Gerald P. Nye (chairman) presiding.

TESTIMONY OF EDWIN PUGSLEY, EGBERT C. HADLEY, E. E. HANDY, W. U. REISINGER, C. K. DAVIS, IRENEE DU PONT, LAMMOT DU PONT, PIERRE DU PONT, AND K. K. V. CASEY—Resumed

DATA CONCERNING WINCHESTER, REMINGTON, AND WESTERN CARTRIDGE COS.

The CHAIRMAN. The committee will be in order.

Mr. Wohlforth, you have a number of exhibits which will be included in the record by the committee, which it is perhaps as well to offer at this time. Are they the records of the Winchester Co.?

Mr. WOHLFORTH. Yes. First of all, I will put in the Winchester Co. records.

The CHAIRMAN. All right.

Mr. WOHLFORTH. You were requested, Mr. Pugsley, to give us a list of your campaign contributions.[1] Do you recall that request?

Mr. PUGSLEY. Yes.

Mr. WOHLFORTH. That was to be here by December 21. We can depend upon you to supply all that material?

Then we have the military sales and cost to the United States, 1931–33, total sales and total export sales, for the same period of time, four copies, costs and sales, export military sales to foreign governments; sales by countries; dollar volume, and so forth.

I just desire at this time to submit them for the record.

The CHAIRMAN. Can these records in any wise be disputed by the industry, or are they records which they themselves have furnished?

Mr. WOHLFORTH. They are the records that you furnished, Mr. Pugsley.

The CHAIRMAN. Mr. Pugsley, will you identify them at this time before they are offered?

Mr. PUGSLEY. Yes, sir.

Mr. WOHLFORTH. The first is Government sales—dollars, no cents—pistol and revolver cartridges, and so forth, four copies, which were received from the Winchester Co.

I will offer that as an exhibit for appropriate marking.

The CHAIRMAN. It may be received.

(The tabulation referred to was marked "Exhibit No. 1303" and is included in the appendix on p. 4057.)

Mr. WOHLFORTH. Next is Winchester Repeating Arms Co., net sales, export, percentage of export to total, and export net sales.

That will be offered as the next exhibit.

(The tabulation referred to was marked "Exhibit No. 1304" and is included in the appendix on p. 4058.)

Mr. WOHLFORTH. Next is Winchester Repeating Arms Co., sales by country, in volume, including net received by Winchester Repeating Arms Co., factory cost[1] and gross profit on military sales to foreign countries.

---

[1] At date of publication of this Part of the hearings the complete list of campaign contributions of officers and directors of the Winchester Co. had not been submitted to the committee. Those which were submitted appear in the appendix on p. 4157.

Mr. Pugsley. Wherever available.

Mr. Wohlforth. Wherever available.

Mr. Pugsley. Yes.

Mr. Wohlforth. We understand they are not available prior to the formation of the present company in 1931.

Mr. Pugsley. Yes.

Mr. Wohlforth. But since that time these figures have been supplied.

Mr. Pugsley. Yes; in some cases they go back wherever we have the records.

Mr. Wohlforth. We understand and appreciate that.

That will be offered for appropriate marking as an exhibit.

(The statement referred to was marked "Exhibit No. 1305" and is included in the appendix on p. 4059.)

Mr. Wohlforth. Also for the Winchester Co. a list of agents all over the world and the commission arrangements of these agents, and the same for the Western Cartridge Co. That completes the request in that paragraph of the letter. These are the agents and commission rates on Western brand arms and ammunition.

The Chairman. Mr. Wohlforth, I suggest you have Mr. Pugsley identify them in each instance.

Mr. Wohlforth. Will you identify this, Mr. Pugsley?

Mr. Pugsley. It is all right.

Mr. Wohlforth. And will you identify these agent and commission arrangements that apply to Western brand ammunition only, as supplied by your company?

Mr. Pugsley. Yes.

Mr. Wohlforth. Those are offered for appropriate marking.

(The documents referred to were marked "Exhibits Nos. 1306 and 1307", respectively, and are included in the appendix on pp. 4069 and 4070.)

Mr. Wohlforth. We made a request for the stockholders of the Winchester Co. We understand Winchester is owned outright by the Western Cartridge Co. Is that correct?

Mr. Pugsley. That is correct.

The Chairman. Do we have any statement showing the stock ownership in the Western Cartridge Co.?[2]

Mr. Wohlforth. No; we haven't that at this time. That will be submitted later.

The Chairman. All right.

Mr. Wohlforth. We also understand the Winchester has no foreign agreements nor makes any payments under foreign agreements; is that correct?

Mr. Pugsley. That is correct.

Mr. Wohlforth. I have here a statement of salaries paid to officers and bonuses given to officers and the expenses of officers from 1932 to 1934. Will you identify that?

Mr. Pugsley. That is all right.

---

[1] Explanation concerning cost figures in this statement was submitted to the committee under date of Dec. 21, 1934, and is included in the appendix on p. 4158.

[2] Under date of May 25, 1935, the Western Cartridge Co. submitted a statement showing its stock ownership, which is included in the appendix on p. 4158.

The CHAIRMAN. That is offered as an exhibit?

Mr. WOHLFORTH. That is offered as an exhibit; yes.

(The statement referred to was marked "Exhibit No. 1308" and is included in the appendix on p. 4073.)

Mr. WOHLFORTH. And we have here the traveling expense, which we understand is the only expense of the officers of the company for 1931 to date, inclusive.

Mr. PUGSLEY. Yes, sir.

Mr. WOHLFORTH. As taken from your books.

Mr. PUGSLEY. Yes, sir.

Mr. WOHLFORTH. I also offer that as an exhibit.

(The statement referred to was marked "Exhibit No. 1309" and is included in the appendix on p. 4074.)

Mr. WOHLFORTH. I also offer to be identified an exhibit of list of stocks held by the Winchester Repeating Arms Co. as of November 23, 1934.

Will you identify that, Mr. Pugsley?

Mr. PUGSLEY. Yes, sir.

Mr. WOHLFORTH. I offer that for appropriate marking as an exhibit.

(The statement referred to was marked "Exhibit No. 1310" and is included in the appendix on p. 4074.)

Mr. WOHLFORTH. I have additional data here which perhaps might be filed as a committee exhibit, Mr. Chairman, containing the dues in trade and other organizations, the officers and directors from 1930 to 1931, balance sheet 1931, consolidated balance sheet 1932 and 1933, bill of sale of the court when the Winchester Co. went into receivership, and also the final report of the receiver. These last two documents are already public documents of the court.

The CHAIRMAN. You are offering them as a committee exhibit?

Mr. WOHLFORTH. I am offering them as a committee exhibit.

The CHAIRMAN. They may be received.

Senator POPE. Not to be printed?

The CHAIRMAN. Not to be printed in the record.

Mr. WOHLFORTH. No; only for the use of the committee.

The CHAIRMAN. That is right. It may be given an exhibit number, however, for identification purposes.

(The statement referred to was marked for identification as "Exhibit No. 1311", and is on file with the committee.)

Mr. WOHLFORTH. From the Remington Arms Co. we requested campaign contributions and stockholdings in the amount of $10,000 and over, of officers and directors, and that is still to be supplied, as we understand it.[1] That will come as soon as it is prepared, will it, Mr. Davis?

Mr. DAVIS. Yes; you asked for that.

Mr. WOHLFORTH. We already have the plant contributions—that is, contributions made by the plant to various organizations, and so forth. That will be offered in just a minute.[2]

---

[1] List of stockholdings and campaign contributions of Remington officers and directors appears in the appendix on p. 4159.

[2] Introduced in the appendix on p. 3982.

We have here the export sales by volume, by country, from 1925 to date, exclusive of government. Will you identify that, Mr. Reisinger?

Mr. Reisinger. Yes.

Mr. Wohlforth. And the four copies made from that?

Mr. Reisinger. Yes.

Mr. Wohlforth. I offer that for appropriate exhibit marking.

(The statement referred to was marked "Exhibit No. 1312" and is included in the appendix on p. 4075.)

Mr. Wohlforth. We have here the export sales of the Remington Arms Co. by order, by customer, quantity and description, the amount of invoice and the commission paid to all foreign countries from 1925 to May 31, 1934, which I wish to offer as an exhibit. Do you identify that, Mr. Reisinger? Those are the copies you supplied us at the plant.

Mr. Reisinger. They look like the copies we supplied.

Mr. Wohlforth. That is offered for appropriate exhibit marking.

(The statement referred to was marked "Exhibit No. 1313", and is included in the appendix on p. 4077.)

Mr. Wohlforth. I next offer a document entitled, "U. S. Government—Sales and Net Profit" of the Remington Arms Co., from 1922 to 1933, showing factory cost, total cost, and net profit and loss. Will you identify that, Mr. Reisinger?

Mr. Reisinger. Yes.

Mr. Wohlforth. I offer that as an exhibit for appropriate marking.

(The statement referred to was marked "Exhibit No. 1314" and is included in the appendix on p. 4094.)

Mr. Wohlforth. I next offer a list of agents of the Remington Co. throughout the world as an exhibit to be printed. We understand that your foreign department will supply us as soon as possible with the commission arrangements of these agents.[1]

Mr. Davis. Yes.

Mr. Wohlforth. I will offer the list of agents at this time, without the commission arrangements, as an exhibit, for appropriate number.

(The list referred to was marked "Exhibit No. 1315", and is included in the appendix on p. 4095.)

Mr. Wohlforth. The next exhibit is a list of stockholders holding 1 percent or more of Remington stock, with roughly 3,000 shares or over. This was taken from the stock record of the Remington transfer agents, and also a questionnaire was put out, so that we could find the actual owners holding 3,000 shares or more of the Remington Arms Co. stock.

Will you identify that, and I will submit it as an exhibit. That was my compilation.

Mr. Reisinger. That is your compilation?

Mr. Wohlforth. That is my compilation; yes.

Mr. Reisinger. Taken from the transfer agents?

---

[1] Commission arrangements of Remington agents appear in the appendix on p. 4161.

Mr. Wohlforth. Taken from the transfer agents. That is "Exhibit No. 1316", which will be printed in the record.

(The list referred to was marked "Exhibit No. 1316" and is included in the appendix on p. 4096.)

Mr. Wohlforth. I also have here, supplied by the Remington Arms Co., the corporate structure of the Remington Arms Co., which I wish to offer as an exhibit. Will you identify that, please?

Mr. Reisinger. Yes.

Mr. Wohlforth. That is offered for the record, for appropriate exhibit number.

(The statement referred to was marked "Exhibit No. 1317" and is included in the appendix on p. 4097.)

Mr. Wohlforth. I also offer a statement, headed, "Investment securities held other than those of subsidiary companies", of the Remington Arms Co. as of this date, supplied to us by the Remington Arms Co.

Mr. Davis. Yes.

Mr. Wohlforth. That will be offered as "Exhibit No. 1318."

(The statement referred to was marked "Exhibit No. 1318", and is included in the appendix on p. 4097.)

Mr. Wohlforth. I wish to offer as exhibits the foreign agreements of the Remington Arms Co., the I.C.I. agreement, the D.A.G. agreement, a list of Remington foreign commitments, R.W.S., Canadian Industries, D.A.G. and I.C.I.

Mr. Davis. Mr. Wohlforth, you realize there is no I.C.I. agreement as yet. It is simply a proposed agreement.

Mr. Wohlforth. Yes; simply a proposal.

Mr. Davis. It has not been consummated.

Mr. Wohlforth. I will submit first of all this D.A.G. agreement, if you will identify it.

Mr. A. J. Greene. I can identify that.

Mr. Wohlforth. I will take that back. That is already in the record, Mr. Davis, with the du Pont Co. It has already been submitted to the other side.[1]

Mr. Davis. I see.

Mr. Wohlforth. Could I have that back then?

Mr. Davis. Surely.

Mr. Wohlforth. This is the proposed agreement between Imperial Chemical Industries, Ltd., and the Remington Arms Co. Will you identify that? As we understand it, that has actually not been signed, but you operate under it as though it was already in effect.

Mr. Davis. I should like to ask Dr. Sparre about this. Dr. Sparre negotiated this.

Mr. Wohlforth. All right.

Mr. Davis. Is Dr. Sparre in the room?

Mr. Wohlforth. Yes; I believe he is back there.

Mr. Davis. Now, what was your question, Mr. Wohlforth?

Mr. Wohlforth. As I understand it, the actual agreement has not been signed, but you are operating under the terms as set forth in this agreement.

---

[1] Entered as "Exhibit No. 1229", Hearings, Part XV, p. 3635.

Mr. Davis. I do not think any licenses have been passed yet. Have they?

Mr. Greene. There has been no action taken in accordance with that agreement, that proposed agreement.

Mr. Wohlforth. Perhaps we better not put it in then but keep it as a committee exhibit.

The Chairman. The Chair would suggest that you hold that as a committee exhibit.

Mr. Wohlforth. This proposed agreement between Imperial Chemical Industries and Remington will be held as a committee exhibit.

The Chairman. Let it be identified as a committee exhibit.

Mr. Wohlforth. And given an appropriate number?

The Chairman. Yes.

(The articles of agreement referred to were marked for identification as " Exhibit No. 1319 ", and are on file with the committee.)

Mr. Wohlforth. I next offer a letter dated June 29, 1934, from Mr. A. J. Greene, patent attorney, to Mr. C. K. Davis, president. " Subject: Remington patent and information exchange commitments." This covers all of the agreements now in force, and I would like to enter that as a committee exhibit, if you will identify it, please.

Mr. Davis. Mr. Greene.

Mr. Greene. This appears to be a copy of a letter which I wrote to the president.

(The letter referred to was marked " Exhibit No. 1320 " and is included in the appendix on p. 4098.)

Mr. Wohlforth. I would also like to submit for the record a statement of cash payments made to R.W.S., D.A.G., and I.C.I. for the years 1929 to 1934, 1931, 1932, 1933, and the first 6 months of 1934, if you will identify that, please. It was prepared for us.

Mr. Davis. Where did this come from, Mr. Wohlforth?

Mr. Wohlforth. That was prepared in your organization upon our request, Mr. Davis.

Mr. Davis. I have never seen it before but it appears to be approximately correct, the amount.

Mr. Wohlforth. I submit that for appropriate number to be printed.

(The statement referred to was marked " Exhibit No. 1321 " and is included in the appendix on p. 4098.)

Mr. Wohlforth. I would also like to submit a statement showing compensation of the executive officers and directors of Remington Arms Union Metallic Cartridge Co. from 1917 to 1920, inclusive, and also the compensation of executive officers and directors of the Remington Arms Co. from 1920 to 1933.

Will you identify those, please? They were supplied by your organization.

Mr. Reisinger. This appears to be copied from the information we gave you.

Mr. Wohlforth. I offer these as an exhibit for appropriate number.

(The statements of compensation referred to were marked " Exhibit No. 1322 ", and are included in the appendix on p. 4100.)

Mr. Wohlforth. I would like to offer next a statement headed, "Remington Arms Co., Inc., and Domestic Subsidiaries, Consolidated Statement of Profit and Loss, from January 1, 1934, to June 30, 1934." That I ask to be appropriately marked.

(The statement referred to was marked "Exhibit No. 1323" and is included in the appendix on p. 4105.)

Mr. Wohlforth. I have here next balance sheets of the Remington Arms Co. for 1920 to 1922, which I will offer for appropriate marking.

(The statements referred to were marked "Exhibit No. 1324" and is included in the appendix on p. 4107.)

Mr. Wohlforth. I have here next a sheet showing the stock set-up of the Remington Arms Co., sales, and so forth, from 1920 to 1933.

I will offer that for appropriate exhibit marking at this time.

(The statement referred to was marked "Exhibit No. 1325" and is included in the appendix on p. 4111.)

Mr. Wohlforth. I next offer a sheet showing the stock set-up, sales, and so forth of the Remington Arms Union Metallic Cartridge Co. from 1914 to 1920.

That will be offered for appropriate marking as the next exhibit.

(The statement referred to was marked "Exhibit No. 1326" and is included in the appendix on p. 4113.)

Mr. Wohlforth. I next offer a statement of the contributions made by the Remington Arms Co. from 1920 to 1934, this having been prepared by them, for appropriate numbering as an exhibit.

(The statement referred to was marked "Exhibit No. 1327" and is included in the appendix on p. 4113.)

Mr. Wohlforth. Next I have a statement of the Remington Arms Co., Inc., showing subscription to Sporting Arms and Ammunition Manufacturing Institute from 1928 to 1934.

That is also offered as an exhibit for appropriate marking.

(The statement referred to was marked "Exhibit No. 1328" and is included in the appendix on p. 4117.)

Mr. Wohlforth. I have next consolidated balance sheets of the Remington Arms Co. from 1930 to 1934, which I will offer as an exhibit for appropriate marking.

(The balance sheets referred to were marked "Exhibit No. 1329" and are included in the appendix on p. 4118.)

Mr. Wohlforth. Next is a comparative statement of consolidated income account, Remington Arms Co., Inc., and Domestic Subsidiaries, for the years 1930, 1931, 1932, 1933 to June 30, 1934, which is offered as an exhibit for appropriate marking.

(The statement referred to was marked "Exhibit No. 1330" and is included in the appendix on p. 4119.)

Mr. Wohlforth. I have asked that these documents be properly noted and submitted as exhibits, Mr. Chairman.

The Chairman. The reporter will make note of that.

The Chair is offering for the record, to be given proper number as an exhibit, a memorandum on foreign companies with which the du Pont Co. has or has had relationships of various kinds. This memorandum was prepared by the du Pont Co. That is offered for the record.

(The memorandum referred to was marked for identification as "Exhibit No. 1331" and is on file with the committee.[1])

The CHAIRMAN. Offered as a committee exhibit to the point that the parties be identified as such for the committee's information alone are statements prepared by the du Pont Co. concerning its advertising expenditures, which I ask may be marked as a committee exhibit.

(The statement referred to was marked for identification as "Exhibit No. 1332" and is on file with the committee.)

The CHAIRMAN. I hand to the reporter another exhibit, for committee purposes alone, showing the du Pont radio advertising for 1932.

(The statement referred to was marked for identification as "Exhibit No. 1333" and is on file with the committee.)

The CHAIRMAN. And another committee exhibit showing the du Pont publication advertising for 1932.

(The statement referred to was marked for identification as "Exhibit No. 1334" and is on file with the committee.)

The CHAIRMAN. Mr. du Pont, I had shown you these advertising exhibits. Will you identify them at this stage?

Mr. LAMMOT DU PONT. I will, but I had not seen one of them before.

The CHAIRMAN. Will you identify that first?

Mr. LAMMOT DU PONT. Yes; they are all right, Mr. Chairman, but I have not looked at this one at all.

The CHAIRMAN. That is the memorandum concerning the foreign connections?

Mr. LAMMOT DU PONT. Yes.

The CHAIRMAN. If, Mr. du Pont——

Mr. LAMMOT DU PONT. This is something else besides a list, Mr. Chairman. There is a lot of comment at the bottom here that I am not familiar with.

The CHAIRMAN. After you have had a chance to review it you may, if you wish, comment upon it.[1]

Mr. Pugsley, you wished to say something here?

Mr. PUGSLEY. When we closed this morning Mr. Wohlforth had introduced a memorandum which I was instrumental in helping to prepare in connection with the Government competition. That memorandum went to the National Association of Manufacturers along with many others, and as a result the National Association of Manufacturers made a report to the Shannon Committee with certain recommendations, and I would like permission to read into the record five short recommendations that were made.

> 1. The Government ought not to engage either directly or through subsidies in the manufacture, production, or purchase of commodities or service for sale or resale in competition with private enterprise.
>
> 2. It ought to procure commodities and services for all of its uses from the commercial and industrial world.
>
> 3. The navy yards are established to maintain the armed fleets of the United States and are justified only while fulfilling that function.
>
> The Federal arsenals are equipped to produce war materials not generally produced commercially. They should not be employed to produce commercial

---

[1] "Exhibit No. 1331" was replaced later by "Exhibit No. 1342", Hearings, Part XVII, p. 4166.

or military articles manufactured by or obtainable in quantity from private industry.

4. Government departments, while continuing to engage in any act of production or service, should be required to establish and maintain a standard system of accounting containing these elements ordinarily recognized in all similar conditions of private operation.

5. Other things equal, the Government should give preference in purchasing of commodities and services to domestic producers.

Mr. Hiss. Colonel Harris, just to clear up two or three things in the record——

Mr. Lammot du Pont. Mr. Chairman, before you start on something else, may I comment on this document?

The Chairman. Yes, sir.

Mr. Lammot du Pont. This seems to be entirely a statement and bears no signature to indicate who prepared it, and it is a very long statement, with comments on each company mentioned. I could not be sure that each one of those comments are correct.

The Chairman. The committee's investigator has advised the committee that the memorandum of which you speak was provided by the du Pont Co. You are not prepared to say it was?

Mr. Lammot du Pont. I do not know it was. I never saw it before, to the best of my knowledge and belief. But if you could say who did prepare it——

The Chairman. The committee is not prepared to say today who did it. Its investigator is not present.

Mr. Lammot du Pont. What do you wish me to say about it?

The Chairman. Might Mr. Hanley be in position to say about it?

Mr. Lammot du Pont. I do not know. Mr. Hanley is ill and is not here this afternoon.

The Chairman. Why not let the exhibit be received, and if there should be development that it was not prepared by the du Pont Co., or is not a truthful memorandum, of course, you are at liberty to make such corrections as you might wish.

Mr. Lammot du Pont. With that privilege, I will accept it.

Mr. Hiss. Colonel Harris, there were, I believe, one or two matters of information which have been requested from you before, that have not yet been received. One was the position of Mr. Dorr, who was referred to in an exhibit heretofore introduced.[1]

Lieutenant Colonel Harris. Mr. Dorr was assistant director of munitions. His full name is Goldthwaite H. Dorr.

Mr. Hiss. Colonel Harris, you remember the office order No. 1, dated in May 1918 relating to the audit of the accounting work being done at Old Hickory, referred to at some length the other day?[2] You raised the question, or you pointed out that the 10-percent item referred to 10 percent of those vouchers which were not accompanied with original documents rather than 10 percent of all the vouchers. I ask you from the standpoint of War Department auditing and accounting, if the documents which require the most auditing are not those vouchers which are not accompanied by original documents.

Lieutenant Colonel Harris. With the permission of the committee, at a latter date, when I have an opportunity to study this matter a little bit, I was going to ask to submit a statement on the auditing phase of this investigation, and with your permission I would like to postpone it until that time.[1]

---

[1] Hearings, Part XIV, p. 3238.

[2] Entered as "Exhibit No. 1186", Hearings, Part XIV, p. 3246.

Mr. Hiss. Very good, sir.

RECENT PROFITS OF DU PONT, WINCHESTER, AND REMINGTON COS. ON SALES OF POWDER TO UNITED STATES GOVERNMENT

The Chairman. That is satisfactory.

Mr. Hiss. Mr. Bradway, have you a copy of a statement furnished to the committee showing income from sales of powder sold to the United States Government from the years 1924 to 1933, inclusive?

Mr. Bradway. Yes, sir; I have.

Mr. Hiss. What types of powder are included in this document, which I offer as an exhibit?

Mr. Bradway. Both cannon and rifle powder, and, in the case of cannon powder, the old type of pyro powder and the newer type of FNH.

Mr. Hiss. In the years 1932 and 1933, as listed on this exhibit, Mr. Bradway, the prices are shown per pound for 1932 as .6760, that is, 67 cents per pound. Is that correct, Mr. Bradway?

Mr. Bradway. That is correct.

Mr. Hiss. And in 1933 as .6557. Do you know what the present 1934 costs are per unit?

Mr. Bradway. No; not offhand.

(The document previously referred to was marked "Exhibit No. 1335" and is included in the appendix on p. 4120.)

Mr. Hiss. Sales prices, I mean. This is the sale price and not the cost price.

Mr. Bradway. No; I do not have that offhand.

Mr. Hiss. Those two figures, 67 cents and 65 cents, represent the average cost of both rifle and cannon powder? Is that correct?

Mr. Bradway. The average price.

Mr. Hiss. I mean "price." I beg your pardon.

Mr. Bradway. That is right.

Mr. Hiss. Of both cannon and rifle powder?

Mr. Bradway. Yes.

Mr. Hiss. Which was the larger item, cannon powder or rifle powder, in dollars?

Mr. Bradway. I think cannon powder in dollars.

Mr. Hiss. Which has been sold in the past few years at the higher price, cannon powder or rifle powder?

Mr. Bradway. Rifle powder.

Mr. Hiss. If you will look at the column marked "Selling expense" would you please explain why it is necessary or how it is shown on your books?

Mr. Bradway. Just a moment, Mr. Hiss. You asked me for the names of these powders, and they do not appear on this sheet, and I think they should be put on this sheet when it is introduced; in other words, list them, pyro cannon powder, FNH cannon powder, and military rifle powder.

---

[1] Under date of Apr. 4, 1935, Colonel Harris advised the committee as follows: "With respect to my request to submit additional data respecting the audit of the Old Hickory contract the records of the War Department indicate that an audit was made but do not disclose the result of that audit. I have nothing further to offer on this subject."

Mr. HISS. I will write them in or I can return it to you to have that added on it.

Will you look, Mr. Bradway, at the column marked "Selling expense." Do you see that item?

Mr. BRADWAY. Yes, sir.

Mr. HISS. Is it customary for you to set up on your books in showing the cost of sales to the Government an item of selling expense?

Mr. BRADWAY. Yes.

Mr. HISS. What selling expense does the company bear in selling to the United States Government? Can you answer that, Major Casey?

Mr. CASEY. My own services and my office.

Mr. HISS. Colonel Harris, have you any information as to the expenditure of certain funds allotted from P.W.A. allotments for powder?

Lieutenant Colonel HARRIS. The records of the Ordnance Office indicate that out of N.I.R.A. funds an amount of $286,923 has been applied to the procurement of powder from the du Pont Co., of which $108,000 was for caliber .30 powder at prices of .715 and .7175 and .72 per pound, depending on point of delivery, and the remainder of the $286,923 was for cannon powder at a price of .6025 per pound.

Mr. HISS. Colonel Harris, at what time were these purchases made? [1]

Lieutenant Colonel HARRIS. I have not that information. It must have been in the last few months.

Mr. HISS. Mr. Bradway or Major Casey, are you familiar with the purchases referred to by Colonel Harris?

Mr. CASEY. I am not specifically familiar with the fact that the Army purchased out of P.W.A. funds. I think I made the statement the other day that we do know it is true in the case of the Navy.

Mr. HISS. Was any difference made in your price to the Army on any lot of powder because it was being purchased with P.W.A. funds?

Mr. CASEY. Not at all.

Mr. HISS. Your prices have been uniform?

Mr. CASEY. Yes, sir; I just stated, Mr. Hiss, that we did not know in the case of the Army that there was any procurement out of P.W.A. funds.

Mr HISS. So that of the amount Colonel Harris has referred to, an amount equal to your normal profit on Government business has, so far as you know, been paid to the du Pont Co?

Mr CASEY. I do not know.

Mr. HISS. Mr. Bradway, I think I asked you this question before, but I would like to bring it out to make it a little clearer: The profit per pound shown for 1932 on this exhibit is roughly 23½ cents, is it not?

Mr. BRADWAY. That is correct.

Mr. HISS. And in 1933 it is 22.98 cents, approximately 23 cents, a pound? Is that correct, Mr Bradway?

---

[1] For additional information regarding P. W. A. purchases of powder, see Hearings, Part XVII, p. 4270.

Mr. BRADWAY. Correct.

Mr. HISS. The selling-price average in 1932, which has already been referred to, was 67.60 cents and in 1933, 65.57 cents. The net profit, after taking out administrative expenses and selling expenses—as to which Major Casey has already testified—the selling expenses in 1932 were 3.36 cents a pound and in 1934, 4.97 cents a pound. After taking out all expenses, the net profit, already referred to, was more than 30 percent of the gross sales price. Is that correct, Mr. Bradway?

Mr. BRADWAY. That is approximately correct.

Mr. HISS. Do you know whether the profit on sales in 1934 has been any less than that amount?

Mr. BRADWAY. It is less, but I do not know what the figure is at the moment. We do not make a recapitulation until the end of the year.

Mr. HISS. Colonel Harris, will you attempt to ascertain for the committee exactly when the P.W.A. purchases were made, whether in 1933 or 1934? [1]

Lieutenant Colonel HARRIS. Yes, sir.

Mr. HISS. Mr. Pugsley, I show you a statement furnished by the Winchester Repeating Arms Co., which is not offered as an exhibit but which will be used for the purposes of examination, showing the costs of Winchester sales to the United States Government in 1932 and 1933. Does this statement represent all the sales of Winchester to the United States Government during this period, Mr. Pugsley?

Mr. PUGSLEY. Yes, sir.

Mr. HISS. The gross value in 1932 was $211,823.89. Is that correct?

Mr. PUGSLEY. That is correct.

Mr. HISS. And in 1933, $14,628?

Mr. PUGSLEY. I think that is correct.

Mr. HISS. The gross profit for the 2 years combined is shown as $65,590?

Mr. PUGSLEY. Yes, sir.

Mr. HISS. The total net sales during that period were $387,191?

Mr. PUGSLEY. Yes, sir.

Mr. HISS. In the break-down of the overhead you show, in the second column the heading, "Admn. dpr." What does the abbreviation "dpr." stand for, Mr. Pugsley?

Mr. PUGSLEY. I do not see that. Where is it?

Mr. HISS. Down at the bottom of the page. You see the column break-down there of certain overhead expenses?

Mr. PUGSLEY. Administration and depreciation.

Mr. HISS. Administration and depreciation?

Mr. PUGSLEY. Yes.

Mr. HISS. I note that the selling and advertising average from 1932 through the first 9 months of 1934 is approximately 15 percent. Is that correct, Mr. Pugsley?

Mr. PUGSLEY. I believe it is, from these figures; yes, sir.

Mr. HISS. In computing your profit on Government sales, do you make any charge, as the du Pont Co. does, for selling expenses?

---

[1] See footnote, p. 3986.

Mr. PUGSLEY. I am not sure of that. I cannot tell you.

Mr. HISS. Do you include advertising expenses?

Mr. PUGSLEY. I think not, but there again I cannot be sure.

Mr. HISS. If those 2 expenses were taken out or were eliminated, but warehousing, freight, administrative, and depreciation charges were computed or included in the estimate of cost, those three items, freight, warehousing, administration and depreciation, regarding the last 2 as a single item—really 4 items—those 4 items come to approximately 5 percent over the average, a little over 5 percent, do they not, for the period?

Mr. PUGSLEY. I have not averaged them.

Mr. HISS. For the period 1932 to 1934.

Mr. PUGSLEY. I have not averaged them.

Mr. HISS. I did not want to read out each one specifically, if you can make a rough estimate.

Mr. PUGSLEY. Somewhere in that neighborhood.

Mr. HISS. The figures which I read before of the gross profit against the net sales would not include the overhead items which we have just been discussing; is that correct?

Mr. PUGSLEY. That is correct.

Mr. HISS. So that in computing the percentage that $65,000 is of $387,000, a further average of about 5 percent for administrative, depreciation, freight, and warehousing charges should be deducted to show net profit, assuming that selling and advertising expenses are not charged; is that correct?

Mr. PUGSLEY. It would be a little more than 5 percent, I think, from those figures here.

Mr. HISS. A little more than 5 percent?

Mr. PUGSLEY. From those figures.

Mr. HISS. Would 6 percent cover it, so far as you can estimate it at the present time, Mr. Pugsley?

Mr. PUGSLEY. It looks to me as if it would be nearer 8, from an examination of the figures.

Mr. HISS. Do you have the average computed? I did not want to put the specific figures in because they might disclose cost material to your competitors, but if we can have that computed, we might insert it at an appropriate place in the record.

Colonel Harris, in the proposed cost contract, that is, the adjusted compensation contract, no provision is made, as I understand it, for selling or advertising expenses.

Lieutenant Colonel HARRIS. I will ask Lieutenant Brannon to answer that.

Mr. HISS. Lieutenant Brannon?

Lieutenant BRANNON. I am quite sure that is correct, but I would like to look it up, Mr. Hiss.

Mr. HISS. Mr. Bradway, have you "Exhibit No. 1335" before you, while Lieutenant Brannon is looking that up?

Mr. BRADWAY. Yes, sir.

Mr. HISS. I want to correlate the net profit of 1924 to 1933, namely, $2,698,000, with the gross sales value of $11,000,000. That represents somewhat in excess of 20 percent, the profit represents somewhat in excess of 20 percent of the gross sales value over the period, does it not?

Mr. Bradway. Yes; but, of course, that does not represent return on investment. When you speak of percentage of profits, you must consider your turn-over. Our turn-over on smokeless powder is very low. In other words, we have a dollar invested in our military business for every six-tenths of a dollar of sales.

Mr. Hiss. You have not included in this statement one item of cost?

Mr. Bradway. The return on investment. We figure, going over our total business over a period of years, and what we are interested in is return on investment. You may have what is apparently a rather large figure of profit per pound, and yet your return on investment would be rather low.

Mr. Hiss. Have you a depreciation charge in these costs?

Mr. Bradway. Yes, sir; there is depreciation.

Mr. Hiss. Would not that take care of original investment?

Mr. Bradway. No, indeed; not at all. Our total return on investment, on our total smokeless-powder business, during that entire period, was 10.67.

Mr. Hiss. On your investment?

Mr. Bradway. On our investment.

Mr. Hiss. That is investment computed at the original cash outlay?

Mr. Bradway. The current investment. We have replacement items.

Mr. Hiss. You mean a valuation placed by you on your investment, valuation of existing plants?

Mr. Bradway. Yes, sir.

Mr. Hiss. Is that based upon replacement cost, market value, or what?

Mr. Bradway. Practically replacement cost.

Mr. Hiss. Mr. Reisinger, this is the only copy of this that the committee has, being a statement of the Remington Arms Co. net receipts of domestic ammunition for the 8 months ended August 31, 1934. Would you step up here so that both of us could look at it at the same time?

The gross sales to the United States Government during this period, that is, the 8 months ending August 31, 1934, appear to be $25,403. Is that correct?

Mr. Reisinger. That is correct.

Mr. Hiss. You have included freight and delivery, selling and administrative costs, in computing your net receipts on the Government business. Is that correct?

Mr. Reisinger. That is correct. They should be included.

Mr. Hiss. What selling costs do you have in selling to the United States Government?

Mr. Reisinger. We possibly have more selling costs in selling to the United States Government than we have in selling our commercial sales. The only selling expense that you do not have is our actual field man soliciting orders, but your office work is much greater in connection with Government business than it is with commercial business.

Mr. Hiss. Where is your ordinary advertising carried in this particular statement? Under the column to which we referred?

Mr. Reisinger. Under selling expense.

Mr. Hiss. Do you have any advertising cost on Government business?

Mr. Reisinger. I should say from what is applicable to Government business; yes, sir.

Mr. Hiss. I call your attention to the manner in which you have stated here your costs, your total sales of domestic ammunition, Government and otherwise. You have stated your factory profit at 29 percent of the gross sales value.

You could also state that at somewhat more than 50 percent of the mill cost, could you not?

Mr. Reisinger. Yes; but why compare it with mill cost?

Mr. Hiss. During the war, when the cost-plus contracts were in effect, the inducement offered was exactly that, a percentage of cost.

Mr. Reisinger. Yes.

Mr. Hiss. And 10 percent return on work was considered an average amount in some of the contracts, was it not, Lieutenant Brannon?

Lieutenant Brannon. Some were 10 percent and some 15 percent, Mr. Hiss, and some, I believe, as low as 5.

Mr. Hiss. Mr. Bradway——

Mr. Reisinger. Wait a moment. It was not directly on mill cost. There are a lot of things in administrative expense under Government contracts which would go back into the cost.

Lieutenant Brannon. Ordinarily the cost on the cost-plus contract in manufacturing contracts included an allowance on administrative overhead.

Mr. Reisinger. You add all clerical expense and financial expense in there.

Mr. Hiss. Mr. Bradway, the percentage statement on profits of the du Pont Co. powder sales to the Government, to which we referred, is on a basis of gross sales?

Mr. Bradway. Gross sales. The percentage figure is on percentage of gross sales; yes, sir.

Mr. Hiss. Mr. Irénée du Pont, with respect to the charts introduced yesterday by you on cost of powder I believe the question was asked as to whether—that was sale prices and not cost—by the du Pont Co.—I believe the question was asked as to whether that included the sale price of powders produced at Old Hickory. Is that correct?

Mr. Irénée du Pont. That was taken from a Government publication. I imagine it did include that.

Senator Clark. Mr. Hiss, I asked the question.

Mr. Irénée du Pont. Pardon me, Senator. That would only come in in the last 3 or 4 months of 1918.

Senator Clark. I asked whether that included the cost of production of powder, and the sources from which the Government supplied the money. I did not mention Old Hickory particularly. I included all sources from which the Government supplied the money.

Mr. Hiss. For the operation.

Senator Clark. For the manufacture of powder.

Mr. Hiss. I wanted also to find out whether it included any estimate of cost of construction of Old Hickory, which, of course, was a large item.

Mr. Irénée du Pont. That did not. It was stated there, according to Government accounting, anything you put into capital, you do not have in your cost.

Mr. Hiss. If the du Pont Co. had built Old Hickory instead of the Government building it, that is, if you had built it, what would be the situation?

Mr. Irénée du Pont. We would have had to amortize anything we built, just like we did for the Allies.

Mr. Hiss. If the Government had not built Old Hickory, the prices shown on the chart during the later period would have been higher?

Mr. Irénée du Pont. If we had had to amortize the plant they would have been higher, the same as the foreign orders in the years 1917 and 1916 were higher.

INDUSTRIAL CONNECTIONS OF CERTAIN WAR DEPARTMENT AND OTHER OFFICIALS INVOLVED IN PROCUREMENT AND RELATED ACTIVITIES DURING WORLD WAR [1]

Mr. Hiss. Colonel Harris, in the discussion which we have so far had on the question of the adjusted compensation contract, there has been some reference to the personnel involved during the world war with the making of contracts, and there has been some discussion, further, on personel in connection with the price-control features of the mobilization plan, and the price-control features of the War Industries Board's duties during the World War. I ask you, in relation to that evidence, this question:

Is it not important to have a large amount of flexibility in wartime contracts to take care of changed conditions and other exigencies of war time?

Lieutenant Colonel Harris. It is important for the Government particularly to have flexibility in contracts to meet changing conditions; yes, sir.

Mr. Hiss. I meant the Government.

Lieutenant Colonel Harris Yes, sir.

Mr. Hiss. That puts an increased responsibility upon the personnel involved in supervising the contractual relations; does it not?

Lieutenant Colonel Harris. It adds to the heavy responsibility they are already carrying; yes, sir.

Mr. Hiss. I would like to offer for the record a summary of the personnel during the last war, of certain of the Army procurement officials.

This shows the name, the governmental position, the industrial connections, and certain sources of income of those particular officials.

(The document referred to was marked "Exhibit No. 1336" and is included in the appendix on p. 4121.)

Mr. Hiss. Colonel Harris, would you identify certain men named on this list?

Col. Charles N. Black, who is listed in the procurement division of the Ordnance Department, assistant to chief ordnance officer,

---

[1] This subject continued, see Hearings, Part XV, p. 3655.

November to December 1918. Can you identify him as described on the exhibit?

Lieutenant Colonel HARRIS. As to these dates, I am not familiar, but I can identify him as being an officer on duty in the Ordnance Department in relation to procurement.

Mr. HISS (reading):

> Maj. Charles F. Cook.

Lieutenant Colonel HARRIS. The same.

Mr. HISS (reading):

> Benedict Crowell, Assistant Secretary of War.

Lieutenant Colonel HARRIS. That is correct; yes, sir.

Mr. HISS (reading):

> General William Crozier, Chief of Ordnance.

Lieutenant Colonel HARRIS. Correct.

Mr. HISS (reading):

> Colonel Deeds, Signal Corps, United States Army and supply section, Division of Military Aeronautics, August 27, 1917, to June 20, 1919?

Lieutenant Colonel HARRIS. Yes, sir; I can identify Colonel Deeds.

Mr. HISS (reading):

> Lt. Col. Edward A. Hamilton, chief of legal section?

Senator CLARK. Do you identify Colonel Deeds?

Lieutenant Colonel HARRIS. I do not know him personally, but I identify the record that he was on this procurement work, from my memory of the war.

Senator CLARK. Can you identify what he was before he got on that procurement work?

Lieutenant Colonel HARRIS. The record shows it, I think.

Mr. HISS. It is mentioned here that prior to 1917 he was an executive of the National Cash Register Co., Delco Co., Domestic Engineering Co., and Dayton Research Laboratories Co.

Lieutenant Colonel HARRIS. I am unable to corroborate that.

Mr. HISS. The compilation is based upon information supplied the committee by the War Department, from its official records. I would like to offer these supporting documents as exhibits, 1337–A, B, C, D, E, to Q, inclusive.

(The documents referred to were marked, respectively, "Exhibits Nos. 1337–A to 1337–Q", inclusive, and are included in the appendix on pp. 4126 to 4141.)

Mr. HISS. Can you identify Daniel C. Jackling as director of explosives?

Lieutenant Colonel HARRIS. Mr. Jackling was appointed by the Secretary of War to have entire charge of the erection of powder plants, in December of 1917.

Mr. HISS. Col. Robert P. Lamont.

Lieutenant Colonel HARRIS. He was an assistant to General McRoberts in the Procurement Division of the Ordnance Office.

Mr. HISS. Col. Samuel McRoberts.

Lieutenant Colonel HARRIS. He was chief of the Procurement Division of the Ordnance Office.

Mr. Hiss. Eugene Meyer was not in the Ordnance Department?

Lieutenant Colonel Harris. He was not in the Ordnance Department.

Mr. Hiss. According to this list he was director, National War Savings Committee, and chief, nonferrous metals section, War Industries Board.

Senator Clark. Colonel, are there any of these gentlemen as to whose industrial or business connections you could testify prior to their experience on this board?

Lieutenant Colonel Harris. Not at first-hand knowledge, Senator.

Mr. Hiss. On the second page, Col. William C. Spruance, Jr., in the Ordnance Department, Explosives and Loading Division, December 6, 1917, to December 1, 1918.

Lieutenant Colonel Harris. I know Colonel Spruance; I was associated with him and know he came from the du Pont Co.

Mr. Hiss. Mr. Stettinius has already been identified.

Can you identify Brigadier General Tripp?

Lieutenant Colonel Harris. He was chief of the Production Division of the Ordnance Department. I know him.

Mr. Hiss. General Williams?

Lieutenant Colonel Harris. I can identify him. He was my chief.

Mr. Hiss. Lieutenant Colonel Williams?

Lieutenant Colonel Harris. I do not know who he was.

Mr. Hiss. I call your attention to certain items in the extreme right-hand column, "Sources of income during war years." The first one listed is Mr. Benedict Crowell; the committee has been informed that the income-tax returns of Mr. Crowell for 1917, 1918, and 1919 have been destroyed.

The Chairman. Destroyed by whom?

Mr. Hiss. By the Internal Revenue Bureau.

The Chairman. There is no explanation given as to the reason for the destruction of the records?

Senator Clark. Mr. Chairman, I am under the impression that there is a provision of law that after a certain number of years the—I have forgotten what the number is—the income-tax returns are destroyed simply to prevent an accumulation of records, after the statute of limitations has run.

Mr. Hiss. As to some of the income-tax returns that were sought in making up this chart, it was impossible to get them; as to some others, they were still in existence. Apparently no uniform procedure has been followed in that.

The Chairman. That is, some of the income-tax returns for that period are available and some are not?

Mr. Hiss. That is correct.

I offer also as the next exhibit a list of the personnel of the wartime agencies.

(The list referred to was marked "Exhibit No. 1338", and is included in the appendix on p. 4142.)

Mr. Hiss. Mr. Eugene Meyer, who was in the first list, should by rights appear on the second.

Mr. Baruch was chairman of the board, as has already been testified.

The CHAIRMAN. The Chair notes that the returns for Mr. Baruch for that period have been destroyed. Those for 1917 are in existence. Those for 1918 and 1919 have been destroyed.

Mr. HISS. That is correct.

Those listed on this chart, for the purposes of the record, are Mr. Baruch; Mr. Harry Payne Bingham, secretary of the War Industries Board; Mr. G. M. Brill, head of the requirements section, United States Shipping Board; Mr. Robert S. Brookings; Mr. March F. Chase; Mr. Clarence Dillon; Mr. Joseph F. Guffey; Mr. H. P. Ingels, who served as secretary; Mr. Alexander Legge; Mr. Robert S. Lovett; Mr. C. H. MacDowell; Mr. Eugene Meyer; Mr. Robert H. Montgomery, who served on the board of appraisers of the War Department and as a member of the price-fixing committee; Mr. Charles A. Otis; Mr. George N. Peek; Mr. J. L. Replogle; Mr. Albert C. Ritchie, who was general counsel of the War Industries Board; Mr. Frank A. Scott; Mr. L. L. Summers; Mr. Samuel Vauclain, who was chairman of the special advisory committee on plants and munitions; Mr. Daniel Willard; and Mr. Pope Yeatman.

PERSONNEL UNDER INDUSTRIAL MOBILIZATION PLAN

Mr. HISS. Colonel Harris, as part of the Army's procurement plan, has considerable attention been paid to the problem of personnel?

Lieutenant Colonel HARRIS. Considerable attention has been paid to that problem.

Mr. HISS. Will you explain for the record, Colonel Harris, the duties of the Army Industrial College?

Lieutenant Colonel HARRIS. The army is divided into two groups by its organization: One, the military group, which is operated under the control and supervision of the general staff; and one, the industrial group, operated under the supervision of the Assistant Secretary of War.

As an agency of the Assistant Secretary of War in this work there is a planning branch, and in the supply branches officers are assigned to industrial planning.

As a source of trained officers for the military group the Army War College is in existence, and as a source for trained officers for the industrial group the Army Industrial College is in existence.

Senator CLARK. What is the Army Industrial College, Colonel? Just explain if you will the tour of duty and the general nature of the duty.

Lieutenant Colonel HARRIS. The course of instruction is of one year's duration. It is under the director who is an experienced officer from the supply branches. There are officers from the Navy and the Army; a few officers from the line of the Army, but the preponderant number from the supply branches.

Senator CLARK. And they are on constant duty for years?

Lieutenant Colonel HARRIS. They are on one year's course of instruction, with no other duties. There are at present 55 students, as I recall, of whom 14 are from the Navy and the Marine Corps.

Senator CLARK. Colonel, could you give us an idea as to the relative rank of the officers attending this college? I do not want the specification, but in a general way.

Lieutenant Colonel HARRIS. The senior officer at the present time as a student is a lieutenant colonel. The junior officer as a student is a first lieutenant.

Senator CLARK. What is the proportion of the student body in ranks; can you give an offhand opinion on it?

Lieutenant Colonel HARRIS. There are a few of the younger officers, and more of the older officers. I should say the rank of major predominates in the student body.

Senator CLARK. That is what I was trying to find out.

Mr. HISS. Is it customary to have civilian lecturers at the Army Industrial College?

Lieutenant Colonel HARRIS. It is.

Mr. HISS. How frequently do they deliver lectures?

Lieutenant Colonel HARRIS. I should say during the course of 1 year's course there are probably 20 lectures from civilian speakers.

Mr. HISS. They cover a wide range of fields, do they?

Lieutenant Colonel HARRIS. They cover the range of economics and other industrial activities.

Mr. HISS. I offer for the record a list of civilian lecturers at the Army Industrial College, furnished by the War Department.

(The list referred to was marked "Exhibit No. 1339", and is included in the appendix on p. 4146.)

Mr. HISS. I assume that most of the men who have had experience with war-time control have been asked to lecture at the Army Industrial College, Colonel Harris?

Lieutenant Colonel HARRIS. That is true. I think every lecturer at the Army Industrial College is a man of standing in his particular line.

Mr. HISS. Mr. Baruch has lectured and is listed as an honorary adviser, A.I.C. What is that, Colonel Harris?

Lieutenant Colonel HARRIS. Army Industrial College.

Mr. HISS. You have a list of honorary advisers. Are they all noted on there?

Lieutenant BRANNON. I think so, only we did not specially ask for a separate list.

Mr. HISS. Approximately how many honorary advisers are there, Colonel Harris?

Lieutenant Colonel HARRIS. I find five.

Mr. HISS. Are there more than that, so far as you know?

Lieutenant Colonel HARRIS. I do not know.

Mr. HISS. Do you know, Lieutenant Brannon?

Lieutenant BRANNON. I really do not know, Mr. Hiss.

Mr. HISS. Those five are Mr. Baruch, Mr. Howard E. Coffin, Dr. F. H. Martin, who is listed as honorary adviser, with the "A.I.C." initials——

Lieutenant Colonel HARRIS. I have an idea since hearing these names that that was a tribute to the Council of National Defense. Mr. Brookings was on there, and he is now dead.

Mr. HISS. Mr. Brookings is also listed.

Lieutenant Colonel HARRIS. They were all on the advisory committee of the Council of National Defense. At this time, to my knowledge, there is no active advisory council for that college.

Mr. HISS. Will you explain, Colonel Harris, what the ordnance district advisory boards are?

Lieutenant Colonel HARRIS. The ordnance district chiefs are civilians of outstanding reputation. They have assigned to them for permanent duty an officer of the Ordnance Department who acts as executive officer. He is the only man except a stenographer on full-time duty. As an aide to the district chief, there is a district advisory council of industrialists in his district, to advise with the district chief on industrial matters.

Mr. HISS. Are some of them members of the Ordnance Reserve Corps?

Lieutenant Colonel HARRIS. Some are and some are not.

Mr. HISS. Have you a copy with you of the list which you furnished the committee.[1]

Lieutenant Colonel HARRIS. I think so.

Mr. HISS. In the Hartford district I notice the following men on the Ordnance District Advisory Board:

Mr. G. A. Bausman, vice president, treasurer, and general manager of the National Equipment Co., Springfield, Mass.

Mr. C. R. Burt, president and general manager, Pratt & Whitney Co., Hartford, Conn.

Mr. C. C. Chesney, Pittsfield, Mass.

Mr. Arthur B. Reynders, works manager, Westinghouse Electric & Manufacturing Co., Springfield, Mass.

Mr. Philip B. Gale, chairman of the board, Standard Screw Co., Hartford, Conn.

Mr. John H. Goss, vice president and general manager, Scoville Manufacturing Co., Waterbury, Conn.

Mr. E. Kent Hubbard, president the Manufacturers Association of Connecticut, Hartford, Conn.

Mr. Edwin Pugsley; Mr. Stone, president Colt's Patent Firearms Manufacturing Co.; and Mr. Webster, chairman of the board, Bridgeport Brass Co., Bridgeport, Conn.

Have this particular board and the other boards advised the War Department with respect to the forms of contract that we have discussed heretofore, Colonel Harris?

Lieutenant Colonel HARRIS. The forms of contract have been sent out to these districts for consideration. Whether these members have advised with them, I do not know, but they were sent out for that purpose.

Mr. HISS. They were sent out for that purpose?

Lieutenant Colonel HARRIS. Yes.

Senator CLARK. Colonel, would not a man who was on this advisory committee, who represents one of the manufacturing companies who would be involved, and who is also on the advisory committee of the Government, necessarily occupy a dual position? In other words, is he not dealing on both sides of the table at the same time?

Lieutenant Colonel HARRIS. Mr. Senator, we expect to do business with industry. We expect to make contracts with them. We are hoping to reach, before war is declared, a form of contract that they will be willing to sign. So I think it is only natural that we should confer with them.

---

[1] Entered as "Exhibit No. 1340", see p. 4021.

Senator CLARK. Yes; but can you not negotiate those contracts across the table, even in peace times, rather than having one man occupy the dual position of being an adviser of the Government on these contracts and at the same time being an interested party on the other side of the table?

Lieutenant Colonel HARRIS. I can readily visualize a case of asking the advice of people, even if they were on the industry side, as to the form of a contract.

Senator CLARK. Yes; but I understand that a committee or a body has been created to advise the Government as to what they should accept and what they should not accept.

Lieutenant Colonel HARRIS. No, no; to advise the Government what they think.

Senator CLARK. What they think as to what they should accept and what they should not accept.

Lieutenant Colonel HARRIS. Yes, sir.

Senator CLARK. It comes back to that. Now, how can one man sit on one side of the table as an adviser of the Government and on the other side of the table as an officer of an interested company, either as stockholder, director, or paid employee, and at the same time exercise the same disinterested view as to both bodies? Do you not see a conflict of interests there?

Lieutenant Colonel HARRIS. I can see the point you are making, Mr. Senator.

Senator CLARK. That is the point that has run through the law from the very foundation of Anglo-Saxon law, Colonel.

Lieutenant Colonel HARRIS. If this were a question of negotiating business agreements, I could see your point. But we are discussing ways and means of doing business.

Senator CLARK. Does not that lead to the same result, Colonel?

Lieutenant Colonel HARRIS. I do not see it that way. Perhaps I am wrong. I do not anticipate the Government is going to be influenced adversely by these advisory committees.

Senator CLARK. Colonel, I have never been an officer of a corporation except nominally, but I have been attorney for several. If you will let me draw up the contract for both parties, I will see that my client does not get very much the worst of it.

Lieutenant Colonel HARRIS. We drew the contract up. I would say that from the testimony of yesterday or the day before we did not get great deal of support from these advisory committees.

Senator CLARK. Then what is the use of having them?

Lieutenant Colonel HARRIS. We want to give them a chance, anyway, to say what they have to say.

Senator CLARK. In other words, this is just a gesture?

Lieutenant Colonel HARRIS. No, sir. I think that a straight-out and honorable way of showing them what we are trying to do.

Senator CLARK. You do not think that one man who is an officer of a corporation at one moment, and at the same moment a member of an advisory committee of the Government, can sit on both sides of the table at the same time and render full service to both parties, do you?

Lieutenant Colonel HARRIS. I think it is in the national interest to have a form of contract that will be acceptable, and not leave that negotiation until after "M day",[1] after war is declared.

Senator CLARK. I am entirely in accord with you. That is the reason I today urged you to send in these laws to be passed on by Congress in peace time. I think it would be a fine thing to have the form of the contracts passed on by Congress. But I do not think that you are going to arrive at any substantial Governmental reform by having one man occupy the dual position of an officer of a corporation interested and at the same time an adviser to the Government. I am not reflecting on anybody. You can call in an officer of the corporation and get his views to the fullest extent, without making him an officer of the Government and an adviser of the Government, because he can not occupy a dual position. One of the oldest books in the world says that where a man's treasure is, there is his heart.

Lieutenant Colonel HARRIS. We reserve the responsibility of making a decision in this matter. We have under the law the power of making a compulsory order, and we have under the law the power of commandeering.

Senator CLARK. We have had a good deal of evidence in this record up to date of the machinations or influences of various ammunition manufacturers on the War Department and on the Navy Department. I am not trying to reflect on anybody. But we are looking at this thing from an entirely impersonal standpoint. I do not see how it is possible for a man to render efficient service and disinterested service both to the Government and to a munitions company, or to any sort of an interested company, a wheat company, a cotton company, or anybody else, if he is going to deal with the Government at the same time.

Lieutenant Colonel HARRIS. Senator, this is only one phase of this industrial planning.

Senator CLARK. It seems to run through the whole planning.

Lieutenant Colonel HARRIS. No, sir. We have other phases, I would like to mention to you, if I may.

Senator CLARK. I would be glad to hear them.

Lieutenant Colonel HARRIS. We have the raw material and commodity phase. We are in touch with all the Government Departments, the Department of Commerce, the Department of the Interior, the Bureau of Mines. We have labor problems that we are in consultation on with the American Federation of Labor and the Department of Labor of the Government. In fact, we try to tap in this work all sources of information. It is a big, broad job.

Senator CLARK. To what extent throughout that whole program, taking it on the broadest possible basis, does this dual capacity of adviser to the Government and interest in a private corporation run?

Lieutenant Colonel HARRIS. In the peace time development of this thing?

Senator CLARK. The peace time development will later develop into the war time development.

---

[1] "M day" is the date designated in War Department orders as the first day of mobilization. Popularly referred to as the first day of war.

Lieutenant Colonel HARRIS. I grant you that. In the peace time development of this thing the interests of industry and the Government you might say are intermingled. But the plan for operation in a war separates the two interests definitely, and the operation will be under a separate organization.

Senator CLARK. Even when you get down to that, Colonel, is it not the plan to have the very officials in many instances of the corporations which are going to deal with the Government taken over into the Government service as procurement officers?

Lieutenant Colonel HARRIS. We are going to be forced to do something of that kind.

Senator CLARK. That is exactly what I thought. In other words, to come back to the case I stated the other day, going back very far, as far as I can in my recollection, to avoid any personal inferences, it is a fact that some 40 years ago it was discovered and judicially ascertained by the United States Government that the Carnegie Steel Co. had been engaged in selling the United States Government defective armor plate at exorbitant rates. As a matter of fact, I think they were fined under President Cleveland $250,000.

Assuming that that situation existed in the case of a new war, if an officer, a vice president, we will say, or a paid employee of the Carnegie Steel Co. had in the meantime been made a colonel, or since it is a naval matter a commander or a captain in the Navy, and he happened to be the procurement officer charged with the responsibility of protecting the Government on that, and he had previously been engaged in selling this defective armor plate to the Government, as the evidence showed at that time that Mr. Schwab, who is now chairman of the board of the Bethlehem Steel Co., and Mr. Corey, who was later president of the United States Steel Corporation, were, do you think the Government would be in a position to get fair service from such officers as that?

Lieutenant Colonel HARRIS. I am willing to admit every case in which there has been anything wrong that is proved, but in planning for the next war industrially, if we are to be put in a glass case and not be allowed to contact industry, or if Government officials are of a character that they cannot associate with industry and still remain honest to their trust, the whole thing is going to fall down anyway.

Senator CLARK. I am not talking about Government officials associating with industry. What I am speaking about is the Government in the event of war taking over the very personnel that might have been engaged in such practices as I have been talking about, making them the procurement and inspection officers. Does your plan contemplate that?

Lieutenant Colonel HARRIS. As I tried to explain the other day, our plan calls for having people on procurement matters that have a knowledge of the subject. I think that is necessary. Our contemplated action will attempt to safeguard any one man being in a position to negotiate or deal with the company from which he came. That is my position. I tried to explain that the other day.

Senator CLARK. Colonel, I think I understand your position.

Lieutenant Colonel HARRIS. This is a big question. I am glad to have the benefit of your quizzing me.

Mr. Lammot du Pont. May I say a word on this subject?

Senator Clark. Yes, sir.

Mr. Lammot du Pont. You seem to be trying to view the problem from a common-sense viewpoint and are evidently not familiar with modern business practice. I can state that it is a very common practice and is considered very good practice for a seller to maintain an advisory division whose duty it is to advise the customer as to what he should buy and how he should use it.

Senator Clark. That is perfectly true, Mr. du Pont.

Mr. Lammot du Pont. Because the customer knows perfectly well that the advisory division is employed by the seller, yet he accepts the advice and even seeks it.

Senator Clark. But in such instances the seller and the buyer deal at arms' length, do they not? That does not involve the buyer.

Mr. Lammot du Pont. Not as regards the advice, though.

Senator Clark. They do deal at arms' length. Both parties realize that the adviser is a representative of the seller. Now in this case, as I listened to Colonel Harris' testimony, I understand that in this case the United States Government is taking over the agents of the seller and making them officers of the Government, and they are advisers on the matter of purchase. It seems to me that it is entirely possible that a man might get into a triple capacity. This Captain Bleasdale that we talked about here yesterday—I do not know whether you were here or not, Mr. du Pont—was a partner in a concern which is manufacturing munitions. He was manufacturing a compensator for use on machine guns and Army rifles. He was not only a partner, profiting to the extent of his percentage of the royalty on every sale of that sort of thing, but he was an active officer in the Marine Corps, that was at that time occupying Nicaragua. In that capacity he proceeded to sell, so the correspondence showed, his superior officers, against their wishes, on the merits of of the Thompson submachine gun; which was certainly to that extent at least a dual capacity.

In addition to that, he was subsequently appointed ordnance officer for Nicaragua during the Marine Corps occupation, and while still a partner in the concern, getting a royalty, and still an officer on the active list of the Marine Corps, he became ordnance officer for Nicaragua and in that capacity proceeded to negotiate and approve the purchase of 61 of these guns, out of every one of which he was going to get a royalty. That created not only a dual but a triple capacity.

I think that it is very dangerous in any of these Government relationships when a man occupies a dual capacity trying to deal across the table with himself. Of course, it is very much worse when he happens to occupy a triple capacity, as he did in this case I have just been stating.

Mr. Lammot du Pont. I just wanted to point out to you what is a very common practice in commercial business, that an adviser does act in a dual capacity, and very frequently he acts as an adviser to the customer, as an employee of the seller. In this case that Colonel Harris has described I see this difference: In commercial practice the seller selects the adviser. In this case the Government, who is the prospective purchaser, selects the adviser. I do not know whether that makes any difference or not.

Senator CLARK. Mr. du Pont, I do not think there is any difference between you and myself on that point. I realize that when a man wants to install a particular line of goods he is very likely to consult with the selling agency of the company from which he is going to buy those goods, ordinarily, if it is a patented article or an article in active competition. But in this case here is the United States Government operating in a sovereign capacity, and these men, when they are appointed on this advisory committee, whether they serve with compensation or without, nevertheless become public officials, and they certainly occupy a dual capacity when they sit on one side of the table and advise the Government as to what they should purchase and the kind of contracts they should make and on the other side of the table as an officer of an interested company.

The CHAIRMAN. Does it not become more than a dual capacity at times, especially where the individual is serving as an adviser to the Government, as he is in a reserve capacity? He has his selfish commercial interests, he serves as an adviser to the Government, then he serves as a Reserve officer of the Army, something more than a dual capacity.

Senator CLARK. It seems to me that it puts even the most honest man, of the most rigid integrity, in an intolerable position.

Mr. LAMMOT DU PONT. Not at all, in my estimation.

Senator CLARK. It would seem so to you, Mr. du Pont. I think I am an honest man, as honest as I could possibly be, but I do not see how I could personally serve the Government and a company with which the Government was dealing, in a matter of details of a contract, at the same time. It would be an intolerable position to me.

Mr. IRÉNÉE DU PONT. Mr. Senator, I do not think anybody can possibly quarrel with what you are saying. I agree 100 percent with it. I think, however, you are talking at cross purposes with Lammot or he is talking at cross purposes with you.

I thought this advisory board or committee was to try to draw up a form of contract which is likely to appeal to the industries when war is declared, so that they will be willing to sign it. The only way you can find out whether the contract is agreeable is to go ask the people whether they would be willing to sign such a contract in advance. If I were on the advisory committee and asked to sign it on behalf of the du Pont Co., I would refuse to do it.

Senator CLARK. I can understand exactly what you are saying and I agree with you entirely. If I were an officer of the Government and wanted to negotiate a contract with an industry, particularly the du Pont Co., I could go to you and say, "Now, Mr. du Pont, will you stand for this, or will you stand for this?" and we might just sit down across the table and argue that matter pro and con in the most friendly sort of way and finally arrive at a conclusion. But I do not see that to conduct that sort of negotiation on the part of the Government, since you essentially represent the viewpoint of the du Pont Co., it is necessary to constitute you a public officer, which you are when you are appointed a member of the advisory committee in any governmental department, and accept your advice if I go to consult with you.

Mr. IRÉNÉE DU PONT. I concur with you 100 percent. The difference between us is this: I say the industries are passing on a type of contract which they think will appeal some day in the future to all industry. I should think the advice in an advisory capacity, or whatever you call it, of a man in that position would be the best information you could get of what would be his type of contract.

Senator CLARK. All right, Mr. du Pont, but I would much rather stand on a contract that Colonel Harris would be in charge of on which he had obtained the best information he could get, for example, by his going to you and saying, "Mr. du Pont, you are connected with the du Pont Powder Co. Now, do you think that this sort of a contract would be acceptable to industry?" and you say, "No." "Why not?" and he would argue it out with you. I would much rather have him do that than have him go to a representative of the Government who is also a representative of the company with which that contract is going to be drawn, and who would tell Colonel Harris what sort of a contract to frame up before he goes out.

That is just the difference in our viewpoint.

Lieutenant Colonel HARRIS. Senator, I think, generally speaking, that is what has been done. The contract was drawn up and was submitted to them for their concurrence.

Senator CLARK. Then why did you have this advisory committee?

Lieutenant Colonel HARRIS. The advisory committee is in being at all times and it probably was submitted to them from time to time.

Senator CLARK. Does it function or does it not?

Lieutenant Colonel HARRIS. It does not function very much.

Senator CLARK. Then let us wipe it off; let us abolish it.

Lieutenant Colonel HARRIS. To clarify this—Lieutenant Brannon suggests that I do so—the general advisory committee, of which a list was given to you, there was a special subcommittee in each district on this particular contract form, but, generally speaking, both committees are of some cross-section. They may not be the same companies, but they come from industry.

INDUSTRIAL CONNECTIONS OF CERTAIN WAR DEPARTMENT AND OTHER OFFICIALS INVOLVED IN PROCUREMENT AND RELATED ACTIVITIES DURING WORLD WAR [1]

The CHAIRMAN. Colonel Harris, is Lt. Col. William Williams in the service now?

Lieutenant Colonel HARRIS. He is not, sir. I have looked up his record at the request of the counsel and gave them all I found, but he is not in the service at the present time.

The CHAIRMAN. But he was, was he?

Lieutenant Colonel HARRIS. He was in the service for a while, in a division of the procurement department, but left the service very shortly after the war.

The CHAIRMAN. We find as to him, as one of the principal officials in the Army in the procurement personnel, that Lieutenant Colonel Williams signed various contracts for ordnance material as contracting officer, including certain contracts with the du Pont Nitrate Co. for nitrate of soda amounting to $16,000,000 and another for $33,000,000 for TNT for the plant at Barksdale, which was with the du Pont Engineering Co.

---

[1] This subject continued from Hearings, Part XV, p. 3655 and infra, p. 3991.

We find his industrial connections as follows: Lawyer; commissioner of water supply, New York, 1914 to 1917; stockholder in General Electric, United States Steel, Otis Elevator Co., du Pont Powder Co., Westinghouse Electric, and bondholder in United Lead and Bethlehem Steel.

Wasn't he most assuredly in a dual capacity there as a part of the procurement personnel?

Lieutenant Colonel HARRIS. I do not dispute that, Senator, but if you recall during the war, any person who had a pound of TNT we would have bought. We bought every bit of TNT we could possibly scrape up. We even installed an expensive set-up to take toluol out of the lighting systems of cities. In other words, we were tapping every possible source for TNT. It didn't make any difference whether it was du Pont or who had it, we would have bought it.

Senator CLARK. Colonel, what we are interested in is not the mistakes you made in the last war, but the extent to which we can profit by the mistakes we made in the last war in preparing for the next war. What steps have you taken to prevent such dual capacity representation as Senator Nye has just mentioned.

Lieutenant Colonel HARRIS. We recognize fully the disadvantages and objections to that system.

Senator CLARK. You are chief of the planning division down there. To what extent has your effort over 15 years since the last war been directed in trying to see that such dual representation as Senator Nye has just mentioned does not take place in the next war?

Lieutenant Colonel HARRIS. Most of our work has to do with plans rather on the material side than the personnel side. The personnel side is changing constantly. With a mounting list of personnel there is constant change in that list. So far as the personnel plan is concerned, it is more a question of what plan should be used.

Senator CLARK. You have meetings from time to time of these Reserve officers listed on procurement which are equal to what they used to do in the National Guard—go to camp every year.

Lieutenant Colonel HARRIS. Of that character; yes.

Senator CLARK. The camp of these procurement officers is the Mayflower Hotel, is it not?

Lieutenant Colonel HARRIS. I don't know where it is.

Senator CLARK. Isn't that where it is; that you have a camp here every year; I mean, similar to the National Guard and the Organized Reserve, that you have a conference every year at the War Department, and the real headquarters or camp, you might say, of these officers is the Mayflower Hotel in the city of Washington?

Lieutenant Colonel HARRIS. I don't know anything about that. From my own knowledge of Reserve officers' training, I can give you my own experience—we recently had 18 in the office of The Assistant Secretary of War. I do not know where one of those people live. The only time I saw them out of the office was at a dinner they gave when they were leaving, which they invited us to attend.

Senator CLARK. Where was that, Colonel?

Lieutenant Colonel HARRIS. At the Army and Navy Club.

Mr. IRÉNÉE DU PONT. May I ask if that list of officers mentioned named Williams as a stockholder in the du Pont Co. in 1917, when he signed those contracts?

Mr. GREGG. 1918.

Mr. Irénée du Pont. 1918. I think it is rather important. He may have bought that years afterward, and I think it is a great pity to blacken a man's character when he is not here.

Mr. Hiss. The information in the chart is based upon a letter in the files of the War Department as to Lieutenant Colonel Williams' stockholdings. We will get that letter, which has already been introduced, from the reporter, so we will have that specific letter in front of us.

Mr. Irénée du Pont. Of course, it is none of my business, but I did not want to see him falsely accused.

The Chairman. Mr. du Pont, seriously, do you think it is good policy for a stockholder in the du Pont Co. to be entering into contracts for the Government with the du Pont Co.?

Mr. Irénée du Pont. Of course not, sir. I thought there was a rule in the Army that you could not hold those positions; you could not hold stock in any corporation you dealt with. My reason for that is my recollection of the time Colonel Spruance left us. I understood he had to divest himself of every drop of ownership in the company.

Senator Clark. We find here from the correspondence taken from your files where Colonel Simons, who was an employee of your company, considered it a persecution for officers of the Army to be asked whether they owned any stock in the du Ponts. He said he considered the investigation was a persecution. You would not consider that persecution, would you?

Mr. Irénée du Pont. I am not familiar with that quotation. I don't think you got it straight.

Senator Clark. I put it in the record myself, so I ought to know. Colonel Simons wrote a letter to your Major Casey, in which he said there was an investigation being made by the Inspector General's Department of the Army, and that the Inspector General, Colonel Van Schaick, had been going around asking Army officers who had had to do with Old Hickory whether they owned any du Pont stock. He said that this conclusively showed that that was a persecution and not an investigation. You would not agree with that yourself, would you, Mr. du Pont?

In other words, if Old Hickory was under investigation, you would consider it a proper question for the Inspector General to be asking the Army officers involved whether they were stockholders in the du Pont Co., wouldn't you?

Mr. Irénée du Pont. I think if I had any relationship with the du Pont Co. it would be a proper question to ask.

Senator Clark. That is what the records show, that all the Inspector General asked was whether the Army officers owned any du Pont stock, and Colonel Simons of your staff considered that persecution.

Mr. Lammot du Pont. Major Simons was a du Pont employee at the time.

Senator Clark. Yes.

Mr. Lammot du Pont. He was not a Government employee.

Senator Clark. No; I say he was a du Pont employee, and he was commenting on the investigation.

Mr. LAMMOT DU PONT. I do not see that it makes any difference if a du Pont employee has any du Pont stock or not.

Senator CLARK. No; you misunderstood me, Mr. du Pont. Colonel Simons said that the Inspector General had been going around asking officers on the active Army list who had had something to do with the Old Hickory proposition whether they owned any du Pont stock or not, and he said the fact they did ask them whether they owned and du Pont stock conclusively showed that that was a persecution rather than an investigation. You would not feel that way, would you, Mr. du Pont?

Mr. LAMMOT DU PONT. I would not feel so. I think you must have gotten Major Simons wrong.

Senator CLARK. No; Major Simons was very clear in his expression.

Mr. CASEY. That was not an investigation of Old Hickory. The investigation was this question of putting the powder under water. Further than that, what Colonel Van Schaick asked for was this: He asked the du Pont Co. to supply him with a list of all of the stock held by Army officers, and we were scared to death that some poor officer might have some du Pont stock at the time.

Senator CLARK. All right, Major, I will ask you the question. Colonel Simons, as you will remember, said that there was an investigation going on of Old Hickory.

Mr. CASEY. No; not of Old Hickory.

Senator CLARK. Of Old Hickory; yes.

Mr. CASEY. Following the war?

Senator CLARK. Old Hickory. I will stand on the record. And he said the fact they asked Army officers whether they owned any du Pont stock showed that it was a persecution rather than an investigation. Now, do you dispute that?

Mr. CASEY. No; but I just want to say——

Senator CLARK. You just answer my question and then you can make any speech you want to.

Mr. CASEY. Simons said it might become persecution.

Senator CLARK. He said it was persecution.

Mr. CASEY. What is that?

Senator CLARK. He said it was persecution.

Mr. CASEY. That is Simons. I am not speaking for Simons. But suppose they had found an Army officer who held some du Pont stock. They would have started right after him. Fortunately, they did not find any.

Senator CLARK. Let me ask you a direct question, Major. Do you think on any deal in which the du Pont Co.—I know you are loyal to the du Pont Co. and I have high respect for you—do you think on any deal in which the du Pont Co. was involved with the Government that it is persecution for the Inspector General, in the exercise of his proper right, to ask the officers who had to do with that deal if they owned any stock in the du Pont Co.

Mr. CASEY. Simons did not say that.

Senator CLARK. Just answer my question.

Mr. CASEY. He is not talking about persecution of du Pont.

Senator CLARK. Just answer my question, Major. Do you think yourself that it shows persecution rather than investigation to ask any officer on the active list of the Army who has had to do with the contract of any company whether he owned any stock in that company or not?

Mr. Casey. Personally, I do not.

Senator Clark. All right.

Mr. Gregg. Might I say something in connection with Lieutenant Colonel Williams?

The Chairman. Yes.

Mr. Gregg. This is the first time that I ever heard that he owned any stock in the du Pont Co. When the March 1923 contract for the construction and operation of Old Hickory was being drawn up, Colonel McRoberts assigned Lieut. Col. William Williams to draw up that contract with me.

We worked on it for, I should say, at least a week. I remember distinctly working all day one Sunday. He left me in the evening and I continued until midnight, going over the contract. There were certain provisions in that contract that I wanted inserted in it. Colonel Williams would not agree with me. I remember distinctly the Sunday afternoon that we were working on the contract. We got into a serious dispute, and he said, "Well, I will not consent to what you want to put in the contract. The only thing to do is to take that to Colonel McRoberts the next morning to settle it", which we did.

Senator Clark. Now, Mr. Gregg, I will ask you a question.

Mr. Gregg. Go ahead.

Senator Clark. I know nothing about Colonel Williams or his connections. I do not wish to reflect in any way on him. But you have had great experience in these matters. I recognize that many a man who is a stockholder in a private company in negotiating with the Government would not only give the Government the best of it, but he might be so straight that he would lean backwards in giving himself the worst of it. But do you yourself in these matters consider it good practice to have an official, as applies to most of these cases we are talking about, or even a stockholder of an interested company, make a contract for the Government, even assuming the highest motives, the highest character and the highest degree of honesty on the part of the contracting officer with that company?

Mr. Gregg. I am giving you my personal opinion now, Senator.

Senator Clark. Yes.

Mr. Gregg. I do not.

Senator Clark. And I dare say I can ask Mr. Pierre du Pont, Mr. Irénée du Pont, Mr. Lammot du Pont or Major Casey, or any other man who has had any experience in those matters in the town of Washington, the same question, and they will all say the same thing.

Mr. Gregg. Might I say this, Senator? I do not know that it has been definitely established that Colonel Williams was a stockholder of the du Pont Co. in 1918. I will go further, Senator, and I will say that at the time I was dealing with Colonel Williams in drawing up the contract, the Nashville contract, if he was a stockholder at that time and I had known it, I would have suggested to him that he have nothing to do with it.

Senator CLARK. Now, Mr. Gregg——

Mr. GREGG. May I finish?

Senator CLARK. Certainly, go ahead.

Mr. GREGG. I prosecuted for the Government for several years and I have my own views.

Senator CLARK. Let me say this: This matter that has come up is not intended to reflect on any individual. We are not concerned really with what happened in the last war, as I said a moment ago, except as it may be a guide for the future, but we are interested in what steps the planning board or the war and navy representatives have taken to see that men who are interested one way or the other personally in contracts will not be negotiating them on the part of the Government, and from my cursory investigation I cannot see that if the program of drafting executives of the corporations which are going to deal with the country into the Reserve Corps and making them procurement and supply officers to deal with their own employees is adopted that it can possibly work out to the Government's interest.

Lieutenant Colonel HARRIS. Senator, did you state that was the plan? I am trying to state that that is not the plan.

Senator CLARK. Colonel, that is the slant I have been able to get on your plan, from such intensive study as I have been able to make up to date.

Lieutenant Colonel HARRIS. I would like to state once more that the plan is that they shall not deal with the companies from which they came.

Mr. PIERRE DU PONT. Senator, I will state that when I am in an official capacity it is my plan to consult with the people on the other side, not follow their advice necessarily; perhaps to find out what not to do. I dare say Colonel Harris has exactly the same experience with people that he knows are interested. He invites them to recommend, and in that way he finds out what they are trying to do.

Senator CLARK. Mr. du Pont, you have been a very successful business man and have been an executive for a great many years. You are in the habit of keeping the other fellow on the other side of the table, aren't you, when you are talking with him?

Mr. PIERRE DU PONT. It depends on who the other fellow is.

Senator CLARK. You don't have him over on your side of the table; you keep him on the other side of the table.

Mr. PIERRE DU PONT. It depends on who the other fellow is. That does not necessarily follow.

Senator CLARK. Can you tell me of any time in your experience that you have allowed the fellow you were dealing with to come around on your side of the table and whisper in your ear and tell you what to do?

Mr. PIERRE DU PONT. Yes. But I don't always follow his advice.

Senator CLARK. But you don't get him over on your side of the table?

Mr. PIERRE DU PONT. On my side?

Senator CLARK. You don't give him a vote on what you are going to do.

Mr. PIERRE DU PONT. No; and I don't think Colonel Harris does, either.

Senator CLARK. He makes Government officials out of these people and puts them in the position of being his official advisers. You don't do that when you are making a deal.

Mr. PIERRE DU PONT. Official adviser, but not the man to perform the contract which he has agreed to accept.

Senator CLARK. Mr. du Pont, you just think it over and if you can tell me one deal you ever had in your life in which you had the fellow sitting on one side of the table make you a proposition and then come over to the other side of the table and tell you what to do, as an adviser of the du Pont Co., official adviser of the du Pont Co., I will be glad to put that in the record.

Mr. PIERRE DU PONT. I think I could cite several instances if I chose to dig them up. I don't have any in mind now. But Colonel Harris is not proposing such a thing as that. I understand this advisory committee is to advise as to the form of contract, but they do not have a vote as to what contract is adopted. He decides that.

Lieutenant Colonel HARRIS. We have a practical illustration as to the operation of this right now. Senator, your counsel has had some of the digests of the views of these advisory councils written out and submitted to us and they are under consideration. We distinctly reserve the right of decision, but we are glad to have their views, and I think the record will bear that statement out.

Senator CLARK. Colonel, wouldn't you have their views just as frankly as officers of the interested companies with which you are trying to deal?

Lieutenant Colonel HARRIS. Would you mind repeating that? I didn't quite get it.

Senator CLARK. I am talking about this dual capacity, Colonel. I say wouldn't you get the full force of their views if they were speaking in their true capacity as officers of the interested company, as you would if they came in and sat on the board with you as members of an advisory committee and told you what they were asking for?

Lieutenant Colonel HARRIS. The advisory committee was simply to form a method of exchanging views relating to these matters. Whether they are called an advisory committee or presidents of companies, it might be better to keep them in their true position.

Senator CLARK. All right, Colonel. What I am trying to get is simply some benefit out of this.

Lieutenant Colonel HARRIS. I am willing to abolish these advisory committees.

Senator CLARK. I don't care whether you abolish the advisory committees.

Lieutenant Colonel HARRIS. Their being on the advisory committees does not give them any more influence, in my judgment.

Senator CLARK. Colonel, I don't care whether you abolish the advisory committees or not. What I am trying to get at is this: Isn't there anybody in the United States who has no financial interest in the matter that you could put on these advisory committees?

Lieutenant Colonel HARRIS. Well, you might, after a long search. But it just came out here today that Colonel Williams, who nobody knew had any holding in du Pont stocks, seems to have a few shares—I don't know how much—but it is stated, I think, as small. It would be very difficult to get a group of responsible, intelligent, and able men and not have them own something that is involved in the form there.

Senator CLARK. I do not know what Colonel Williams' interest was in the du Pont Co. and I am not trying to use Colonel Williams as a scapegoat in this thing, since you brought that up. Is not any man who does own an interest in the company with which he may have to deal primarily incapacitated to be on such an advisory committee and should not Colonel Williams when he had stock in the du Pont Co. have told the War Department about it before he accepted the appointment?

Lieutenant Colonel HARRIS. I am only prepared to answer my own view.

Senator CLARK. I don't want to press you for an answer.

Mr. IRÉNÉE DU PONT. Is not Colonel Harris' position on all fours with that of your committee? You were good enough to ask us a few weeks ago if we would not write out our ideas of recommendations you might report to Congress. We certainly never had in our hearts the idea that it would have any say-so.

Senator CLARK. We did ask you for your views and we were very happy to have them. I dare say there are many things in the views expressed by Mr. Lammot du Pont which will be of great value to this committee, but we did not put you on any advisory committee to tell us what to say in our report.

Mr. IRÉNÉE DU PONT. I thought it was advice to you.

Senator CLARK. No, sir. It was evidence to be used by us, views that you expressed, but we did not certainly give you any official position to control what we might put in our official report, and it seems to me that certainly is the essential difference between those two things.

Lieutenant Colonel HARRIS. Might I say something about these advisory committees? On this industrial planning it is very difficult, with no return, to engage the interest of industry to work out these things. We were not making progress. In the hope of enlisting the personal interest of these people, this was a means of endeavoring to get a little more of their interest in these matters.

Mr. GREGG. Might I say for the information of the committee that shortly after the war—probably Colonel Harris can give a closer date than I can—it was just about the time that Charles G. Dawes became Director of the Budget. He was the first Director of the Budget, and he had under him, as I recall it, a board that was working on forms of contracts, starting as early as that period, for use in the event of another war.

Now, Mr. Dawes asked me if I would not come down and address that board and give my views on the types of contracts the Government should have in the event of another war. One thing he asked me to talk about was cost plus contracts. I did come down and I addressed the board and I gave them my position on cost plus contracts.

Senator CLARK. Mr. Gregg, nobody ever criticized anybody who appeared in response to any governmental agency or a request from any governmental agency for expressing any views they might hold when they appeared in the proper capacity, either as a citizen or as a representative of the company with which they were connected. But what this investigation has been directing itself to is the question of a man appearing in a dual capacity, on the one hand as a stockholder, employee, or officer of a corporation doing business with the Government, and, on the other hand, as adviser of the Government.

Mr. GREGG. Personally, Senator, I may say that I agree with you entirely.

Senator CLARK. I am coming back if I may, Mr. Chairman, just a moment, because I have to leave the hearing, as you know, to this question as to whether the inspector general, Colonel Van Schaick, who was investigating this, was conducting a persecution, as Colonel Simons seemed to believe.

I desire to read a letter dated December 14, 1929, signed by Mr. Lammot du Pont, addressed to Col. Louis J. Van Schaick, inspector general, United States Ordance Department, Washington, D.C.:

> DEAR SIR: Your letter of December 11, addressed to E. I. du Pont de Nemours & Co., for attention of Maj. K. K. V. Casey, has been referred to me for reply.
>
> It is contrary to our policy to give information with respect to the share holdings of any of our stockholders. We have, however, compared the list of names given in your letter with our list of stockholders and find that not one of these individuals appears as a stockholder of E. I. du Pont de Nemours & Co. We do note that one of these parties, together with another party not named in your list, appear as joint tenants in the ownership of 10 shares of the common stock of E. I. du Pont de Nemours & Co. The registered address of these joint tenants is in Massachusetts.
>
> Trusting that this information will be sufficient to serve your purposes, I am
>
> Yours very truly,
>
> LAMMOT DU PONT.

Admittedly the joint ownership of 10 shares of stock is not very much. It certainly shows that Colonel Van Schaick's investigation was not a persecution but was a bona fide investigation, because at least he drew a drop or two of blood.

The CHAIRMAN. Colonel Harris, just what is the form or regulation as respects ownership of stock or bonds in industrials which have dealings with the War Department?

Lieutenant Colonel HARRIS. Suppose you let Lieutenant Brannon answer that, please.

The CHAIRMAN. All right.

Lieutenant BRANNON. I have not that information offhand. There is an oath of disinterestedness for contracting officers. I do not recall whether that was suspended during the war or not. That is in the Revised Statutes, I believe. In addition, there was the provision Mr. Hiss mentioned yesterday or the day before in the Food and Fuel Act about persons occupying a dual capacity. I do not remember the details of that.

The CHAIRMAN. The Department does strive to ascertain what the military man's connections are?

Lieutenant BRANNON. Yes, sir.

The CHAIRMAN. In connection with Lt. Col. William Williams, I have before me a letter written by him dated November 1, 1918, written on the stationery of the War Department, Office of the Chief of Ordnance, Procurement Division, Washington.

To insure prompt attention, in replying refer to no. ——.
(Attention of Lt. Col. Wm. Williams.)

NOVEMBER 1, 1918.

From: Lt. Col. Wm. Williams, staff officer, Procurement Division.
To: Maj. Gen. C. C. Williams, Chief of Ordnance.
Subject: Names of manufacturers dealing with the Ordnance Department in which the undersigned has an interest.

1. As directed by the Chief of the Procurement Division under date of October 19, I annex hereto a statement showing to the best of my knowledge and belief the name of each manufacturer or dealer in materials or supplies, purchased through the Procurement Division, with whom I have relationship as officer, employee, stockholder, or bondholder.

2. Such relationship existed for some time, in most instances for many years, prior to the date when I entered the service and my several stated interests (which in no case are large) have neither been increased nor decreased since said time.

3. I am financially interested in other industrial concerns, but, so far as I am aware, these concerns have no dealings with the Procurement Division or War Department.

WILLIAM WILLIAMS,
Lieutenant Colonel, Ordnance Department, United States Army.

Then it was made part of this statement, which is noted at the foot of the letter, which is signed by William Williams, lieutenant colonel, Ordnance Department, United States Army. [Reading:]

General Electric Co. (stockholder), United States Steel common and preferred (stockholder), Otis Fensom Elevator preferred (stockholder), du Pont Powder Co. preferred (stockholder), Westinghouse Electric preferred (stockholder), United Lead Co. (bondholder), Bethlehem Steel Co. (bondholder).

Now, would not a statement of that kind have the effect of leading to his retirement?

Lieutenant BRANNON. What is the date of that, Mr. Chairman?

The CHAIRMAN. November 1, 1918.

Lieutenant Colonel HARRIS. I am not qualified to speak for the Chief of the Procurement Division, but in my judgment it should have led to relief of his duties so far as they related to those companies mentioned.

The CHAIRMAN. Let the letter which I have just read be identified as an exhibit.

Mr. HISS. It was introduced before.

Lieutenant Colonel HARRIS. You took them back.

(The letter referred to was marked "Exhibit No. 1339–A" and is included in the appendix on p. 4147.)

Mr. GREGG. Mr. Chairman, as I understand it, Colonel Williams does not state in there when he acquired those interests.

The CHAIRMAN. No; he states that he had held them for some time before he went into the service.

Mr. HISS. And he did not decrease them.

The CHAIRMAN. He did not increase them or decrease them since that time.

Mr. GREGG. I see.

The CHAIRMAN. You may read the exhibit, if you wish.

Mr. HISS. Colonel Harris, you made a reference some time back to the power of commandeering in time of war. Could you testify at this time, or, if you have not the details in your head at the present moment, could you supply the committee a list of those cases during the war in which there was actual commandeering?

Lieutenant Colonel Harris. I could give a résumé. There are two phases to compulsory action. Should they take a compulsory order, it placed upon the contractor a duty and that forced him to comply with it, the compensation being arrived at in the statute. If he failed in that compulsory order, the act carried with it the power of commandeering. This actual commandeering was exercised to a very limited degree, for the reason, as very ably stated by Mr. Baruch, that the personnel to operate the plants were not available and if the existing personnel of those plants could not operate them effectively, there was little hope of getting any personnel in time of war that could do so.

Mr. Hiss. Do you remember approximately how many cases of actual commandeering there were?[1]

Lieutenant Colonel Harris. Actual commandeering, very few, but I will have to get the records. Do you wish that?

Mr. Hiss. If you please.

Lieutenant Brannon. What you want is actual plants as to which the compulsory orders had been issued, which were actually commandeered?

Mr. Hiss. Yes, sir. Colonel Harris, returning again to the duties of the Ordnance district advisory boards and the personnel of those boards, I do not know whether you testified to this or not, it may be a repetition of previous testimony, but in time of war would any of the members of those advisory boards be eligible to become officials of the War Department in the procumenet field?

Lieutenant Colonel Harris. I think it is quite likely that some of those men would be. Did you say in the procurement field?

Mr. Hiss. Yes, sir.

Lieutenant Colonel Harris. Subject always to that statement which I have made time and time again, that they should not negotiate procurement contracts with their own companies.

Mr. Lammot du Pont. Mr. Chairman, may I interrupt a moment to correct a possible error?

The Chairman. Yes, Mr. du Pont.

Mr. Lammot du Pont. In reading the list of stock holdings of Colonel Williams, you read the du Pont Powder Co. That may have been a typographical error, meaning the du Pont Co. At that time there was in existence a du Pont Powder Co. that did not have any contracts and did not negotiate any contracts with the United States Government.[2]

Mr. Irénée du Pont. It was not engaged in the manufacture of munitions.

Mr. Lammot du Pont. He may have used the correct name, and he may have used the incorrect name, but if he used the correct name, he did not own anything in the du Pont Co., which made the contract.

The Chairman. Who owned the du Pont Powder Co.?

---

[1] Colonel Harris later submitted a list of plants commandeered by the Ordnance Department. Hearings, Part XVII, p. 4270.

[2] Mr. Irénée du Pont later informed the committee that Colonel Williams was the owner of 100 shares of debenture stock of the E. I. du Pont de Nemours & Co., from November 1913 to May 1925. Hearings, Part XVII, p. 4167.

Mr. LAMMOT DU PONT. The stock was quite widely held at that time, I think.

Mr. HISS. Mr. Lammot du Pont, was not the du Pont Powder Co. the predecessor of the present company, E. I. du Pont de Nemours & Co.?

Mr. LAMMOT DU PONT. It was.

Mr. HISS. Was there not a reorganization in 1915?

Mr. LAMMOT DU PONT. There was.

Mr. HISS. That was when the present company was formed?

Mr. LAMMOT DU PONT. Yes.

Mr. HISS. Was there not also an arrangement that the stockholders of the powder company could receive shares of stock in the new company by surrendering shares of stock in the old company?

Mr. LAMMOT DU PONT. Not at that time, I think. They received the new company's stock as dividends, it is my recollection.

Mr. HISS. All stockholders of the powder company received stock of the new company in the form of a dividend?

Mr. LAMMOT DU PONT. All the common stockholders of the du Pont Powder Company received the stock of the new company as a dividend. He was down as a holder of preferred stock, was he not?

Mr. HISS. That is correct, from that letter.

Mr. LAMMOT DU PONT. I do not know where the mistake is, but there is something wrong some place.

Mr. HISS. The present du Pont Co. took over all the assets of the powder company? Is that correct?

Mr. LAMMOT DU PONT. I think that is correct; yes, sir.

Mr. HISS. In exchange for stock issued to the powder company, which it then distributed to its stockholders?

Mr. LAMMOT DU PONT. I believe that is correct.

Mr. IRÉNÉE DU PONT. The Supreme Court found, however, that that was a sale, in which we purchased the assets and paid for them by the stock of the E. I. du Pont de Nemours & Co.

Mr. HISS. By the issuance of stock. So that the powder company held shares of stock of E. I. du Pont de Nemours & Co. Do you know how much of the stock of the new company was issued to the old company for its assets, of the then-outstanding stock?

Mr. IRÉNÉE DU PONT. It was the entire amount, something of the order of 60,000,000 preferred and 60,000,000 common, I think, but you can find that in the report of the company.

Mr. HISS. Then the du Pont Powder Co., after receiving all the stock of the new company, controlled the new company? Is that correct?

Mr. IRÉNÉE DU PONT. No.

Mr. HISS. It held all the stock of the new company, which it distributed to its stockholders. Is that correct?

Mr. LAMMOT DU PONT. Yes, sir.

Mr. HISS. As I understand your statement, Mr. Lammot du Pont, it was that no stock of the new company was issued to the holders of preferred stock of the old company, but it was to the common stockholders of the old company. Is that correct?

Mr. LAMMOT DU PONT. I think that is correct.

Mr. IRÉNÉE DU PONT. I do not think so. My impression is that the preferred stockholders of the old company—this is going back a good many years, 19 years ago—my impression was that the preferred stockholders of the old company got new preferred stock of the new company, with the exception of some small amount, I think $10 shares left over to wind up some residual assets.

We will have to get out the statement of the company at that time to verify it.

The CHAIRMAN. What was the du Pont Powder Co. during the war?

Mr. IRÉNÉE DU PONT. I think it was nothing but a shell, with a few minor assets.

Mr. LAMMOT DU PONT. All the plants were sold out in 1915.

The CHAIRMAN. Are you meaning to say, by reason of his ownership of preferred stock in the du Pont Powder Co., that Lieutenant Colonel Williams really had nothing after all?

Mr. LAMMOT DU PONT. He had nothing in the du Pont company's business.

Mr. HISS. Is it true, then, that the preferred stock in the new company was issued to holders of preferred stock in the old company as a dividend?

Mr. LAMMOT DU PONT. I do not think they were issued at that time.

Mr. HISS. Mr. Irénée du Pont thought they were.

Mr. LAMMOT DU PONT. They were held by the powder company until a much later date. My point is that the du Pont Powder Co., in which Colonel Williams had stock holdings, did not have any contracts with the United States Government.

Mr. HISS. But, Mr. Lammot du Pont, the company which succeeded the powder company is the present company, which did have contracts with the United States Government, and the issue that I believe you and Mr. Irénée du Pont are not in complete agreement on, and which you can determine by referring to the records of the company, is whether or not the preferred stockholders of the powder company received any interest in the new company, whether preferred or common.

Mr. LAMMOT DU PONT. They did eventually.

Mr. HISS. That really is the point at issue, is it not?

Mr. LAMMOT DU PONT. No; that is not the point at issue. The question is whether the colonel held any stock in a company which had a contract with the United States Government.

Mr. HISS. I thought the question was whether he had any interest in a company which had a contract with the United States Government.

Mr. LAMMOT DU PONT. I thought that was a list of his stock holdings.

Mr. HISS. That is correct, but the conclusion drawn by the chairman from that was that he had an interest in a company having contracts with the United States Government.

Mr. LAMMOT DU PONT. I thought that list purported to be a list of this stock holdings in companies that had contracts.

The CHAIRMAN. That is correct.

Mr. LAMMOT DU PONT. The du Pont Powder Co. did not have any contracts.

Mr. HISS. Did he have any interest in it through his preferred stock in the powder company, the predecessor of the present company?

Mr. LAMMOT DU PONT. That is too deep for me to say.

The CHAIRMAN. Colonel Williams in his letter said that the du Pont Powder did have contracts with the Government.

Mr. LAMMOT DU PONT. If he said that, I think he was mistaken.

The CHAIRMAN. It might easily mean, then, that he was referring to the E. I. du Pont de Nemours Co.?

Mr. LAMMOT DU PONT. He may have used the wrong name inadvertently. He may have been mistaken about their having a contract. It must have been one or the other.

Mr. HISS. May we reserve that for further determination, and have a statement furnished by your company as to the exact interest in the new company of preferred-stock holders in the old company, and also a reference to the old company records, where Colonel Williams' interest should appear? [1]

Mr. LAMMOT DU PONT. That interest is in 1918.

Mr. HISS. The interest stated in this letter dated November 1, 1918, is the interest which apparently he had when he entered the service. The second paragraph says:

> Such relationship existed for some time, in most instances for many years, prior to the date when I entered the service, and my several stated interests (which in no case are large) have neither been increased nor decreased since said time.

Mr. LAMMOT DU PONT. It would seem to be correct to state, then, that it was the powder company in which he had preferred stock, because he could not have held preferred stock in E. I. du Pont de Nemours & Co. for a long time because it was not organized until 1915.

Mr. HISS. There are a total of seven companies which are listed here.

Mr. GREGG. I might say—and this has been several years ago, and these things come back as you think them over—Col. Robert P. Lamont, who was Secretary of Commerce in Mr. Hoover's administration, was an officer in the procurement division during the war. Colonel Lamont and myself worked for several days on a new contract for the construction and operation of the Penniman shell-loading plant. The du Pont Engineering Co. had previously had a contract for the construction and operation of the Penniman shell-loading plant, similar to the first contract for the construction and operation of the Old Hickory powder plant, under which they were to get a profit on construction.

Just shortly after the new contract of March 23 covering Old Hickory was entered into, a new contract was entered into for the construction and operation of the Penniman shell-loading plant, under which the construction was to be at cost plus $1 eliminating any profit on construction.

As I said, Colonel Lamont and I worked on the contract for several days. We finished it one evening, and Colonel Lamont said that he would send it upstairs and have it typewritten; in other words, we had marked it up in going through it.

The following day I called him up and asked him if he had the contract, because we were anxious to have the contract executed as soon as possible, so that we could operate under it.

---

[1] For this statement see Hearings, Part XVII, p. 4167.

He said, "It has not come back to me, and I will try to find out where it is."

He finally found that Lieutenant Colonel Williams had it. I went to see Colonel Williams and Colonel Williams had made a number of changes in the contract, which changes were more favorable to the Government than the contract that Colonel Lamont and I had drawn up.

The changes made by Colonel Williams I declined to agree to and, as in the Old Hickory case, we again had to take it to Colonel McRoberts to settle.

PERSONNEL UNDER INDUSTRIAL MOBILIZATION PLAN

Mr. Hiss. Referring again to the list of members of the Ordnance District Advisory Board, I have read through the list of those in the Hartford district.

New York district:

Patrick E. Crowley, president New York Central Lines.
J. M. Davis, president Delaware, Lackawanna & Western Railroad.
John I. Downey, vice president Bankers Trust Co.
Malcolm Muir, president McGraw-Hill Publishing Co.
Gen. James G. Harbord, president Radio Corporation of America.
William C. Dickeeman, president American Locomotive Co.
B. L. Winchell, chairman Remington Rand, Inc.
Owen D. Young, chairman General Electric Co.
James A. Farrell, former president United States Steel Corporation.
Hon. Nathan L. Miller, of the law firm of Hornblower, Miller, Miller, and Boston.

In the Rochester district:

Edwin Corning, chairman, board of directors, Ludlum Steel Co.
C. E. Eveleth, vice president, General Electric Co.
Edward Hoagland, assistant general freight agent, New York Central Railroad.
J. T. Loree, general manager, Delaware & Hudson Co.
G. S. Ruffner, president Mohawk Hudson Power Co.
Carl L. Bausch, director, Bausch & Lomb Co., Rochester, N. Y.

In the Philadelphia district:

Samuel M. Vauclain, chairman of board, Baldwin Locomotive Works.
W. W. Atterbury, president Pennsylvania Railroad.
George Horace Lorimer, editor Saturday Evening Post.
Josiah Penniman, president University of Pennsylvania.
Charles R. Richards, president Lehigh University.
A. Atwater Kent, president Atwater Kent Manufacturing Co.
Irénée du Pont, president E. I. du Pont Co.
Eugene G. Grace, president Bethlehem Steel Co.

It gives Mr. Irénée du Pont as president of the company, and as of today that is in error.

Mr. Irénée du Pont. That is a little bit antique, I think.

Mr. Hiss. Do you know the date of this list, Colonel?

Lieutenant Colonel Harris. It is probably several years old.

Mr. Hiss (reading):

E. T. Stotesbury, financier.
Leanard H. Kinnard, president Bell Telephone Co. of Philadelphia.
John E. Zimmerman, president, U. G. I. Co.

Do you know what company that is, Colonel?

Lieutenant Colonel HARRIS. That is the United Gas Improvement Co.

Mr. HISS. In the Pittsburgh district:

F. J. Chesterman, P. P., Bell Telephone Co. of Pennsylvania.
George Gordon Crawford, president Jones & Laughlin Steel Corporation.
T. H. Girdler, president and chairman, board of directors, Republic Steel Corporation.
A. L. Humphrey, president Westinghouse Air Brake Co.
C. D. Marshall, president McClintic-Marshall Co.
W. L. Mellon, president Gulf Refining Co.
F. A. Merrick, president Westinghouse Electric & Manufacturing Co.
William L. Munro, president American Window Glass Co.
A. W. Robertson, chairman board of directors, Westinghouse Electric & Manufacturing Co.
Homer D. Williams, chairman, president Pittsburgh Steel Co.
E. T. White, regional vice president, Pennsylvania Railroad.
I. Lamont Hughes, president Carnegie Steel Co.
E. T. Weir, chairman board, National Steel Corporation.
Arthur E. Braun, president Farmers Deposit National Bank.

In the Cleveland district:

Henry C. Osborn, vice president and chairman, executive committee, Addressograph-Multigraph Corporation, Euclid, Ohio.
Benedict Crowell, brigadier general, Crowell & Little Construction Co.

That is the former Assistant Secretary of War, Colonel Harris?

Lieutenant Colonel HARRIS. Correct.

Mr. HISS (reading):

Allyn F. Harvey, president Pittsburgh Steamship Co.
Colonel Frank A. Scott, chairman, India Tire & Rubber Co.

Is that the Frank Scott who was chairman of the General Munitions Board?

Lieutenant Colonel HARRIS. It is.

Mr. HISS (reading):

Alexander C. Brown, president Industrial Brownhoist Corporation, Cleveland, Ohio.

In the Cincinnati district:

Frank Andrews, vice president, Andrews Steel Co., Newport, Kentucky.
B. S. Armstrong, president the Mabley & Carew Co.
C. H. M. Atkins, president Warner Elevator Co.
J. B. Doan, president American Tool Works Co.
Walter A. Draper, president the Cincinnati Street Railway Co.
Nelson Emons, Jr., vice president, Dayton Manufacturing Co.
Tylor Field, president Ferro-Concrete Construction Co.
F. A. Geier, president the Cincinnati Milling Machine Co.
C. R. Hook, vice president, American Rolling Mill Co., Middletown, Ohio.
R. K. LeBlond, president the R. K. LeBlond Machine Tool Co.
H. M. Lefton, treasurer and general manager the Columbian Iron Works Co., Chattanooga, Tenn.
A. B. Morgan, vice president, the United States Printing & Lithograph Co., Norwood, Ohio.
George Puchta, president Queen City Supply Co.
Walter D. Randall, vice president and mill manager, Champion Coated Paper Co., Hamilton, Ohio.
J. A. Reilly, vice president, Queen City Coal Co.
J. J. Rowe, president First National Bank.
Herman Schneider, president University of Cincinnati.
Colonel Clarence O. Sherrill, vice president, Kroger Grocery & Baking Co.
F. D. Stalneker, president Indiana National Bank, Indianapolis, Ind.
T. H. Townsend, executive vice president, Hardwood Manufacturers Institute, Memphis, Tenn.

William F. Wiley, general manager the Cincinnati Enquirer.
H. A. Worcester, vice president, the Cleveland, Cincinnati, Chicago & St. Louis Railway Co.
Lucien Wulsin, president the Baldwin Piano Co.

In the Chicago district:

Frank R. Bacon, president Cutler-Hammer Manufacturing Co., Milwaukee, Wis.
William Butterworth, president United States Chamber of Commerce, Washington, D. C.
Col. W. W. Coleman, president Bucyrus-Erie Co., South Milwaukee, Wis.
Brig. Gen. Charles G. Dawes, chairman Central Republic Bank & Trust Co.
A. R. Erskine, president the Studebaker Corporation, South Bend, Ind.
George M. Gillettee, Minneapolis, Minn.
R. P. Lamont.
B. C. Heacock, president Caterpillar Tractor Co., Peoria, Ill.

In the St. Louis district:

Louis H. Egan, president Union Electric Light & Power Co.
George B. Evans, St. Louis, Mo.
H. I. Finch, president the Emerson Electric Manufacturing Co.
S. W. Fordyce, Fordyce, White, Mayne & Williams, St. Louis, Mo.
J. M. Kurn, president St. Louis-San Francisco Railroad Co.
John J. Lonsdale, president Mercantile Commerce Bank & Trust Co.
J. M. Olin, vice president Western Cartridge Co., East Alton, Ill.
E. H. Steedman, president Curtis Manufacturing Co.
John B. Strauch, president National Bearings Metals Corporation, St. Louis.

San Francisco district:

C. N. Black, chairman of board Ford, Bacon & Davis, engineers.
Theodore J. Hoover, lieutenant colonel Ordnance Reserve, dean school of engineering, Stanford University, California.
D. C. Jackling, president Utah Copper Co.

Is that the Mr. Jackling who was in the War Department during the World War?

Lieutenant Colonel Harris. It is.

Mr. Hiss (reading):

W. H. Oliver, president Oliver United Filter Co.
D. C. Seagrave, colonel Ordnance Reserve, vice president and general manager Pacific Coast Shipbuilding Co.
Stanley G. Harris, Harris Trust & Savings Bank of Chicago, San Francisco
K. R. Kingsbury, president Standard Oil Co. of California, San Francisco.

Is Mr. Hoover a member of the Ordnance Reserve Corps?

Lieutenant Colonel Harris. He is.

Mr. Hiss. And Mr. Seagrave, of the Pacific Coast Shipbuilding Co.?

Lieutenant Colonel Harris. He is. He was when this was put into being. I do not know about now.

Mr. Hiss. In addition to the ordnance district advisory boards, Colonel Harris, there are ordnance district contract boards, are there not?

Lieutenant Colonel Harris. That is a temporary matter. There are. That is a temporary arrangement for advice on these particular contract forms.

Mr. Hiss. Upon the particular contract forms?

Lieutenant Colonel Harris. Yes, sir.

Mr. Hiss. On those boards there are some members of the Ordnance Reserve and more men who are not connected with the Army. Is that correct?

Lieutenant Colonel Harris. That is true.

Mr. HISS. In the Boston ordnance district there are:

H. C. Dodge, president S. A. Woods Machine Co.
Alf Anderson, president Albert & J. M. Anderson Co.
Mr. Alvin C. Simonds, president Simonds Saw & Steel Co.

In the Chicago district:

Colonel Hamilton, president, M. H. Treadwell Co.

Is Colonel Hamilton a member of the Reserve Corps of the Ordnance?

Lieutenant Colonel HARRIS. This record shows that he was at that time.

Mr. HISS. Lt. Col. F. A. Lorenz, general works manager, American Steel Foundries.

He was also at that time in the Ordnance Reserve?

Lieutenant Colonel HARRIS. The same.

Mr. HISS. Lt. Col. Max Epstein, chairman, board of directors, General American Tank Car Corporation.

He also was in the Ordnance Reserve?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. Capt. Whitney B. Hobbs, superintendent at the Western Electric Co.

He was also in the Ordnance Reserve?

Lieutenant Colonel HARRIS. Yes, sir.

Mr. HISS. Capt. John Sezak, vice president, Turned Brass Co.

He was also in the Ordnance Reserve?

Lieutenant Colonel HARRIS. Yes, sir.

Mr. HISS. In the Cincinnati ordnance district:

Mr. Ludwig Kemper, president Cincinnati Ball Crank Co.
Alternate, Mr. W. W. Sudmeier, Mr. Kemper's assistant.
Mr. George W. Haydock, head of Haydock, Lamson & Co.
Col. George G. King, head of King Powder & Peters Cartridge Co.
Alternate, Mr. R. E. King, his son.
Maj. A. C. Rasmussen, chief engineer, Insley Manufacturing Co.

Major Rasmussen was also in the Ordnance Reserve?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. In the Hartford district:

Mr. John H. Goss, Scoville Manufacturing Co.
Mr. C. R. Burt, Pratt & Whitney Co.
Maj. D. B. Wesson, vice president and purchasing agent, Smith & Wesson.

Major Wesson was a member of the Ordnance Reserve at this time?

Lieutenant Colonel HARRIS. That is true.

Mr. HISS (reading):

Capt. J. A. Lavallee, superintendent Westinghouse Electric & Manufacturing Co.

Captain Lavallee at this time was in the Specialist Reserve?

Lieutenant Colonel HARRIS. Right.

Mr. HISS. The Specialist Reserve is distinguished how from the Ordnance Reserve?

Lieutenant Colonel HARRIS. The Specialist Reserve was of men who came in at an older age, who are supposed to be especially qualified in special matters, and do not come in at the bottom of the list, but come in at higher ranks.

Mr. Hiss. In time of war what would be their assignment?

Lieutenant Colonel Harris. Their assignment would be particularly related to the industrial situation.

Mr. Hiss. Procurement?

Lieutenant Colonel Harris. And supervisory work, control measures.

Mr. Hiss. Capt. J. V. Montague, assistant comptroller, Scoville Manufacturing Co., was also in the Ordnance Reserve at this time?

Lieutenant Colonel Harris. Right.

Mr. Hiss. The New York Ordnance district:

Col. Frank W. Roller, president Roller-Smith Co., was also in the Ordnance Reserve at this time?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Lt. Col. C. O. Brown, chemist, American Cyanamid Co. He was also in the Ordnance Reserve at this time?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Lt. Col. T. F. Brown, vice president, National Distillers Products Co. He was also in the Ordnance Reserve?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Lt. Col. C. E. MacQuigg, research director, Union Carbide & Carbon Testing Laboratories; also in the Ordnance Reserve?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Lt. Col. Crosby Field, president Flakice Corporation; also in the Ordnance Reserve?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Maj. H. H. Hall, mechanical engineer, Aluminum Co. of America; also in the Ordnance Reserve?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Maj. R. L. Hall, technical adviser, Kearny plant of Western Electric Co.; also in the Ordnance Reserve?

Lieutenant Colonel Harris. Right.

Mr. Hiss. Schenectady, in the Rochester ordnance district:

Mr. J. F. Cunningham, General Electric Co., and Mr. W. E. Hoffman, General Electric Co.

In Rochester, Mr. James Gleason, president Gleason Gear Works, and Mr. Carl L. Bausch, Bausch & Lomb Optical Co.

San Francisco ordnance district:

Mr. Roland Oliver, president California Cap Co.
Mr. Milton S. Ray, president Ray Burner Co.
Mr. E. H. Daniel, treasurer, Columbia Steel Co.

St. Louis ordnance district:

Col. Harry Scullin, Auxiliary Reserve.

What was the Auxiliary Reserve· Colonel Harris?

Lieutenant Colonel Harris. That is when they get beyond an active age. They are subject to call, but not subject to active call.

Mr. Hiss (reading):

President Scullin Steel Co.
Mr. F. W. Olin, president Western Cartridge Co.
First Lt. G. C. Hetlage, Ordnance Reserve, of Hetlage & Co., appraisal engineers.

In the Philadelphia district:

Maj. I. E. Lambert, vice president, R. C. A.-Victor Co.
Mr. Charles E. Acker, treasurer Baldwin Locomotive Works.
Mr. E. Grant Tice, special representative, Bethlehem Steel Co.
Mr. J. H. Hubbs, purchasing agent, United Gas Improvement Co.

In the Detroit ordnance district:

Mr. Alex Dow, chairman.
Mr. C. S. Hirshfeld, vice chairman, chief of research, Detroit Edison Co.
Mr. C. J. Jolly, legal department, General Motors Corporation.
Maj. John Worley, Specialist Reserve, Quartermaster Corps, professor of transportation, University of Michigan.
Mr. E. B. Stason, law department, University of Michigan.
Mr. J. W. Parker, chief engineer, Detroit Edison Co.
Mr. Edward T. Gushwe, purchasing agent, Detroit Edison Co.

Pittsburgh ordnance district:

Mr. T. S. Grubbs, comptroller, Westinghouse Air Brake Co.
Mr. W. V. McConnor, assistant general manager of sales, National Tube Co.
Lt. Col. G. Elkins Knable, Ordnance Reserve, Carnegie Steel Co.
Mr. James O. Carr, vice president, Allegheny Steel Co.

That is all that I will read. Those are both offered as exhibits.

(The two lists referred to were marked "Exhibit No. 1340", and "Exhibit No. 1341", and are included in the appendix on pp. 4148 and 4150.)

The CHAIRMAN. I have been patient here, but I have not heard you reading any of the names of these profiteering farmers in the reserve list.

Mr. HISS. Colonel Harris, yesterday I think the question was raised, based upon certain minutes of the War Industries Board, as to whether or not the civilian members of the War Industries Board received any compensation. Have you been able to find out about that?[1]

Lieutenant BRANNON. I have some data on that, Mr. Hiss.

In the files of the Army Industrial College, where are kept the files of the Council of National Defense and the War Industries Board, are card indexes which I believe show the salaries paid by the Government to all members of both the War Industries Board and the various subdivisions of the Council of National Defense. Of course, I have not checked to say all, but I think all of them.

Here is the list made up on November 12, 1918, of the War Industries Board organization. This does not show the salaries, but it shows which were dollar-a-year men; in other words, which were drawing a nominal salary. I believe it is correct, presumably made from the files.

Mr. HISS. The particular reference in the minutes was to the five civilian members of the Board as opposed to assistants and members of the staff; I refer to a resolution providing a salary of $400 a month for those particular men.

Lieutenant BRANNON. Do you have the names of those?

Mr. HISS. Those five civilian members of the War Industries Board, as I recall them——

Lieutenant Colonel HARRIS. There is a little confusion, Mr. Hiss. This is a later War Industries Board that he is reading, and you were discussing an intermediate board. I think we had better pursue the research further before we answer your question. I think we had better reply later to that.

---

[1] Colonel Harris later submitted a list of salaries for civilian members of War Industries Board. Hearings, Part XVII, p. 4269.

PROBLEMS INVOLVED IN PRICE FIXING [1]

Mr. **Hiss**. Colonel Harris, the plan of the War Department involves also, does it not, the question of the possible fixing of prices in order to avoid profiteering. Is that correct?

Lieutenant Colonel **Harris**. The plans provide for that contingency.

Mr. **Hiss**. In controlling prices, I assume that your first problem will be the problem of at what level the prices should be fixed. Is that correct?

Lieutenant Colonel **Harris**. That will be one of the first things to be considered.

Mr. **Hiss**. Then some agency would have to be established to see that prices were properly adhered to, the prices fixed, so that there is a theoretical or research problem and in addition to that an administrative problem.

The Industrial Mobilization Plan recommends the fixing of uniform per-unit prices slightly above the bulk line of cost. This chart, Colonel Harris, which was prepared by the Tariff Commission, represents the costs of beet sugar, the season of 1917–18. This jagged line at the bottom represents production. This column to the left is cost. This amount of production was possible, in other words, or occurred, according to the Tariff Commission, at this particular level of cost. In referring to the bulk line of cost, what does the War Department have in mind, Colonel Harris?

Lieutenant Colonel **Harris**. You have me out of my depth, Mr. Hiss. You need not ask me any questions on that. It is beyond me. I do not know.

Mr. **Hiss**. Do you know, Lieutenant Brannon?

Lieutenant **Brannon**. We have not established, Mr. Hiss, any definite policy as to where prices should be fixed. In other words, we do not contemplate that the War Department will be the one to enforce any general price-fixing measures.

Mr. **Hiss**. Has any consideration up to the present time been given as to the problems of fixing prices?

Lieutenant **Brannon**. Yes. There has consideration been given. That is covered in the industrial mobilization plan and in possible actions by the price-fixing committee.

Mr. **Hiss**. Do you know what is meant in the plan where the statement is made that prices will be fixed so that there will be uniform per-unit prices slightly above the bulk line of cost?

Lieutenant **Brannon**. The bulk line of cost is the cost which will bring out the necessary production.

Mr. **Hiss**. Referring to this chart, if you wanted this much production, it would be necessary to fix the price at this level, would it not, in the beet-sugar field? That means that for units producing at these costs there would be the amount of profit over and above cost at that price represented by the blue-shaded area on this chart.[1]

---

[1] In this connection see "Exhibit No. 1406", a memorandum on Price Control. Hearings, Part XVII, appendix, p. 4457.

Lieutenant BRANNON. That is right. Where the bulk line principle is followed, the low-cost producers will make a profit.

Mr. HISS. That will be graduated on up as to those right on the margin of the fixed line?

Lieutenant BRANNON. Up to the marginal producer, the last marginal producer that we have to bring in to get the quantity necessary.

Mr. HISS. Under the mobilization plan or in time of war in general, the Government's purchases are terrifically increased, as has already been indicated. That is true, is it not?

Lieutenant BRANNON. That is right.

Mr. HISS. Therefore, one of the desiderata must be maximum production?

Lieutenant BRANNON. That is correct.

Mr. HISS. Consequently any fixing of the price level at a sufficiently high level to bring all or as many of the high-cost producers into production as possible must of necessity provide for high profits to low cost producers?

Lieutenant BRANNON. That is correct. As I understand it, there were two general principles followed in the war. The Fuel Administration and the War Industries Board followed the bulk-line principle of making a price to bring in the necessary number of high-cost producers, and allowing the low-cost producers to make a profit. The Food Administration, as I understand it, worked on a somewhat different principle there, on the question of the margin of profit rather than a definite price.

Mr. HISS. Which is meant by the mobilization plan, which speaks of the bulk line of cost.

Lieutenant BRANNON. The plan of making a price which will bring in the necessary marginal producers.

Mr. HISS. That will be a uniform price for that particular industry.

Lieutenant BRANNON. That is correct.

Mr. HISS. The Industrial Mobilization Plan also states that in fixing prices the principle will be followed which will allow just compensation. How is it possible to follow that principle and still fix the price at the bulk line of cost insofar as low cost producers contrasted to high cost producers are concerned?

Lieutenant BRANNON. Of course, we do not know that that possibility is going to be followed. It is one of the ways of working it. Of course, the low-cost producer will make a profit. The advantage of this plan is that it is easy to work. There is no great amount of accounting. You get information from the Federal Trade Commission, the Tariff Commission, and other bodies, and you set one price. It is simple. But your low-cost producers will make an additional profit.

Mr. HISS. When the plan speaks of just compensation as a principle to be followed in fixing prices, it must mean, therefore, just compensation to the higher cost producers rather than to the lower cost producers. Is that correct?

---

[1] Chart entered as appendix to "Exhibit No. 1406", Hearings, Part XVII, appendix, facing p. 4473.

Lieutenant Brannon. That is what I understand, if this principle is followed.

Mr. Hiss. If you fix a price which guarantees just compensation, have you not guaranteed to certain high-cost producers more than they are guaranteed in an ordinary competitive system, where they run the risk of bankruptcy or failure or what not?

Lieutenant Brannon. When you say " guarantee ", what they mean there, I think, is a price at which they can afford to produce.

Mr. Hiss. They have no assurance under all circumstances that they will be able to get a price——

Lieutenant Brannon. They will not get any profit, as I understand, in other words, other than the fact that there is such a broad demand for the product that we can use all they produce. That is, the combined demands of the Government and the civilian population will be such that, let us say, certain high-cost producers will be able to sell what they produce. If they are going to produce it, they must get some profit. It is not a case of guaranteeing them a profit; it is simply fixing a price at which they can afford to produce.

Lieutenant Colonel Harris. Under this price fixing, if a man can produce it for less and sell it to the Government, he makes the difference. That difference varies according to whether it is a high- or low-cost product.

Mr. Hiss. Do you know whether the item of depreciation will be counted in in fixing that cost, Colonel Harris?

Lieutenant Colonel Harris. Mr. Hiss, as I said before, in this phase of our planning work we believe that different planners are going to operate these plans. They are way above our heads. We are charged with planning to meet that contingency, but the operation of price fixing and setting up of price levels is a matter that probably will be handled under special committees designated by the President and answerable directly to him.

Mr. Hiss. You do not regard the present Industrial Mobilization Plan as providing a basis on which prices can be fixed?

Lieutenant Colonel Harris. I would say the present Industrial Mobilization Plan provides a vehicle to take care of this situation. How the organization will function is a question for the people at the time to decide, in my opinion.

Mr. Hiss. In those parts of the plan which refer to price control and price fixing, there must have been some economic theory or philosophy back of the drafter of those particular provisions.

Lieutenant Colonel Harris. Yes; that is true.

Mr. Hiss. It is that particular theory that I wish to attempt to bring out.

Lieutenant Colonel Harris. That particular theory is really what remained of the philosophy of operation of that activity at the close of the last war.

Mr. Hiss. I notice that at pages 65 and 66 of the plan there is reference to the fixing of the actual cost of production with a reasonable return on capital investment. Would that be used as a basis of fixing prices by the control committee, Lieutenant Brannon?

Lieutenant Brannon. I will have to look at that, Mr. Hiss.

Mr. Hiss. That states the general policies to be followed.

Lieutenant BRANNON. Yes; I see. You see, it is one of four different policies that may be adopted.

Now, where this policy came in, as I understand it, in the early days of the World War, where the General Munitions Board advised the Government departments as to prices, on April 17, I think, the Secretary of War, as chairman of the Council of National Defense, authorized any Government department to go to the General Munitions Board for advice as to particular prices. One of the bases for advising them, where competitive conditions were not fixed at a satisfactory price, was this plan (*d*), that is, the actual cost of production plus a reasonable return on capital investment.

Mr. HISS. The next sentence says:

> The determination of what constitutes capital investment presents many difficulties which make this method one of limited use, except in the formation of rate schedules for services of public utilities.

In other words, the plan does not look with particular favor upon fixing a price based on cost of production plus a reasonable return on capital investment.

Lieutenant BRANNON. In any general price fixing, I think the idea is that you could not possibly do the necessary accounting to establish this kind of price.

Mr. HISS. There is another suggestion in connection with bases for determination of prices. That is (*c*), on page 66, "prevailing market prices."

Does that mean a fixing of prices at the prevailing market prices at some particular date?

Lieutenant BRANNON. I assume that is substantially what is called the "Baruch plan."

Mr. HISS. In other words, the freezing of prices at a particular level?

Lieutenant BRANNON. I presume that is what is meant.

Mr. HISS. Let us assume, Lieutenant Brannon, referring again to this chart, that in a given industry the price went down to the line (*a–b*) at the time that it became necessary to fix prices. If you froze prices at that level, you would lose, would you not, the capacity represented from (*b*) to the heavy black line through this square into here? You would lose all that capacity.

Lieutenant BRANNON. That is correct. If you froze them and kept them frozen at that level. But, as I understand the Baruch plan, if that is what is meant here, and I presume it is, a general freezing of prices, after particular prices are once frozen they may be raised where the necessity is apparent.

Mr. HISS. That is more or less the method followed during the World War by the Price Control Committee of regulating specific industrial prices rather than a uniform freezing or limiting of all prices to any one particular scale, is it not?

Lieutenant BRANNON. I believe so. If I understand it, they fixed certain prices, and even on those prices some slight changes, some slight advances, were necessary from time to time on steel and copper.

Mr. Hiss. If you will look again at page 66, still another possibility is suggested in the plan:

> The cost of producing the last unit of the indispensable amount of the commodity required by the war program either throughout the industry as a whole or upon a regional or territorial basis.

What would be the difference between that particular method, Lieutenant Brannon, and the ordinary market demands followed during the war when prices went up to extremely high levels?

Lieutenant Brannon. This is substantially the bulk-line principle, where you base it on the cost of the marginal producer, the necessary marginal producer that you would bring in.

Mr. Hiss. But this particular suggestion is the last unit of the indispensable amount. In other words, then, by "bulk line" you do not mean where the major part of the production lies?

Lieutenant Brannon. The bulk line is the line necessary to bring in the necessary production; in other words, it is the marginal unit.

Mr. Hiss. So by establishing the so-called "bulk line", the War Department plan recommends the establishing of a line sufficiently high to give the maximum required capacity; is that correct?

Lieutenant Brannon. That is correct. In other words, just slightly above the actual cost of this last man that must be brought in.

Mr. Hiss. In the case of steel, for example, what producers, how many producers, and how large a capacity would the Government be willing to include? Would not the Government need all possible steel capacity in time of war, Colonel Harris?

Lieutenant Colonel Harris. The military program of steel in volume is something like 20 percent of the total capacity of this country.

Mr. Hiss. The total present turn-over or the total possible capacity, Colonel Harris?

Lieutenant Colonel Harris. The total military requirements for steel are approximately 20 percent of the present steel capacity in this country.

Mr. Hiss. Do you know of any items in which the total requirements exceed the estimated capacity?

Lieutenant Colonel Harris. Ferromanganese.

Mr. Hiss. Where would the bulk line be fixed for that, Colonel Harris?

Lieutenant Colonel Harris. It would be a question of judgment. You could not fix it high enough to get all the production needed in this country, because it does not exist. It would be a question of judgment as to how much premium we would want to pay to get the part of the production in this country that was essential to supplement other sources.

Mr. Hiss. In time of war does the Government have the problem of restricting civilian demand so that more of the existing capacity or more of the available capacity may be utilized for Government requirements?

Lieutenant Colonel Harris. That is one of our methods of conserving supply and making that supply available to the military effort.

Mr. Hiss. I call your attention to a statement by Mr. Taussig, who was a member of the price-fixing committee:

> In the main the course of action by that committee was comparatively simple: A maximum price the same for public purchases as for private, the Government taking all it wanted and the general public scrambling to buy at the maximum prices whatever it could get.

Lieutenant Colonel Harris. That held in the early part of the last war. It did not hold in the latter part.

Mr. Hiss. Would there not be extreme danger under any such principle as that, of the civilian supply being inequitably distributed and reaching only those who could afford to pay extremely high prices?

Lieutenant Colonel Harris. The maintenance of morale in this country is one of the principal responsibilities of anyone directing the effort of the country, and the civilian requirements will have to be given due consideration.

Mr. Hiss. Has the War Department considered whether in a case where it was necessary to limit the civilian requirements in order to increase the Government requirements to the required level, the civilian supply would be rationed out rather than left to the course described by Dr. Taussig?

Lieutenant Colonel Harris. There will be several methods used: First, public opinion, to achieve voluntary curtailment of use through the agencies of the Government acquainting the people with the status of conditions. It might become necessary finally to ration them out. It did in England during the last war.

Mr. Hiss. Colonel Harris, going back to your testimony as to steel, when you said that 20 percent of capacity represented the estimated Government requirements——

Lieutenant Colonel Harris. I said the military requirements. That means Army and Navy.

Mr. Hiss. Does that take into account the requirements of contractors with the Government?

Lieutenant Colonel Harris. That takes into account the amount of steel needed for the Army and Navy needs.

Mr. Hiss. Does that include steel for construction purposes to build any increased plant to fill Government requirements?

Lieutenant Colonel Harris. It does.

Mr. Hiss. In addition to that 20 percent, of course, the normal commercial demand for steel would have to be added.

Lieutenant Colonel Harris. I think I made a wrong statement. I meant 20 million tons out of 65 million tons. 20 millions is the figure. It is about one-third.

Mr. Hiss. Sixty-five millions being the estimated maximum capacity?

Lieutenant Colonel Harris. Yes.

Mr. Hiss. Twenty millions being the estimated military requirements, and in addition to that 20 millions the ordinary commercial requirements?

Lieutenant Colonel Harris. And there will be some other governmental requirements.

The Chairman. "Some other", you say?

Lieutenant Colonel Harris. Some other Government requirements.

Mr. Hiss. There might be such a thing as shipbuilding requirements for other than naval requirements?

Lieutenant Colonel Harris. The railroad requirements, ocean transportation, other than military.

The Chairman. Would not commercial demand remain about as it was in normal times?

Lieutenant Colonel Harris. No, sir. Commercial demand is very materially decreased. Building construction falls down. Bridges are not built. That steel that ordinarily goes into those activities could be diverted to military needs. In the last war nearly all building was discouraged and prohibited in some cases; certainly very materially limited.

Mr. Hiss. Colonel Harris, do you know how much of the capacity of the United States in the field of steel was used during the last war?

Lieutenant Colonel Harris. Approximately the same percentage.

Mr. Hiss. Do you know whether the steel industry considered that it had any idle excess capacity during the World War?

Lieutenant Colonel Harris. It did not. The steel capacity at that time was some 43 million tons, as against a present capacity of some 65 million tons.

Mr. Hiss. There was a tremendous expansion at the outbreak of the war?

Lieutenant Colonel Harris. That is correct, and since the war.

Mr. Hiss. Referring back again to the question of cost, in determining your price I assume that first the price-fixing agency must determine costs in order to determine how much above cost to fix the price. Is that correct, Lieutenant Brannon?

Lieutenant Brannon. They must have some basis; yes.

Lieutenant Colonel Harris. Mr. Hiss, I do not mind answering the question, but I would like to state again that in the operation of price-fixing our plan, while it discusses these various alternatives, provides a structure to take care of this activity. But I, and I think the other members who made the plan, felt that the method of approach was a question to be determined at the time. We named a certain number of alternative methods that could be utilized.

Mr. Hiss. Do you not think, Colonel Harris, that it would be helpful, prior to the outbreak of the war, to attempt to analyze and study possible methods of price control?

Lieutenant Colonel Harris. That is what we have endeavored to do, is to develop possible methods.

Mr. Hiss. In the plan?

Lieutenant Colonel Harris. Yes.

Mr. Hiss. You analyze the efficacy of particular plans?

Lieutenant Colonel Harris. Within our limitations, yes.

Mr. Hiss. That is merely the point to which I am addressing myself, Colonel Harris.

In fixing costs it will not be past costs so much as future costs that will have to be estimated in order to assure adequate production, particularly in those industries where increased production is necessary?

Lieutenant Colonel Harris. I would say rather present conditions at that time.

Mr. HISS. Will you not want to fix the price at such a level as to insure production for a reasonable period ahead of time, Colonel Harris?

Lieutenant Colonel HARRIS. Yes.

Mr. HISS. Does that not require some estimate of the costs in the immediate future?

Lieutenant Colonel HARRIS. If I understood your statement, it was that the analysis would be based on either past or future. My point was that I thought the present situation would be a factor in determining the action to be taken.[1]

Mr. HISS. May I call your attention to the fact that costs vary from time to time and change radically over short periods. The costs that have been introduced today for the du Pont Co., for example, show that from year to year there has been considerable fluctuation in costs.

I further call your attention to a memorandum that Dr. Taussig wrote to the price-fixing committee, in which he stated:

> In the first place, costs are not clearly ascertainable. They vary from month to month, from year to year. We get figures from cost accountants which are worked out to the last cent. but which, as a matter of fact, contain arbitrary and debatable elements.

Have you had any experience in the field of cost accounting or cost estimating, Colonel Harris?

Lieutenant Colonel HARRIS. I have had no experience in cost accounting. I have had some experience in cost estimating in my Government service.

Mr. HISS. Mr. Brookings stated at a meeting of May 22, 1918, of the price-fixing committee:

> We have gone into that very exhaustively. As I have explained to you, we have had the cost sheets for the month of March.

This was a meeting in May.

> That was the latest month we can get. We never can bring figures much closer to a meeting of this kind than 60 days, if we get reliable figures.

Is it not true that any determination of costs in any single industry, particularly projected costs, is a very difficult and a rather elaborate task?

Lieutenant Colonel HARRIS. Yes; and that is the reason I said that the present condition—I mean the condition at that time. I don't think I said the cost. I said the condition relates to the subject.

Mr. HISS. In order to make sure that production will not be hampered——

Lieutenant Colonel HARRIS. Just a minute. Lieutenant Brannon wishes to say something there.

Lieutenant BRANNON. I wish to give this thought, Mr. Hiss. During the World War prices were fixed piecemeal; copper at one time, steel at another. The thought for the next war is that it will start out with general price fixing, and if we have general price fixing so that the cost of basic raw materials remains relatively the same and the cost of living remains relatively the same, then there will not be that constant necessity for readjustment.

---

[1] Further testimony on cost element in price fixing, Hearings, Part XVII, p. 4289.

Mr. Hiss. Do you believe that the present thought of the War Department is that there will be a general freezing of all prices? Does that also mean all wages?

Lieutenant Brannon. I don't know.

Mr. Hiss. May I just follow this up?

Lieutenant Colonel Harris. I do not think we are qualified to discuss price freezing at this stage, any more than it has been discussed in general principles. I do not like to feel that I am not fully answering your question, but price fixing and price freezing are matters that have been widely discussed by abler men than we are, and our opinions are worth just what they are worth. Very little, I should imagine.

Mr. Hiss. Colonel Harris. I am attempting to limit myself to the specific suggestion raised in the Industrial Mobilization Plan prepared in the office of the Secretary of War.

Lieutenant Colonel Harris. We shall endeavor to answer your question in relation to that plan to the best of our ability.

Mr. Hiss. That plan does contemplate price control as one of the major mobilization control forces in time of war; isn't that correct?

Lieutenant Colonel Harris. It certainly contemplates price control and governmental effect on price.

Mr. Hiss. Is there someone else in the War Department who you feel is more familiar with this particular field than yourself?

Lieutenant Colonel Harris. Yes, there is. I would like to bring an officer of my branch who has made a particular study of this matter here.

Mr. Hiss. Could you bring him tomorrow?

Lieutenant Colonel Harris. I would be very glad to.

Mr. Hiss. Shall we adjourn then, Mr. Chairman?

The Chairman. Colonel Harris, I have one question that you can give response to. Assume now that we are going into another war, as we did the last one, after it has been 2 years in progress—2 years during which prices in America were kited clear to the sky. Are these prices that prevail at the moment and after the war the ones that are going to be determining in declaring what prices we are going to pay?

Lieutenant Colonel Harris. I want to say something just before I answer your question, Mr. Chairman.

The Chairman. All right.

Lieutenant Colonel Harris. In the last war the conditions you mention were certainly apparent. In other words, the thing had run away, and to get hold of it in the last war was a very much more difficult matter than it would be starting from scratch in a new war, in my opinion. Our plans, which are really a digest of opinions left from similar activities during the war, contemplate the application of measures just as soon as possible, and under the legislation recommended it will be possible to do that.

Mr. Hiss. Colonel Harris, I don't want to ask you questions that you have indicated you prefer to have someone else answer, but on that specific point you just raised, do you know whether the plan is to fix prices as of some day after war is declared or will you go back to a prior period and attempt to reestablish prices already long since passed?

Lieutenant Colonel **Harris**. I really would ask to be excused from answering that, because my opinion is not worth enough to answer that question.

The **Chairman**. Perhaps I am confused on it, but does the War Department plan provide for a 3-year average in determining prices? Or have I confused that with the Baruch plan?

Mr. **Hiss**. I think that is the basis of the excess-profits plan.

The **Chairman**. I see. I have been confused. Have you finished for tonight?

Mr. **Hiss**. I would like to read into the record at this time a provision of law, being section 41 of the Criminal Code:

> No officer or agent of any corporation, joint stock company, or association and no member or agent of any firm or person directly or indirectly interested in the pecuniary profits or contracts of such corporation, oint stock company, association, or firm shall be employed or shall act as an officer or agent of the United States for the transaction of business of such corporation, joint stock company, association, or firm. Whoever shall violate the provision of this section shall be fined not more than $2,000 and imprisoned not more than 2 years.

Lieutenant Brannon, do you know whether or not that particular statute was suspended during the World War?

Lieutenant **Brannon**. I do not think so. I do not know for sure.

The **Chairman**. The committee will stand in recess until 9:30 tomorrow morning.

(Whereupon, at 5:07 p.m., the committee recessed until 9:30 a. m., Thursday, Dec. 20, 1934.)

This concludes that part of the testimony known as "Part XVI, Industrial Organization in War." At this point the committee continued hearings on Industrial Organization in War and the subject is concluded in Part XVII.

APPENDIX

Exhibit No. 1283

[File]

July 12, 1926.

Mr. E. C. Hadley,
Ballistic Engineer, U. M. C. Bridgeport Works.

Confirming our conversation I quote from the proposal on the 30 Springfield contract as follows:

(a) That, owing to the fact that this will be in the nature of an educational order designed to give the manufacturers experience in making the service type of ammunition, which has never yet been manufactured commercially in the United States, ammunition which fails to meet the requirements of paragraph 14 of the specifications in regard to accuracy, may be accepted if, in the opinion of the Chief of Ordnance, the accuracy is sufficiently good to make the ammunition serviceable.

(f) That the eight-hour law will apply to the manufacture of the ammunition.

I am also enclosing the blue prints referred to and also a copy of a letter from Mr. Keplinger to Mr. Reierson and a copy of Mr. Keplinger's letter to Frankford Arsenal, which may contain suggestions which will be valuable in your discussion with the people at Frankford.

The proposal calls for 17,500,000 cartridges and is divided into groups in multiples of 3,500,000 each. It is probable that we will bid on one group only of 3,500,000.

Mr. Reierson before leaving asked me to have this matter discussed very carefully for there is a question in our minds whether the contract in its form will be acceptable from a manufacturing standpoint. Therefore, after you have an opportunity of visiting Frankford and also studying the proposition carefully, we will want you to be prepared to recommend whether it is advisable to make a bid.

General Sales Manager.

Exhibit No. 1284

Remington Arms Company, Inc.,
Cunard Building,
25 Broadway, New York City, November 10, 1926.

Mr. J. B. Smiley,
Chairman, Executive Committee, New York Office.

I called at the Office of the Chief of Ordnance of the Army in Washington yesterday and presented to Colonel Whelen the special .22 caliber "Springfield" type of cartridge we have recently developed and asked him to try them out in his own rifle. He was very glad to have them and expressed gratification that we are at last getting into the manufacture of a cartridge which he hopes will prove to be the best one yet developed for use in the Government's .22 caliber rifle and said he felt every confidence that we could do this if we made up our minds to go at it seriously. He is very friendly to us and it is desirable to keep him so for many reasons.

While sitting in the Colonel's office with him General Ruggles looked in and seeing me invited me into his office. He called in Major Clay, who is an important factor in the development of the new .30 caliber mark 1 Government ammunition. Colonel Whelen also came into the general's office.

They were all very anxious to know the result of Cost Accountant Craig's visit to Frankford Arsenal and the General stated that while he had heard from Colonel Horney, Commanding Officer at Frankford, the general results of the comparison, he would like to see Mr. Craig's comments and the tabulated comparison and I told him I would furnish him with this.

Naturally, we shall have to go over Mr. Craig's report and see just how much of it we can furnish to General Ruggles. So far as the actual figures are concerned, you will recall that the Craig report stated that it had been necessary for him to give to Frankford comparisons of our factory costs so we shall not be furnishing anything in the way of figures that Frankford is not already in possession of and I think it desirable to show this intention and effort to be frank with General Ruggles.

He told me that after the failure of the recent bids, none of which could be accepted because of much higher cost of cartridges, he had been compelled to instruct Frankford Arsenal to immediately begin to increase manufacturing capacity. Up to that time Frankford had been making about 70 M cartridges per day. Their intention had been to gradually increase that capacity up to a point where the annual production would be somewhere between 20 to 30 million of these cartridges. He said that was an ample volume to keep Frankford comfortably busy.

He particularly dislikes to increase the personnel at Frankford to the point necessary to make all the cartridges they will require because he says it involves a good many undesirable things, among them the necessity of purchasing additional equipment in the way of loading machines and especially a new straight-line type of bullet-making machine for the new type of bullet. He says that when they increase their personnel it is very difficult to discharge or lay off any of them. Between the Congressmen whose constituents are thus discharged and the labor leaders he says his life is made a burden whenever anything of that kind happens and he very much prefers to keep Frankford's manufacture down to the basis mentioned.

Their requirements for these cartridges, he says, under present conditions will be about 74 million cartridges per annum and that he would very much prefer having the ammunition companies manufacture annually 45 to 50 million of these cartridges and let Frankford make the balance but, he says, that under the law he cannot pay private manufacturers any more for them than Frankford's costs.

He stated very frankly that he appreciates the fact that private manufacturers must take into consideration the element of profit which Frankford does not have to consider but that under the law as it exists today he simply cannot pay the cartridge companies any higher price than Frankford's manufacturing costs.

He stated that this law is unsatisfactory to the Ordnance Department and that they are making strong efforts to have it changed so that some discretion may be used and so that there may be some just and fair differential that can in an emergency be used to justify the Ordnance Department in placing orders outside even at a little higher price which will affòrd private manufacturers a small profit.

As conditions exist today and in view of the law he says that with the failure of the recent bids he had no option but to instruct Frankford to immediately proceed to increase production and that it has now been increased to 120 M cartridges per day. He showed me a letter from Colonel Horney stating that by November 15th production will be increased to 140 M per day and by December 15th to 160 M per day and by April 1st it was believed that production would be brought to a point where it would take care of the entire 74 million estimated to cover their next year's requirements.

He says that if the cartridge companies are to do anything about getting any of this business—provided they want it—it should be done just as soon as possible. He pointed out that once they have gotten their production up to a point that will take care of their full requirements, he will be powerless to give the cartridge companies any business as he much prefers to do. Moreover, he says that each time Frankford's production is increased their costs will naturally go down somewhat and it will make it all the more difficult from the standpoint of price for the private manufacturers to get any of this business.

About this stage of the game Major Clay told me that he had written me a letter on Monday of this week, showing me a copy of it. The original of that letter is attached. In discussing the matter with him he stated that he would be at Frankford Arsenal Monday and Tuesday, November 15th and 16th, and asked if I would have Mr. Craig, our cost accountant, there to meet him on Tuesday morning to go over with him the comparisons of the manner of computing Frankford Arsenal costs. I told him I would arrange to have that done.

Then he asked me to confirm the appointment to talk to him at nine o'clock Thursday morning, November 18th, on the subject of placing of orders for this ammunition with the cartridge companies. I told him I would be very glad to see him.

Accordingly, between now and that time it is up to us to decide just what we are going to say to Major Clay in regard to this matter. General Ruggles stated that the letter of November 8th had been written to me by the Major under General Ruggles' instructions.

There is also attached a letter of November 8th addressed to me by Colonel Herrmann with further reference to a talk that Mr. Hadley had with Major Clay at Aberdeen Proving Ground on Friday, November 5th.

I would like to talk to you about this matter sometime within the next few days so that we may determine just what we are going to do.

(Signed) C. L. REIERSON, *President*.

REMINGTON ARMS COMPANY, INC.,
September 3, 1927.

COMMANDING OFFICER,
Frankford Arsenal,
Philadelphia, Pa.

DEAR SIR: 1. We return herewith circular advertisement and proposal #28–71, dated August 23, 1927, in triplicate, constituting our bid or proposal on ball cartridges, cal. 30 m. completed rounds, as per Ordnance Department Specifications 50–1–17, revised May 14, 1927.

2. Our proposal contemplates furnishing ten million (10,000 M) rounds at a price of thirty dollars ($30.00) per M rounds, f. o. b. Raritan Ordnance Reserve Depot, Nixon, N. J.

3. Our bid is made with the provision that the Ordnance Department will furnish without charge, f. o. b. our plant at Bridgeport, Conn., the following:—

Smokeless powder for propelling charge.
Wooden packing boxes (including copper sealing wires and paper seals).
Metallic liners.
Cartridge clips.
Bandoleers.

Should we be the successful bidder, we would like the privilege, subject to the Ordnance Department's approval of supplying any or all of the components above mentioned, excepting powder.

4. Dating from the day of receipt of contract and essential materials to be supplied by the Ordnance Department, we can make delivery of one million (1,000 M) rounds during the first 90 days, and one million (1,000 M) rounds per month thereafter; and the entire lot of ten million (10,000 M) rounds will be completed within twelve (12) months.

5. We propose to prime the cartridges under advertisement #28–71 with our regular commercial primer for military cartridges. This primer will be modified slightly in order to meet the sensitiveness requirements of Ordnance Department Specifications 50–1–3 entitled "Primers, Calibre .30."

6. In accordance with long established custom, after securing bills of lading from the railroad company, our responsibility ceases, and the safe or timely delivery of ammunition at destination rests with the railroad.

7. It will be noted on Circular Advertisement and Proposal #28–71 that this letter forms a part of our proposal.

Yours very truly,

REMINGTON ARMS COMPANY, INC.,
——— ——— *President.*

REGULAR REMINGTON ARMS LETTERHEAD

BRIDGEPORT, CONN., *September 2, 1927.*

MR. J. B. SMILEY, *President,*
25 Broadway, New York City, N. Y.

DEAR MR. SMILEY: We are enclosing herewith, proposal in triplicate, with price inserted in accordance with your instructions of this date.

It will be necessary to sign each one of these proposals, also each copy of the accompanying letter. We have not had an opportunity to check over carefully all of our cost data up to date, but, as calculated from the usual method, our cost per thousand rounds (commercial) is $29.67 per M. The costs as computed from actual data relative to burden items secured in running the half million lot earlier in the year, shows a commercial figure of $25.52 per M. You will note that we have again put in our accompanying letter our desire to furnish any or of the materials accompanying powder, usually supplied by the Government.

If we are the successful bidder, we should look very carefully into the desirability of supplying clips. We have several hundred thousand in stock which might be used and, in any event, if we were to purchase them in the outside market, we would proabably realize a saving in excess of $7,000.00.

Yours very truly,

(Signed) R. C. Swan,
Sales Manager Ammunition Division.

RCS/H
(Pencil note.)
P. S.—Attached copy is for your files.

Exhibit No. 1287

[Copy for New York office]

April 24, 1928.

Remington Arms Co., Inc.,
Bridgeport, Connecticut.
(Attention Colonel Hermann.)

Gentlemen: Attention is invited to your correspondence with Frankford Arsenal in connection with the acceptance test on caliber .30 M1 cartridge lot no. 1614 under your contract no. 3564 for 10,000,000 rounds of this ammunition.

The commanding officer of Frankford Arsenal has referred the papers in connection with the test of this particular lot to this office for a decision. It appears that the lot consists of 1,000,800 rounds which are loaded with powder furnished by the Ordnance Department under the above contract. It is understood that the cartridges have not been assembled in clips and bandoleers and have not been packed.

An examination of the data submitted in connection with the test of this particular lot of ammunition indicates that in the firings in the Browning water-cooled machine gun in the first test of 800 rounds, two bullets were lodged in the bore approximately three (3) and five (5) inches, respectively, from the breech end. On a retest of 1,800 rounds in the same machine gun, one (1) bullet was lodged in the bore approximately three (3) inches from the breech end. In other respects the ammunition appears to meet the specifications, although it is noted that the spread of the groups in the hang-fire test is in most cases considerably larger than those obtained with Frankford Arsenal ammunition.

The defect of having a bullet lodge in the bore when a cartridge is fired is a very serious one, in that it precludes the issue of this ammunition to the service. Cartridges of this type would be dangerous to fire in the service weapons and in our surveillance tests of the great quantity of ammunition left over from war production we would relegate ammunition of this type to the unserviceable class and would withdraw it from the hands of troops for breaking down.

The Ordnance Department greatly regret that the defect is not one that can be overcome by reworking the ammunition and, therefore, under the terms of the contract the ammunition cannot be accepted. It will, therefore, be necessary for your company to submit another lot of ammunition to replace that rejected. In this connection it will also be necessary for you to provide the powder for the additional lot since the Government has already furnished you powder.

The department realizes that you have limited, if any, outlet for this ammunition and it has been considering how it might help reduce the loss to your company by buying from you from time to time such amounts of this ammunition as might be used in its own tests at a price which would relieve you of some of the loss and still not increase the cost to the department of the tests to be made.

We have been considering the use of this ammunition in certain erosion and other tests of machine guns. You realize, of course, that the lodgement of a bullet in the bore of a machine gun would cause a failure of the gun to continue fire. With ordnance personnel posted as to the defect in this ammunition there would not be much danger because they can be warned not to resume fire until they have determined by inspection if the bullet is lodged in the bore, and, if so, to remove the bullet. The possibility of a cartridge being fired with a bullet already lodged in the bore is considered too great to permit the use of this ammunition except under the most carefully guarded conditions.

We are not now in a position to say how much of this ammunition we might be able to buy for limited tests but are making a study to determine this as exactly as possible under the circumstances. We will let you know what the possibilities are within a short time. We can, of course, only agree to buy this ammunition from time to time as the possibility for using it arises.

After having determined the probable amounts of this ammunition which we may use in limited tests within the next few years, we will communicate with you further so that you may determine then whether it will be more profitable for you to hold the defective lot on the prospect of selling part of it from time to time to the Government at a reduced price or to break the lot down. In case you determine it will be to your advantage to hold the lot in store on the prospect of selling it from time to time to the Government, you will be in a position to quote us a price at which you will sell it to us. Under the circumstances we would be able to purchase the ammunition without advertising for competitive bids.

In closing, the department wishes to express its extreme regret that this defect as occurred in lot no. 1614 and the loss that has accrued to your company, and it is desirous of reducing this loss to you as much as possible under the circumstances.

Very truly yours,

C. L'H. Ruggles,
Brig. Gen., Ass't Chief of Ordnance.

Exhibit No. 1288

[Pencil Note Met. Ammun. Tickler 30 days. Oct. 28]

Bridgeport, Conn., *May 18, 1934.*

To H. J. Strugnell.
From J. H. Chasmar.

You will recall that some weeks ago I talked with you about a lot of .30—06 Springfield 172 gr. taper heel cartridges, head stamped "RA28." These cartridges are left over from a run made for the U. S. Government in 1928 and they do /not have Kleanbore primers. This makes them unsalable commercially.

We wish to either pull down these cartridges or dispose of them at a reduced price and you indicated that you might be able to move them to Lyman Gun Sight or through some other concern. The latest cost figures which we have on 0.30–06 Springfield cartridges indicate—factory cost $26.28—commercial cost $32.85.

We have available almost exactly 5,000 of these cartridges. Will you please see what you can do in disposing of these cartridges in order that we may clear up this matter which has been pending so long?

(Signed) J. H. C.

Re: Noncorrosive Nonmercuric Primers.

Col. L. J. Herrmann,
Works Manager, Bridgeport, Conn.

I did not get any great amount of pleasure out of reading the letter from Frankford Arsenal dated August 21st, a copy of which was enclosed with your letter of August 22nd. I think as you do that this letter was probably dictated by Mr. Pritham. The position he takes on styphnate is certainly an arbitrary one.

It strikes me as very presumptuous for anyone at Frankford to try to tell us anything about styphnate. They have never manufactured it as far as we know and we are manufacturing it every day and in commercial quantities. It might be pertinent, although not politic, to ask them where they have acquired this great fund of information. They have apparently swallowed the du Pont propaganda and have paid more attention to that than the long experience of R. W. S., Nobels, and ourselves.

Mr. Purvis told me about a week ago that Canadian Industries Limited is just beginning the manufacture of styphnate for detonators and they will soon use it in primers. He also indicated that du Pont might have to take up styphnate for detonators. This may be the reason why one of the R. W. S. styphnate experts is coming over to America this fall, as indicated in Dr. Hutchinson's letters.

I agree with you that nothing could be gained by further correspondence at this time but I believe that at the first opportunity after Dr. Hutchinson's return it would be a good plan to take up with Colonel Munroe or his superiors at Washington the exact situation on styphnate in an effort to break down the effect of this propaganda and the feelings of Dr. Pritham in the matter.

I also feel that the inquiry from Picatinny Arsenal is very opportune and we should avail ourselves thereof to interest them in styphnate-tetracene priming.
AAD/c.

(Signed) A. A. Dicke.

Exhibit No. 1290

New York, *May 20, 1931.*

Mr. H. J. Strugnell:

The file I have given you, correspondence with the du Pont Company, in relation to Government business in China, I believe indicates they are merely playing with us as usual on foreign business. This impression is also gained from other dealings we have had with du Pont. For over a year we have showed a very willing attitude to cooperate with them on foreign government business, but not a single bit of business has resulted; in fact, we have not had a lead through them which could be considered worthwhile. Yes, they have asked for quotations on large quantities of military cartridges, but never have they put us in touch with any of the principals and every such inquiry has led to absolutely nothing.

You know, Mr. O'Gorman of du Pont kept us interested in the China proposition for many months. Then he did a lot of talking of the good that should be done by Mr. Bates' trip to South America. We have had a couple of communications from Mr. Bates, the last one asking for prices c. i. f. a large number of South American ports. A number of these points of destination could absolutely never be considered as places where a foreign government would take delivery. The only impression we received from his communications was that of stringing us along.

Mr. Bates' real mission in South America is to cooperate with Nobels of England in the establishment of a powder plant for the Argentine Government. A local plant in the Argentine manufacturing commercial ammunition is controlled by Nobels so it can readily be seen how close du Pont and Nobels would have to work in that country, not only on government business, but also commercial ammunition.

Mr. Singer, the du Pont representative in Paris, has on occasions supplied us with data, always of a historical nature so it was of no use from the standpoint of getting an order.

du Pont, Nobels, and the German company, R. W. S., you are aware have practically divided the world on chemicals and higher explosives. We also know of where they have all worked together, particularly du Pont and Nobels, on Government business for powder in military cartridges. An important feature of this tie-up is that du Pont and Nobels jointly own the Canadian Explosives, Limited, in Canada, whose subsidiary is the Dominion Cartridge Company. For the past couple of years the Dominion Cartridge Company has made surveys of foreign markets, particularly Latin America, with a view of getting some of this volume.

Lately, Mr. Henning returned from Europe and told me it was their intention to cooperate with us, rather than the industry as a whole, in obtaining Government business, especially in Europe. He said while in Europe he had succeeded in raising the standard of specifications of some of the governments so that our competitors on the Continent would not be able to comply, thereby giving us the chance to get our price. He was not specific as to the countries involved.

Then he laid great stress on the possibilities of .50 caliber ammunition. He told of Poland having placed an order with Fabrique Nacional, Liege, Belgium, for 2,500—.50 caliber machine guns, but no order was placed for the cartridges.

One of the reasons he says he left Europe so quickly was that Fabrique Nacional and other companies were inquiring for too much detail on the manufacture of .50 caliber ammunition and he did not want to give it. He spoke of Nobels and ourselves being the only manufacturers of .50 caliber ammunition, and that our product was superior to Nobels. Yet there was no information forthcoming from him as to what we should do to go after the business.

Yesterday we received from our agent in Greece, who is also the du Pont agent in that country, a report of the bids made some months ago on 13.2 cartridges (13.2 is almost identical with the .50 caliber cartridge). This report states bids were entered by Nobels of England, Nobels of Holland, Fabrique Nacional and Italian, French, and Swiss companies, with the contract being awarded to Nobels of England. We knew we had no chance on our bid as the Hotchkiss Company of France, who make this gun, would recommend only Nobels ammunition. For this reason our prices were lower than Nobels of England who were awarded the contract as we wanted Nobels to learn of our low prices and open negotiations to establish a higher basis for the future in cooperation with them.

Mr. Henning also gave Mr. Hadley the story on .50 caliber in Europe and how he wanted to work with us, but the facts of the report from Greece are at variance in many respects with Mr. Henning's advices to us.

It would not be surprising to have confirmed the impression that du Pont does not like to see our nonmercuric primer developments, as it means the loss of business to them on mercury fulminate. If the United States Government were to take up a nonmercuric primer, du Pont's loss in this respect would be increased, which may account for Mr. Henning's talk against our nonmercuric primer in .50 caliber.

The cost of materials in a military cartridge is approximately $15.00. With an average of 7 pounds of powder to a thousand cartridges du Pont receives from us, at the price of 90¢ a pound for powder, $6.30 of this $15.00, or 40% of the material cost. In the prices we have given them for military cartridges we have figured on the necessity of the price being reduced $1.00 or $2.00 per thousand because of competition. Our attitude, so far unexpressed to them, is if this must be done they should absorb most of the reduction in the price of their powder. While we cannot advance concrete evidence we believe that when in competition with some of the other European powder companies they quote as low as 60¢ a pound for powder, compared with their price to us of 90¢.

Even on powder for commerical cartridges we have had the impression they quote quite low prices for export. It might do no harm to query them on their export price of powder compared with their prices to us.

Reverting to the China business du Pont has told us they have sold powder to the government arsenals there at about 90¢ a pound and they probably consider that so long as they can get 90¢ a pound selling powder in bulk to China it is preferable to giving us a lower price so we could get completed cartridge business.

All in all we have never found any cooperation from du Pont unless it meant at least 90% of the advantage to them.

——— ———,
Export Manager.

Exhibit No. 1291

[Copy]

(Pencil note, Mr. Bowers, Mr. Craig.) U. S. R.

Remington Arms Company, Inc.,
Bridgeport, Conn., June 30, 1928.

Subject: .30 M–2.

Colonel G. L. Wall,
Commanding Officer, Frankford Arsenal, Philadelphia, Pa.

Dear Sir: Attached to this letter you will find the schedule of depreciation which we discussed with you on the occasion of our recent visit to Frankford Arsenal. You will recall that the plan agreed upon, was that we should send you this schedule and that you would arrive at the book value of the various items shown thereon, so that a direct comparison could be made with figures representing commercial manufacture.

The value of land used should, doubtless, be added to the book values obtained above, the resulting figure will then show the capital book value of assets being used. Of course, that part used for .30 caliber manufacture is the only part under discussion.

We are expecting to send this same schedule to all of the commercial manufacturers, requesting them to work up their figures on this basis, so that a uniform system will have been followed by all concerned.

We hope to get off to you on Monday a schedule of items entering into general and administrative expenses. We will refer to this in more detail when we forward it to you.

The figures worked up on the schedule we are sending you today and those that will be prepared on the basis of the schedule referred to in the paragraph above, when added to the operation figures that Captain Chavin is preparing on the uniform schedule sent to all manufacturers, will make the work fairly complete.

We think the tax item will have to be discussed separately.

Very truly yours,

Remington Arms Company, Inc.,
(Stamped) (Signed) Egbert C. Hadley,
Ballistic Engineer.

Exhibit No. 1292

[Copy]

AMM. WKS. FORM NO. 265 "M" US

Remington Arms Company, Inc.,
Bridgeport, Conn., July 2, 1928.

Subject: Cost of .30 caliber M–1 components and cartridges.

Peters Cartridge Co.,
Cincinnati, Ohio,
(Att.: *Col. Geo. G. King, Pres.*)
Remington Arms Co.,
New York, N. Y.,
(Att.: *Mr. Saunders Norvell, Pres.*)
Western Cartridge Co.,
East Alton, Ill.
(Att.: *Mr. F. W. Olin, Pres.*)
Winchester Repeating Arms Co.,
New Haven, Conn.,
(Att.: *Mr. W. A. Tobler, Vice Pres.*)

Gentlemen: We wrote you on June 25th on the above subject, enclosing eight multigraphed pages showing operations, etc., in order that each company might work up costs which could be averaged or compared with those of other companies. Frankford Arsenal has been supplied with similar sheets and is preparing figures to conform, so that a direct comparison can be made.

This same idea is being developed further in the sheets which you will find attached to this letter. Frankford Arsenal is, also, being supplied with similar sheets.

The first enclosure consists of a tabulation showing rates of depreciation. If everyone follows this uniform method the values arrived at, when added to the appropriate land values, will give fixed investments on a comparative basis.

Another sheet shows the items to be included in general and administrative expense and shows the method to be used in allocating that expense to proposed .30 caliber M–1 manufacture.

An additional sheet shows the method to be pursued in determining interest on fixed investment and interest on working capital.

It is appreciated that the preparation of figures in accordance with these formulae represents quite a bit of labor. The object to be attained, however, has seemed to justify a painstaking comparison, otherwise the points of diversions might be so numerous and so large as to vitiate the comparison desired.

Very truly yours,

———— ————
Chairman, Special Committee.

REMINGTON.

ILION, NEW YORK, *July 5, 1928.*

Office of The District Sales Manager, 1105 Liberty Trust Building,
Broad and Arch Streets, Philadelphia, Pa.

MR. E. G. HADLEY,
Ballistic Engineer, Bridgeport, Conn.

DEAR SIR: Answering your letter of June 29th relative to the tax rate in Bridesburg, Pa.

We have consulted the Chief Clerk of the Tax Bureau at City Hall in Philadelphia, and he states that Bridesburg is a part of the city of Philadelphia. He also states that the tax rate in Bridesburg is $1.95 per hundred, except that in wards 22, 23, 35, 41, and 42 there is a 4¢ allowance made (making the rate $1.91). This 4¢ represents the amount which the city of Philadelphia assesses as a poor tax, and is allowed because the local officials in Bridesburg collect their own poor tax.

These rates are based upon the full valuation.

If there is any further information along these lines which you need, please advise and we shall be glad to make further inquiries.

Yours very truly,

J. B. WALLIS,
District Sales Manager.

Freight N. H. to Nixon, N. J	----------	----------	----------	----------	.2573
	----------	----------	----------	----------	33.7537

NOTE.—(1) Selling expense is not to be included in General and adm. expense.

(2) Leave time, peculiar to Government plant, amounts to $1.15 per M.

(3) All of these figures are as received from the different manufacturers. Certain adjustments to make a direct comparison easier have been made on the modification of this sheet, #8 A.

---

[1] Percent shrinkage based on factory costs of sheet #7: F. A., 0 percent; Peters, 10 percent; Remington, 1 percent; Western, 5.2 percent; Winchester, 12 percent. The Remington 1-percent shrinkage is intended to cover unaccounted for shrinkage. Known loss on condemned product and cost of repairing product are included in overhead.

[2] This figure is very much altered on sheet #8 A for the reason that scrap allowance for shell material has been transferred to material cost. Tool and machine expense on shell and bullet have been transferred to General and administrative on sheet #8 A.

Sheet #8 A

Less 10 percent on the U. S. materials since Ord. Dept. unwilling to recognize	1.17	1.17	1.17	1.17	1.17
C. Net selling price of manufacturer	21.88	30.19	27.50	33.47	33.22
Add 5 percent for rejections	1.09	1.56	1.38	1.67	1.66
D. Net selling price of manufacturer	22.97	31.75	28.88	35.14	34.88

NOTE.—Selling expense is not to be included in General and adm. expense.

There were three different prices for Government materials, as shown on sheet #8. It has seemed best for this comparison to show the same figure in each tabulation, $11.73.

Handling charges on Government materials have been left out. In the case of Remington the cost of handling these materials is included in regular overhead. Winchester shows $0.21 on sheet #8. If the handling of Government materials is not included in their overhead, doubtless this charge should have been included on this sheet. We rather presume that the overhead of the other factories includes the cost of handling Government materials.

Formula circulated for interest on fixed investment considered interest after proposed increase in business of additional .30 Springfield. Frankford's figures above are intended to represent present cost not contemplating any increase in business.

No account has been taken of Frankford's leave time expense of $1.15 per M.

[1] Percent shrinkage based on factory costs of sheet #7: F. A., 0 percent; Peters, 10 percent; Remington, 1 percent; Western, 5.2 percent; Winchester, 12 percent.

[2] See footnote [2] on sheet #8.

Sheet #8 B

	Frankford Arsenal	Peters	Remington	Western	Winchester

Less cost of materials furnished by Government	11.73	11.73	11.73	11.73	11.73
A. Net selling price of manufacturer	23.25	28.99	28.67	33.43	31.33
Less 10 percent on the U. S. materials since Ord. Dept. unwilling to recognize	1.17	1.17	1.17	1.17	1.17
C. Net selling price of manufacturer	22.08	27.82	27.50	32.26	30.16
Add 5 percent for rejections	1.10	1.39	1.38	1.61	1.51
D. Net selling price of manufacturer	23.18	29.21	28.88	33.87	31.67

The differences in percentage allowed for shrinkage were so great that it has seemed possibly worth while to make another sheet #8 B, made up with a uniform shrinkage of 1 percent for each manufacturer. This sheet differs from 8 A only in this particular.

We have omitted from this sheet all of the footnotes on sheet #8 A. They should be borne in mind, however, in studying this sheet.

EXHIBIT NO. 1295

File

Amm. Works Form No. 266 "M" US

REMINGTON ARMS COMPANY, INC.
Bridgeport, Conn., June 29th, 1928.

To: Mr. Saunders Norvell, president.
From: Mr. E. C. Hadley, chairman special committee.
Subject: .30 Springfield M1.

Acknowledgement only of communications.—Your letter of June 27th on the above subject, has been received together with copy of letter to you dated June 21st by Mr. J. M. Olin; copy of letter to you dated June 21st by Mr. F. W. Olin; copy of your letter to Mr. F. W. Olin dated June 27th, and copy of your letter of June 27th to Messrs. Olin, King, and Tobler.

Progress report only.—Mr. Bowers, Mr. Craig and the writer visited Frankford Arsenal on June 28th, inasmuch as Frankford Arsenal accountants had then completed their figures worked up on the inventory of June 15th. These figures were discussed. Comparison was also made of the kind of items which we are obliged to consider in our over-head and those which they consider. We left with them the eight-page cost formula which we forwarded to the different manufacturers on June 25th. They are going to adjust their operation cost figures to conform to this formula. They sent us on June 20th information which they had available on the capital value of their buildings, land, etc. These figures were discussed at some length. We agreed to send to them a formula showing the method used by us in dealing with these items. They agreed to recast their figures on the basis of our formula so that a direct comparison would be possible. We said that we would also send that same formula to the other manufacturers, supplementing our letter of June 25th which we discussed with them. Our hope is that we will be satisfied with figures which Frankford also can approve so that when these figures go to General Ruggles, they will represent agreement in principle between us and Frankford and form the basis for a real comparison. We found that Frankford readily admitted the item of interest on working capital. They were unwilling to consider any profit on material supplied by the Government, but they were willing to have included necessary handling charges.

Change in policy proposed, decision desired.—Capt. Chavin expressed himself as being opposed to a comparison of Frankford figures with an average of the costs of other manufacturers. He felt that the averaging of these costs would obscure some of the very items upon which it was desired to fix attention. Two alternatives were suggested: One was the general exchange of complete figures, competitors' tabulations being designated not by name but by symbol as A, B, C, D. The other one was that the detailed figures should be submitted to Frankford Arsenal and/or Washington in confidence, in the event that certain manufacturers did not wish to disclose their own cost figures to other manufacturers but were willing to do so to the Government.

Capt. Chavin seemed very decided in his expression of opinion that Frankford's figures should not be given to the other manufacturers unless they, in turn, gave their figures to Frankford. Col. Wall did not express himself on these points. Since it is very distinctly understood that we will not make any move which would be offensive to the Ordnance Department and because, on the other hand, our desire is to work with them in very friendly fashion, we belive that before showing Frankford's figures to the different manufacturers we should have corresponding figures from them and authority from them to transmit these figures to Frankford Arsenal and to the Ordnance Department. This would involve a change in the plan suggested by you at our last meeting in New York and is occasioned, as indicated above, by the opinion of Frankford Arsenal as expressed yesterday. If you agree to this change of plan, will you ask the different companies to authorize exchange of their figures with those of others submitting figures (their's to be designated by letter and not by name) or would you prefer to have me write a supplement to my letter of June 25th requesting their assent to this plan?

Alternative policy.—It might be that General Ruggles would be perfectly ready to give out Frankford figures regardless of whether he received any complete or individual figures in exchange or not. However, in view of the fact that the exchange idea was uppermost in the meeting of June 8th in New York City, it seems better, if possible, to actually plan to effect a complete exchange rather than to ask him to permit us to give out Frankford figures to any not giving their figures in return.

Acknowledgement only.—The last paragraph in your letter of June 27th has been noted. We shall doubtless visit Frankford again and if it then proves desirable we shall also hope to see General Ruggles in Washington.

Decision desired.—Referring to copy of your letter of June 27th to Messrs. Olin, King, and Tobler, I would like to urge that Mr. Bowers be invited to be present at the discussion of .30 caliber M1 costs at the proposed Niagara Falls, Ontario meeting. I am sure that if the subject is fully discussed, there will be numerous instances where Mr. Bowers' information would be of great value.

——— ———,

ECH:J *Chairman, special committee.*

(written in red pencil)

(1) Subject matter discussed with Col. Herrmann.

(2) Draft oked by Bowers & Craig. (Herrmann out of town.)

(There was no exhibit marked "No. 1296".)

Exhibit No. 1297

[Memo]

Subject: Visit of Major W. L. Clay, July 30th, 1928.

As advised in his letter of July 28th, Major W. L. Clay visited Bridgeport on the morning of July 30th. He had just returned from about three weeks' leave and said that he wanted to get in touch again with the situation in respect of .30 MI costs.

Major Clay had not seen the letter which the writer had addressed to General Ruggles dated July 26th. A copy of this letter was shown to him together with General Ruggles' reply of June 28th as follows:

"Your twenty sixth received. Major Clay expected visit your plant Monday. No objection to Frankford's figures being given commercial manufacturers. Ruggles."

The file of correspondence and figures prepared by Frankford Arsenal, were shown to Major Clay and were the subject of discussion.

The writer said that figures from some companies had been received, but not from all, and that there was evident reluctance in certain quarters to exchange all of the figures with Frankford Arsenal, and that some who might themselves have been willing to do so, did not feel that they wished to do this if some of the others were unwilling to make the exchange.

Major Clay seemed disappointed at not obtaining cost figures from the different manufacturers. Since "Half a loaf is better than no bread", the writer agreed to raise the question specifically with the different manufacturers as to whether they would be willing that their direct labor figures be sent to Frankford Arsenal and Washington.

Major Clay seemed to think it unlikely that General Ruggles would care to be in New York on September 6th, as suggested in letter of July 26th mentioned above. Major Clay felt that there would be nothing that General Ruggles could say that he had not already said.

Major Clay was questioned as to whether they would postpone the issuing of proposals until after opportunity for a meeting in New York on September 6th. His feeling seemed to be that but little could be gained under the circumstances by discussion at such a meeting. It was pointed out to him, however, that the situation would have changed from that which obtained early in June in that (1) the manufactuers would have accumulated additional data in the making of .30 MI ammunition so that they might be surer of their costs; (2) that they would have had a chance to study the Frankford Arsenal cost figures; and (3) that Frankford Arsenal and Washington would have had a chance to study at any rate the direct labor costs of the different manufacturers should it prove that they acceded to the request that these figures be forwarded to Frankford. Major Clay agreed that these things might result in further conversations being worth while on September 6th but he seemed to doubt it.

Major Clay intimated that they might arrange to have Frankford issue proposals for twenty million rounds with no bid upon a lesser quantity than ten million rounds. He was agreeable to the suggestion that the proposals should not be opened until September 10th or 11th. He said that the detailed points which had been discussed at the technical committee meeting of the Institute on June 8th had been, or would shortly be, incorporated in the cartridge specification. This new specification will apply on the proposal under discussion.

Major Clay's general feeling seems to be that the ammunition manufacturer's costs are probably not very far from those of Frankford after all.

Needless to say, none of the cost figures of commercial ammunition manufacturers were given to Major Clay.

(Stamped) (Signed) Egbert C. Hadley,
Chairman, Special Committee.

Exhibit No. 1298

[File]

Remington Arms Company, Inc.,
Bridgeport, Conn., August 14, 1928.

Subject: Cost of .30 Caliber M1 Components and Cartridges.

Peters Cartridge Co.,
Cincinnati, Ohio.

New Haven, Conn.
Att.: Mr. W. A. Tobler, vice pres.

Gentlemen: Detailed cost figures were received from the Peters Cartridge Company on August 9th. Tabulation of these figures together with those of the other manufacturers, has now been completed as planned, except that General Ruggles' authority for sending out Frankford figures has enabled us to add theirs to the tabulation. The general form followed was that of the eight-sheet formula circulated with our letter of June 25th. The summary originally called for on sheet #7 has been presented in two different forms for convenience in studying. These sheets are numbered "Sheet #7" and "Sheet #7A". The comparison on sheet #8 has been altered so as to show figures more directly comparable. The sheet with this tabulation is #8A. Another sheet #8B eliminates another item of difference and makes a still closer comparison. Copious footnotes are intended to explain various steps taken.

In our letter of July 31st, to which was attached memorandum covering Major Clay's visit to Bridgeport on Monday, July 30th, several questions were raised in regard to information which might be given to Frankford Arsenal. Messrs. King and Tobler have since written expressing their unwillingness that any of their figures should be shown to Frankford Arsenal. Mr. Norvell has written saying that, if possible, he thinks the ammunition manufacturers should act as a unit in regard to this.

No reply has been received from the Western Cartridge Co.

If there are any questions which arise from study of the tabulation of comparative costs, the writer will be glad to do whatever he can toward answering them.

Yours very truly,

(Signed) Egbert C. Hadley,
Chairman, Special Committee.

Subject: *.30M1*

Major W. L. Clay,
Office of the Chief of Ordnance,
War Department, Washington, D. C.

Dear Major Clay: You will recall that on the occasion of your visit to Bridgeport on July 30th, we discussed the matter of costs of .30M1 ammunition ammunition and that I agreed to see whether I could obtain permission to send to the Ordnance Office and/or Frankford Arsenal, the direct labor figures of the different manufacturers.

I had hoped to have these figures for you, but so far I have not been able to accomplish this.

I shall hope to see you at the institute meeting on September 6th, if not before.

Sincerely yours,

(Signed.) EGBERT C. HADLEY,
Chairman Special Committee.

SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE,
103 Park Avenue, New York, August 17th, 1932.

Mr. B. L. WINCHELL,
Chairman, Committee on Gov't. Competition with Private Industry,
National Association of Manufacturers.

DEAR SIR: In accordance with the suggestion made at your meeting of August 4th to Mr. Edwin Pugsley of the Winchester Repeating Arms Company, I submit the following report with Mr. Pugsley, after conference with other manufacturers representing 95% of the available capacity, has prepared setting forth in detail the Government competition which has been experienced by the arms and ammunition industry and making suggestions for remedying the situation.

Competition which the small arms and ammunition manufacturers experience from the Government may be divided into five general classifications:

1. Current manufacture by Government arsenals of relatively large quantities of small arms ammunition for use in the various arms in the service.
2. Sale by the Government of service and subcaliber rifles at prices below those of private manufacturers for similar arms.
3. Resale by the Government of ammunition to civilians at prices below those prevailing in the open market. Part of this ammunition has been purchased by the Government under its specifications and its sale through the National Rifle Association competes directly with all jobbing and retailing outlets for ammunition throughout the country.
4. Export competition through the sale at very low prices, to friendly foreign governments, of arms and ammunition.
5. Sale by Government through American Legion, National Rifle Association, and others of obsolete equipment at scrap prices.

Under item #1 it should be pointed out that the Government produces at Frankford Arsenal near Philadelphia, all of the .30-caliber Springfield ammunition at present used by the service, a large portion of .45-caliber Colt, and practically all of .50-caliber machine-gun ammunition. During the war it was necessary for the Government to call on private manufacturers for over 90% of all the ammunition used by United States troops. Government arsenals were capable of producing such small quantities that they were not considered seriously as sources of supply for this material.

The war pointed out plainly the tremendous advantage to the country, in point of preparedness, of having commercial organizations scattered throughout the country capable of producing ammunition to Government specifications. Our experience proved that only the established companies were successful in producing this ammunition, although there were numerous attempts to establish ammunition factories by firms of excellent manufacturing experience, though not versed in the technicalities of ammunition. In no case did such a factory survive and produce useable ammunition for the Government.

This fact was recognized by the Ordnance Department and with the passage of the National Defense Act cognizance was taken to the extent of including in the act a provision for so-called "educational" orders for small-arms ammunition, particularly .30 caliber 06. Such orders were allotted by competitive bidding among the five commercial companies then in existence, with the result that these orders were allocated to various companies, with the consequent training of commercial organizations.

Several years ago the Ordnance Department rejected private bids on the basis that the law required that material purchased by the Government should not cost more than a similar article made in a Government arsenal, and Frankford Arsenal's costs were cited to show that the Government could manufacture the ammunition much cheaper than it could purchase it. In October 1926, as a result of numerous conferences between members of the arms industry and the Ordnance Department, an investigation was undertaken of the costs of ammunition as produced at Frankford Arsenal, an accountant was sent by the ammunition industry to Frankford and a summary of his findings will be of interest. In the first place, he found that:

Direct labor at Frankford Arsenal was considerably more than similar items in industrial plants partly due to the fact that the Government charged into direct labor some items that the industry charged to burden.

He found, however, that the great discrepancy in cost between the Government arsenal and the private institution was due to the fact that practically no overhead charges were made in the case of the Government arsenal. All salaries of officers directing the operation of the arsenal which would compare with the executive officers of a commercial plant, are paid from an Army fund, and are not applied as burden against the cost of cartridges produced. Experimental work on equipment was done on a special appropriation and was not a cost factor. Hospital and first aid is maintained by the Medical Corps as a separate unit. Depreciation is not considered, as the arsenal, in their method of accounting, do not carry any capital assets on which to charge off depreciation. This, as can be readily seen, is a large factor in a commercial plant. Donations and gifts are something that do not enter into Government consideration. Insurance of any kind is not carried. Postage: No expense to the arsenal. Telephones: Automatic inside telephone system which was installed entirely gratis, the upkeep and maintenance of which was practically a negligible item of expense. Outside telephone and toll calls are covered by a special appropriation. Taxes: None paid by the Government. Workmen's compensation and public liability insurance: Not carried. Any expense incidental to this item would be paid from the employees' pension fund which is set aside by deducting 2½% of every Government employee's earnings during each year. Since this comes out of the employees, it is not a factor of cost of ammuition.

About 80% of the cost of ammunition is the raw material, and all fired shells and bullets where recovered are sent to Frankford Arsenal free of charge from various Government depots where they are accumulated and reshipped to a brass company to be converted into good metal, the only expense to the Arsenal being the transportation and handling charges. This salvage material, of course, is only a portion of their total metal used but nevertheless it is a very appreciable item, which is furnished at no cost to the arsenal.

When this report was discussed with the Ordnance Department, orders were issued to the department to work out a percentage which should be added to the cost to cover these items, and a percentage of 13.9 was submitted. This figure was later increased by about 3% for expenses of men in Washington which they felt should be charged to Frankford, making a total of 17% which the Government proposed to add to the cost of their goods to make them comparable with those of commercial manufacture. Obviously, this was totally inadequate. There is, of course, no provision in Government costs for interest on investment, or profit, both of which are essential in the case of commercial manufacturers.

Following this discussion, it was apparent that no common basis could be arrived at, and as a result new and up to date machinery was installed by the Government for increasing the production capacity of and reducing costs at Frankford Arsenal. Machines were re-arranged and extensive conveyor systems were installed. An excellent job of mechanical engineering resulted in elimination of operations and labor which with the increased production now totaling about 300,000 rounds per day, brought the costs at Frankford, when figired by their system of accounting, far below anything that a commercial manufacturer could attain. With the uncertainty of repeat orders on Government materials, no commercial manufacturer up to the present time has been justified in spending the amount of money necessary to equip his plant for the production of one type of cartridge, to the extent that has been done at Frankford.

There is still another factor in commercial costs not shown in Frankford's costs, which is the commerical hazard that the non-government producer must assume, i. e.: the possibility of having a lot of ammunition rejected. Commercial manufacturers are required to submit ammunition in large lots, from a half million to several million, which must pass Government inspection. Frankford Arsenal produces ammunition in the same way that the industry produces commercial ammunition, viz., gaging and testing the product currently and not accumulating it in large lots to be subject to acceptance tests. The commercial manufacturer who suffers a rejection of a lot of Government ammunition has no alternative but to scrap it, as the specifications for Government ammunition are not applicable to commercial ammunition. Due to the rearrangement at Frankford Arsenal, they are now prepared to furnish only .30 Gov't. '06, .45 caliber Colt, .50 caliber machine-gun ammunition. They are not willing to consider making the .30 Army cartridge used for the Krag or the .38 pistol cartridge used for the many .38 caliber revolvers still on issue, showing the extent to which Frankford Arsenal has been made a single purpose machine for producing in quantity particular items.

It is the feeling of the ammunition industry that mass production at Frankford Arsenal should not continue, that the arsenal should contract for .30 caliber '06, .45 caliber Colt, and .50 caliber machine-gun ammunition from the various factories capable and willing to supply competitive bids on this type of material. We believe that this will result in a very considerable ultimate economy to the Government in the cost of ammunition, and will be of great educational value to the private manufacturers recognized by the Government as the source of supply in case of need. It would be our recommendation that the technical personnel at Frankford be confined to experimental work, the development and tests of new types of ammunition, and the inspection and acceptance of ammunition purchased from commercial manufacturers. The objection may be raised by the Government that there is only one commercial plant at the present time equipped to supply .50 caliber ammunition, but there is at least one more plant entirely willing to undertake the tooling up for this type of ammunition if assured of sufficient Government business.

Springfield Arsenal produces the Springfield 30–06, the Springfield subcaliber .22 target rifle, the Springfield sporter which is a sporting model of the Army action, the Colt automatic pistol and various machine guns, as well as numerous other items. The service rifle is sold to the civilian population through the National Rifle Association for less than similar comparable commercial arms. The Government alters its military gun as a sporting model and sells the Springfield sporter in direct competition with and at lower prices than similar arms furnished by private industry. The .22 caliber Springfield rifle is a design for superaccurate .22 caliber shooting and likewise competes as above.

The industry suggests in the case of Springfield Arsenal that the sale of the Springfield 30–06 rifle be restricted for military purposes, and if sold, that the Government exercise care to see that it does not compete with private manufacturers. The question may be raised as to why recommendation is not made to discontinue the manufacture of Springfield rifles at Springfield in the same line as the manufacture of cartridges at Frankford in the paragraphs preceding. This is due to the fact that no commercial manufacturer is at the present time tooled up to produce the Springfield rifle. It would be our feeling that if two or more of the reputable gun companies were tooled to produce the Springfield rifle, under these circumstances, the production of the rifle should be discontinued at the arsenal.

The Government purchases in large quantities for resale throughout the country, .22 caliber ammunition, .38 caliber ammunition, and .30 Army ammunition. This ammunition is bought under Government specifications and at extremely low prices which are accorded the Government on all purchases. This ammunition is then sold throughout the country to shooters, thereby competing directly with the comparable ammunition sold through the regular jobbing and retailing channels.

There have been numerous instances in the last few years where the Government has sold arms and ammunition at very low figures to friendly foreign governments, thereby blocking any possibility of sales by private manufacturers. One particular instance may be cited in connection with Mexico in which one of the large arms manufacturers was negotiating with Mexico for the sale of a large quantity of arms. The Government supplied Mexico with a large quantity of surplus war rifles, thereby effectively ending all negotiations by the Mexican Government with private manufacturers for the production of these arms. We believe the Government should be prohibited by law from entering into competition with commercial manufacturers in this fashion.

The industry is informed that thousands of Krag-Jorgensen rifles have been disposed of in a manner so that the user can obtain them through service organizations at about $2.00 each. This displaces the sale of rifles of a similar type which might be supplied by private manufacturers. Further, it is understood that the stock of Krag rifles formerly held by the Government has been depleted in this manner, but the industry protests against the marketing of further obsolete models should stocks of them accumulate, except at prices in line with similar guns made by private concerns.

The arms and ammunition industry is not a growing one. Therefore, if the Government is to depend upon private enterprise, as it must, for the major portion of its war material, these manufacturers should be encouraged to keep abreast of the times and placed in position of being able at all times to furnish the necessary supplies, without having to incur the losses that would result if orders were taken on the basis of present Government accounting practice.

We are in complete agreement with the resolutions adopted at the last meeting of the Manufacturers' National Committee on Government competition with private industry, and believe that they express the situation adequately.

Respectfully submitted.

SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE,
(Signed.) C. STEWART COMEAUX, *Secretary.*

EXHIBIT No. 1301

STATEMENT FILED WITH THE NATIONAL ASSOCIATION OF MANUFACTURERS' COMMITTEE ON GOVERNMENT COMPETITION WITH PRIVATE INDUSTRY, BY THE SPORTING ARMS AND AMMUNITION MANUFACTURERS' INSTITUTE, IN BEHALF OF ITS MEMBERS MAKING ARMS AND AMMUNITION

Government competition experienced by the Arms and Ammunition Industry may be divided into five general classifications, as follows:

1. Current manufacture by Government arsenals of relatively large quantities of small arms ammunition for use in the various arms in the service.
2. Sale by the Government of service and sub-caliber rifles at prices below those of private manufacturers for similar arms.
3. Resale by the Government of ammunition to civilians at prices below those prevailing in the open market. Part of this ammunition has been purchased by the Government under its specifications and its sale through the National Rifle Association competes directly with all jobbing and retailing outlets for ammunition throughout the country.
4. Export competition through the sale at very low prices, to friendly foreign governments, of arms and ammunition.
5. Sale by Government through American Legion, National Rifle Association and others, of obsolete equipment at scrap prices.

On the following pages will be found a detailed statement regarding this competition and the industry's recommendations.

1. CURRENT MANUFACTURE BY GOVERNMENT ARSENALS OF RELATIVELY LARGE QUANTITIES OF SMALL ARMS AMMUNITION FOR USE IN THE VARIOUS ARMS IN THE SERVICE

Statement of facts.—The Government produces at Frankford Arsenal near Philadelphia, all of the .30 caliber Springfield ammunition at present used by the service, a large portion of .45 caliber Colt, and practically all of the .50 caliber machine-gun ammunition. During the war it was necessary for the Government to call on private manufacturers for over 90% of all the ammunition used by United States troops. Government arsenals were capable of producing such small quantities that they were not considered seriously as sources of supply for this material.

In point of preparedness, the war pointed out plainly the tremendous advantage to the country of having commercial organizations scattered throughout the country capable of producing ammunition to Government specifications. Experience proved that only the established companies were successful in producing this ammunition, although there were numerous attempts to establish ammunition factories by firms of excellent manufacturing experience, though not versed in the technicalities of ammunition. In no case did such a factory survive and produce useable ammunition for the Government.

The foregoing facts were recognized by the Ordnance Department and with the passage of the National Defense Act, cognizance was taken to the extent of including in the act a provision for so-called eductional orders for small arms ammunition, particularly .30 caliber 06. Such orders were allotted by competitive bidding among the five commercial companies then in existence, with the result that these orders were allocated to various companies, with the consequent training of commercial organizations.

Several years ago the Ordnance Department rejected private bids on the basis that the law required that material purchased by the Government should not cost more than a similar article made in a Government arsenal, and Frankford

Arsenal's costs were cited to show that the Government could manufacture the ammunition much cheaper than it could purchase it. In October 1926, as a result of numerous conferences between members of the Industry and the Ordnance Department, an investigation was undertaken of the costs of ammunition as produced at Frankford Arsenal, an accountant was sent by the ammunition industry to Frankford, from whose findings the following summary is submitted:

Direct labor at Frankford Arsenal was considerably more than similar items in industrial plants, partly due to the fact that the Government charged into direct labor some items that the industry charged to burden.

However, the great discrepancy in cost between the Government arsenal and the private institution was due to the fact that practically no overhead charges were made in the case of the Government arsenal. All salaries of officers directing the operation of the arsenal which would compare with the executive officers of a commercial plant, were paid from an Army fund and not applied as burden against the cost of cartridges produced. Experimental work on equipment was done under a special appropriation and was not a cost factor. Hospital and first aid maintained by the Medical Corps as a separate unit. Depreciation not considered, as the arsenal in their method of accounting did not carry any capital assets on which to charge off depreciation. This, as can be readily seen, is a large factor in a commercial plant. Donations and gifts not taken into consideration by Government. No insurance of any kind carried. Postage: No expense to the arsenal. Telephones: Automatic inside telephone system installed entirely gratis, the upkeep and maintenance of which was practically a negligible item of expense. Outside telephone and toll calls covered by a special appropriation. Taxes: None paid by the Government. Workmen's compensation, and public liability insurance: Not carried. Any expense incidental to this item paid from the employees' pension fund set aside by deducting 2½% of every Government employee's earnings during each year. Since this comes out of the employees, it is not a factor of cost of ammunition.

About 80% of the cost of ammunition is the raw material, and all fired shells and bullets where recovered are sent to Frankford Arsenal free of charge from various Government depots where they are accumulated and reshipped to a brass company to be converted into good metal, the only expense to the arsenal being the transportation and handling charges. This salvage material, of course, is only a portion of their total metal used but nevertheless it is a very appreciable item, which is furnished at no cost to the arsenal.

When this report was discussed with the Ordnance Department, orders were issued to the Department to work out a percentage which should be added to the cost to cover these items, and a percentage of 13.9 was submitted. This figure was later increased by about 3% for expenses of men in Washington which they felt should be charged to Frankford, making a total of 17% which the Government proposed to add to the costs of their goods to make them comparable with those of commercial manufacture. Obviously, this was totally inadequate. There is, of course, no provision in Government costs for interest on investment, or profit, both of which are essential in the case of commercial manufacturers.

Following this discussion, it was apparent that no common basis could be arrived at, and as a result new and up-to-date machinery was installed by the Government for increasing the production capacity of, and reducing costs at Frankford Arsenal. Machines were rearranged and extensive conveyor systems were installed. An excellent job of mechanical engineering resulted in elimination of operations and labor which with the increased production now totalling about 300,000 rounds per day, brought the costs at Frankford, when figured by their system of accounting, far below anything that a commercial manufacturer could attain. With the uncertainty of repeat orders on Government material, no commercial manufacturer up to the present time has been justified in spending the amount of money necessary to equip his plant for the production of one type of cartridge, to the extent that has been done at Frankford.

There is still another factor in commercial costs not shown in Frankford's costs, which is the commercial hazard that the nongovernment producer must assume, i. e., the possibility of having a given lot of ammunition rejected. Commercial manufacturers are required to submit ammunition in large lots, from a half million to several million, which must pass Government inspection. Frankford Arsenal produces ammunition in the same way that the industry produces commercial ammunition, viz, gauging and testing the product currently and not accumulating it in large lots to be subject to acceptance tests. The commercial manufacturer who suffers a rejection of a lot of Government ammunition has no alternative but to scrap it, as the specifications for Government ammunition are not applicable to commercial ammunition. Due to the rearrangement at Frank ford Arsenal, they are now prepared to furnish only .30 Government '06, .45 caliber Colt, and .50 caliber machine gun ammunition. They are not willing to consider making the .30 Army cartridge used for the Krag or the .38 pistol cartridge used for the many .38 caliber revolvers still on issue, showing the extent to which Frankford Arsenal has been made for a single purpose machine for producing in quantity particular items.

Recommendation.—It is the feeling of the ammunition industry that mass production at Frankford Arsenal should not continue, that the arsenal should contract for .30 caliber '06, .45 caliber Colt, and .50 caliber machine gun ammunition from the various factories capable and willing to supply competitive bids on this type of material. We believe that this will result in a very considerable ultimate economy to the Government in the cost of ammunition, and will be of great educational value to the private manufacturers recognized by the Government as the source of supply in case of need. It would be our recommendation that the technical personnel at Frankford be confined to experimental work, the development and tests of new types of ammunition, and the inspection and acceptance of ammunition purchased from commercial manufacturers. The objection may be raised by the Government that there is only one commercial plant at the present time equipped to supply .50 caliber ammunition, but there is at least one more plant entirely willing to undertake the tooling up for this type of ammunition if assured of sufficient Government business.

2. SALE BY THE GOVERNMENT OF SERVICE AND SUBCALIBER RIFLES AT PRICES BELOW THOSE OF PRIVATE MANUFACTURERS FOR SIMILAR ARMS

Statement of facts.—Springfield Arsenal produces the Springfield 30–06, the Springfield sub-caliber .22 target rifle, the Springfield Sporter which is a sporting model of the Army action, the Colt automatic pistol and various machine guns, as well as numerous other items. The service rifle is sold to the civilian population through the National Rifle Association for less than similar comparable commercial arms. The Government alters its military gun as a sporting model and sells the Springfield Sporter in direct competition with and at lower prices than similar arms furnished by private industry. The .22 caliber Springfield rifle is a design for super-accurate .22 caliber shooting and likewise competes as above.

Recommendation.—The industry suggests in the case of Springfield Arsenal that the sale of the Springfield 30–06 rifle be restricted for military purposes, and if sold, that the Government exercise care to see that it does not compete with private manufacturers. The question may be raised as to why recommendation is not made to discontinue the manufacture of Springfield rifles at Springfield in the same line as the manufacture of cartridges at Frankford in the paragraphs preceding. This is due to the fact that no commercial manufacturer is at the present time tooled up to produce the Springfield rifle. It would be our feeling that if two or more of the reputable gun companies were tooled to produce the Springfield rifle, under those circumstances, the production of the rifle should be discontinued at the arsenal.

3. RESALE BY THE GOVERNMENT OF AMMUNITION TO CIVILIANS AT PRICES BELOW THOSE PREVAILING IN THE OPEN MARKET. PART OF THIS AMMUNITION HAS BEEN PURCHASED BY THE GOVERNMENT UNDER ITS SPECIFICATIONS AND ITS SALE THROUGH THE NATIONAL RIFLE ASSOCIATION COMPETES DIRECTLY WITH ALL JOBBING AND RETAILING OUTLETS FOR AMMUNITION THROUGHOUT THE COUNTRY

Statement of facts.—The Government purchases in large quantities for resale throughout the country, .22 caliber ammunition, .38 caliber ammunition, and .30 Army ammunition. This ammunition is bought under Government specifications and at extremely low prices which are accorded the Government on all purchases. This ammunition is then sold throughout the country to shooters, thereby competing directly with the comparable ammunition sold through the regular jobbing and retailing channels.

Recommendation.—If this ammunition continues to be sold by the Government it should be done at prices that will be competitive with the product of the regular manufacturer.

4. EXPORT COMPETITION THROUGH THE SALE AT VERY LOW PRICES, TO FRIENDLY FOREIGN GOVERNMENTS, OF ARMS AND AMMUNITION

Statement of facts.—There have been numerous instances in the last few years where the Government has sold arms and ammunition at very low figures to friendly foreign governments, thereby blocking any possibility of sales by private manufacturers. One particular instance may be cited in connection with Mexico in which one of the large arms manufacturers was negotiating with Mexico for the sale of a large quantity of arms. The Government supplied Mexico with a large quantity of surplus war rifles, thereby effectively ending all negotiations by the Mexican Government with private manufacturers for the production of these arms.

Recommendation.—The Government should be prohibited by law from entering into competition with commercial manufacturers in this fashion.

5. SALE BY GOVERNMENT THROUGH AMERICAN LEGION, NATIONAL RIFLE ASSOCIATION, AND OTHERS, OF OBSOLETE EQUIPMENT AT SCRAP PRICES

Statement of facts.—The industry is informed that thousands of Krag-Jorgensen rifles have been disposed of in a manner so that the user can obtain them through service organizations at about $2.00 each. This displaces the sale of rifles of a similar type which might be supplied by private manufacturers. Further, it is understood that the stock of Krag rifles formerly held by the Government has been depleted in this manner.

Recommendation.—The industry protests against the marketing of further obsolete models, should stocks of them accumulate, except at prices in line with similar guns made by private concerns.

GENERAL STATEMENT

The arms and ammunition industry is not a growing one. Therefore, if the Government is to depend upon private enterprise, as it must, for the major portion of its war matériel, these manufacturers should be encouraged to keep abreast of the times and placed in position of always being able to furnish the necessary supplies, without having to incur losses that would result if orders were taken on the basis of present Government accounting practice.

The industry is in complete agreement with the resolution adopted at the August 4th, 1932, meeting of the Manufacturers' National Committee on Government Competition with Private Industry, and believes they express the situation adequately.

Exhibit No. 1302

[Gov. Bus.—P. S. du Pont, file.]

Naval Consulting Board of the United States
Hotel Biltmore, New York City,
December 4, 1916.

Du Pont de Nemours Powder Co.,
Wilmington, Del.
(Attention of Mr. Pierre S. duPont.)

Dear Mr. DuPont: You will receive, within a day or two, a communication from the board created under section 121 of the Army bill and now in session at the War Department.

This board is composed of officers of the Regular Army and civilians, and its report, which must be ready for Congress before January, will, of necessity, have considerable weight in the argument for or against Government manufacture of munitions and Government ownership of munition plants.

I believe that close observation of European conditions during two and one-half years of the war has convinced all of us who have experience in manufacturing matters that any comprehensive plan for true military and naval preparedness, in this or any other country, must be based upon the most careful education, organization, and co-ordination of the industrial forces in every line. The foreign war has shown us the utter futility of dependence upon Government-owned plants alone for fitting this Nation to defend itself in the event of future aggression upon the part of even any one of the several first-class powers. Private industry in all the varied lines of Governmental supply must be encouraged and not discouraged. It must be educated, organized, and trained for the national emergency service. A closer and more mutually satisfactory business relation must be established between the industrial lines and every Department of the Government, and the work of the newly created Council of National Defense must be directed to this end.

But just now, it is the need that the frankest plssible co-operation and assistance be given to this board, which is to report upon the feasibility of Government manufacture of "arms, munitions and equipment". This board needs facts as to costs and the proper methods of figuring them, in order that a reasonable accurate analysis of the problem in hand may be made, and an intelligent and convincing report rendered to Congress.

May we ask your active aid, in accordance with the more formal request over the signature of Colonel Francis J. Kernan, President of the Board? The report of this body, if based upon facts and statements of business attitude such as you can supply, should go far towards settling, once for all, the question of Governmental munition manufacture.

It is the desire to record in the report of this board a concise and convincing statement of the attitude of the average patriotic American manufacturer toward Government business. Constructive criticism and suggestion as to present Governmental methods of business dealing will be strictly in order. I have myself, during tke past week, spent a day before this board, and desire to strongly second its request for your assistance.

The first meeting of the Council of National Defense and its Advisory Commission will be held in the office of the Secretary of War, December 6th, and within the six months thereafter it is our hope that we may lay the foundation for that closely knit structure, industrial, civil and military, which every thinking American has come to realize is vital to the future life of this country, in peace and in commerce, no less than in possible war.

Very truly yours,

H. E. Coffin, *Chairman.*

( ) Denotes red figures.

The above figures show the sales to the United States Government and were compiled from records which we believe to be correct. The costs applied against these sales to arrive at net profit or loss from this volume of business is the percentage that the various cost figures bear to the total volume of business carried on by the present Remington Arms Company, Inc.

Subject: Remington Patent and information exchange, commitments.

Mr. C. K. DAVIS,
President, Bridgeport Office.

Please refer to Mr. Jenney's letter of June 25th, and Mr. Abrams letter of June 22nd, both returned herewith.

Our letter of June 18th summarized all of Remington's commitments, both domestic and foreign, in the matter of patent licenses and the exchange of patents and technical information.

A somewhat more precise description of these commitments, than the one drafted by Mr. Abrams, might be as follows:

Date	Parties	Subject
Nov. 14, 1929	Remington—R. W. S.	Remington agrees to grant D. A. G. United States rights in new uses for Tetrazene and new processes for Tetrazene manufacture; and to grant D. A. G. German rights on new Tetrazene priming mixtures.
Jan. 1, 1934	Remington—D. A. G. (modification of R. W. S. agreement).	
Mar. 8, 1933	Remington—D. A. G.	Remington agrees to disclose to D. A. G. the subject of such U. S. applications as it sees fit, and to grant D. A. G. German rights in the subject of such applications.
Aug. 22, 1929	Remington—C. I. L.	Remington agrees to certain limitations in its Canadian sales and advertising, in exchange for a license under Canadian's Tetrazene patents.

I do not think that the German situation can be satisfactorily settled by simply excluding Germany from the territory in which Remington agrees to grant licenses to I. C. I. The arrangement with D. A. G. is not satisfactory. We have never disclosed to them our more important U. S. applications, and these applications have at times been of such a nature that it would be undesirable to do so. Moreover, we are entirely satisfied that they have not disclosed to us all of their pending German applications. It is undesirable to enter into an agreement with I. C. I. affecting Germany without the knowledge and consent of D. A. G., but advising D. A. G., that we proposed to enter such an agreement might well be the means of securing a more definite and satisfactory arrangement with them.

A. J. GREENE,
Patent Attorney.

AJG/m

EXHIBIT NO. 1321

Statement of cash payments made to R. W. S., D. A. G., and I. C. I. for years 1929–1934 (1931, 1932, 1933, and first 6 months of 1934)

[1] From May 1, 1920.

[2] As of May 1, 1920.

[3] Includes $2,250,000 stock dividends paid in common stock to second preferred stockholders on exercise of option to receive same in lieu of cash dividends.

[4] Credit to surplus of $7,961,925.00 resulting from reduction of stated value of common capital to the equivalent of $5.00 per share.

[5] Includes credit to surplus of $4,529,364.00
(Resulting from reduction of stated value of 1,132,341 shares of common stock from $5.00 to $1.00 per share.)
Includes credit to surplus of 2,111,190.00
(Resulting from sale of 1,688,952 shares common stock at $2.25 or $1.25 per share above par value of $1.00 per share.)
6,640,554.00

All other capital adjustments represent revaluation of assets resulting from appraisals.

Parentheses denote red figures.

Certificate of incorporation, filed May 24, 1920, called for 1,100,000 shares composed of 100,000 shares preferred with $100 par value per share and 1,000,000 shares of common without par value. Common stock was set upon the book at stated value of $30.00 a share.

Charter was amended September 25, 1923, authorizing stock as follows: 100,000 shares first preferred series A, par value $100.00 a share, 7% cumulative; 100,000 shares first preferred series B, par value $100.00 a share, 7% cumulative; 50,000, shares second preferred, par value $100.00 a share, 8% cumulative; 700,000 shares common without par value. For each share of the old preferred there was given in exchange ½ share of the first preferred series A and ½ share of the second preferred.

December 1924 the stated value of the common stock was reduced to $10.00 a share by charging against capital, goodwill of $10,000,000 and provision for preliminary engineering and development expenses of cash register of $2,000,000.

September 25, 1931, the charter was amended, authorizing stock as follows: 100,000 shares first preferred series A, par value $100.00 a share; 100,000 shares first preferred series B, par value $100.00 a share; 1,700,000 shares common without par value. Common stock was exchanged for second preferred share for share and nine shares of common stock were offered for the accumulated dividends. Stated value of common stock was reduced from $10.00 to $5.00 a share.

May 31, 1933, warrants issued to common-stock holders giving right to subscribe to additional common stock at rate of one share for each two shares held at $1.00 per share. Stated value of common stock was reduced from $5.00 to $1.00 a share.

Charter was amended July 7, 1933, authorizing stock as follows: 100,000 shares first preferred series A, par value $100.00, 7% cumulative; 100,000 shares first preferred series B, par value $100.00, 7% cumulative; 3,400,000 shared common, par value $1.00. Warrants were issued to common stockholders giving right to subscribe for one share of new common for each share of common held, as well as exchange share for share old common for new. Subscription price for this stock was $2.25 per share. Stock was set up on the books at $1.00.

STATEMENT OF THE MILITARY SERVICE OF CHARLES F. COOK, MAJOR, ORDNANCE DEPARTMENT

The records of this office show that Charles F. Cook accepted a commission as major, ordnance section, Officers' Reserve Corps, September 14, 1917; reported for active duty in the office of the chief of ordnance, Washington, D.C., September 17, 1917; was detailed for duty in the office of the director of purchase, storage and traffic, general staff, April 26, 1918; was granted fourteen days leave of absence effective about December 12, 1918, and died January 1, 1919, at St. Lukes Hospital, New York City, from bronchopneumonia.

Major Cook was awarded the Distinguished Service Metal (posthumous) "for exceptionally meritorious and distinguished services. While serving in the ordnance department he was instrumental in organizing the divisions dealing with the procurement of ordnance material. While serving on the general staff he worked out a plan for the consolidation of all articles of standard commercial circulation in single purchasing units throughout the War Department, upon which basis was built the organization of the present division of purchase, storage and traffic of the general staff. In his various assignments he gave himself whole-heartedly and self-sacrificingly to the work of the Government".

At the time of his application for a commission in the ordnance department he gave his business experience as: 1908, served six months for Mr. Hugh L. Cooper, consulting engineer, on the construction of the McCall Ferry hydroelectric power plant at McCall Ferry, Pa.; 1909, personal assistant to Mr. A. S. Crane, chief engineer of J. G. White & Company, engineers and contractors, New York City; 1910, engineer in charge of the excavation of the ancient city of Sardes in Turkey-in-Asia; 1911, assistant resident engineer on the construction of an hydroelectric power plant at Bonny Eagle, Maine; J. G. White & Company, engineers; 1912 to 1915, with the Power Construction Company of Shelburne Falls, Massachusetts; from September 1915 to date of application for a commission, in charge of the Pittsburgh district for the British Munitions Board of New York City, the direct representative in this country of the British ministry of munitions of war.

Official statement furnished December 6, 1934.

By authority of the Secretary of War:

E. T. Conley,
Brigadier General,
Acting The Adjutant General.

STATEMENT OF THE MILITARY SERVICE OF RICHARD HAYS HAWKINS

Born Feb. 15, 1879, Hawkins Station, Pa. Appointed from Pennsylvania.

Capt., ord. sec., O.R.C	Jan. 28, 1918
Accepted	Jan. 29, 1918
Active duty	Feb. 6, 1918
Maj., ord. dept., N.A	July 25, 1918
Accepted	Aug. 1, 1918
Lt. Col., ord. dept., U.S.A	June 18, 1919
Accepted	June 20, 1919
Vacated	Sept. 16, 1920
Maj., ord. dept., R. A	July 1, 1920
Accepted	Sept. 16, 1920
Resigned	Sept. 29, 1921
Lt. Col., ord.-res	Nov. 9, 1921
Accepted	Nov. 22, 1921
(Reappointed Nov. 9, 1926 and Nov. 9, 1931.)	
Resigned	Oct. 4, 1932

Active duty subsequent to Nov. 9, 1921; none; education: Ph.B., Yale University, 1900; LLB., University of Pittsburgh, 1903; Shadyside Academy, graduate, 1897.

Business experience (officer's statement at time of appointment): 1903–1917, attorney-at-law (DeGill, Scott and Gordon, DeGill, Fisher and Hawkins); professor, Pittsburgh Law School.

He held securities in Standard Underground Cable Co., Westinghouse Electric & Manufacturing Co., Galena Signal Oil Co., Westinghouse Air Brake Co., Nationl Transit Co., Pennsylvania Railroad Co., Lehigh Valley Railroad Co., Dayton Supply Co., San Toy Mining Co., West Laurel Hill Cemetery Co., Wood Lawn Cemetery Co., Pittsburgh Brewing Co., First National Bank of Pittsburgh, City of Newcastle (Pa.) Water Co., Ellwood Water Co. (under date of Aug. 4, 1919, page 21, Document 69, U.S. Senate, 66th Congress, 1st session).

SERVICE

He was assigned to active duty Feb. 6, 1918, in the office of the chief of ordnance Washington, D.C., and served in that office until Sept. 29, 1921, the date of his resignation.

He was appointed to fill a vacancy in the purchase section, gun division, as officer in charge of the preparation of contracts and commandeering orders and served in that section and in the contract section, procurement division, to Feb. 4, 1919 (becoming the head of that section Oct. 24, 1918); contracting officer and chief, contract section, administration division, to the date of his separation from the service. He was also a member of the ordnance claims board from Oct. 10, 1919, to Sept. 29, 1921.

He was placed on detached service from July 29 to Sept. 12, 1920, with a commission ordered to proceed to Santo Domingo via Port au Prince, Haiti, for the purpose of taking testimony of witnesses and procuring evidence in connection with the performance of a contract entered into between Eliseo Espaillat and Maj. A. C. Downey, S. C., relative to procurement of castor beans.

It appears that after separation from the military service, he resided in Pittsburgh, Pa., and was engaged in the practice of law and as professor of law, Pittsburgh Law School.

While a member of the reserve corps, 1921 to 1932, he was assigned to the manufacturing service, office chief of ordnance, for industrial mobilization.

His latest address appears as 1405 Squirrel Hill Avenue, Pittsburgh, Pa., but the Veterans Administration has advised this office that he died October 14, 1933.

By authority of the Secretary of War.

WAR DEPARTMENT,
THE ADJUTANT GENERAL'S OFFICE,
Washington, November 30, 1934.

STATEMENT OF SERVICE OF EDWARD R. STETTINIUS

Edward R. Stettinius, by business a banker, was well known for his management of Allied purchases in this country. Paragraph 2, section II, General Orders, No. 25, War Department, March 11, 1918, refers to him as "Surveyor General of Purchases and Supplies" and designated him as an additional member of the War Council. No record has been found of either his appointment to, or his separation from, the position as Surveyor General of Purchases and Supplies. The office of Surveyor General of Supplies in the Purchase and Supply Division of the War Department, General Staff, was organized per paragraph 3-d, section I, General Orders, No. 14, War Department, February 9, 1918, and the position was abolished per paragraph 2, section II, General Orders, No. 36, War Department, April 16, 1918.

He was commissioned as Second Assistant Secretary of War, effective April 11, 1918, and resigned November 13, 1918. He was placed in charge of all questions of purchase and supply for all bureaus of the department, under the general direction of the Secretary of War, per section II, General Orders, No. 44, War Department, May 7, 1918. Under date of July 6, 1918, he was instructed to proceed at his earliest convenience to France and remain there as long as necessary, to attend meetings of Inter-Allied Munitions Council, as the special representative of the United States War Department, and later served as special representative overseas of the Secretary of War, in dealings with the Allied Governments, which service continued to about January 24, 1919. Also shown as member and chairman of the Advisory Liquidation Board of the American Expeditionary Forces.

AWARDED

Distinguished Service Medal "as Director General of Purchases for the War Department, Second Assistant Secretary of War, and special representative in France of the Secretary of War in connection with the procurement of munitions for the American Expeditionary Force, rendered conspicuous services. His broad vision and splendid judgment have been of the greatest value to the success of the military program." (Per General Order No. 25, War Department, February 13, 1919.)

French Legion of Honor with rank of commander as Assistant Secretary of War, awarded on May 11, 1919.

This office has been informed that he died September 3, 1925, after a long illness, the result of his strenuous work during the war and post-war years.

Volume 13 of Who's Who in America contains a biographical sketch of Mr. Stettinius which it is thought will furnish all the desired information about him.

By authority of the Secretary of War:

JAMES F. MCKINLEY,
Major General,
The Adjutant General.

EXHIBIT NO. 1337-E

STATEMENT OF THE MILITARY SERVICE OF RICHARD R. FARR, MAJOR, JUDGE ADVOCATE GENERAL'S DEPARTMENT, OFFICERS' RESERVE CORPS

The records of this office show that Richard R. Farr was a civilian candidate in training with the 5th Provisional Training Regiment, Fort Myer, Virginia, from August 25 to October 8, 1917, when honorably discharged by reason of physical disability. He accepted a commission as major, Judge Advocate General's Department, United States Army, March 15, 1919; served in the Judge Advocate General's Department, in the Purchase, Storage, and Traffic Division, General Staff, as a member of the Appeal Section, War Department Claims Board and Board of Contract Adjustment, and was honorably discharged December 31, 1920, for the convenience of the Government, his services being no longer required.

He was appointed a major, Judge Advocate General's Department, Officers' Reserve Corps, January 1, 1921; was on active duty from January 3, 1921, to June 30, 1921, with the War Department Claims Board, Supply Division, General Staff; appointed lieutenant colonel, Judge Advocate General's Department Reserve, November 8, 1923; on active duty with the 3rd Corps Area Headquarters, November 16 to 30, 1924, and from September 18 to October 22, 1927, taking a course of instruction at the Army War College; was reappointed lieutenant colonel, Judge Advocate General's Department Reserve, November 8, 1928, and was on active duty from August 15 to 28, 1929, and August 15 to 28, 1934, in the office of the Judge Advocate General, having been reappointed lieutenant colonel, Judge Advocate General's Department Reserve, November 8, 1933, which commission he now holds.

At time of his entry into the service he gave his business experience as general practice of law at Fairfax, Virginia, since 1907.

Official statement furnished November 3, 1934.

EXHIBIT NO. 1339-A

WW/amw.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
PROCUREMENT DIVISION,
Washington, November 1, 1918.

To insure prompt attention,
in replying refer to
——— No. ———

(Attention of Lt. Col. Wm. Williams)
From: Lt. Col. Wm. Williams, Staff Officer, Procurement Division.
To: Major General C. C. Williams, Chief of Ordnance.
Subject: Names of manufacturers dealing with the Ordnance Department in which the undersigned has an interest.

1. As directed by the Chief of the Procurement Division under date of October 19th, I annex hereto a statement showing to the best of my knowledge and belief the name of each manufacturer or dealer in materials or supplies, purchased through the Procurement Division, with whom I have relationship as officer, employee, stockholder or bondholder.

2. Such relationship existed for some time, in most instances for many years, prior to the date when I entered the service and my several stated interests (which in no case are large) have neither been increased nor decreased since said time.

3. I am financially interested in other industrial concerns, but so far as I am aware these concerns have no dealings with the Procurement Division, or War Dept.*

(Signed) WILLIAM WILLIAMS,
Lt. Col. Ord. Dept. U.S.

Gen. Electric Co. (stockholder).
U.S. Steel com. & pfd. (stockholder).
Otis Fensom Elev. pfd. (stockholder).
Dupont Power Co. pfd. (stockholder).
Westinghouse Elec. pfd. (stockholder).
United Lead Co. (bondholder).
Bethlehem Steel Co. (bondholder).

*The words "or War Dept." were added to point 3, above, in hand-writing.

Exhibit No. 1340

The following advisory boards have been appointed to assist the district chiefs in the event of an emergency. In but few instances have they been called upon to exercise any assistance in time of peace. The extent to which they would be available and the extent and manner in which they would assist the district chief can be determined only if and when an emergency arises.

LIST OF MEMBERS OF ORDNANCE DISTRICT ADVISORY BOARDS
